THE LARGEST AUTO SUPPLY HOUSE IN AMERICA

Our Name Is Your Guarantee

WHATEVER you buy from the house of CHAS. E. MILLER you may expect the fullest degree of satisfaction in every detail. Quality, quantity, material, workmanship, durability will be just right or we will make it right. Our name is your guarantee.

To buy from a house the size and standing of this one is the safest way to insure complete satisfaction in all your dealings. We handle goods of **standard quality only** and of course stand back of everything we sell.

No matter what you want in the line of automobile accessories or supplies, remember our slogan, "We Either CARRY IT IN STOCK, WILL GET IT—OR IT ISN'T MADE." One of the prize winners in MOTOR'S recent advertising contest selected this as the slogan out of the many shown. His reason was as follows: "This saying is the clearest possible statement of the Miller business policy which I have found to be a fact through several years of satisfactory relations with them."

Our Annual Catalog is the largest, most complete, up-to-date and authoritative dictionary of the auto supply market of any book published. It has come to be recognized as one of the standard reference works of the industry.

The total distribution of one hundred thousand copies of this catalog practically covers the world, at least wherever automobiles are used. Nearly all foreign as well as domestic automobile manufacturers and dealers, the offices of American Consuls, Public Libraries, Universities, Y. M. C. A. Schools, Publishers, Automobile Clubs, Engineers' Offices, Purchasing Departments—in all these places you will find a copy of the Miller catalog on file.

Fifteen branches spread over the United States, located in the principal motoring centers, bring Miller service within the reach of practically every motorist in the United States. Prompt delivery, perfect quality, honest prices—these are the things that distinguish Miller service and explain the marvelous growth of this pioneer establishment since its inception in 1896.

Knox

MARTIN TRACTOR

Maximum Carrying Capacity
Minimum First Cost
Minimum Maintenance
Minimum Turning Radius

What It Is

Not a Theory But a Proven Success in a Year's Gruelling Work. Many in Successful Operation. 5 to 10 Ton Capacity. Full Details Explained in Tractor Catalog. Send Today.

A motor unit that may be attached to any heavy vehicle designed to be drawn by horses; the combination making a five-wheeled motor-drawn vehicle.

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO EXCESSIVE COST OF RUBBER TIRES. Wagons have been doing good work for many years on steel tires and there is no reason why they will not continue to do so when drawn by the tractor; the heaviest part of the load is always carried on steel tires.

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO EXCESSIVE VIBRATION ON STIFF SPRINGS. All working parts of the tractor are carried on springs as resilient as those of a pleasure car.

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO SUDDEN STARTING OR STOPPING OF HEAVY LOADS. The cushioning of the shock between the engine and the load is one of the most important advantages gained, (fully explained in catalog).

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO NEGLECT ON ACCOUNT OF INACCESSIBILITY OF PARTS—all parts of the tractor being more accessible than on a touring car.

IT SAVES HEAVY MAINTENANCE CHARGES due to frame twist. The tractor accommodates itself to all road unevenness.

The single front wheel can be turned at 80 degrees angle, enabling the driver to back to any position or turn completely around in a narrow street.

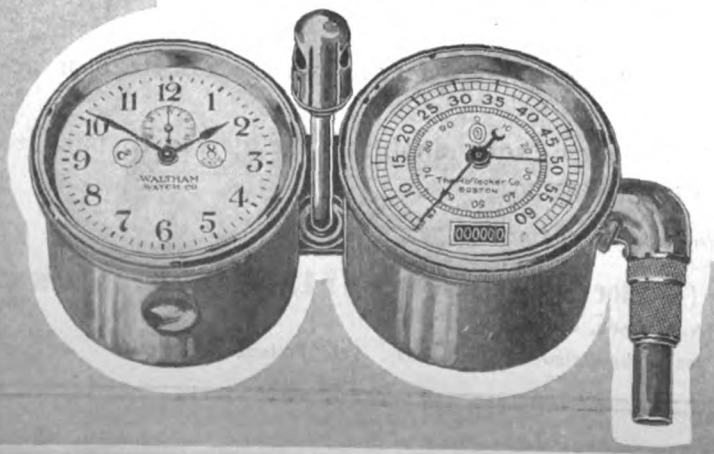
HOFFECKER SPEEDOMETERS

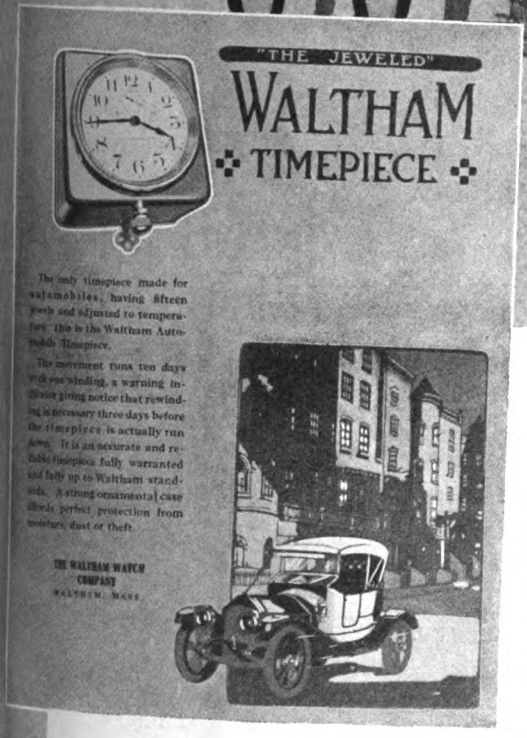


HOFFECKER IS TO A SPEEDOMETER WHAT WALTHAM IS TO A TIMEPIECE

Write to your car manufacturer—tell him to equip the cars you sell with Hoffecker Speedometers and Waltham Time Pieces—then you are selling another important item of service.

Hoffecker is to a speedometer what Waltham is to a time piece—both names stand for quality of product known and used wherever cars are found.

You cannot find better instruments anywhere at any price—and the fact that we can sell this combination to manufacturers at moderate cost emphasizes this argument.



You can judge Hoffecker-Waltham worth by cost of production. These instruments are turned out in factories where design, material and workmanship are paid for on a scale commensurate with our ideals—and they are high.

Digitized by Google

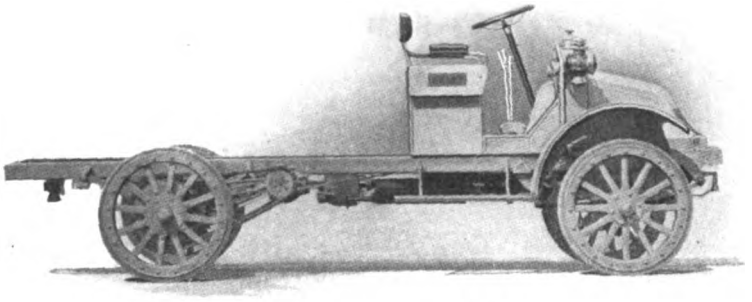
A WALTHAM TIMEPIECES

HOFFECKER IS TO A SPEEDOMETER WHAT WALTHAM IS TO A TIMEPIECE

We subordinate selling cost (which is overhead) to cost of production, and to do this we concentrate our advertising in a group of publications that reach prospective car owners and owners only. A sample two-page spread of this advertising is shown here.

You, as a dealer, get the benefit of this advertising—it reaches the people to whom you sell cars and accessories.

The car manufacturer gets the money we save (through economical, effective advertising) in the shape of the highest grade instruments at prices he can well afford to pay.



Again we say:

If you want to help your prospective car owner to exceptional speed and time recording service, then specify Hoffecker Speedometers and Waltham Time Pieces.

KELLY MOTOR TRUCKS SELL

YOUR PROFITS

$ You can make money selling motor trucks.

$ You can finish each season with increasing profits.

$ To do so take advantage of these fundamentals:

(1) You must have good trucks to sell—and good selling trucks.

(2) You must be supported by an **ORGANIZATION** which will co-operate with you to give 100 per cent. truck efficiency to the user—that's Kelly service.

(3) You must have the benefit of working with a factory sales department which has but one object—the sale of Kelly Trucks for you. This means aggressive advertising, intelligent publicity and direct sales co-operation.

Sixteen Page Insert in Li
Tells the Story.-If y
Us for a Copy.-The

$ In your community we will create a demand for Kelly Trucks, and if you are the dealer with the big brains WIRE IMMEDIATELY AT OUR EXPENSE.

KELLY SERVICE

The final test of the efficiency of a motor truck is service. The sale of a truck is only the beginning of the manufacturer's responsibility.

Do you realize what real factory service means to the man who sells a truck?

Kelly service is legitimate service in every sense of the word.

We can give real service because we have built up the Kelly organization with that idea in view.

We operate well-equipped factory branches and service stations in the following cities:

Boston	Dallas	Birmingham
Providence	San Francisco	Chicago
Worcester	New York	Kansas City
New Haven	Philadelphia	Seattle
Cleveland		Los Angeles

Digitized by Google

WHEREVER TRUCKS ARE SOLD

Every city and town in the country is within a few hours of one of these service stations. The necessary equipment for any repairs can be dispatched to any dealer without an instant's delay, and delivered within a few hours. The advantage of this arrangement can be seen readily by those who have often been compelled to wait many days for the arrival of repair parts from a distant factory.

KELLY SALES HELPS

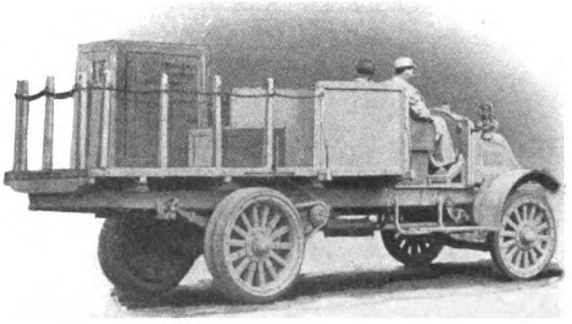
Our sales and advertising department is designed primarily to sell Kelly trucks for you. We will help you in every way possible.

A large sum of money will be spent in advertising and sales promotion work in 1913. We will employ every legitimate means to promote your sales.

Weeks Motor World Didn't see it send to Wire for Territory

Every member of our sales and advertising department has had long experience in selling. They know how to help you sell trucks—they can sell them for you.

We will co-operate with you in every way possible.



THE LAST WORD

In conclusion we urge upon you the importance of telegraphing at our expense if you, as THE live Dealer, want the best motor truck account in America.

We are prepared to go the limit with you to get the cream of the motor truck business in your territory.

Don't wait to see us for the Chicago or any other motor truck show.

Telegraph immediately at our expense and arrange to have territory assigned you.

Buffalo Electric

1500 Pound Capacity Chassis

Announcement of Buffalo Electric Light Duty Trucks

The most satisfactory solution of light trucking requirements is found in Buffalo Electric Shaft Drive Commercial Cars.

1500 lbs. capacity chassis.

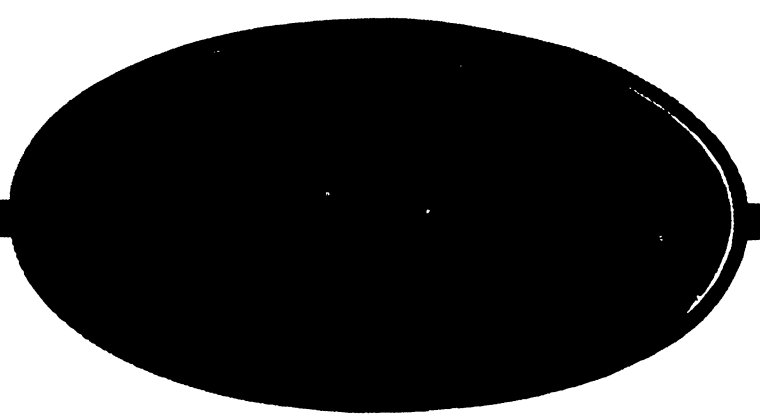
2000 lbs. capacity chassis.

The Buffalo Electric type Direct Shaft Drive is the most efficient and reliable light truck transmission yet developed. Every day performance of any truck depends upon the efficiency of its transmission.

We direct your attention to the Buffalo Electric universally suspended motor, the gear connection between motor and drive shaft, the drive and rear axle mechanism.

Approved electric truck standards have been developed and refined to meet the requirements of such classes of business as trucks of this kind can best serve.

Every element in the make-up of these trucks provides for generous overload.



Buffalo Electric Light Duty Trucks make their first bid for the endorsement of dealers and business men at the Chicago Truck Show—February 10th to 15th.

Every dealer should visit the Buffalo Electric Truck exhibit at the Chicago Show. Dealers who are unable to attend the Show can have descriptive folder for the asking.

Hyatt Quiet Bearings

LINE CONTACT is the basic principle of the Roller Bearing as against Point Contact of the Ball. There results a vastly increased surface to support the load, reducing the duty per unit section of the operating parts and increasing their life in a like proportion.

To insure this condition, uniform distribution of load is essential. This necessitates perfection in the manufacture and mounting of the bearing. Perfection is unattainable under manufacturing conditions.

The flexibility of the Hyatt Roller absolutely insures full line contact, hence guarantees uniform distribution of the load.

Flexibility is an exclusive feature of the Hyatt Roller.

How About Dead Stock in Spark Plugs?

You may have such a losing investment—Plenty of dealers have. It's the logical result of defective products—many brands that do not give service, even if you do sell them on the maker's word.

DEALERS—We are going to help you sell Mezger Soot Proof Spark Plugs by giving your trade the best plug on the market—and by giving you advertising service on a scale never attempted by any manufacturer in this line.

Mezger Soot Proof Spark Plugs are made by one of the oldest spark plug makers in America.

They have stood the test of years—long, hard and consistent service.

Through their self advertising they have multiplied into

Millions Now In Service

and they are giving perfect satisfaction to tens of thousands of motorists—simply because they cannot short circuit, leak or break down.

Your trade can pay more for Spark Plugs, but no matter what the price, they cannot buy more uninterrupted service or longer life.

We are going to prove that it will be to your advantage to handle Mezger Soot Proof Spark Plugs exclusively.

Write today for our proposition. Get our booklet telling why these plugs have made and held a reputation second to none.

KisselKar Trucks

Why Business Men Believe in KisselKar Trucks

THERE is scarcely a business in which KisselKar Trucks are not used and praised. A superior truck—strong and sturdy—best adapted to grilling service—**that's** why. Materials zealously selected--construction carefully inspected—chassis rigidly tested **and testers double checked.** That's the Kissel way.

KisselKar Trucks are built in seven sizes—1,500 lbs., 1 ton, 1¼ ton, 2 ton, 3 ton, 4 ton and 5 ton carrying capacity.

The two smaller sizes have 30 H.P. motors, the 1¼ ton, 36 H.P., the 2 and 3 ton, 40 H.P., and the three larger, 50 H.P.—all long stroke.

Characteristics of all but the two smaller sizes of KisselKar Trucks that contribute to their superiority are four speed transmission (direct on third—fourth geared up) and a differential lock which throws traction to both rear wheels—positive insurance against stalling.

Liberal dimensions throughout—extra large axles, wheelbases and tires. Frames of pressed or channel steel. Gears and other vital chassis parts vanadiumized.

***KisselKar Service** adds inestimable value to a KisselKar Truck. Our own buildings and factory trained men at all principal points relieve owners of mechanical trouble—keep the truck in prime condition and minimize depreciation.*

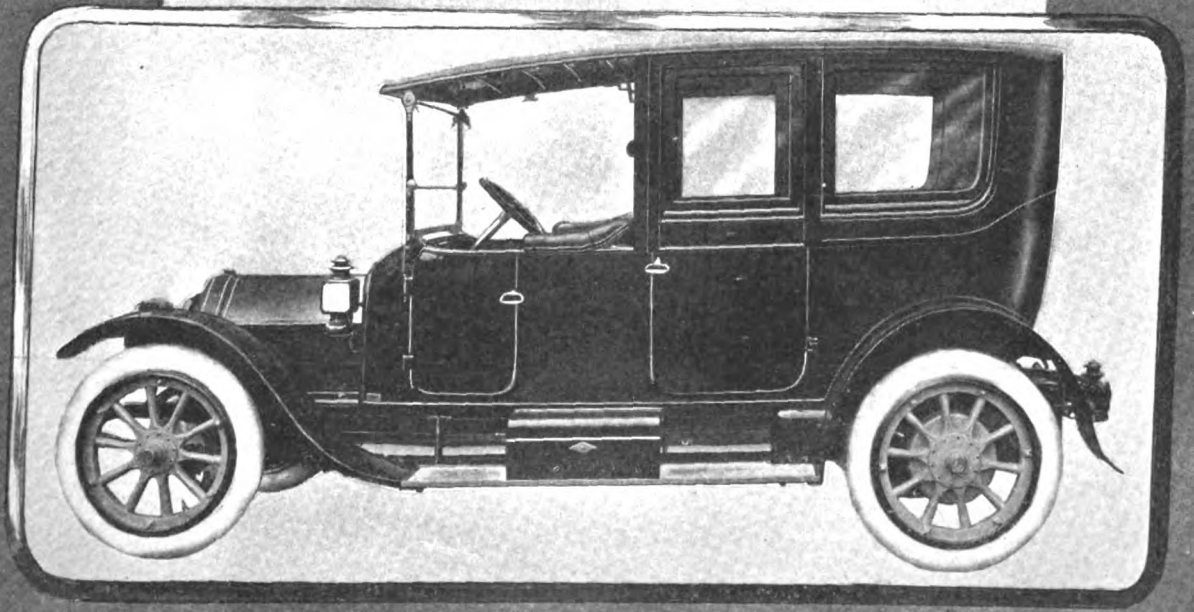
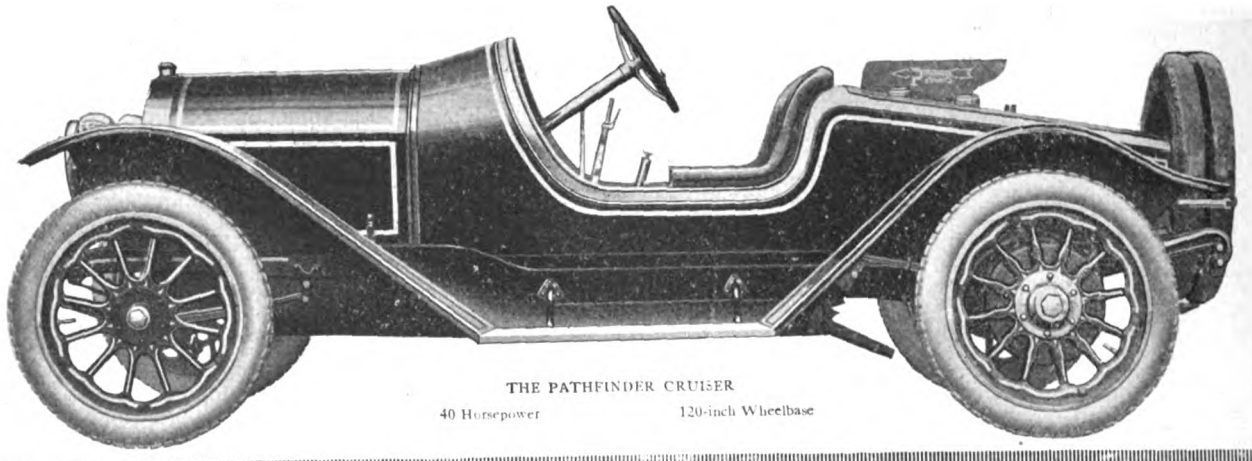
Lancia
Dealers Make Good



In handling the Lancia, the dealer automatically creates an exclusive and most desirable selling connection—and the fact that he may be surrounded by many American agencies lends still *more* prestige to his own proposition.

You, Mr. Dealer, can sell Europe's most exclusive product at American prices and you can, on this basis, offer Lancia cars and equipment to those who are fastidious not only in regard to rakish, unusual European design, but who also understand the actual service value of a car made in Europe, where steel making is an exact science and where engineering genius of the world has reached the high water mark.



Canvass your list of prospects—you can interest plenty of them in a very unusual and distinctive type of motor car, with racing and endurance records back of it that are beyond cavil.

We await your inquiry and we promise our selling co-operation.

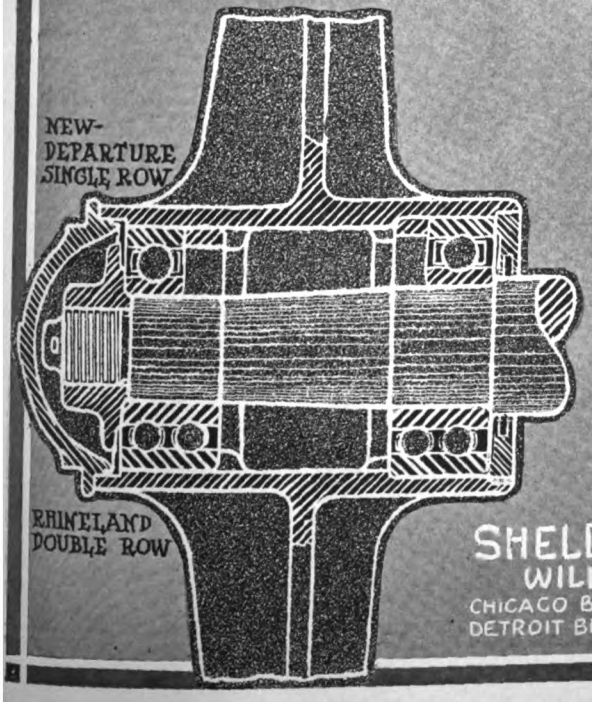
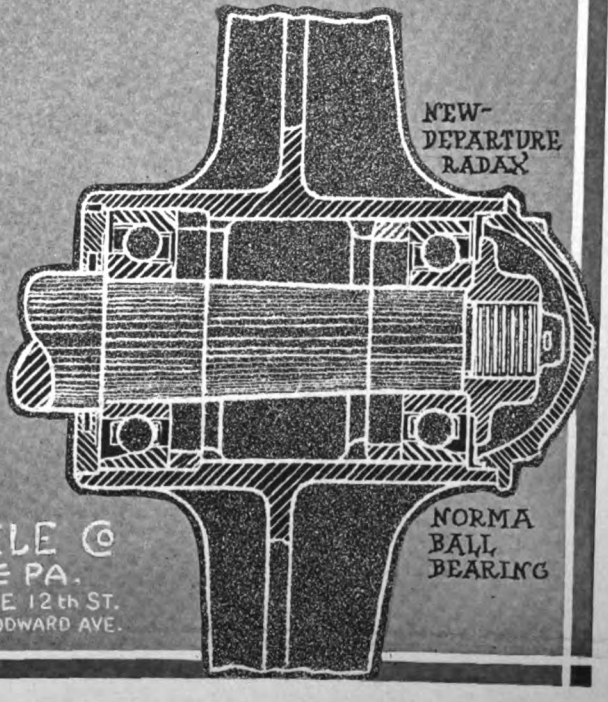
SHELDON

WE MAKE AXLES NOT BEARINGS



Manufacturers purchasing Sheldon Axles to-day, are offered a completeness of equipment which exceeds anything previously known to the motoring industry.



Our new axles are equipped for wooden or steel wheels with your choice of the following high class bearings:

New Departure Double Row
Hess-Bright Single Row
Standard Taper Roller Bearing
Bower Roller Bearing (straight)
New Departure Single Row
Rhineland Double Row
New Departure Radax and Norma Ball Bearings

We do not offer our axles as a means of selling bearings because we are distinctly axle manufacturers. We offer car makers their choice of all the best bearings that can be made—domestic or foreign—simply that the rest of the equipment may conform to Sheldon superiority.

Surely no car equipped with Sheldon Axles and a choice of any of the bearings mentioned on this page will be lacking in quality.

DEALERS—

Out of EUROPE Comes The Aristocratic

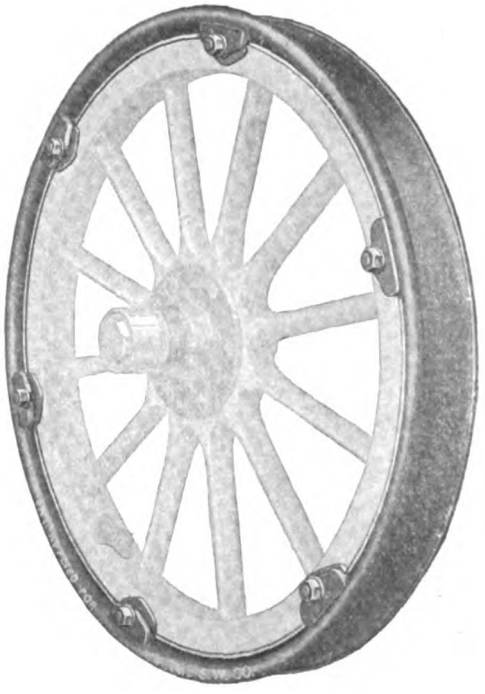
METALLURGIQUE

The Car You Can Sell to Men of Means and Fine Discrimination

¶ Are you in a position to locate and interest men of means, social standing and ability to recognize a car of impressive individuality, tremendous prestige and sterling performance.

¶ If so, we will use our sales organization to assist you in selling the Metallurgique, Europe's most talked of car and the one most sought after.

¶ This automobile is the product of fifty years steel making near Brussels, the Pittsburgh of Europe. In materials, it stands alone in quality. Its chassis is a revelation in construction that has given it a proven title, "The unbreakable car." In body design it is a model of sensational European originality that causes even the blase New Yorker to turn to admire.



¶ Metallurgique dealers have as sales ammunition a list of owners that reads like the International Social Register. Write for our beautiful brochure—it will introduce us.

RIMS  RIMS

THE RIM BASE OF
STANWELD
RIM No. 30

Will Fit the Felloe Band of Either the Continental or Standard Universal No. 3 Rim

SEE OPPOSITE PAGE

Digitized by Google

Rim Base of STANWELD Rim No. 30 With Tire Applied

IF your car is equipped with Continental or Standard Universal No. 3 Demountable rims, you can completely re-equip with No. 30 STANWELD Rims in less than one hour and with very little expense.

All that you need are the No. 30 rim bases. They fit perfectly the felloe band of either of the above mentioned types and can be applied without the necessity of any special wheel work or the addition of any bolts, wedges or special tools.

Merely remove your old tire rims from the wheels, apply your tires to the new rims, replace the rim with tire on the wheel, screw up your wedges and you have a complete set of new rims.

STANWELD Rim No. 30 is a vast improvement over all former similar types. It is operated without a special tool. Rust and freezing cannot interfere with its operation. Circumferential movement of either section is not necessary to detach a tire.

Merely open a small swinging latch with a screw driver, pry loose the ends of the two flat semi-circular spring rings which fit over corresponding lugs of both sections. The two sections of the rim base can then be separated for removal of the casing or tire. The locking rings can be replaced with the fingers in a very short time.

All the old difficulties experienced with the other types are completely eliminated. The rim itself is light, strong, extremely simple and easy to operate. The expense involved is so low that the oldest car can economically be re-equipped with the No. 30 STANWELD rim, provided its former equipment was either Continental or Standard Universal No. 3 rims.

Write to us, giving the present size of your rims and we shall furnish you with a descriptive folder giving prices. This is absolutely the best rim offer that has been made to the motoring public for many years.

Your Name on the Spring Bolt

Makes it a Distinctive Part of the Car

Here is a bolt designed and manufactured with such care that you can put your name on it and stand back of it.

It will show that you are giving this important bearing the attention it deserves.

The system of lubrication is perfect. The grease cup is of extra large capacity and the grease ducts of ample size.

The fresh grease, forced into the bearing at the middle, spreads over the entire surface of the bolt. It not only lubricates it thoroughly but pushes out the grit, dirt and old grease at both ends leaving the bearing clean.

The bolt is made of open-hearth steel. Scientific heat treatments carbonize and harden the body producing a bearing surface which resists the cutting action of the mud and grit.

A tough, silky core is retained by this treatment making a bolt that stands the road shock and strain.

These bolts are furnished with your name stamped on the grease cup as shown above.

Send blue prints for quotation

We are looking for the manufacturer who is not 100% satisfied with the motor he is using.

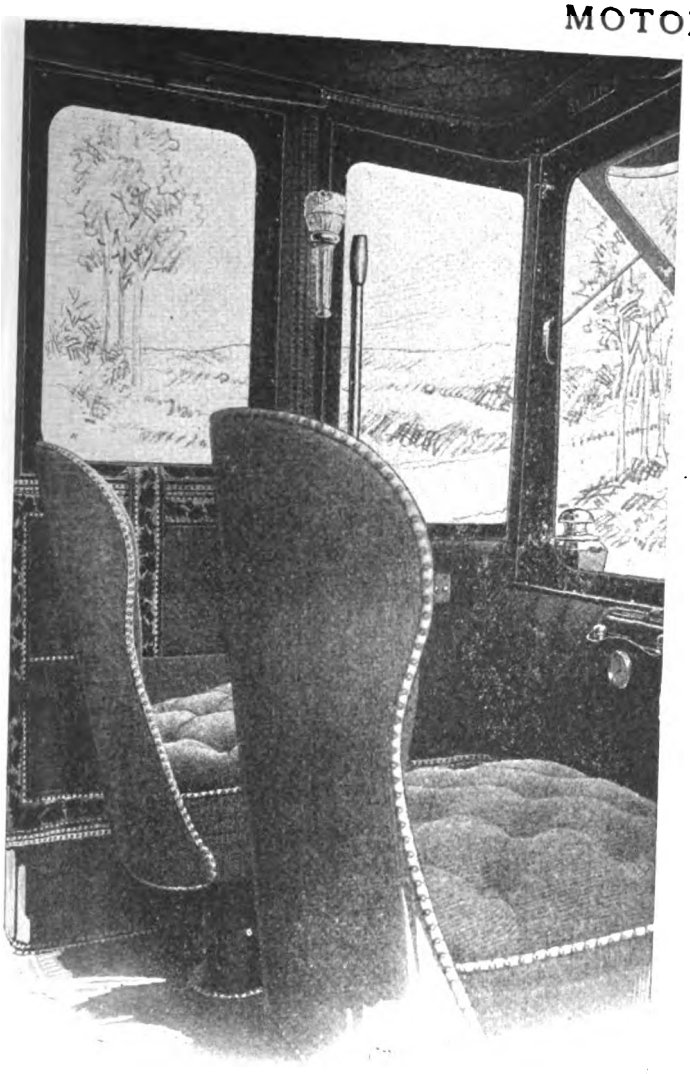
Ergon Motors will satisfy those manufacturers.

Ergon Motors are not revolutionary in design and construction—they are simply refined and developed to a point in keeping with the extreme demands of the present day pleasure and commercial vehicle requirements.

Not only has great care been used to assure great power and light weight but in the attaining of this end equal attention has been paid to the simplicity, durability and accesibility of the motor.

Our crank shafts and cam shafts are made by the Driggs-Seabury Ordnance Corporation, and the silent chain drives which replace the timing gears, are made by the famous firm of Hans Renold. In the transmission, Timken bearings are used and the clutch is supported on F & S bearings.

Ergon Motors are 4-cylinder, 4-cycle, water-cooled, L-head, with the cylinders cast in pairs. The motors are of the long stroke design with a bore of 4⅜" and a stroke of 6". They are of the unit power plant type with Brown-Lipe dry plate clutch and 3-speed selective transmission.



In keeping with modern demand. Ergon motors are equipped so as to permit of the use of any one of several types of either electric or pneumatic starters.

We are positive that we can satisfy even the most skeptical of the superiority of our product if but given a chance.

Won't you let us hear from you?

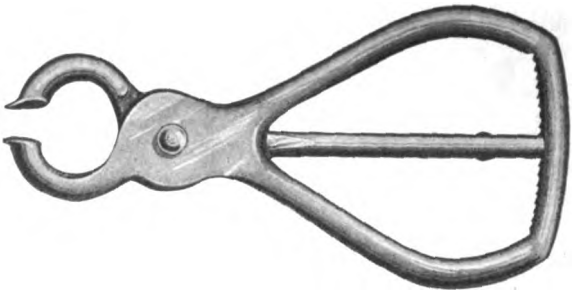
Model 31, Forward-Drive Brougham; Pedestal front seats. Wheel or lever steer, as preferred.

The LUXURIOUS BROC ELECTRIC

THE degree of roominess in an electric may be a matter of inches. But dimensions do not always prove roominess unless you know all dimensions, and can see the car.



The Broc rear-seat cushion is 49 inches wide, and 8½ inches deep. There are 44½ inches of clear space between top of cushion and ceiling.

The importance of those extra-liberal provisions for roominess is not wholly in the dimensions themselves.

For every dimension of the interior follows that standard. Knee-room, foot-room, leg-room is always ample.

With all that roominess, nothing of exterior or interior beauty—of grace, proportions or finish—is sacrificed. The best-looking cars are Brocs.

The BROC ELECTRIC VEHICLE COMPANY

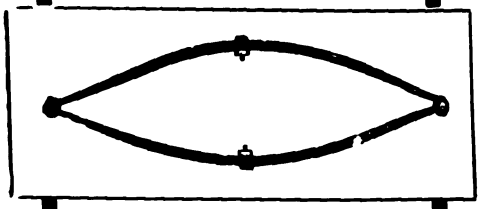
GILMER TIRE REPAIR PLIERS

An absolute necessity in the garage—a ready seller and one that you ought to handle.

This little instrument has a big mission, repairing trifling injuries before they become big and serious. A dollar invested by your customer will save him many dollars in the course of a year.

Aside from the liberal commission which is yours from each sale, you are conserving the best interests of your trade by introducing and selling Gilmer Tire Repair Pliers. It is all a matter of service, and the successful dealer today is the one who helps his trade save money.

The operation of sealing up cuts and abrasions is simple. Just insert the prongs of the pliers into the injury, spread the pliers, and move the ratchet lever over far enough to make the cut perfectly accessible. Then clean the wound, insert pure rubber gum and reverse the operation of opening. Then the tire will close over and around the gum, producing a permanent repair.



Write and get details—better still lay in a stock now—and see how kindly car owners in your territory will take to this little device.

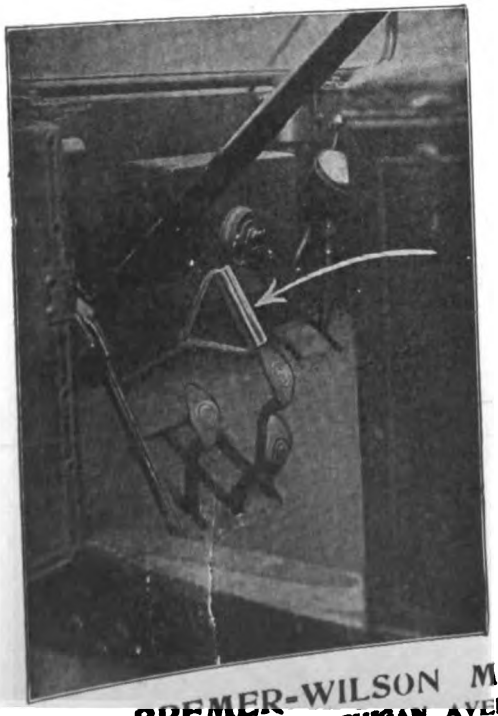
Penn Springs



Penn Spring Works

BALDWINSVILLE
NEW YORK

PENN SPRINGS are tested for resiliency and tensile strength far beyond any point that could be reached in every day service. They are guaranteed against fatigue and through the special grades of steel and methods of construction they will give service "plus."

Car manufacturers can make our engineering force part of their organization in the work of producing springs that are true in even load carrying, resilient and engineered to fit the particular car for which they are designed.

The Triplex Starter
for FORD Engines

"It is out of sight," under the hood. All that shows is a small hand lever on dash. You do not have to leave your seat to start your Ford Motor when equipped with the TRIPLEX STARTER.

All that is necessary is to pull the lever. Will positively turn your motor over every time.

The TRIPLEX FORD ENGINE STARTER is a mechanical starter, which, of all types—compressed air, acetylene gas, electric and spring—is the only one on the market which at all times proves absolutely RELIABLE. In no respect is it a "Hit-or-Miss" proposition—working one minute and short-circuiting or blowing out a cylinder head the next. It gives 100% uuinterrupted service from the time it is attached. It comprises so few parts and is so simple and direct in application that it cannot get our of order, and it is as safe and durable as it is simple and effective.

With the TRIPLEX STARTER you have two starting devices. You do not remove the crank. It stays on.

"Ask the man that has one."

To be had at all dealers or direct on receipt of price.

DEALERS.—It doesn't require SALESMANSHIP to sell an ARTICLE for which every FORD OWNER is clamoring. Bring the TRIPLEX FORD ENGINE STARTER and the FORD OWNER together and a sale results. Big Sales spell Big Profits. Get our Sales Proposition today. Write or Wire. No more broken arms. Back kicks are dangerous.

BOYCE MOTOMETER

PAT'S PEND'G

1913's TRADE SENSATION

(Front view ½ actual size.)

KNOW THE EXACT HEAT OF YOUR MOTOR WHILE DRIVING

The Motometer is a watchlike instrument fitted to the radiator cap, protecting the motor from damage caused by improper lubrication, overheating, defective cooling, etc. By means of a red fluid indicator it warns you

When the Radiator Needs Water
When Oil Supply Is Insufficient

In short, it tells whatever excessive heat tells—a broken water pump, a clogged pipe, a broken fan belt, etc., and tells before the damage is done.

Attached the same as an ornament, readily visible from the seat day or night. It will prevent frozen radiators in winter and cracked cylinders in summer.

Finished in black enamel with gold plated or nickel rims.

BENZ

Since the introduction of BENZ cars to the motoring public of America no car has attained such world-wide supremacy as to its construction, standing up quality, and material The new type of 35 and 50 H. P. BENZ models are the last word in automobile construction.

The noticeable features of this type of BENZ cars include the offset crank shaft, smokeless oiler, and SILENT CHAINS instead of timing gears.

The BENZ Carrosseries are noted for their beautiful lines and thorough comfort.

To those desiring AGENCY of this car the Benz Company will offer special terms. We want RELIABLE, ENERGETIC agents to further our interests for both BENZ pleasure cars and BENZ-GAGGENAU trucks, which today stand recognized by those who know, as the leading 6-ton truck. Wire or write us, no matter where you are.

Our PRICES compete with LEADING AMERICAN makes.

If You Need Motor Lamps
You Need This Catalog

We want you to write for the Solar Catalog before you decide on your motor lamps, for this is the most complete line of lamps on the market. Solar Lamps have been preferred by most motorists for the past fourteen years because of their brilliancy, their style, their strength and their several exclusive advantages—their special short focus lead glass lens mirror reflectors—the patented double ray light projection (in the Solarclipse), giving two distinct fields of light, for city and country use—the new black finish, the only such finish that's proof against heat and moisture—and other features that other lamps lack.

To fail to see Solars before you buy is to fail to include in your consideration the very finest lamps in existence. Solars are made for oil, electricity, gas and in combination, for pleasure cars, motor trucks, carriages, motor boats and airships. Write for catalog now—while you think of it. (136)

Kenosha, Wis. BADGER BRASS MFG. CO. New York City

SOLAR LAMPS

How to Repair an Inner Tube in 15 Minutes

Directions: Place tube between plates of the **Imperial Vulcanizer** (see cut); tighten thumbscrews; put a little gasoline in pronged receptacle; ignite. A permanent repair in 15 minutes.

You can do this yourself at home or on the road—anywhere. The Imperial Vulcanizer saves time, saves money, is easy to operate, and pays for itself in a short time.

PRICE, $3.50 Complete with enough rubber for 40 punctures. At your dealer's or sent by express.

INTERLOCK INNER TIRES
Stop Tire Troubles

The one weak point of the automobile is that you cannot depend on the tires. Thousands of motorists have solved their tire problem by discarding inner shoes, reliners, fillers and other makeshifts and equipping their tires with **Interlock Inner Tires.**

Interlocks are complete inner tires (not inner shoes) placed between the outer casing and inner tube to strengthen the casing and protect the tube from punctures. They double the mileage of new tires and add 1,000 to 5,000 miles to old ones—save half your tire expense—and make tires trouble proof.

Dealers and Motorists—Investigate Interlocks

Don't delay—write now for booklets, data, prices, testimonials of users, road tests, etc. Mention size and kind of tires you use.

Weed Chains

The Great Anti-Skid DEVICE

Nine-tenths of all accidents to automobiles are caused by skidding or slipping.

Either you skid into the "other fellow" or the "other fellow" skids into you.

No matter how careful a driver you may be, you cannot prevent skidding or slipping on wet, muddy snow-covered roads or on icy, slippery greasy pavements unless you equip your car with Weed Chains.

Cannot Injure Tires

Because They Creep

An absolute necessity on both rear wheels and if you want to know what real steering steadiness means put them on the front wheels too.

For your own safety—for the safety of the public, fully equip your car with Weed Chains. Make it your business to get a set today.

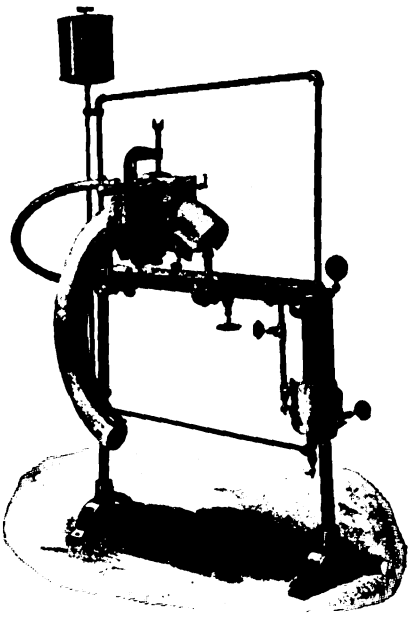
Blow-out repairs that outlast the tire.

The only way to make **durable** blow-out repairs **economically** is to reinforce the tire with fabric applied to the inside, fill the hole through the tire with Para gum, then apply heat **both** to the inside and outside. This method avoids cutting away and wasting a lot of expensive tread stock, requires a minimum of fabric and makes a repair that is stronger than the tire. Anyone can use it because the work is all straightforward, requiring no special experience. One set of forms fits all sizes of tires. No extra moulds required.

SHALER Steam Vulcanizer

The Shaler is the only steam vulcanizer that permits using the approved wrapped tread method as it is the only one that applies heat to the inside and outside of a tire simultaneously. It makes perfect blow-out repairs.



To make it complete as a garage equipment it is provided with a tube plate 4 x 30 inches that will mend six tubes as quickly as one.

The boiler, a conical copper coil, heated by a powerful gas or gasoline burner, raises steam so quickly that you can profitably heat the Shaler even if you only have a tube puncture to mend.

The essential Shaler feature of a thermostat to hold the temperature at the vulcanizing degree automatically makes it impossible to overheat a tire. Simply light the burner, and steam is raised to the correct pressure and held there indefinitely.

Price of the complete outfit, including all attachments for tube and casing work, $45.

C. A. SHALER CO., 406 Fourth St., Waupun, Wis.

Free—a tire handbook for repairmen

Write today on your letterhead for a copy of "Common Sense About Tire Repairs." It contains a lot of money-making ideas about the most profitable part of the repair business.

Remember these facts about Prest-O-Lite Exchange Service

When you turn in your empty Prest-O-Lite be sure to get a genuine Prest-O-Lite in exchange. Because Prest-O-Lite Service means more than merely giving you a fresh charge of gas.

In addition to this, ***Prest-O-Lite Service*** includes putting every cylinder that passes through our hands in perfect working order.

In many cases the actual cost of replenishing the solvent, regulating and refinishing the cylinder is more than the small exchange fee.

And on top of this, the owner of a genuine Prest-O-Lite has the privilege of having his empty cylinder, plus a small exchange fee, accepted without question as full payment for what is practically a new Prest-O-Lite, at any of our exchange agencies. When you get an imitation, or a Prest-O-Lite cylinder which some imitator has filled, do you get this service?

The user of genuine Prest-O-Lite pays nothing extra for this service. If you would protect your investment, be sure no one slips on an imitation for your genuine Prest-O-Lite.

Remember that no imitator ever stayed in business long enough to build up a satisfactory exchange service and that no imitator has ever stayed in business long enough to protect the customer's investment.

Mighty few wise dealers trifle with imitations of Prest-O-Lite now.

The Prest-O-Lite Co. 287 East South St. Indianapolis, Indiana

Canadian General Office and Factory, Merritton, Ont.

Marion

MARION 37 A
Complete
$1475

Electric Self-Starter on Marion Cars

The Marion 48-A, the Marion de luxe, is now equipped with Westinghouse electric self-starter, making it an electrically-equipped car throughout—electric starter, electric dynamo lighting system, electric horn, and 120-hour auxiliary storage battery charged by the dynamo. With complete equipment, $1,850.

The famous Marion 37-A touring car, the "Bob-cat," and the new fore-door roadster, 30-40 h. p. cars selling for $1,475, $1,425 and $1,475 respectively, can be supplied with this electric starter, instead of gas, for $120 extra. This is at cost, $50 less than the prevailing price for a good electric starter.

This electric starter may be seen in operation at the automobile shows, or at Marion dealers. It embodies features which make it distinctly superior to the average outfits. Such, for example, is a clutch which prevents the electric motor from being driven too fast or backwards by the gasoline engine.

The electric starter, or the Disco gas starter supplied with the 30-40 h. p. cars unless the electric is ordered, increases the value of Marion motor cars to every owner and dealer. They are the most remarkable cars of the season at their prices, in appearance, size, luxury, and completeness of equipment.

Do not fail to see these cars whenever possible. They are being exhibited at all the shows, and you can buy these show cars or a duplicate of them from any Marion dealer.

Marion Equipment Is Complete. It includes self-starter, electric or gas as listed above; electric dynamo lighting system for five lamps; auxiliary storage battery, charged by dynamo; Warner speedometer; Q. D. demountable rims, one extra rim; Mohair top, boot, storm curtains; plate glass windshield; tire irons, tire repair kit, pump; robe rail and foot rest on touring cars; jack and tools. Everything you need.

Let us send you literature describing these cars in detail, and give our proposition to dealers.

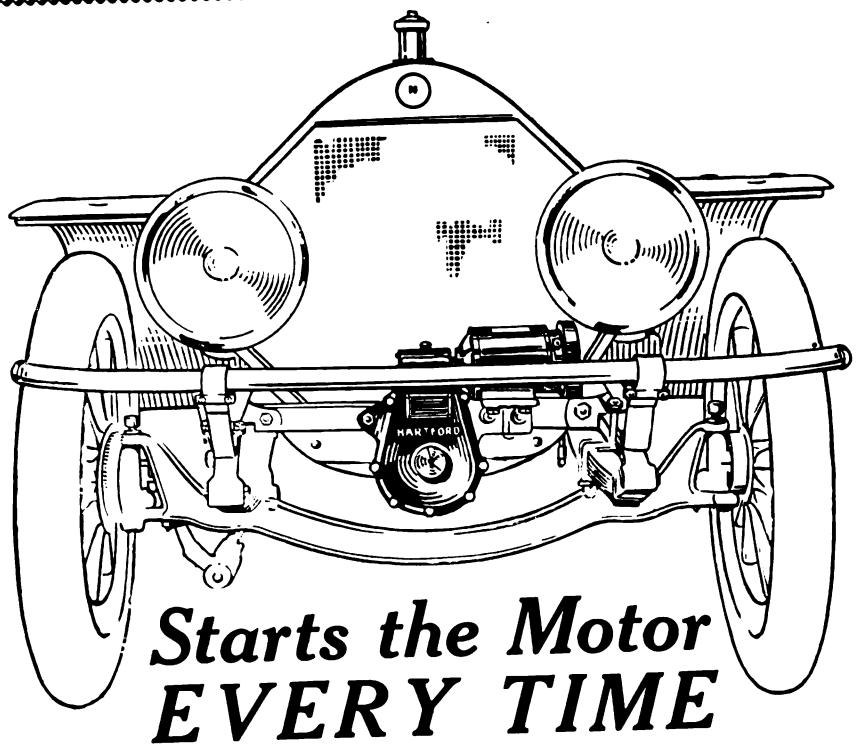
The Supremacy of

GRAY & DAVIS

20 MANUFACTURERS
Out of
42 MANUFACTURERS

Exhibiting at Madison Square Garden equipped their cars with GRAY & DAVIS Electric Starter, Lighting Dynamo, Electric Lamps or all three in combination.



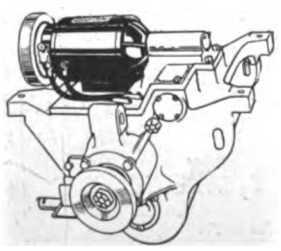
That answers the question: "Who builds the **best** Electric Starter, Lighting System and Lamps?"

Don't accept inferior equipment when you can buy a car equipped with GRAY & DAVIS products.

GRAY & DAVIS, Inc., 55 Lansdowne St., Boston, Mass.

Manufacturers of Automobile Lamps, Dynamos and Electric Starters

Published Weekly by the Motor World Publishing Company, 1600 Broadway, New York



Starts the Motor EVERY TIME

Starts the biggest motor with a press of the button--- starts it unfailingly, positively, every time. Yet the

HARTFORD ELECTRIC
Starting and Lighting
SYSTEM

is the smallest and lightest ever devised. invented by Mr. Edw. V. Hartford three years ago, it has been simplified to the extent of six compact, light weight parts that make it the only system applicable to **any** car, old or new. Most powerful motor invented, utilizes a fly wheel on its armature shaft—spins a 90 H.P. engine at 118 revolutions a minute. Most efficient generator invented—produces most power in proportion to size. Smallest battery equipment for a starter—six cells and adequate current constantly on hand for starter and lights.

A new factory with an annual capacity of 90,000 starters is now in operation, assuring delivery on all orders. Send for descriptive matter.

NEW DEPARTURE BALL BEARINGS

American Made for American Trade

Gasoline Is Going Up—

and the users of motor vehicles are paying the bills. Abroad, where gasoline costs half-a-dollar a gallon, builders of automobiles use only ball bearings.

Why?

Because ball bearings are more thoroughly anti-friction than any other type. Friction scarcely exists in ball bearings, hence less power and less fuel are required to drive mechanism mounted on such bearings.

Other advantages are:

Minimum wear;

Maximum efficiency, endurance and dependability.

Ease of replacement;

Freedom from necessity of frequent adjustment — ball bearings are fool-proof.

The prospective automobile buyer will favor the car that will cost him the least to operate and maintain. This means he will favor the car that is equipped with ball bearings.

The American made New Departure ball bearings have no superior — are strongly guaranteed and preferred by the majority of American automobile manufacturers.

One such manufacturer says: "More real bearing value than I can get out of any other bearing."

MOTOR WORLD

Vol. XXXIV New York, U. S. A., Thursday, February 20, 1913 No. 9

TIRE EXPORTS $3,222,133; ENGINES EXCEED A MILLION

Total Foreign Trade in 1912, Exclusive of Cars, $8,963,547—Figure for 1911 Three Million Less—Other Statistics.

Automobile engines, tires and parts to the value of $8,963,547 were exported from the United States to foreign countries during the calendar year of 1912, according to information which is obtainable from the advance report of the Department of Commerce and Labor, which figures are supplementary to the car exports, valued at $23,703,989, as stated in Motor World last week; during the preceding year, 1911, this figure was $5,913,709. During the two years the value of the several items making up these totals were: Engines—1911, $201,409; 1912, $1,137,285. Tires—1911, $2,458,177; 1912, $3,222,133. Parts—1911, $3,254,123; 1912, $4,604,129. The engines for 1911, however, are for the last six months only, they not being separately listed prior to July 1.

In December, 1912, parts to the value of $367,364 were exported, while in the same month of the preceding year the figure was $302,935. The tire exports in these same comparative months were: December, 1911, $200,450; December, 1912, $187,434. Similarly comparing the engine exports, the statistics are: December, 1911, 447, $54,836; December, 1912, 854, $100,753.

In December, 1912, 87 cars, valued at $227,652, were imported, which compares with 103 cars, at $227,067, for December, 1911. The imports for the years 1911 and 1912 were, respectively, 972 cars, valued at $2,098,481, and 868 cars, with a valuation of $1,999,587. A peculiar combination is found in the December imports in that while the number dropped from 103 to 87 the valuation increased by $585, which, however, is slight, being less than one per cent.

During 1912 there were imported parts valued at $275,819, and in December, 1911, the valuation was $50,325, and in that month of the year just closed, $12,694.

Broadwell Out of Hudson Company.

Due to a disagreement as to matters of policy, E. H. Broadwell, vice-president in charge of sales of the Hudson Motor Car Co. of Detroit, has disposed of his interests and wholly retired from the company. C. C. Winningham, former advertising manager, has assumed charge of the sales department also and with it the new title, director of sales and advertising. Broadwell, who is well and widely known, has been connected with the industry almost from its inception, having been conspicuously identified with the Fisk Rubber Co. for many years previous to becoming interested in the Hudson Motor Car Co. Before taking up new duties of any sort Broadwell will spend two or three months vacationizing.

Barley Takes Over Halladay Factory.

A. C. Barley, at one time secretary and a director of the Rutenber Motor Co., has completed negotiations whereby he has become possessed of the property of the bankrupt Streator Motor Car Co. in Streator, Ill. He already has reopened the factory and will re-commence the manufacture of Halladay cars on a conservative basis, devoting himself chiefly to the $1,450 model. A limited number of model 40's, at $1,935, and a few six-cylinder cars also will be produced. When the Streator property was sold by the receiver it was bid in by the Merchants' Realization Co. of Chicago, with whom Barley consummated the transaction which placed him in possession of the plant.

Jones Taximeter Voluntarily Dissolves.

The Jones Taximeter Co., of New York, finally has filed a certificate of voluntary dissolution. The company was an outgrowth of the Jones Speedometer business but has not been active for a year or more, having transferred the patents under which it operated to the American Taximeter Co.

STRIKE OF RUBBER WORKERS DISTURBS AKRON TIRE TRADE

Professional Agitators Fan Small Spark Into Large Flame—No Danger of "Tire Famine"—Status of Factories.

Because of a strike which began in the Firestone Tire & Rubber Co.'s factory in Akron, Ohio, on Wednesday of last week, alarming reports have flooded the press of the country, many of them going so far as to predict a tire famine. As a matter of fact, at last advices, the strike had not become general and most of the Akron tire companies express belief that the trouble will not seriously affect their operations or deliveries, if it affects them at all.

The trouble in the Firestone plant grew out of the installation of new machinery and establishment of a new wage scale, which, however, affected only about 60 men—those known as tire finishers. Before the new machines were installed, one man made a complete tire, but the use of machinery split the work into two processes, one man building the carcass and another finishing the tire. Under the old order of things the workmen earned about $3.50 per day, and it was the intention that the new scale should permit them to average the same amount, for though the use of machines requires that the men produce more tires each day, the machines themselves lighten the actual labor.

According to H. S. Firestone, president of the Firestone Tire & Rubber Co., which is most seriously affected, the comparatively small discontent which first arose would have been adjusted between the company and its employes had not professional labor agitators projected themselves into the affair. The agitators, as Firestone aptly states, "do not live in Akron, have no real interest in Akron or its people, and when peace is restored will pass on to the next place where trouble may be stirring."

Digitized by Google

The chief agitator appears to be one of the fire-eating foreigners who last year caused the labor troubles and riots in the textile district of Massachusetts, and who also had a large hand in the strike of the New York garment workers. He is one of the leaders of the Industrial Workers of the World, which sometimes is called the "Industrial Mischief Makers of the World."

Previous efforts to organize the rubber workers in Akron have failed, and in the present instance the Industrial Workers are in conflict with the American Federation of Labor, whose organizers also appeared on the scene; neither organization loves the other, and efforts are in direct conflict, though both are seeking to make the most of the trouble by enrolling the workers in their respective ranks.

Although small disorder has attended the strike, an appeal for the presence of militia was made to the governor of Ohio, which appeal, however, he refused. Instead, he sent the State Arbitration Board to Akron, but its efforts to bring about peace so far have proved fruitless, the Firestone wage scale having become almost a secondary consideration and other demands having been formulated. In preparation for trouble, however, at least one of the big companies is erecting stockades around its property.

It is estimated that there are about 27,000 rubber workers in Akron, and press reports have stated that nearly one-third of the number are on strike. As a matter of fact, however, the exact number is in doubt, and while practically all of the Akron factories have been affected to some degree, in several instances it is so small as to be almost unworthy of mention.

In an effort to make clear the exact situation, Motor World yesterday asked each of the seven Akron tire companies how the strike had affected their operations and deliveries.

"We have no strike in our factory and no differencies with any of our employes," replied the Goodyear Tire & Rubber Co. "A few have remained away out of sympathy for workmen in other factories and owing to fear and intimidation, but we are running our factory full on day shift. Deliveries to customers not affected in any way."

The B. F. Goodrich Co., which controls both the big Goodrich and Diamond factories, states: "At present we are not seriously affected in any of our operations. Our stocks are so plentiful and widely scattered as to prevent any inconvenience to our trade."

The Motz Tire & Rubber Co. replied that the strike had affected its operations not at all, adding that it is satisfied that it is in position to make prompt deliveries.

None of the other companies addressed replied to the inquiry and their New York branch managers apparently deem it the better part of wisdom not to commit themselves to definite statements. What they say, however, is to the effect that if the strike does not last long their stocks on hand will be equal to the demand.

Columbia Litigant Sells His Stock.

Although there was speculation as to what might be the result when Edo E. Mercelis, as attorney for William H. Burger of New York City, a holder of 144 shares of stock in the Columbia Motor Car Co., appealed from the denial by the United States District Court for the Southern District of New York of his request to intervene in the receivership and reorganization of the United States Motor Co., the matter has been peaceably ended through a financial settlement by the reorganizers which was satisfactory to Burger; and while those of the stockholders who assented to the reorganization got more or less stock in the new company, Burger is wearing a smile of satisfaction which is far above the class of those which adorn the faces of the other Columbia paper owners.

Burger's appeal to be allowed to intervene was to have been argued in the Circuit Court of Appeals Monday last, 17th inst., but it was withdrawn before that date. This action lends color to the belief that Burger's case had strength, as was indicated by remarks made by Judge Hough when he denied the application in the lower court.

Cleveland-Galion Truck in Trouble.

On the petition of Elliott Bright, a creditor to the extent of $350, H. B. Thompson has been appointed receiver for the Cleveland-Galion Truck Co. of Cleveland, Ohio, which concurred in the allegations contained in Bright's petition. These statements were to the effect that unless a receiver was appointed, and the assets thereby conserved, suits threatened by other creditors would endanger the value of the property.

The Cleveland-Galion company, which is capitalized at $1,000,000, represents a merger of the two truck companies of those names, neither of which, however, ever cut a very pronounced figure in the business. In fact, after the merger was consummated about a year since the company's efforts were not centered in the manufacture of motor vehicles but in the development and production of an electric platform truck.

Weed Makes Way Harder for E-Z-On.

E-Z-On is the name, but E-Z-Off might be more appropriate in the light of what happened this week to the E-Z-On Chain Tire Protector Co., of Chicago, which started out in December to invade the tire chain grip market but which now realizes that the Weed Chain Tire Grip Co. is rather jealous of a certain patent, known by the name of Parsons and which bears the number 723,299. The E-Z-On company apparently found little difficulty in entering upon the stage, and the Weed company supplied the hook which transformed it into E-Z-Off, the Weed company having secured a preliminary injunction against the new chain grip makers this week in the United States District Court for the Northern District of Illinois.

The E-Z-On grip was constructed in a method similar to that of the Weed chain but in appearance differed somewhat in that the side chain, instead of being a circle of ordinary wire link chain, was made with links of a peculiar design; large irregular-shaped links were used for attachment to the cross chains and in turn were connected by other wire designs. With the E-Z-On company there were named as defendants the Hartley Mfg. Co., which helped produce the product, Edward D. Lewis, Thos. V. Garvin and Matthew J. Frambach, all of Chicago.

John Splitdorf Completes New Company.

John M. Splitdorf, formerly of C. F. Splitdorf, Inc., and those who were acting with him, have completed the organization of the John Splitdorf Corporation, which has been incorporated under the laws of New York with an authorized capital of $350,000. The incorporators and officers of the company are: John M. Splitdorf, president and general manager; A. L. Kull, vice-president and sales manager; P. J. W. Kelly, treasurer. E. LeRoy Pelletier, who does not figure as one of the corporators, is secretary of the company. Kull, like Splitdorf, was identified with C. F. Splitdorf, Inc., when the business was taken over by John F. Alvord in May last and reorganized as the Splitdorf Electrical Co.

As stated in Motor World of January 30th, the John Splitdorf Corporation will manufacture an electric engine starter, the work being conducted at 136 West 52nd street, New York City. The starter is understood to employ a reduction gear, which is unusual in that it permits the meshing of four or more teeth. The production is so far advanced that it is stated the first deliveries will be made in two weeks.

Chandler to Locate in Cleveland.

As Motor World intimated would be the case, the Chandler Motor Car Co., which was recently organized by former Lozier lieutenants, has selected a factory site in Cleveland, O. The contracts for the erection of the plant itself will be let on March 1st. Meanwhile the temporary headquarters in Detroit will be maintained.

SUPREME COURT DISSECTS A MOTOR TRUCK GUARANTEE

Far-Reaching Decision That Renders the Promise of a Salesman or Other Employe Binding on the Manufacturer.

In a decision written by Justice Laughlin, in which all of his associates concur, the New York Supreme Court, Appellate Division, just has decided "where a contract for the sale of an automobile provides for the payment of the balance of the purchase price after a certain trial period if it is found satisfactory, and the purchaser is induced by an employee of the vendor who is sent for the balance to pay the same, though the car is not satisfactory, upon his assurance that the vendor could and would make it satisfactory, the vendor is bound by this promise of its employee, regardless of whether he originally had authority to change the contract or make a new one, as he was then representing the vendor both with respect to performing its contract and requiring performance on the part of the vendee."

The decision, which is of a far-reaching nature and which alike affects manufacturers and dealers and their salesmen, was handed down in the case of the Dochtermann Van & Express Co., plaintiff-appellant, vs. Fiss, Doerr & Carroll Horse Co., defendant-respondent, which grew out of the purchase by the former, in 1907, of a two-ton Reliance truck.

In the lower court, the plaintiff was given a verdict, but the court set it aside and dismissed the complaint. It was from this judgment that the Dochtermann company appealed. The supreme court ordered that the action of the "court below" be reversed and the verdict be reinstated.

The purchase price of the truck in question was $2,500, the terms of payment providing for 20 per cent. cash with order and the balance within 15 days after date of delivery, the sale being subject to the following guarantee:

"The company agrees to make good by repairs or replacement within one year from first use any part showing defect in material or workmanship on said truck, provided the part is delivered to the company by buyer, transportation prepaid, and clearly shows defect and is tagged with truck or motor number from which taken and date of break. This guarantee does not cover breakage or the cost of repairing when damage is done by misuse, accident or neglect. Tires, coils and accessories are guaranteed by the various makers, to whom all claims must be made direct.

"It is further agreed that if at any time within 15 days from date of delivery the purchasers shall decide the truck to be unsatisfactory, the company will refund the purchase price, less $15 for every day truck was in operation.

"It is understood that the purchaser pays all operating and maintenance expenses during the 15-day trial period.

(Continued on page 30.)

Thomas Family Offers 30 Per Cent.

On "behalf of himself and his family," Edwin L. Thomas, son of E. R. Thomas, is making an effort to untangle the affairs of the E. R. Thomas Motor Car Co. of Buffalo, N. Y. To that end, he has offered the holders of what are known as creditors' extension notes, dated February 15, 1911, and subsequent notes, dated August 15, 1912, 30 per cent. of the face value of such paper. In making his offer, Thomas states that it is not probable that the receivership can be terminated within a year and that his proposal is made not only to give the creditors the advantage of immediate use of their money, but particularly "to unburden the property from the cumbersome effect of the trust agreement."

R. C. H. Discontinues Three Branches.

The R. C. H. Corporation of Detroit has discontinued its branches in Philadelphia, Minneapolis and San Francisco, its interests in each of those cities being turned over to well established dealers. The Philadelphia account was placed with J. Harry Schumacker, the Minneapolis agency with the Harvey Haynes Co. and the California representation with the H. O. Harrison Co., of San Francisco. The former R. C. H. branch managers have been designated district sales managers and will remain in their respective territories to handle the wholesale business.

Mezger Calls Grossman to Court.

C. A. Mezger, Inc., of Mount Vernon, N. Y., maker of "Soot-Proof" spark plugs, filed suit this week in the United States District Court for the Southern District of New York against the Emil Grossman Co., of New York City, maker of "Red Head" plugs, charging infringement of the Mezger patent, No. 700,147, granted to Minnie Mezger, May 13, 1902. The plug was invented by Charles A. Mezger, but the application was assigned to Minnie Mezger.

Pittsburghers Buy Bankrupt Penn Plant.

At the receiver's sale of the bankrupt Penn Motor Co. of New Castle, Pa., the real estate and plant was bid in by George Roth and J. M. Jack, of Pittsburgh. They paid $400 above the $50,000 mortgage on the plant.

FISK'S FIRST PREFERRED OFFERED TO THE PUBLIC

Statement of Output, Assets and Earnings Discloses Prosperous Condition of Tire Company—Capital Now $15,000,000.

Public offerings late last week of $3,000,000 of the Fisk Rubber Co.'s first preferred stock served to disclose the details of the enlargement of that company which has been in progress since October last, when it surrendered its Delaware charter and reincorporated under the laws of Massachusetts, at which time its capital was increased from $4,000,000 to $10,000,000. Preceding the new issue, the capital was again increased—this time to $15,000,000, divided as follows: Seven per cent. cumulative first preferred stock, $5,000,000; seven per cent. cumulative second preferred stock (convertible into common stock), $2,000,000, and common stock, $8,000,000.

The enlargement and semi-reorganization of the company will entail no change in its personnel. Harry T. Dunn remains president, John C. Cole vice-president and Harry G. Fisk secretary and treasurer. The board of directors, however, will be enlarged from three to five.

As Motor World of January 23 stated, John N. Willys, president of the Willys-Overland Co., has acquired a substantial interest in the Fisk company, but the control and direction rests with the Fisk-Dunn interests, which also have enlarged their holdings. Willys figures merely as an investor, and will take no active part in Fisk affairs. The prospectus offering the stock for sale states, however, that the Willys-Overland Co. has contracted to use a large quantity of Fisk tires during the next three years.

As disclosed by the prospectus, the output of the Fisk factory in Chicopee Falls, Mass., during the past five fiscal years, is as follows:

	Automobile casings or shoes.	Automobile inner tubes.	Bicycle tires.
1908	57,695	40,960	84,387
1909	78,259	59,077	103,085
1910	96,692	88,061	168,990
1911	125,279	121,584	207,561
1912	221,826	198,925	240,623

The enlargement of the plant now in progress will permit the output to be increased to 1,600 tires a day, affording, in round figures, a production of 400,000 automobile tires per year, to say nothing of several hundred thousand bicycle tires. Incidentally and interestingly, the prospectus brings out that renewals constitute 80 per cent. of the Fisk tire business.

During the past four years the company's net earnings, after depreciation, averaged

Digitized by Google

$334,371, the amount for the last fiscal year, ending October 31st last, being $508,421. With the increased output and added capital, it is expected that the profits of the present fiscal year will show an increase of at least $250,000.

The total net assets of the company, as of October 31st last, aggregates $5,000,000. In this amount is not included goodwill, patents and trade marks, but it does include some $2,400,000 new cash capital which will be provided by the sale of the present issue of first preferred stock and otherwise. The assets are arrived at as follows:

Land, buildings, machinery etc., partly based on appraisal)		$1,037,636.82
Current assets:		
Inventory	$1,829,507.97	
Accounts and bills receivable	1,111,542.70	
Cash, including moneys to be provided by the present financing)	2,514,602.78	
Deferred charges	56,775.24	
	$5,512,428.69	
Deduct current liabilities	1,550,065.51	
Net current assets		3,962,363.18
Total current assets (exclusive of good will, patents, trade marks, etc.)		$5,000,000.00

The first preferred, of which only two-thirds already has been sold, is offered to the public at 102½ and accrued dividends, and it is figured that it will yield 6.83 per cent. net.

The company has no funded debt, and the stock issue is protected by provision that without the consent of three-quarters of the preferred stock the company can create no mortgages, bonds, notes or other evidences of indebtedness maturing within one year from the date of issue.

An annual sinking fund for the purchase or redemption of first preferred stock also is provided for. It will be created out of the earnings, the amount to be set aside during 1914 and 1915 to be equal to 7½ per cent. of the maximum amount of first preferred stock issued; thereafter annually an amount equal to 15 per cent. of the net profits of the company, but not less than 7½ per cent. of the maximum amount of first preferred stock issued.

Application will be made to list the Fisk first preferred on the Boston Stock Exchange.

Fire Fails to Stop Double Fabric.

The Double Fabric Tire Co., whose plant in Auburn, Ind., was destroyed by fire on the 8th inst., already has leased another building and secured the necessary equipment to permit of its immediate operation. The fire, therefore, will cause practically no interruption in the Double Fabric company's business.

FINDS A NEW WAY TO GET CAR AND OUTWIT REPAIRMAN

Owner Is Charged With Obtaining Car by Paying With Check and Then Stopping Check Payment—Third Parties Involved.

If the allegations of the complainants are provable, Raymond W. Marshall, a business man with an office in the Hudson Terminal Building, New York City, has turned up a new way of getting a car out of a repair-shop without paying the bill and without giving the repairman an opportunity to hold the car for his money; the scheme is merely to pay the bill with a check, no matter how much the bill is, and then before the repairman can get to the bank, stop payment on the check. A means of an inferior grade is to pay with a check the signature of which is scrawly or defective and which will not be honored by the bank.

The story is told in an action instituted in the New York City Court against Marshall by the Berg Auto Trunk & Specialty Co., of New York City, which, besides having a claim of $70.40 for goods sold to Marshall, now holds the checks in question. In the Berg deal, also, a check figures; Marshall claims he paid $25 on his bill, but the complainants allege that his payment was made with a check and that it was returned to him.

Figuring most prominently in the transaction is a check for $647.50 which Marshall is said to have given to Duhamel & Bruecker, Brooklyn repairman. Marshall states that about a year ago they agreed to repair his car for $300, but that when he went for it he was in great haste to start on a tour, and having no ready means of checking up the bill which was presented, paid it, the amount being $647.50. He further states that as soon as he got to his office, where information was available, he checked up the bill and found it not correct. He does not deny having stopped payment on the check. After this he went on a tour. For alleged faulty work he asks $250 damages.

Another check, for $9.50, made out to N. Engwall for work done on the side, also is in the possession of the Berg company and is claimed to have been turned down by the bank because of the nature of the signature. A total of $728.65 is asked by the complainant.

Dressmaker Sues Pneumatic Transmission.

Mary S. Clark, a dressmaker, who invested a part of her savings in the Universal Pneumatic Transmission Co., a Maine corporation, the headquarters of which are in Chicago, Ill., has instituted suit in the Federal court in that city to compel the Pneumatic concern to render an accounting. The dressmaker alleges that on the representations of Charles I. Backus, president of the company, she paid $1,237.50 for 10,000 shares of Universal Pneumatic stock, but when her several requests for information and an accounting were refused, she resorted to law.

Kaufman Wants $10,600 of Indian Money.

The Indian Refining Co. may have what it regards as good and sufficient reasons for not selling as much oil to L. J. Kaufman, Inc., a New York City automobile supply dealer, as it agreed to sell, but the Kaufman company claims a contract which was made November 22, 1912, was broken without cause and asks $10,602.50 in a suit which it filed this week in the Supreme Court for New York county. According to the complaint, 1,500 barrels of No. 3 pale lubricating oil were to be supplied at 13 cents a gallon in the year beginning December 1, 1912, and 20 barrels of No. 3 and 5 of No. 2 red lubricating oil are said to have been delivered December 27, after which there was refusal to deliver more. The barrels each contained 50 gallons and shipments were to be not less than 25 nor more than 50 barrels.

Ewing Now Appears in Findlay Sale.

Who purchased the plant of the bankrupt Findlay Motor Co. of Findlay, Ohio, when it was sold by the receiver last month, appears to be something of a question. At the time of the sale, it was stated that the property had been bid in by J. G. Cleary, of Milwaukee, for $50,000, it being Cleary's announced intention of dismantling the plant and removing the machinery to Milwaukee. Later, however, it was stated that the Milwaukeeian had transferred his bid to W. W. Edwards, president of the Buckeye National Bank of Findlay, but, despite the transfer, on Saturday last L. E. Ewing, the former president of the Findlay Motor Co., over his own name, advertised the equipment "for a quick sale at a ridiculously low figure." He also offered to arrange terms for partial payments and expressed his willingness to take stock in a new organization for part of the purchase price.

Munger to General Manage K-D Motor.

L. D. Munger has assumed the general management of the K-D Motor Co., of Boston, which was built around Miss Margaret Knight's crescent valve motor. Munger acquired an interest in the company several months ago, but hereafter will devote a part of his activities to its affairs, at the same time retaining his holdings in the Moore & Munger Co., one of New York's famous body building establishments.

The Week's Incorporations

Hagerstown, Md.—Antietam Garage Co., under Maryland laws; authorized capital, $5,000; to operate a garage.

Marquette, Mich.—Cloverland Auto Co., under Michigan laws; authorized capital, $15,000; to deal in motor cars.

San Francisco, Cal.—Latham Auto Supply Co., under California laws; authorized capital, $25,000; to deal in motor car supplies

Samger, Cal.—King's River-Hume Auto Service Co., under California laws; authorized capital, $15,000; to operate a motor stage line.

Los Angeles, Cal.—Quartette Automobile Signal Co., under California laws; authorized capital, $100,000; to manufacture motor car devices.

Harrisburg, Pa.—Watts Wagon & Automobile Co., under Pennsylvania laws; authorized capital, $5,000; to deal in vehicles. Corporators—F. N. Watts and others.

Spokane, Wash.—Main Street Garage Co., under Washington laws; authorized capital, $10,000; to operate a garage. Corporators—R. B. Hatley, A. L. Reid, Emily O'Kelley.

Wilmington, Del.—Colonial Tire & Rubber Co., under Delaware laws; authorized capital, $250,000; to manufacture tires. Corporators—F. D. Buck, G. W. Dillman, B. M. Grawl.

Brookville, Ohio—Brookville Auto Co., under Ohio laws; authorized capital, $10,000; to deal in motor cars. Corporators—J. Ward Somers, Edward S. Somers, V. T. Somers.

Omaha, Neb.—Stewart-Toozer Motor Co., under Nebraska laws; authorized capital, $25,000; to deal in motor cars. Corporators—John T. Stewart, George E. Toozer and others.

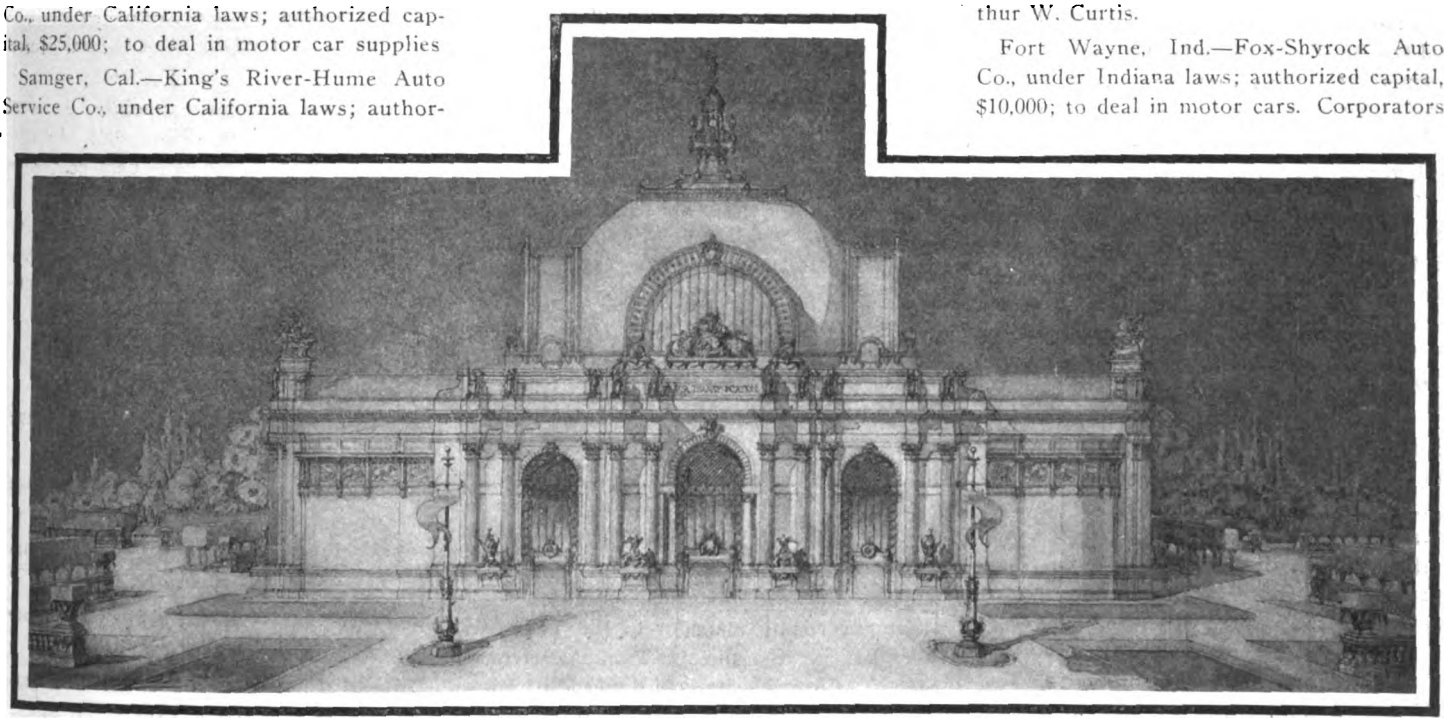
Bowling Green, Ky.—Monroe Motor Co., under Kentucky laws; authorized capital, $2,500; to deal in motor cars. Corporators—Ida B. Monroe, Harry G. Monroe, George W. Monroe.

Dayton, Ohio—Dayton Top Improvement Co., under Ohio laws; authorized capital, $10,000; to manufacture tops. Corporators—C. C. Blackmore, Jean C. Blackmore, H. E. Randall.

Seattle, Wash.—Enterprise Auto Repair Co., under Washington laws; authorized capital, $10,000; to operate a motor repair shop. Corporators—H. O. Hollenbeck, R. W. Smailes.

Cleveland, Ohio—Motor Car Service Station Co., under Ohio laws; authorized capital, $10,000; to operate a service station. Corporators—Paul S. Knight, M. Marquard, Don P. Mills.

Brockton, Mass.—City Garage Co., under Massachusetts laws; authorized capital, $5,000; to operate a garage. Corporators—Bernard B. Winslow, Daniel Winslow, Arthur W. Curtis.



Fort Wayne, Ind.—Fox-Shyrock Auto Co., under Indiana laws; authorized capital, $10,000; to deal in motor cars. Corporators—William W. Shyrock, Bartlett W. Shyrock, George T. Fox.

Cleveland, Ohio—Motor Van Delivery Co., under Ohio laws; authorized capital, $10,000; to operate a motor delivery. Corporators—Elizabeth G. Stewart, S. T. Stewart, John R. Cautner.

Wilmington, Del.—Carels Diesel Motor Co. of America, under Delaware laws; authorized capital, $10,000,000; to manufacture motors. Corporators—H. E. Latter, W. J. Maloney, N. P. Coffin.

Columbus, Ohio—New Columbus Automobile Co., under Ohio laws; authorized capital, $30,000; to deal in motor cars. Corporators—Jesse J. Brown, Lillian E. Brown, William E. McCannon.

New York, N. Y.—Aer-Oid Rubber Substitutes Co., under Delaware laws; authorized capital, $500,000; to manufacture rub-

ber substitutes. Corporators—L. A. Sorensen, M. Friedberg, C. A. Brown.

Cleveland, Ohio—Standard Shock Absorber Co., under Ohio laws; authorized capital, $100,000; to manufacture shock-absorbers. Corporators—C. D. Sward, Wm. Leary, G. D. Sward, Naomi M. Leary, A. A. McGill.

New York, N. Y.—Veerac Motor Truck Co., under New York laws; authorized capital, $10,000; to deal in motor trucks. Corporators—Harry B. McGinley, 761 East 24th street; Edward L. Whittemore, 139 St. James place, Brooklyn; George H. Hinnau, 165 Broadway.

New York, N. Y.—Maxim Tricar Mfg. Co., under New York laws; authorized capital, $100,000; to manufacture motor cars. Corporators—Otto Kuhneman, 2084 Broadway; Charles F Novotny, 660 Dawson avenue; A. A. Meschutt, 43 Liberty tsreet, Ridgewood, N. J.

New York, N. Y.—Auto Center, Inc., under New York laws; authorized capital, $25,000; to deal in real estate for use in the motor car business, such as garages, show rooms, etc. Corporators—Edward W. Forrest, Charles H. Fuller, Byron C. Thomas, all of 290 Lenox avenue.

New York, N. Y.—John Splitdorf Corporation, under New York laws; authorized capital, $350,000; to manufacture electrical equipment for motor cars. Corporators—John Splitdorf, 1427 Doris street; P. J. W. Kelly, 137 Duncan avenue, Jersey City, N. J.; A. L. Kull, 42 West Castle Place, New Rochelle, N. Y.

Minor Business Troubles.

A petition in bankruptcy was filed this week in the Federal court in New York City against Cruice, Keelan & Co., taxicab operators at 143 East 23rd street, it being stated that there are more than twelve creditors. The petitioners and their claims are: Mark Cowles, trading at Mark Cowles & Co., automobile supplies, $116.30; Ray Locke, salary, $25; American Taximeter Co., rental of taximeters, $567.50.

Edgar A. Bloch, of 343 St. Nicholas avenue, New York City, a former automobile dealer, this week filed a voluntary petition in bankruptcy, showing liabilities of $2,149 and no assets; among the creditors and debts are: Broadway Auto Accessories Store, Inc., $539; La Buin Auto Importing Co., $859, and Moto Bloc Import Co., $227.

A petition for a receiver for the Jennings-Sherwood Auto & Carriage Co. has been filed in the court in Bridgeport, Conn., by Sarah L. and George S. Jennings; they state that they own more than one-tenth of the stock of the company and that its assets are liable to waste and deterioration through attachments.

PROMINENT MEN IN TRADE WHO ASSUME NEW DUTIES

Resignations and Promotions That Serve To Place Many Workers In New Places—Few Leave the Industry.

H. W. Hall has been appointed manager of the Boston branch of the Universal Motor Truck Co. of Detroit.

H. S. Shaffer has been elected treasurer of the Keeton Motor Co., of Detroit. He is a brother of C. D. Shaffer, the well-known and wealthy oil producer who already is largely interested in the Keeton enterprise.

Roy G. Harris has been appointed assistant advertising manager of the Firestone Tire & Rubber Co. of Akron, Ohio. Previously he was sales and publicity manager of the Vreeland Chemical Co. of New York.

H. H. Robinson has been appointed assistant director of sales for the Keeton Motor Co., of Detroit. He is new to the automobile industry, although he had acquired a reputation in the telephone business.

D. C. Hathaway has been appointed manager of the branch which the Kelly-Springfield Motor Truck Co. recently established in Cleveland. Previously Hathaway was manager of the Dayton Auto Truck Co. of Dayton, Ohio.

George L. East has been appointed assistant advertising manager of the Timken Roller Bearing Co. and the Timken-Detroit Axle Co. Formerly he was director of advertising for the Olds Motor Works and later for the Amplex Motor Car Co.

J. L. White, for four years purchasing agent of the Northway Motor & Mfg. Co. of Detroit, whose motors are used in Cole cars, has assumed similar duties and a similar title in the Cole Motor Car Co. of Indianapolis. He succeeds E. E. Westman.

J. J. Meade has been appointed superintendent of the engine building department of the Moon Motor Car Co. of St. Louis. He is experienced in that work, having performed similar duty for both the Packard and E. R. Thomas companies for a period of several years.

R. L. Lockwood, formerly an assistant district manager for the Willys-Overland Co., has been promoted to the post of supervisor of district managers in the Eastern territory. His domain includes New York, Pennsylvania, Maryland, Virginia, the New England States and Eastern Canada.

C. A. Carey has been appointed purchasing agent for the Chandler Motor Car Co., of Detroit. Like all of the other officials and department heads of that new enterprise, Carey previously was identified with the Lozier Motor Co. He had charge of its purchasing department.

E. E. Westman has resigned the post of purchasing agent for the Cole Motor Car Co. of Indianapolis to take up similar duties for the Henderson Motor Car Co. of that city. Before becoming connected with the Cole organization Westman was identified with the Weston-Mott Co. of Flint, Mich.

James Joyce, formerly sales manager for the Southern Motor Vehicle Co. of Rochester, N. Y., and one of the genuine veterans of the automobile industry, has been appointed manager of the Philadelphia branch of the Kelly-Springfield Motor Truck Co. The branch is located at 4518 Baltimore avenue.

E. J. Kulas has been appointed general sales manager of the Peerless Motor Car Co., of Cleveland. He is a new comer in the automobile industry, but acquired a reputation as secretary and general manager of the Brilliant Electric Lamp Co., of Cleveland, one of the largest producers of incandescent lamps in this country.

Recent Losses by Fire.

Casper, Wyo.—Richards Garage, garage damaged. Loss not given.

Madelia, Minn.—Forstner Bros., garage damaged. Loss not given.

Toledo, Ohio—Ray Kuhn Co., accessories stock damaged. Loss not given.

Lewiston, Me.—Nelke & Partridge, Central Garage, destroyed. Loss, $25,000.

Milton, Mass.—William B. Stearns, garage and cars destroyed. Loss not given.

St. Paul, Minn.—C. S. Neutson, supply dealer, 7th street, stock and building damaged. Loss, $25,000.

Kansas City, Mo.—Admiral Auto Livery, 715 Lydia avenue, building and contents damaged. Loss, $1,500.

Milwaukee, Wis.—Manhattan Garage & Express Co., 270-74 27th street, garage and 23 cars destroyed. Loss, $65,000.

New York, N. Y.—Independent Garage Owners Co., 205 West End avenue, garage and 50 cars destroyed. Loss, $100,000.

Washington, D. C.—David Hendrick, 1315-19 H street, northwest, building damaged and several cars destroyed. Loss, $9,000.

Kansas City, Mo.—Winton Motor Carriage Co., 3324-26 Main street, and Franklin Automobile Co., 3320-22 Main street, building, fixtures and 33 of Winton company's and 12 of Franklin company's cars destroyed. Loss, Winton, $125,000; Franklin, $25,000.

In the RETAIL WORLD

Otto Baumann of Lake Wilson, Minn., is erecting a new garage.

F. E. Bates is making ready to erect a garage in Northfield, Minn.

A new garage is being erected for Shaffer & Lounsbury in Merced, Cal.

W. D. Jackson is about to open a garage and machine shop in Waxahachie, Tex.

P. G. Liederbach has secured a site in Buffalo, Minn., and will build a garage.

A new garage is being erected in Carthage, Ill., for the Auto & Carriage Co.

L. E. Rogers of Sandwich, Ill., is about to open a garage in Leland, in the same State.

Richard Welland is building a garage in Marblehead, Mass. It is located on Atlantic avenue.

Jonas D. Emery of Concordia, Kan., has purchased the automobile business of John Stewart.

A. N. Barnes has sold the Libby Motor Co., in Santa Ana., Cal., to I. M. Von Schriltz.

Aaron Joens has leased a newly constructed building in Marshall, Ill., and will open a garage.

Joel F. Batt is erecting a concrete garage, 36 x 48 feet, in Pen Argyl, Pa. It is located on E street.

Ruth & Smith is the style under which a new supply firm is about to open up in Downs, Kan.

Howard Tracy has entered the trade in Ashland, O. He is trading under the style Central Garage.

George A. Stilling has entered the trade in McHenry, Ill. He will sell Hupmobiles and Veerac trucks.

A. A. Wedgewood, formerly of Sioux City, Ia., has removed to Madison, N. D., where he will open a garage.

J. E. Hansen, a dealer in Bloomington, Ill., has withdrawn from the trade; he had the Warren-Detroit agency.

The Schofield Auto Co. has been formed in Provo, Utah, and will handle Ford cars; F. L. Schofield is manager.

Lewis & Drye, of Bradfordsville, Ky., are about to open a garage and repair shop in Lebanon, in the same State.

Robert W. Lehr has opened a garage in Paola, Kan. He has the location formerly occupied by the City Garage.

The Horton Auto Co., of Fennimore, Wis., has let the contracts for a new garage; the company has the Ford agency.

G. L. Schultz, Albert True and Edward Kaifer have formed a co-partnership in Henry, Ill., and will handle the Velie.

F. W. Gilman, a real estate broker in Portersville, Cal., has become an automobile dealer; he has the Marathon agency.

John Jones of Oakley, S. C., is about to open a garage in Walterboro, in the same State; he also will conduct an agency.

Floyd P. and Raleigh L. Harris plan to establish a garage business in Galva, Ill. The style will be Harris Bros. Garage.

Charles W. Ellis has had plans prepared for a new garage which he will have erected in Greenville, N. C. It will cost $4,000.

G. Harold Fanning, of Brooklyn, will enter the trade in Smithtown, Long Island, N. Y., March 1; he will handle the Stutz.

The Tom Botterill Automobile Co., of Salt Lake City, Utah, has added a supply and accessory department to its business.

Walters & Hand have opened a garage in Wheeling, W. Va., on Elm street; they will handle several makes of car, including the Overland.

The Motor Vehicle Sales Co. has opened new salesrooms and a garage on Farmer's avenue, Kalamazoo, Mich. The concern is Buick dealer.

Adolph J. Nus and W. U. Mussina have formed the N. & M. Motor Co. in Williamsport, Pa. They will locate at 141 West Church street.

Kennedy Bros., of Pratt, Kan., have taken over the Bell Garage in Dodge City, in the same State; the firm comprises H. J., W. E. and B. L. Kennedy.

The Mountain City Garage Co., of Altoona, Pa., has located a new garage at 9th avenue and 12th street; the establishment includes a machine shop.

J. M. Lawrence of San Jose, Cal., has taken a dealership; he represents the Jackson line in Santa Clara, Santa Cruz, Monterey and San Benito counties.

Clarence Funkey plans to open a new garage in Hancock, Mich., this coming summer; a livery service which he started about a year ago is to be extended.

Fred R. Young, of Moline, Ill., opened a new garage last week, the opening taking the form of a dance; the two floors each have 7,000 square feet of floor space.

Charles Mackey has purchased of George Bentel a half interest in the Pacific Coast agencies for the Mercer and Simplex cars; the headquarters are in Los Angeles.

Leonard Wyeth has purchased the James L. Bush Garage in Tuscola, Ill. The business includes the Ford and Rambler agencies for Douglas and Moultrie counties.

Arthur Staack has bought the interests of the latter named partner in the garage form of Hamann & Schumacher, in Guttenberg, Ia. The new firm is Hamann & Staack.

J. L. Teberg of Taylor, Tex., has sold the Texas Garage on West 4th street to E. B. Garess; Garess also owns the Taylor Garage, on West 2nd street, and will operate both.

J. C. McDonald and Joseph Atherton, owners of the M. & A. Garage, on North Lafayette street, Macomb, Ill., have purchased the Stocker Garage; they will operate both.

The W. J. Burt Motor Car Co., of Los Angeles, Cal., has completed a new garage and salesrooms; they are located at Pico and Hope streets. The company handles Auburn cars.

C. T. Bernhardt, formerly connected with the Gardena (Cal.) Garage, has branched out for himself; he plans to establish a garage and repair business in that town near Wilmington road.

Thomas Trewet, of Sibley, Ia., has disposed of his garage and machine shop to John Shunick and R. Dimmick; the business was exchanged for land in Colorado, which Trewet will work.

The Whittlesey Garage & Machine Co. has been organized in San Benito, Tex. The incorporators are C. W. Whittlesey and James T. and James F. Valentine; a garage and machine shop will be opened.

The T. G. Northwell Co., a dealer in Sioux City, Ia., which was burned out recently, has arranged to resume business; temporary quarters have been secured in the Haakinson & Beaty building.

Charles C. Collins and Tom S. Davidson have formed a copartnership and have opened up in Denver, Col., at 1633 Court place, under the style National Rubber Sup-

Digitized by Google

ply Co. They will handle accessories and Revere tires.

Lamping & Garfield, of Seattle, Wash., are about to establish a branch in Tacoma, in the same State; they will erect a new building, 50 x 120 feet, at a cost of $4,000. The firm is distributer of Flanders cars.

H. V. Maresch, of Taylor, Tex., has sold the Star Garage, on East 5th street, to Nowlin & Caswell. T. J. Caswell, one of the partners, is from Georgetown, Tex., and the other, Daniel Nowlin, from Circleville, in the same State.

H. J. Hilliard has purchased the Hoganson & Fruland Garage, in Ottawa, Ill., which he formerly operated. Hoganson & Fruland at the same time bought the Ottawa Garage on Columbus street from Walter Mers, J. O. Laugman and Jesse West.

The Cadillac Sales Co. has been organized in Knoxville, Tenn., and has contracted for the erection of a garage and salesrooms at Gay and Main streets; the members of the company are E. C. Mahan, Benjamin A. Morton, A. M. Stewart and T. T. Pace, the latter of whom will act as manager.

Ackerman & Baird have opened one of the largest garages in Brooklyn, N. Y., at 2 Keap street; they will handle the Mercer, but their salesrooms will be located elsewhere. R. P. Ackerman, one of the firm members, was with the I. S. Remson Mfg. Co., Brooklyn agents for the Locomobile and Abbott-Detroit, for four years, while Baird is the son of the proprietor of one of Brooklyn's large stores.

The Thomas Motor Car Co. and the Carpenter Motor Sales Co., both of Los Angeles, Cal., have combined under the name Thomas Motor Car Co. of California. The officers are: President, A. M. Young; vice-president, Lee R. Carpenter; treasurer, J. F. Scott; secretary, E. O. Hanson; retail sales manager, L. A. Pratt; service manager, William F. Lloyd. The new company handles the Paige-Detroit car and the Lippard-Stewart truck and is located at 11th and Flower streets.

The Central Iowa Motors Co., of Des Moines, Ia., has taken over the Van Vliet-Bradt Auto Co., and will remove from 706 Mulberry street to the Van Vliet-Bradt location at 919 Locust street; the change adds the Moon distributing agency to those of of the Hupmobile and American, heretofore held by the Central Iowa company, and an extended distribution is planned. F. S. Cummings, vice-president and sales manager of the Central company, will manage the new business, and the Des Moines dealers, Steele & Shaw, also will locate at 919 Locust street. W. J. Bradt will continue with the Herring Motor Supply Co. and C. G. Van Vliet will engage in other business.

HOLDS PATENTEES CANNOT CONTROL RE-SALES PRICES

Federal Judge Delivers Hard Blow in Unexpected Direction—The Points Involved and a Patent Lawyer's Opinion.

Until it has been digested by their legal advisers, or until a higher court has confirmed his opinion, lawyers versed in patent causes express the belief that it will not be safe for dealers handling patented articles to assume that the decision of Judge Ray, of the United States District Court for the Northern District of New York means that they are free to disregard the prices fixed thereon.

Judge Ray's decision was handed down on Monday last, 17th inst., and as it apparently holds that a patentee has no right to fix the re-sale price of his goods, and that he otherwise relinquishes control after their manufacture, it created a tremendous sensation in practically all lines of industry. The demand for copies of the decision—an unusually voluminous one—has been so great that it has not been possible to supply it.

The suit which brought about the decision is that of the Waltham Watch Co. of Waltham, Mass., vs. Charles A. Keene, a New York jeweler, who long had cut Waltham prices and otherwise flouted Waltham authority. He was taken into court on a charge of patent infringement, the infringement consisting of having violated the price fixed on the Waltham movement.

This patented watch movement is sold with what is termed the "Waltham Contract Notice" attached to it, the "notice" differing, however, from the usual conditional patent license which is commonly used in the sale of Victor talking machines, Edison phonographs, Klaxon horns and other patented articles. The Waltham "notice" declares that the article to which it is attached is sold subject to certain stated conditions which every buyer thereof agrees to perform, and goes on to say that "breach of any of these conditions shall revest in the company the title to this movement and upon tendering the price paid therefor to the holder thereof, the company may retake possession of the same. These conditions will be enforced by the company."

In the usual license agreement it is usually stated that the license for use and sale is conditional and that breach of conditions terminates the license and constitutes an infringement of the patents.

George Cooper Dean, a New York practitioner who is eminent in the domain of patent cases and conditional licenses, states that attorneys who are familiar with the law governing the latter are of opinion that breach of the Waltham contract of sale belongs to the law of contracts, and that the contract, as such, may be a violation of the Sherman act, as decided by Judge Ray.

(Continued on page 26.)

Rajah Wins a Case, Loses a Point.

Selling imitation Rajah spark plug porcelains was the point at issue in two actions in the United States District Court for the Southern District of New York which were this week decided, one for and the other against the Rajah Auto Supply Co., of Bloomfield, N. J., the latter company being the complainant in both cases.

The action decided favorably to the Rajah company was against the American Auto Supply Co., of Buffalo, N. Y., which was charged with selling porcelains to fit the Rajah company's plugs; the court directed the issuance of an injunction restraining this practice as an infringement of the Rajah patent, No. 825,856.

The other action was against the Emil Grossman Co., of New York City, against which the Rajah company obtained an injunction about a year ago, and the request was that the Grossman company, charged with having sold porcelains to fit Rajah plugs following the enjoining, be adjudged in contempt of court. The judge refused to grant this motion, expressing a belief that the Grossman company had not intentionally violated the court order. An appeal will be taken.

Coloradoans to Make Tires in California.

According to reports from Denver, the W. C. Hendrie Rubber Co., of that city, has purchased a six-acre site in Torrence, a suburb of Los Angeles, Cal., on which will be erected an automobile tire plant at a cost of $100,000. The Hendrie company is producing leather belting and steam packing in its plant in Denver, but has found that the dryness of the Colorado climate makes it impracticable for crude rubber to be stored there; hence the choice of Los Angeles as a site for the proposed tire factory.

Chain Makers Prosecute Supply Dealers.

The H. Channon Co., of Chicago, makers of tire chains, filed judgment for $272.02 this week in the New York county clerk's office against Violet V. Sullivan and Benjamin Sullivan, Jr., who trade in Brooklyn, N. Y., as the Bay Ridge Auto Supply Co. The suit preceding judgment was in the Municipal Court .

Metz Adds $50 to Price of Runabout.

The Metz Co., of Waltham, Mass., has increased the price of its 22-horsepower runabout to $445. Previously it listed at $395.

NEW YORK, FEBRUARY 20, 1913

"SOAKING THOSE AUTOMOBILE 'FELLERS.'"

The general change in political complexion of the various State legislatures which followed the over-turning election of last November is having a natural result. Always a popular legislative pastime, tinkering with automobile laws has become almost epidemic.

The many men who for the first time find the title "Hon." placed in front of their names are feeling their responsibilities, and in an endeavor to live up to them, and to prove their usefulness to their respective constituents, what is simpler than "soaking those automobile 'fellers.'" The deluge of new bills and of amendments to existing laws, which range from grave to gay, is so great as to indicate that the secretary of state, or the member of the legislature who has not offered at least one such measure is lacking in either a sense of humor or a sense of duty.

With comparatively few exceptions, all of the law-compounders who have "seen their duty and done it" apparently are agreed that the one way to make the highways safer is greatly to increase the amounts of the license or registration fees, or both, which are imposed on automobilists. The fact that no other vehicle which uses the roads pays one cent for such use is not permitted to enter legislative halls, where, evidently, it is never realized that roads were destroyed before automobiles were thought of and that it hurts as much to be injured by a horse-drawn vehicle as by any other, and that persons can be killed quite as dead by one as by the other.

The idea that piling on the fees and increasing the restrictions on automobiles, which has obtained for so many years, constitutes a cure-all still obtains. Even New York's new governor and new secretary of state, both apparently well-meaning men, are possessed of the notion that the fees should be largely increased, not as a matter of justice but, according to the secretary of state, because owners of automobiles can afford the increase, or, according to the governor, because the State "needs the money."

Despite the fact, it is not too much to hope that some day, at least, in the far distant future, there will arise a legislator who is wise enough and fair enough to insist that all road users shall be treated alike, and who will recognize that the measures which will most effectively add to the safety of the highways are those that will reduce the small boy peril and that will require the use of lamps—and, perhaps, numbers—on all vehicles of whatever nature.

BENEFITS OF REMOVABLE TRUCK BODIES.

It is one of the plainly noticeable tendencies of the commercial vehicle industry that the demountable or detachable type of truck body steadily is increasing in popularity. The development is logical, of course, if true efficiency, which necessitates the constant employment of the vehicle, be considered, for the removable body eliminates a great portion of the "dead" time represented by loading and unloading operations.

There is another angle of the situation, however, which is, perhaps, not so plainly apparent and to which little attention has been directed despite its evident importance. The demountable body virtually lifts the motor truck out of the long haul rut where it really has belonged prior to the advent of the removable superstructure, and has made of it a double purpose vehicle which is equally applicable, with economy, to either long or short haul work. That is to say, the demountable body for short haul work has reduced the ratio of the time on the road, when the truck actually is performing useful work, to the time lost in loading and unloading operations, to the point where it is even lower than is the same comparatively low ratio in long haul work where the non-demountable body is employed.

Incidentally, the removable body permits of the alluring possibility of employing several different types of bodies for different kinds of work, and here again it increases efficiency in general, for efficiency of the highest kind requires specialization, and specialization in the transportation of full loads of, say, coal on one trip and wood on the next, is impossible with one style of non-demountable body.

In at least one respect, the national shows proved that the lessons of real salesmanship gradually are being heeded by the trade. There no longer is that promiscuous or indiscriminate distribution of catalogs which once was the rule. Instead most of those who asked for catalogs—car catalogs, at least—were requested to leave their names and addresses, to which the desired literature would be forwarded later. Manufacturers have reason to realize that catalogs cost money, and they also appreciate the value of obtaining names and addresses.

LUBRICATING OIL PRICES FOLLOW CRUDE OIL UPWARD

Advances in Crude Petroleum Cause Two and Three Cents Increase in Lubricants—Crude Raised 80 Per Cent. in Year.

Marked advances which have been made in the prices of crude oils within the last few weeks have made themselves felt in the lubricating oil field, and this commodity now stands generally about two cents higher than it did at the opening of the new year, the advance in some instances being three cents; the change, on the whole, makes difficult a concrete and detailed enumeration of specific alterations because of the numerous prices that apply in the oil trade, there being a wide range from the individual consumer to the manufacturer and the small and large garageman and the varying grades of manufacturers being the intermediate stations in the price scale.

To cite an instance, the Wolverine Lubricants Co., on January 5, made an increase of two cents in practically all of its prices and did not confine the raise to different grades, as have some of the other companies, among them the Columbia Lubricants Co. of New York, maker of Monogram oil, which made its principal increases in the lower grades of gasoline engine oils; in the higher priced grades of oils the changes were not so great or so numerous, and at the office of the Standard Oil Co. it was stated that no change had been made and that Polarine Oil, its leading commodity in the lubricating line, remains as before the recent agitation in the crude field.

The jump in the price of the crude product has as one reason the "supply and demand" story, while there are those who claim to be familiar with petroleum products who declare the agitation is of purely artificial origin and that the increases have been made with a well defined purpose in certain quarters. By others it is said to be a fight by the refiners for better prices. To the lay mind the fact that certain grades of crude oil jumped at the rate of about five cents a jump and that the jumps were but two or three days apart is at the best bewildering when an attempt is made to recognize a congruity in the relations between price and supply and demand.

Within about a year crude oil has increased about 80 per cent. in price. The figure per barrel at the beginning of this period, taking a certain grade of Pennsylvania oil which is recognized as a standard for price variations, was $1.30, but advances have brought this up until the price now stands at $2.33.

The undue activity in crude oil has given rise to anticipations that the advance in the price of gasolene from 16 to 17 cents made by the Standard Oil Co. January 1 would be followed by a further increase, and predictions and rumors have said the next advance wolud be to 19 cents, but the Standard company apparently has been so busy distributing its recent $50,000,000 "melon" that it has not had time to tickle the gasolene frog sufficiently to cause such an able leap.

Mitchell Terminates Old Insurance Suits.

In order to stop four lawsuits which were not more than officially half started a year ago, it was necessary this week for the Mitchell-Lewis Motor Co., of Racine, Wis., to file the suits officially in the Supreme Court for New York county and at the same time file orders of discontinuance. The actions grew out of a fire in the Mitchell-Lewis plant about two years ago, and following a dispute as to the insurance, suits were partially launched against the Northwestern Insurance Co., the Liverpool Victor Insurance Co. of England, the Regal Insurance Co., the Liverpool Victor Insurance and the Essex & Suffolk Insurance Co. However, before the proceedings attained any importance, the matter was settled, but it was not until this week that the cases were closed up in the court records.

Sign Brings Toplitz Double Publicity.

There are two ways in which an electric sign can bring a man's business before the public, as can be attested by Bert L. Toplitz, president of the Allenhurst Garage Co., of 135 West 37th street, New York City; one way is to put the sign in place and have it illuminated at night, the other is put up the sign and have the maker sue for its value. Toplitz acknowledges financial embarrassment at the present time, and when the Federal Sign System took the matter into the Municipal Court, judgment for $68.08 was secured and when he filed to adjust matters he was summoned into the New York City Court in supplementary proceedings. This week the court granted an attachment bailable in the amount of $50, the unpaid portion of the bill being $58.08.

Michigan Men Launch Admiral Truck.

Having secured the necessary financial support, Earl Porter, Don E. Evans and H. G. Dewey have organized the Admiral Auto Co. in St. Louis, Mich., and will devote themselves to the manufacture of a half-ton truck that will list at about $900. Later they will also produce a light farm tractor. The Admiral company, which will be capitalized at $50,000, will start in a comparatively small way, probably with a working force of about 20 men.

February 15-22, Albany, N. Y.—Annual show of the Albany Automobile Dealers' Association in the State Armory.

February 15-22, Newark, N. J.—New Jersey Exhibition Co.'s Sixth annual exhibit in the First Regiment Armory.

February 16-23, Richmond, Va.—Richmond Automobile Dealers' Shows Co.'s exhibit in the Horse Show building.

February 17-27, Kansas City, Mo.—Kansas City Automobile Dealers' Association's show in Convention Hall. First week pleasure cars; second week commercial vehicles.

February 18-22, Baltimore, Md.—Baltimore Automobile Dealers' Association's annual show in the Fifth Regiment Armory.

February 19-22, Kalamazoo, Mich.—Kalamazoo Automobile Dealers' Association's annual show.

February 19-22, Davenport, Ia.—Annual show of the Tri-City Automobile Dealers' Association in the Coliseum.

February 19-22, Oshkosh, Wis.—Oshkosh Automobile Dealers' Association's second annual show in Armory B.

February 20-22, Canandaigua, N. Y.—Motor Car show in Hawley's Garage, under the management of A. Blumenstein.

February 22-March 1, Brooklyn, N. Y.—Brooklyn Motor Dealers' Association's annual show in the 23rd Regiment Armory.

February 24-March 1, Omaha, Neb.—Omaha Autmobile Dealers' Association's annual show.

February 24-March 1, Cincinnati, Ohio—Third annual show of the Cincinnati Automobile Dealers' Association in the Cincinnati Music Hall.

February 25-28, Topeka, Kan.—First annual show of the Kansas Motor Show Co.

February 26-March 1, Fort Dodge, Ia.—Second Annual show of the Fort Dodge Dealers' Association in Armory.

March 1-8, Paterson, N. J.—Second annual show of the Paterson Automobile Dealers' Association.

March 8-15, Boston, Mass.—Boston Automobile Dealers' Association's annual show in Mechanics' Hall. Pleasure cars only.

March 19-25, Boston, Mass.—Boston Commercial Vehicle Association's annual show in Mechanics' Hall.

March 3-8, Pittsburgh, Pa.—Pittsburgh Automobile Dealers' Association's show in Duquesne Garden.

FRANCE'S RATING FORMULA PROVOKES KEEN DERISION

Recently Adopted Plan, Which Taxes Piston Displacement, Styled a "Mess" and a "Catastrophe"—How It Works Out.

Whether or not the formula recently adopted by the French Department of Mines for the determination of the taxable horsepower of motor car engines eventually will conduce to that placidity of mind induced by the old formula, which was substantially the same as the present American A. L. A. M. formula, remains to be seen. At present, however, the French automobile journals are inclined to view it as a huge joke—one of them styles it "a catastrophe" and "a mess" almost in the same breath and further remarks that the Department of Mines must have employed a Sherlock Holmes to derive it—despite the fact that it has been aimed to account not only for stroke but for speed as well. Which means, briefly, that the French government hereafter will tax its self-propelled vehicles according to the piston displacement per minute, instead of on an empirical formula based on piston area and an arbitrary piston speed.

The new formula is empirical in a measure, of course, for it embraces different constants for two-, four- and six-cylinder motors, though just how the constant was obtained is not made plain. At any rate, it is explained that the new formula is designed to determine the minimum possible horsepower obtainable under known conditions—and it is the "fatal expression minimum" that is most held up to ridicule.

The formula itself as adopted is as follows:

$$P = KnD^2LV$$

where P = the power, K = a constant, n = the number of cylinders, D = the diameter of the pistons in centimeters, L = the stroke in centimeters and V = the number of revolutions per second. The constants adopted are as follows: 0.00017 for two-cylinder motors, 0.00015 for four-cylinder motors and 0.00013 for engines of more than four cylinders.

As an example of just how the formula works, it is interesting to note that a well-known American long-stroke motor measuring 3¼ inches bore and 5¼ inches stroke and normally rated according to the A. L. A. M. formula at 22.5 horsepower, is rated at 27.196 horsepower according to the new French formula. How far from right the rating is may be judged from the fact that at 2,200 revolutions a minute the motor in question actually develops 41 horsepower by Prony brake, while at 1,500 revolutions a minute the formula rates the motor at only 18.4 horsepower.

Three Tradesmen Cross Great Divide.

William E. Moyer, head of the Moyer Automobile Co. of Des Moines, Ia., and president of the Des Moines Auto Dealers' Association, died in Silver City, N. M., on Wednesday, 12th inst. Tuberculosis was the cause of his death. Moyer was 36 years old and a native of Iowa. He had been engaged in the automobile business for some 10 years, having first started as a Buick branch manager.

Walter W. Wallis, manager of the Milwaukee branch of the Goodyear Tire & Rubber Co., committed suicide by hanging in that city on Sunday, 9th inst. Temporary insanity is ascribed as the cause of his rash act. For several months he had complained of being troubled with frightful dreams, in some of which he saw himself hanged. Wallis was 60 years of age.. He is survived by his wife and four adult children.

Sigmund Wollheim, vice-president and sales manager of the Crown Commercial Car Co. of North Milwaukee, Wis., died at his home in that city last week after a year's illness. He was 55 years of age.

White and Manhattan Renew Fight.

The filing of an order this week in the New York City Court marks the beginning of the retrial of a dispute between the White Co., of Cleveland, Ohio, and the Manhattan Top & Body Co., of New York City, which when tried the first time in that court resulted in a verdict of $990 for the Manhattan company; the suit was for the price of a body which the White company ordered but refused to accept on the grounds that it was not satisfactory. The $990 verdict was reversed by the Appellate Term of the Supreme Court for New York county and the new trial ordered.

New Men and New Money in Midland.

The Midland Motor Co., of East Moline, Ill., of which new interests recently acquired control, has increased its capital from $100,000 to $300,000. The new money, it is stated, will not be utilized for the enlargement of the plant, but for the consummation of what are referred to as "long-cherished ideas."

Kelly Truck Branch Opened in Chicago.

The Kelly-Springfield Motor Truck Co. has established a branch in Chicago at 2439 Cottage Grove avenue, of which L. D. Garrison has been appointed manager. In connection with the branch, there will be maintained a complete service department which will be open day and night.

K-D ADDS A "SIX" AND RADICALLY ALTERS DESIGN

Crescent-Shaped Valves Retained in Miss Knight's Invention, But In New Location—Some Other Features Discarded.

After more than a year spent in experimenting, the K-D Motor Co., of Boston, Mass., whose original product, Miss Margaret Knight's four-cylinder crescent valve motor, was brought out at the Boston show last year, has developed a "six" which has very little in common with its predecessor. As a matter of fact, the design as a whole differs radically from the original; it is similar to it only in that it employs the sliding crescent-shaped valves made familiar by the "four," though even the location of the valves has been altered. The bore and stroke remain the same, however—four inches and six inches, respectively.

The most conspicuous alteration in the design lies in the elimination of the Scotch yoke construction between the piston and the crankshaft and the casting out of the method of leading the exhaust gases into the crankcase for the ostensible purpose of assisting the scavenging stroke of the pistons. Neither is a feature of the new design, which, instead, is quite similar to orthodox poppet valve construction except as regards the valves, of course. Which is to say, the vertical motion of the pistons is converted into rotary motion only through the intermediary of the usual connecting rods. The use of piston rods, it is explained, limited the speed obtained to a certain extent and hence they have been discarded.

In shape, and in method of actuation, the crescent valves remain the same, movement being imparted by separate miniature crankshafts for each set, intake and exhaust, respectively; they are mounted at opposite sides of the cylinders. Instead of being fitted into pockets opening directly into the combustion chamber, however, thus necessitating that the pistons slide over them, they are outside the cylinders proper and the pistons do not come in contact with them. Full advantage of their crescent shape is taken to provide unusually large ports, which, combined with their quick opening and closing, is considered to be highly advantageous. The new "six" is to be uncovered for the first time at the Boston show next week.

Paige-Detroit Enters British Market.

The Paige-Detroit is the latest American car to enter the British market. The agency for it has been placed with the G. & W. Motor Exchange, Ltd., of London.

WIDE-AWAKE MERCHANDISING In the Motor Trade

BENEFITS OF QUICK SERVICE

Lack of Prompt Attention to Callers as an Effective Means of Losing Sales—One Example in Point.

The old saying, "He gives twice who gives quickly," might be properly changed for the benefit of the merchant and his salesmen to read "He serves twice who serves quickly."

If there is anything more exasperating than to have to wait five or ten minutes, or even three minutes, in a store before you are waited on or before anybody pays attention to you, it would be hard to say what it is. Buyers appreciate instant attention. The merchant who comes quickly forward to meet his trade gains inestimably. He has not only shown proper courtesy, but there is a certain amount of appreciation of intended patronage conveyed in the eager, ready attention. It never fails to win appreciation, even if it is followed by the request to "Make Yourself at home; I will be at liberty in a few minutes."

Courtesy as a First Principle.

This spontaneous courtesy is too frequently lacking in automobile establishments, and yet it is one of the first principles of inside, or "floor," salesmanship. You can go into many garages and accessory stores, "rubber around" for a few minutes, and walk out without anyone taking the trouble to inquire what you desire. One interesting and noteworthy feature of this is that the man or woman who walks out under such conditions rarely walks in again. It is a fact that most persons subjected to such lack of attention prefer to pay more money or endure inconvenience rather than submit to such treatment.

A window full of electric horns with the prices marked on attractive cards drew the attention of a Detroit motorist to such an extent that he entered the accessory store with the intention of investigating, and buying if satisfied with the tone, etc. He waited around for what seemed like five minutes, while two men of the institution talked with a third who apparently was a customer. He sounded the horns and otherwise indicated the cause of his interest, but no attention was paid other than to look up at him when he operated the instrument. As he opened the door on the way out, a man—evidently the proprietor—said, "I'll be with you in a minute." But it was too late; the would-be customer did not tarry longer.

Even a compelling window display and goods of merit cannot overcome the chilling effect of such a reception. That is one reason why every dealer should emblazon on his own mind as well as on the minds of every one of his helpers the slogan, "He serves twice who serves quickly."

ABOUT CIRCULARIZING OWNERS.

The accessory dealer and jobber has a wonderful chance to get business in his locality because he can find out who are his possible customers, and this at once eliminates the element of waste that is common to most businesses.

The secretary of state will furnish complete lists of automobile owners in the state and in a great many cities lists can be secured locally. From all of which it might be inferred that direct advertising of a very profitable sort could and would be done. Of course, everyone knows that this is the case; but it is equally certain that, like a great many things everyone knows, only a few avail themselves of the opportunity.

Once a year everybody gets a notion to send something to every owner in a given locality, and it is all done about the same time, with the result that for a week or ten days after his car has been registered or possibly after the first fine spring day the owner is deluged with circulars. The rest of the time he gets an occasional flash that finds its way into the waste basket—unread and therefore unheeded.

Within the past three years, drawing from personal experience, there cannot be recalled any single direct-by-mail campaign that stands out from the others. Nor does there remain recollection of any definite proposition by mail that offered to furnish a certain thing at a certain time for a certain price. Hundreds of general publicity folders that told things already known were received, but none were far enough above the average to leave the slightest impression.

Automobile dealers and accessory dealers will find it profitable to pick out one or two things and make a complete proposition, including prices and offers of immediate delivery at the home or office of the prospect. In other words, make a situation that calls for action of some kind. Don't content yourself with general talk about quality and best prices. Say something!

LIGHTING DISPLAY WINDOWS.

Some window displays are completely killed because of heavy shadows. You go by the store and are conscious that there are display windows, but the shadows are so deep that you do not get a glimpse of what is inside. This is a condition that should be remedied even if it is necessary to use artificial light to attract attention. Study the situation, see what can be done by means of mirrors, reflectors, etc. But do not pay for window space and then not get the value of it.

One of the most interesting facts in connection with selling cars or anything else is that the human equation is always human. It's never the same; but there is always a way to a heart or a head if we will only steer for the right channel.

"NOTHING DOING" DISPROVED

Incident that Serves to Show How Sales Ripen Unknowingly—Also Illustrating Folly of Not Following Up Closely.

"Things certainly are quiet," remarked a salesman for a certain automobile concern as he dropped into the office of the manager. "There is absolutely nothing doing. I've made seven calls to-day and haven't got even a nibble. I don't believe any one wants to buy cars now; everyone seems to want to wait till spring."

"What about that Mr. Dean? Have you called on him this week?" asked the manager.

"Oh, I dropped in to see him about two weeks ago; I don't think he is ready yet," replied the salesman.

"Well, I have an idea that it's about time to try and close with Dean, and I want you to call on him this afternoon. If he is not in this afternoon, get busy on him the first thing in the morning. And there's Mr. Rogers—what about him?" queried the manager.

"To tell the truth, I had forgotten all about Rogers," explained the salesman.

It was about 2:30 in the afternoon when this dialogue took place. At five o'clock the salesman called up the manager and reported that he had secured Dean's signed order for immediate delivery.

The manager knew no more about Dean's being ready to close than the salesman, but when he heard the salesman talk about the quietness of things he began to recall prospects that a month ago seemed live ones; Dean was the first that came to mind.

The trouble with the salesman was that he was trying to make too many calls, and as a result was not following up closely work already started. If he had been asked to name ten of the livest prospects he had he could not have done it. Can you? If you can, then the suggestion is that you get busy on that ten and turn some of them into sales. After you have their cases thoroughly settled, tackle ten more. You will find the plan works.

"Knowing a buyer well, is a very fine asset, that is, if you sell the goods to him at a profit; but a salesman can reach a position where everyone is so friendly that he sells his goods at a loss."

AN OPPORTUNITY THAT YAWNS FOR A WIDE-AWAKE DEALER.

Some dealer in high-priced cars such as are uniformly driven by hired chauffeurs would make a great hit with his customers if he would draw up and supply his customers with a form for hiring a chauffeur.

Such a form would indicate the responsibilities, duties and privileges of a chauffeur in clear, definite language. It would cover every situation as far as possible and should be made from a thorough knowledge and understanding of the whimsicalities of that recently developed profession.

Imagine a customer's pleasure at having a printed blank sent him covering all the details more concisely, more thoroughly than he could possibly sum them up. Such service is one of the many which shrewd, wide-awake dealers will be prepared to offer customers.

The need is real. Will someone rise to the opportunity?

LOCKERS FOR GARAGE CUSTOMERS.

Simply as an experiment, an Ohio garage, which had gone through the usual experience of having many little things disappear from cars, the fate of which remained a mystery, decided to make an investment in metal lockers, and rent them to customers.

The initial order was for five lockers and the garage housed some 30-odd cars. An extra charge of one dollar a month was made for the lockers. The five lockers were all rented as soon as they were set up, and before nightfall the next day an order was on the way to the factory for ten more.

Where prices run about the same for the same average service there is always one or two things that keep one garage filled all the time, while another has space to rent. Frequently the difference lies in little points of convenience like the one indicated.

In nearly every city there are motorists still waiting for the garage with the clean toilet room with clean towels, clean washbasin and other decent necessities. Certainly it costs something to provide these conveniences, but when you consider the class of trade you are dealing with it is reasonable to expect that your investment will ultimately yield a profit.

Right here it is pertinent to remark that the filthy, unsanitary conditions that obtain in too many garage toilet rooms are an insult to customers and a disgrace to the proprietors.

IS YOUR KNOWLEDGE ORGANIZED?

Herbert Spencer declares that science is organized knowledge. The demand to-day is for scientific business methods. Is your knowledge of your business organized? Have you got all the facts concerning it classified? Can you put your fingers on the weak spots? Can you point to the remedy? Have you all the facts at your fingers' ends?

Every good business man knows exactly what his bank balance is every day. Is your business organized so that the facts concerning it are available in the same way, or is everything in a heap? You feel sure it is all there, somewhere in that pile—maybe underneath, perhaps in the middle—but not where you can go right to it and get it. If that is the condition, the thing to do is to sort out the pile at once and get the information in orderly arrangement.

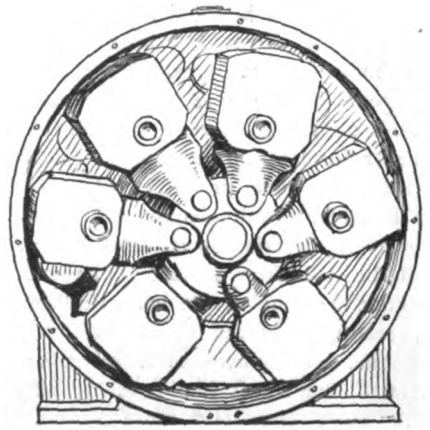
TOY ENGINE PRINCIPLE IN ROTARY AIR STARTER

Merrall Device Comprises Six Cylinders of Oscillating Type—Dead Centers Eliminated by Positioning of Ports.

Although with a six-cylinder motor it is practically impossible to stop with the crankshaft in such position as to render ineffective an air starter of the usual type, with the air admitted directly to the cylinders through the intermediary of a distributer valve, with the four-cylinder motor such is not the case. Which, according to W. A. Merrall, of 617 Lexington avenue, New York City, who is the patentee of the Merrall rotary air starter, for the purpose of marketing which a $150,000 corporation now is in the course of organization, under New York laws, opens the field for an air starter of the type wherein the power to crank the motor is obtained from a separate air motor.



The Merrall device is so simple as to be comprehensible by any school boy who has ever possessed a toy steam engine, for it is in fact but little more. As shown by the accompanying illustrations, the device comprises six cylinders provided with pistons of the trunk type, all of which act upon a common crank pin. Each of the pistons is pivoted to the rear wall of the enclosing case, so that it is free to oscillate as the motor shaft is turned. A single port enters near the closed end of each cylinder and two ports, one for the exhaust and one for the induction, are provided to register with the cylinder ports in the rear wall of the casing. Just as the crankshaft tosses the dead center with relation to any one of the cylinders, the port in that cylinder is brought into line with the corresponding inlet port provided in the casing wall and air under pressure is admitted, to the end that the piston is set in motion and the shaft caused to revolve. When the piston has reached the half-way point in its stroke the cylinder port has moved out of line with the inlet port and the expansive power of the compressed air is utilized to drive the piston to the end of its stroke, at which time the relative position of the cylinder and casing wall is such that the exhaust port is uncovered and remains uncovered until the piston has reached the top of its stroke. Since six cylinders are provided, it is obvious that in any position of the motor shaft at least two of the cylinders must be on the working stroke and starting must be the inevitable result of opening the throttle valve.

Naturally, the Merrall starter, like the electric starter, can be attached to the motor mechanism at any convenient point, such as the magneto or pump shaft or through teeth provided on the periphery of the flywheel; a dog clutch is provided for throwing the device out of engagement when the motor has taken up its cycle of operation. The starter is supplied either with or without a

MERRALL AIR STARTER

compressor. Where a compressor is supplied, it is cast integral with the motor case and comprises a pair of opposed cylinders provided with suitable pistons and clack valves of the orthodox type; without the compressor the device must needs be run on the spent gases from the motor stored in a suitable tank. The device, it is claimed, will start the motor 20 times on 30 pounds air pressure; on 100 pounds

MERRALL STARTER "INTERNALS"

pressure it will develop 3½ horsepower. Complete with a pressed steel tank measuring seven inches in diameter and four feet in length, the device weighs but 40 pounds and will sell at a price in the neighborhood of $150.

Getting Home With Punctured Float.

When a carburetter float fails and a new one is not procurable, "getting home" is a matter of using one's wits. Generally it can be accomplished by cutting down the supply from the tank so as to correspond with the flow through the needle valve.

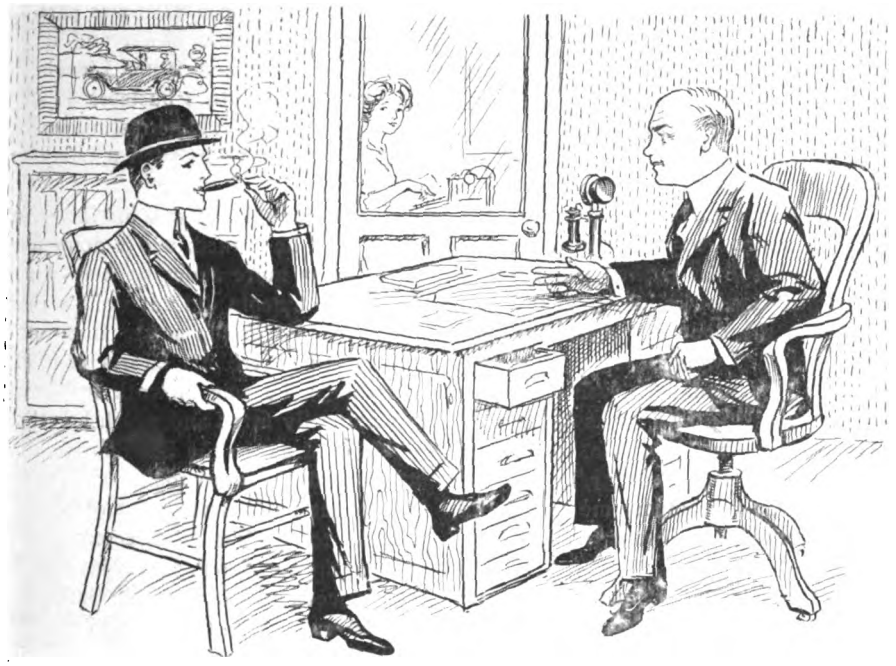
IMPROVISED FAN BELTING THAT SAVED A SITUATION

Heavy Load and Stalled Fan Cause Overheated Truck Motor—How the Chauffeur Effected an Ingenious Repair.

On the greater number of cars, a stalled fan in warm or even moderate weather means a stalled motor sooner or later, unless the fault is corrected. Of course, the only way to correct the fault is to replace the belt and, in nine cases out of ten, it is merely a matter of replacing a fastener which has pulled out. Once in a while, however, one of those "freak" accidents will happen and the belt will become twisted around the pulley or entangled with the magneto drive shaft or the pump drive shaft and be torn to shreds. "Get a new belt" is the advice forthcoming from anyone who has to do with motor cars, but if conditions are such that for the time being a new belt is not procurable and the motor absolutely refuses to function properly with the fan at a standstill, the case assumes a more or less serious aspect.

One driver who faced the situation—he was a driver of a motor truck and had the vehicle loaded to the limit at the time—proved equal to the emergency. His tool box offered nothing more promising as a belt substitute than a coil of No. 18 cotton covered copper wire—bell wire, as it is called, for it generally is used in connection with door bell installation. From this, the paraffined insulation was removed by burning; it simply was necessary to ignite the covering, which burns freely, and the process served to anneal the wire also and render it pliable. The covering removed and the wire cooled down sufficiently to be handled, the wire was folded so as to form a multistrand strip very nearly as long as the belt. The ends were bound with short pieces of wire and a short, stiff helical spring of small diameter was firmly wired between them. The belt then was placed in position and the belt tensioning adjustment shifted until the spring was stretched sufficiently to cause the belt to grip the pulleys. Needless to state, the improvision answered the purpose for a time sufficient for the delivery of the load and for the driver to obtain a new belt, otherwise the tale would not have been worth the telling.

Sand as a Traction Agent.



When the driving wheels get into mud so deep and so slippery that traction cannot be maintained, it is a good plan to throw dust, sand or straw into the mud to thicken it and partly lessen its "lubricating" qualities.

REILLY ON MEN WHO DO NOT LIKE THEIR WORK

Advises One of Them to Quit His Job and Cease Misdirecting His Energies—Declares Relish for Duty is One of the First Essentials of Success in Business and Cites Several Failures.

From the office of the News there emerged a young man who, after reaching the sidewalk, looked perplexedly up the street and then cast just as perplexed a look down the street; but he didn't hesitate long—for two reasons. One reason was that he was not of the hesitating kind, the other was that he didn't have much time in which to hesitate.

"HIS TROUBLE WAS HE WASN'T CUT OUT FOR A DEALER," SAID REILLY

After the termination of this brief period of hesitancy, the young man walked with decided step to the next corner, climbed aboard a street car when one came and rode to Automobile Row, where he alighted, walked to Reilly's salesrooms, entered the office, which was empty, helped himself to a cigar from a desk drawer, lighted the smoke and sat down contentedly with the remark, "Well, the old shiny-pate can't be far away, his overcoat's here."

At first he had not noticed the office girl in her little adjoining compartment, and when he did see her she was looking through the glass partition at him with an amused smile; the young man arose, went to her door and said, "How do you do? Is Mr. Reilly about?"

"Yes," she replied, "he's out in the shop. He'll be right in shortly. Make yourself at home."

"Oh, I did that some time ago," laughed the youth; "what you mean is, 'Keep on making yourself at home.'"

Reilly interrupted the dialogue by entering at this moment.

"Hello, Charley, what's the matter today?" he exclaimed. "How long have you been here and how many of those cigars have you smoked?"

"The matter is," replied the man who answered to the name of Charley, "that I've got orders from the boss to get a special article every week for the automobile section on something of interest to owners, and I've got to have some dealer's name signed to it. As to the rest of the question, I've been here about ten minutes and am on my first cigar."

"Well," asserted Reilly, "I suppose I'm to be the goat the first time; you're going to smoke up a few of my cigars and jolly the office girl and go back and write something and sign my name to it. Am I right?"

"Something like that," admitted the youth.

"Very kind of you to give me warning," said the dealer.

"Maybe you'd like to write it yourself? I'm perfectly willing," declared the newspaper man. "But, of course, I know you won't do it; that's too much like real work."

"Say!" exclaimed the interviewer, "how'd you ever happen to get into this business when you're such a good publicity man?"

"I like it and it makes money for me," was the response.

"Reason enough," remarked Charley; "but that's where we differ—I don't like my work and it isn't making me any money."

"Then get into something that you do like and maybe it will make you money," directed the dealer.

Round Pegs in Square Holes.

"I've often wondered," continued Reilly, "why more men don't get into something where their energy and will count for more than it does. And I've also pondered much as to the reason so many people stay in positions or businesses that are not fitted for them and who plug along at work which is only a treadmill to them, which they detest from the bottom of their hearts and in which they never can make their greatest success."

"Do you mean I ought to jump the job?" asked the young man.

"Oh, I don't advise you to go back and quit this afternoon," explained Reilly, "but why don't you get into a line of work that you are fitted for, because as long as you were not cut out for newspaper work you are not likely to progress very swiftly. Here you are, working like a nailer six days in the week, and if I am any judge you can work right on until they put you on the shelf and you'll never get very high, not unless they put you on a high shelf. You know that you aren't the kind of a man to get on over fast in this business, so why stay there? Why don't you get into some line of work where the talents you possess will find opportunity to prove their value?"

"For instance?" asked the object of the lecture.

Finding One's Proper Forte.

"That's for you to find out," stated the dealer. "You ought to be able to land something that you like and are fitted for and which will enable you to apply your energies to the best advantage. But if you do change, don't do what so many men do; don't get where you don't belong and, if

Digitized by Google

you do, don't stay there. You probably have seen several men come into this trade and pass out again within a few years and have wondered what there was the matter with the automobile business that they didn't make good. But did you ever know these men and try to learn whether it was the business or the men that were at fault?

Reilly's Investigation of a Failure.

"If you haven't, I have. When I was new in the business and heard of men giving up their dealerships because they weren't making anything it naturally caused me to think a bit, for I didn't want to tie myself to a business that contained no future. I remember about the third or fourth man who quit after I started was a fellow by the name of Burns. I made up my mind to investigate a little. I called on Burns, ostensibly to ask him if he was going to dispose of anything I needed, and I got him to tell me about his troubles. Also, I later learned a few things from people who knew him.

"His whole trouble was that he wasn't cut out for a dealer; that's why he failed. He used to be a druggist, and was a good druggist, too, but he saw a competitor open up near him and just about that time there was a chance at the automobile dealership, so Burns took it—to his sorrow. He opened up a little showroom with a repair shop at the rear, and if he had been the right kind of man could have made more or less of a success of it. But he didn't work in the right direction."

"What did he do?" asked the man who at times was known by the dignified title of Automobile Editor.

Dealer's Energy Was Misdirected.

"For one thing," continued Reilly, "he thought he ought to put his whole self into the business, just as he had done in the drug store; so he went out into the shop and puttered around cars, got all dirty, and anyone who came in couldn't tell him from a workman His energy should have been directed toward the building up of a sales department, getting prospects for sales and working that end of the business, but all the time he was complaining that there was so much work around the place that he never could get time to go out to sell cars. The poor cuss! If he had got into a demonstrating car and worked as hard about town as he did around the back end of the shop, he would have had money to-day. I know that one day he actually neglected a sale, and in the end lost it, because he wouldn't break away from the darned detail about the office. What really was the trouble was that he was not fitted for the busy outside work that automobile selling requires. He could take care of the drug store, where trade came to him, but he couldn't get out and fight for it.

"He's but one. There are any number of men to-day who are shouting that the garage business doesn't pay. That general fact is all that they know about it, and that is based upon the fact that they don't seem to be making money. Why they lose or where they lose is beyond them. Those men never were cut out to run garages. There is hope for them if they turn over a new leaf, but the majority of them will quit the business with a firm belief that there is no money in it.

"Bill" and the Revolving Doors.

"They're like Billy Sommers, who lives outside the city where I lived when I was a kid. Billy, I don't believe, will ever go to Congress. One day he came to town with his dad and dad let Billy go out alone, but told him to come back in an hour to the little old hotel where the farmers put up. Billy came back all right and started to come in, but the hotel had a set of these revolving doors and Billy, of course, never having gone at anything in the right way from the day he was born, tried to turn the doors the wrong way. They stuck, of course, and poor Billy pushed and jammed for ten or fifteen minutes. Some of the men tried to push the door the right way, but Billy thought they were trying to keep him out and he got mad and pushed all the harder. They had to let him have his way. He got through, but it was a fearful example of misdirection of energy."

"Do you mean to compare me to old Bill Sommers?" asked the newspaperman indignantly.

"I didn't mean to, but maybe you are like him," said Reilly, as he critically surveyed his caller, slowly looking him over from head to feet and back again.

Real Workers and Time-Servers.

"Did you ever stop to think, friend Charles," earnestly went on the dealer, "that your object in life, unless I'm mistaken, is to make money enough to live comfortably and to take care of yourself when you get to the point where you don't want to work any more and that, unless you're below the average, you ought to be able to do it? You have a certain amount of energy which ought to enable you to get what you want, or all you need, at least; now, you undoubtedly feel that you are working at your very best in your present position, and yet you know that you don't get on very swiftly. Doesn't that make you feel like pushing a revolving door the wrong way and that there must be some easier way if only you can find it? No matter who a man is, he ought to apply his energy where it will benefit him most, and if he doesn't like his work he simply can't do it, no matter how hard he tries.

"No man who does not relish his work and take pride in it ever will be able to make a distinct success or become much more than a mere time-server. Time-serving is one of the chief troubles of industrial life.

Abraham Lincoln as an Example.

"One of the greatest men that ever lived would never have been heard of had he not realized that he was misdirecting his energy. That was Lincoln, whose birthday just passed. Lincoln was engaged in various things at different times, and at one time, with a partner, ran a store. But Lincoln didn't have much more talent for merchandizing than a two-year-old kid. The partner, too, was too deeply interested in the liquor which in those days was part of the stock of the general store, and it wasn't long before they gave it up. Lincoln might have kept at the store business all his life, and he probably would be resting now under a cheap slab in a forgotten country graveyard.

"But he thought he saw his future in law and to law he turned, and I don't need to tell you any more about it; but—it doesn't mean that Lincoln did not work as hard at law as he did in the store. It means that he worked where his efforts counted for something; he was in work for which he was naturally fitted and which he relished."

"Maybe I am in the Bill Sommers class," interrupted the automobile writer, "but if I'm to get an interview out of you to-day it looks to me like misdirected energy for you to chatter about something foreign to the subject and for me to listen to you."

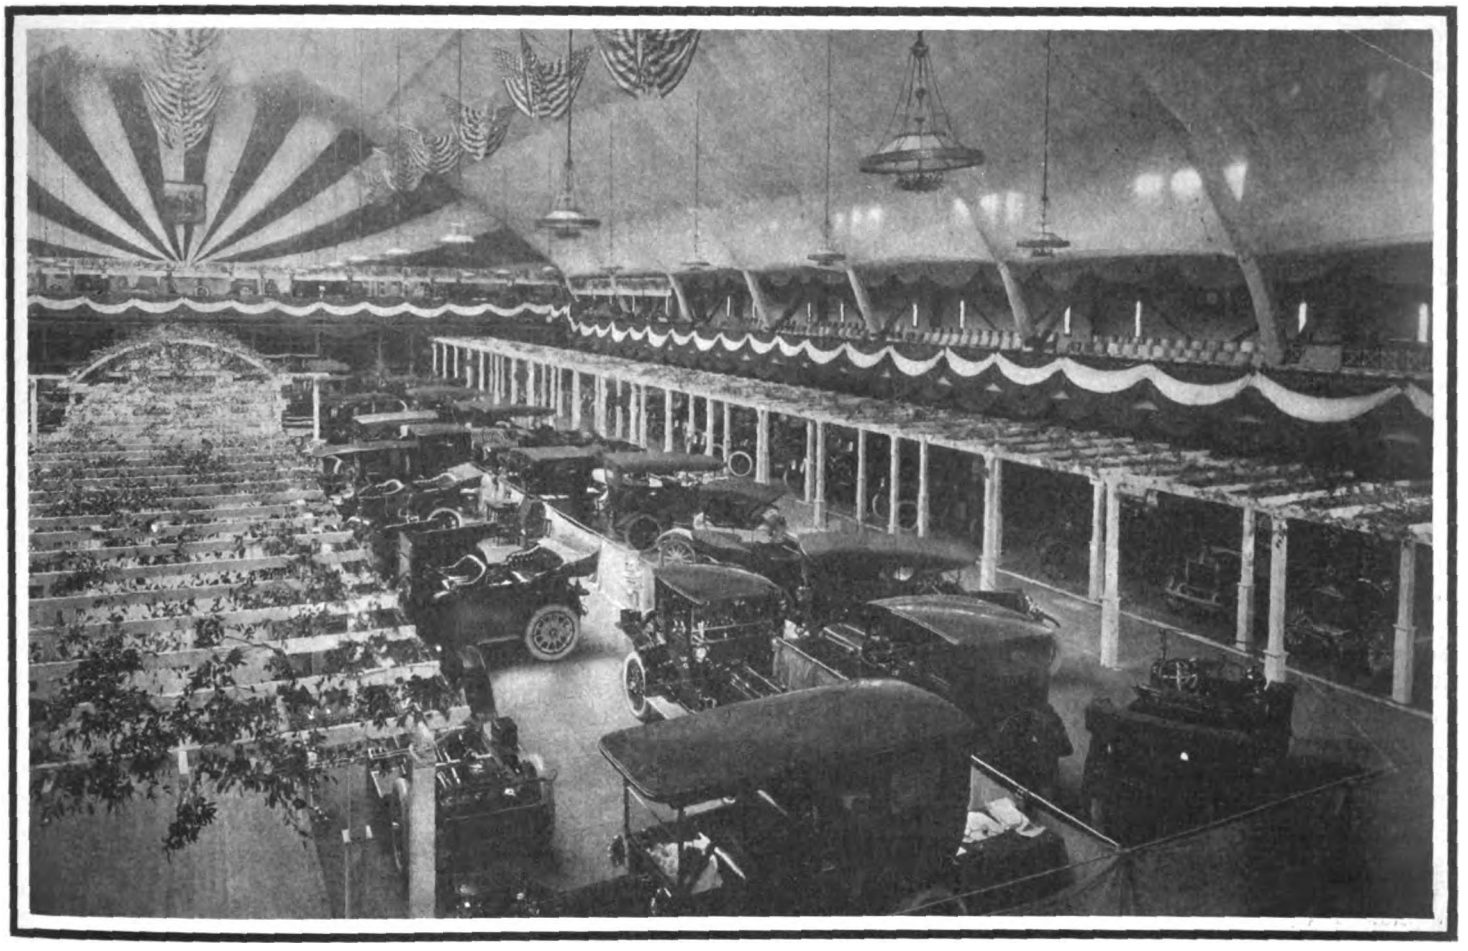
"You wanted me to talk, didn't you?"

"Talk!" exclaimed Charley. "It's no trouble to get you to talk; the only trouble is to steer you into what I want you to talk about."

"Well," asked Reilly, "what do you want me to talk about?"

"Oh," slowly rejoined the newspaperman as he arose and buttoned his overcoat and picked another cigar out of the desk drawer, "I'll think up what you're going to say on my way back to the office."

Offers Inducements for Farm Tractors.



By way of stimulating the exhibition of agricultural tractors at the St. Petersburg automobile show, which is scheduled to be held in May, the committee in charge of exhibits has reversed the usual proceeding and offered a premium of 1,000 francs (about $200) for every agricultural tractor installation (tractor and plough, or other agricultural machinery) exhibited. The premium is offered partially to offset the expense of transporting such machinery.

GOULD'S COUNTRY ESTATE SUGGESTED BY NEWARK SHOW

Vine-grown Pergolas Patterned After Multi-millionaire's Possession—Fifty-nine Dealers Show Sixty-nine Care.

George Gould's estate at Lakewood supplied the decorative theme for the Newark automobile show—the sixth under the auspices of the New Jersey Automobile Exhibition Co.—which "opened up" in the First Regiment Armory on Saturday evening last, 15th inst. The vine-grown pergolas which span the three aisles which run the length of the immense room are patterned after the Gould pergola at Lakewood; hence the likeness. Of course, a patch of blue sky has been added by way of making the country estate setting realistic, while a degree of warmth is provided by the cardinal and white draperies which bedeck the galleries and which radiate fan-like from points on the two end walls. The long hall leading to the drill room is lined with marble columns supporting luminous globes which form part of the lighting scheme, and wistaria vines in full bloom festoon between the columns.

GENERAL VIEW OF THE NEWARK (N. J.) SHOW IN THE FIRST REGIMENT ARMORY

The product of some 69 different motor car factories are on view, shown by 59 dealers; in the matter of accessories, the manufacturers of the smaller devices and parts are well represented by 28 accessory dealers.

Although in the line of pleasure cars nothing that was not shown at the New York show cropped out, such was not the case with the commercial vehicle field, for a slight amount of newness appeared in the shape of the A. & R. truck, made by the Abendroth & Root Mfg. Co., of Newburgh, N. Y. The vehicle is of conventional design and is fitted with a four-cylinder cast-in-pairs motor disposed under the driver's seat. Water cooling is adhered to, and the bore and stroke stand at 5 and 5¼ inches, respectively; transmission of power to the rear wheels is through the orthodox clutch and three-speed gearset to the counter shaft and thence through roller chains to the rear wheels. The truck is built in three sizes for carrying three, four and five tons, respectively.

Also new, in the sense that it has not heretofore been exhibited, is the Maxi carburetter, product of the Maxi Co. of Newark. The device, which has been fully described by Motor World, lays its claim to individuality by reason of the fact that the 14 fuel jets or orifices with which it is graced are uncovered one at a time and consequently brought into action by the opening of the throttle valve itself, so that constancy of mixture proportions is very closely approximated under all conditions of motor operation. The low speed jet protrudes through the butterfly valve into the mixing chamber so that the suction of the motor draws forth a heavy supply of fuel, rendered starting a comparatively simple matter.

The pleasure cars on view are: Abbott-Detroit, American, Auburn, Buick, Cadillac, Case, Chalmers, Chevrolet, Cole, Cutting, Flanders, Franklin, Garford, Haynes, Henderson, Hudson, Hupmobile, Kline, Little, Lozier, Locomobile, Marmon, Marion, Michigan, Moline, National, Norwalk, Nyberg, Oakland, Oldsmobile, Packard, Pathfinder, Peerless, Pierce-Arrow, Premier, Pullman, Rauch & Lang, Regal, Reo, S. G. V., Simplex, Standard electric, Stearns-Knight, Stevens-Duryea, Studebaker, Stutz, Velie, Winton.

Commercial vehicles: Adams, A. & R., Buick, Chase, Croce, Garford, Hewitt, I. H. C., Koehler, Lansden electric, Locomobile, Mack, Nonpareil, Nyberg, Packard, Peerless, Pierce-Arrow, Saurer, Stewart, Universal, Velie.

KANSAS CITY, AS USUAL, STAGES A "BUMPER" SHOW

So Large That Trucks Will Overflow Into Second Week—English Setting Provided for the American Automobiles.

Convention Hall, or, better, the Kansas City Convention Hall, for buildings of that designation are legion, which not long since was considered sufficiently large properly to house the full complement of pleasure and commercial vehicles which comprise the annual show of the Kansas City Motor Car Dealers' Association, this year has been found to be inadequate. In consequence, the exhibition which opened on Monday evening last, February 17th, and which will continue for two weeks until Saturday evening, March 1st, will be split into two parts. Part I, comprising pleasure cars, will hold forth throughout the present week only, to be replaced by commercial vehicles after next Saturday night.

In the matter of decorations, no expense has been spared in an endeavor to render the building eye-pleasing, with the result that the 63 different makes of automobiles now on display, shown by 46 dealers, are viewed 'mid scenes typical of "merrie England." The "fixings" and the scenic panels which line the walls all convey the impression of an English country estate. An unusually wide concourse has been laid out down the center of the hall, and over this stretches a vine-grown pergola. Illumination is supplied by seven massive globes, each containing a large number of tungsten lamps, which are hung from the roof girders, themselves invisible because of the improvised blue sky which is provided.

Two makes of cars cropped out which have not been previously exhibited during the present show season, in the shape of the Stafford, product of the Stafford Motor Car Co., a local concern, and the Wilcox, which is made in Minneapolis by the Wilcox Motor Car Co. Both are four-cylinder machines, built along conventional lines.

The cars on view are: Auburn, Apperson, Abbott, American, Bergdoll, Buick, Cartercar, Chalmers, Case, Cutting, Cadillac, Chevrolet, Dorris, Detroiter, Empire, Flanders, Franklin, Garford, Hupmobile, Hudson, Imperial, Interstate, Jackson, Krit, King, Kissel, Lozier, Little, Mercer, Mitchell, Marmon, Maxwell, Moline, Oakland, Overland, Oldsmobile, Premier, Paige, Pierce-Arrow, Peerless, Packard, Regal, Rambler, R. C. H., Reo, Stearns, Speedwell, Stutz, Stevens-Duryea, Stafford, Studebaker, Velie, Warren, White, Wilcox, Baker electric, Detroit electric, Hupp-Yeats electric Ohio electric, Rauch & Lang electric, Waverly electric, Woods electric, Stanley.

Richmond Offers First Show to F. F. V.'s.

Richmond, Va., has inaugurated its first automobile show. It opened, under the management of the Richmond Automobile Dealers' Association, on Monday evening last, February 17th, in the Horse Show building, which naturally has been fittingly bedecked with smilax-entwined cedar trees and vari-colored streamers and bunting strips and myriad incandescent lights disposed in the foliage. Japanese umbrellas, many in number and varying in size, add to the attractiveness of the decorations. The show, which comprises 28 different makes of vehicles, both pleasure and commercial, shown by 18 dealers, and the displays of half a dozen accessory dealers, will be in progress throughout this week.

The vehicles on view are: Krit, Cadillac, Kline, Buick, Pierce-Arrow, Peerless, Hupmobile, Studebaker, Alco, Stevens-Duryea, Abbott-Detroit, Maxwell, Overland, Ford, I-H-C commercial, Knox, Hupp-Yeats electric, R. C. H., Mitchell, Locomobile, National, Little Giant commercial, Chalmers, Warren, Case, Standard, Kelly truck.

Lambert Apparently Emulates Lightning.

If reliance can be placed on press cables, a new one-hour speedway record of 103¼ miles was made by Percy Lambert on the Brooklands track to February 15th. His intermediate times were 29:00.4 for 50 miles and 57:49.6 for the century. The American record for an hour's run on a speedway is held by Ray Harroun, who covered 74 miles in the time at Los Angeles, in April, 1910. Lambert's time for a single mile figures at 34.7 seconds, .65 faster than Robert Burman, the American record holder for a single mile on a speedway, which he was able to do on the Indianapolis track in 1911. If the time accredited to Lambert is correct, his performance was phenomenal—even more so if it is true, as the cables report, that he drove a car of only 25 horsepower.

Declares "Trolley Stop" Unconstitutional.

Hereafter the drivers of automobiles in Columbus, Ohio, need not bring their cars to a full stop when passing trolley cars receiving or discharging passengers, for, as a result of a test case instituted by the Columbus Automobile Club, the recently enacted ordinance making such stops compulsory has been declared unconstitutional. Decision was rendered on the argument that persons entering or leaving a car are not really passengers until fully on the car and that the wording of the measure therefore is ambiguous. It was also contended that the law operated to cause traffic congestion at crossings. No appeal will be taken.

BILL PICKENS LEASES THE BRIGHTON BEACH TRACK

And If Nothing Happens, Maybe He'll Hold a Good Humored Outlaw Racemeet On It—Diagram That Is Lacking.

After having spent some time promoting "bird men" who did not fly across the continent, Bill Pickens is again in New York. He brought with him that wealth of good nature and fund of good stories, not to mention the abundant "nerve" of which he admits ownership, and, possessed of them, he has leased the Brighton Beach track for May 30th and 31st, and on those days, if everything is lovely and the goose hangs low, William will stage a race meet on that Brooklyn (N. Y.) course.

Pickens himself has been "in bad" with the American Automobile Association ever since he directed or followed the flip-flops of Barney Oldfield, and as a result he is a more or less earnest and enthusiastic supporter of the so-called Western Automobile Association, which consists chiefly of a half-hundred Los Angeles motorists who do not believe that the A. A. A. should apply to Californians the same rules which apply to other residents of the United States. The W. A. A. will "sanction" Bill's meet.

The good-natured Pickens has caused to circulate a story that he has behind him a Californian named Hewlett, who is reported to possess uncounted millions and who is reputed to be the "chiefest outlaw of them all." Bill, however, has not submitted a diagram showing just how far behind him Hewlett may be, but regardless of that circumstance, it is known that Pickens really has the moral and other support of a New York theatrical press agent named Dan Smith, who is close to the owner of the Brighton Beach track.

Smith's good offices and glorious picture painting are understood to have induced the Brighton Beach track owners to see large dollar signs arising from an outlaw meet in which Barney Oldfield and Teddy Tetzlaff will perform the chief gyrations. The dollar signs were made to look so large that the track owners are said not to care more than a fig and a half whether their property is outlawed by the A. A. A. after May 30th.

However that may be, very many things are likely to happen between February 28th and May 30th, but whatever happens, it is fairly certain that Pickens will retain his good nature and continue to be a more or less practical joker. It is one of his superb accomplishments that he is able to make many people take him more seriously than he takes himself or desires to be taken.

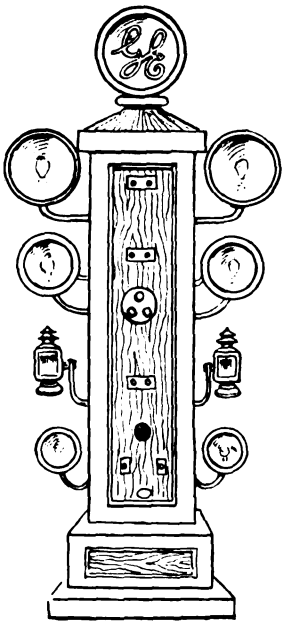
THE VALUE OF FIXTURES AS "SILENT SALESMEN"

Illuminating Methods of Displaying Illuminating Apparatus in a Manner to Make Plain Individual Qualities—Some Simple and Some Ornate Devices That Have Been Evolved to Permit of Displays of Lamps.

"Let your light so shine," runs the Biblical saying; and an evening stroll through the automobile sections of Broadway, or, for that matter, any other thoroughfare well lined with automobile accessory stores, is likely to result in the conviction that at least a few of the accessory men have taken the saying in a literal sense; they have realized the value of it commercially and as a result have brought storage batteries into use, and electric headlights all aglow are no longer infrequent sights in show windows. But in order to display a lamp or a set of lamps attractively, something more is necessary than the mere fact that they are burning. It is just as important that they should be appropriately mounted, and in the devising of the fixtures upon which the "shining lights" are displayed no little ingenuity has been brought into play.



Attractive by Night and by Day.

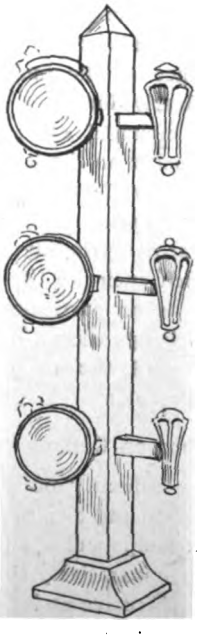
Lamps must be displayed in the daytime as well as at night, and consequently the fixtures upon which they are mounted must be of such character that they will do duty as well when the sun shines as when it does not. As Motor World has iterated and reiterated, the art of selling things consists largely in showing them in a favorable light—showing them to the best advantage

SIMPLEST TYPE OF FIXTURE

—and appropriate fixtures go a long way toward accomplishing this end, particularly in the case of lamps, which lose their attractiveness to a great extent when tilted over on a shelf or a counter. At the same time, it is quite as important to remember

GENERAL ELECTRIC DEMONSTRATOR

that it is not the fixture that is on exhibition, and to subordinate it to the goods it is to hold up for inspection and, perhaps, admiration.



Stands for Showing Shining Lights.

It goes without saying that the vast improvements made in electric lighting systems within the last few years have opened the way for displays of illuminating apparatus that were out of the question previously. The national automobile shows were fairly alive with concrete examples—electric lighting systems shown in full operation, dynamos buzzing, and lamps sending their blue-white "pencils" through the dusty, smoky air. Clearly, many of the display methods employed at the shows can be just as well made use of in window or store displays, though some, of course, are suitable more particularly for exhibition work in the hands of operators who explain things even while they are happening.

Fixtures for the display of lamps vary in their characteristics quite as much as other fixtures, ranging all the way from extremely elaborate and decidedly expensive affairs of more or less permanent character to simple stands or racks for holding lamps before the eye in their proper positions and on their own brackets. Even the simplest of these devices—and some of them are about as far removed from complexity as it is possible for fixtures to be removed—can be made, and are made, to answer their ends with satisfaction to seller and buyer. Lamps, as a rule, are awkward things to handle, look clumsy and unattractive when held in the hands, and so require fixtures for their adequate display—in which they differ from some accessories that can be shown quite effectively with little or no apparatus.

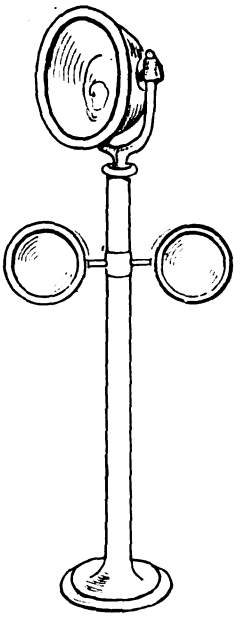
An Elaborate Pillar of Electric Light.

At once elaborate, practical and effective, a lamp-displaying fixture that is used by the General Electric company provides means not only for showing how the lamps look when they are hung, but also provides connections for supplying electricity to the bulbs and switches for turning on and off the current. A heavy square pillar mounted on a substantial base carries four brackets on each side, the eight brackets supporting four pairs of lamps of different styles,

ADLAKE DISPLAY STANDARD

Digitized by Google

while the pillar is surmounted by a single great headlight, the lens of which bears the letters "G. E." The top brackets carry a pair of headlights which, though large, are smaller than the big "masthead light"; on the second pair of brackets is a pair of smaller lamps, and so on, tapering down to a pair of small side lamps at the bottom. On a polished wood panel extending nearly the full length of the column are the switches for controlling the current supply to the various lamps. Not a small part of the usefulness of this fixture consists in the fact that the lamps can be changed as often as may be desired and the possibility of monotony eliminated—a fact which, however, applies equally to other and less elaborate fixtures.

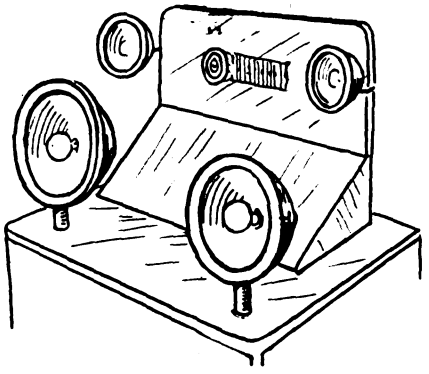


How Lamps Look on the Car.

Not only to show their lamps to good advantage, but to show them practically as they appear when mounted on a car, is the object of a fixture employed by Gray & Davis. The stand does not simulate the front of a car further than that it provides mountings which bring a pair of headlights and a pair of side lamps into correct relative positions. When the lamps are burning, however, the effectiveness of the arrangement is instantly evident; in the radiance of the lights it is easy to imagine the stand an automobile, and the lamps look entirely "at home" and in their right places.

Effectiveness in no small degree is combined with simplicity in a fixture upon which Solar lamps are shown. As in the Gray & Davis stand, there is no studied effort to make an imitation of a car front; yet, when the bulbs are glowing it requires but little imagination to see exactly the effect of a big central headlight above a pair of smaller headlights—an arrangement that is not uncommonly employed for night driving under conditions requiring an unusual abundance of illumination. As the illustration clearly indicates, the big central lamp is mounted on a bracket that swivels in a socket on the top of the heavy metal standard, while the pair of smaller illuminators is carried by a double-armed bracket, the arms springing from a tubular clamp which encircles the column. Obviously, there is no particular reason why other pairs of lamps cannot be mounted on the same standard, though the illustration shows only one pair.

Variations on Column "Motif."



The popular column "motif" lends itself extremely well to the display of a number of varieties of lamps and has the advantage of occupying comparatively little space and of being as unobtrusive as it is useful. The "general utility" lamp column shown in one of the accompanying illustrations is fitted with a number of brackets clamped on by means of split sleeves and pinching screws. These brackets, and of course the lamps they support, can be placed at any desired height on the column and swung all round the circle; there are all sorts of opportunities for making varied and effective combinations, especially if two such columns are placed close enough together to obtain an "ensemble" effect, with both headlights and side lamps mounted.

SOLAR DOUBLE-PURPOSE BRACKET

A Colonial Type of Fixture.

A type of fixture that is particularly well suited to the display of lamps of the so-called "Colonial" and other quaint types, is the square-column stand used to hold up to view some of the goods of the Adams & Westlake company. Not only is this stand particularly appropriate for exhibiting Colonial lamps, but it is of a design that harmonizes well with the interior finish of many modern salesrooms in which the woodwork is of mission or other plain, heavy finish. The severely plain post with its pyramidal peak and short wooden arms upon which the lamps are hung, is attractive by reason of its very lack of ornateness. Obviously such a fixture is not so "versatile," so to speak, as the metal columns with their adjustable lamps and brackets; but it is designed for a special purpose, and the illustration shows how accurately it fits into its niche.

GRAY & DAVIS DISPLAY STAND

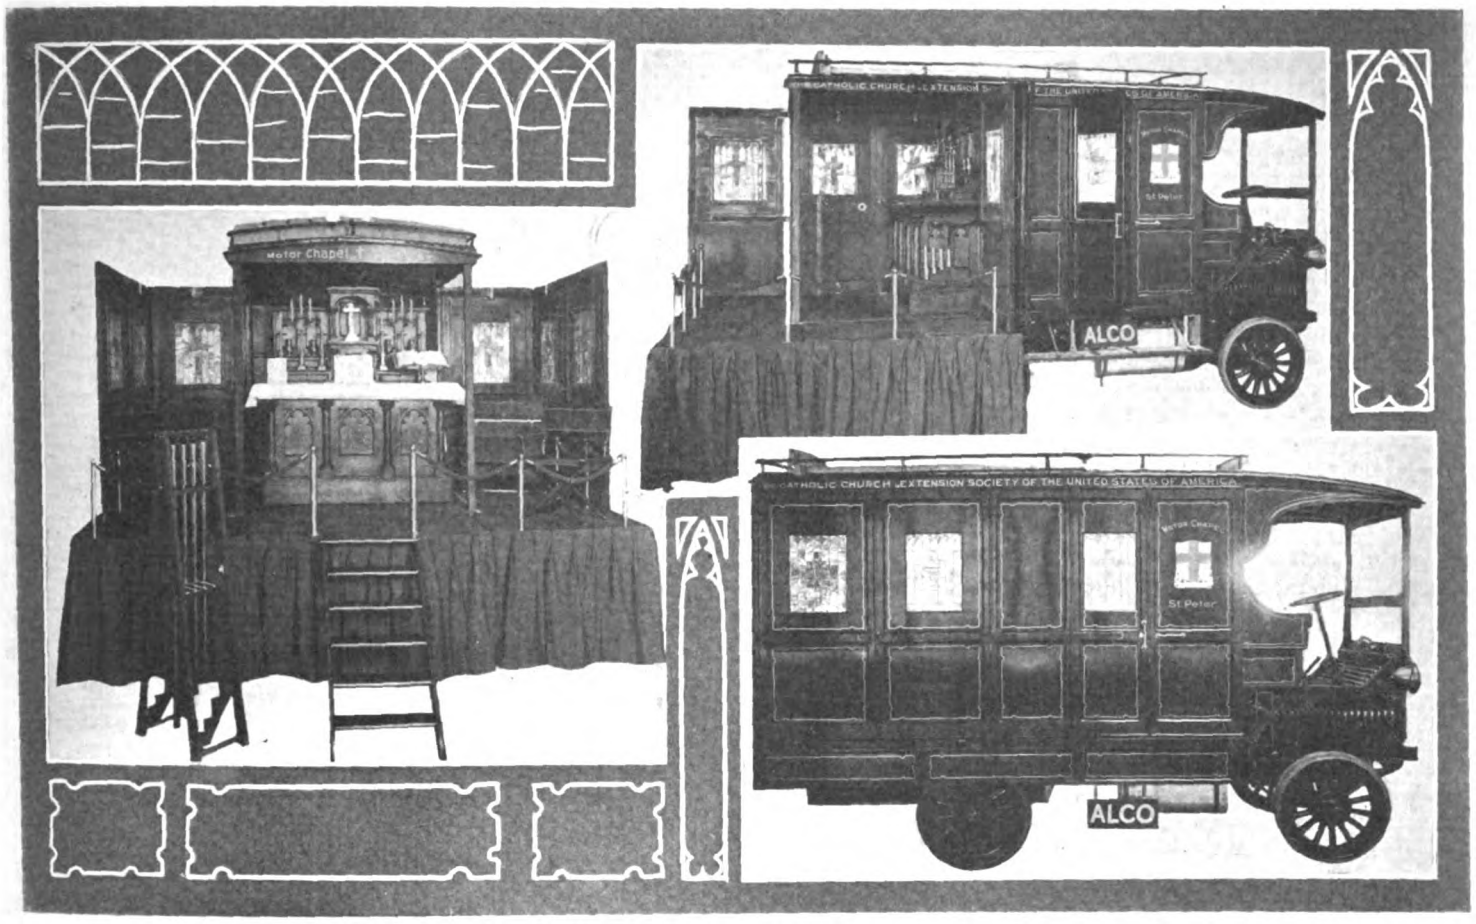
Variety of the Spice of Display.

A variation of the predominant vertical column idea consists in a horizontal rail carried between two standards, and having clamps and brackets similar to those on the upright stands; there also are stands having two or more horizontal rails, so that a large number of lamps can be displayed in a small space.

Nearly all of the stands referred to permit the frequent changes and the wide variety of exhibits demanded by modern selling methods, which insist that the passer-by shall not refrain from taking a look because he knows in advance what he will see. And while the fixtures are attractive and sightly in themselves, they are not so obtrusive as to coax the eye to wander from the goods to the "silent salesman."

"License Plate" to Advertise Bearings.

Mixed in with the rest of the mail, and even when not so mixed, it looks exactly like a regulation license plate; it is of a real bright red, with white figures, is the right size and shape and the lay-out is correct, even to the provision of four slots for the straps. Upon closer examination, however, it proves to be a novel and decidedly striking advertisement for the Hyatt Roller Bearing Co. of Detroit; the "license number" is "1913," of course. It is formed of cardboard. At the left end the word "Hyatt" appears at the top and "U. S. A." at the bottom, and between them is a picture of a Hyatt roller bearing—the connecting link between Hyatt and the U. S. A. It is one of those effective advertising "hits" that compel comment.



Wire Netting for Sandy Highways.

Apparently overlooking the fact that strips of canvas, which are very much lighter and can be folded up into very much smaller compass, will serve the same purpose, one motorist has hit upon the not very novel scheme of carrying around with him a roll of wire netting for use in helping him over sandy spots. The modus operandi is to place the netting under the wheels in order to get a "bite" on the road. No doubt a roll of fairly fine mesh netting would serve a useful purpose for deep mud, or for ice or snow, but for sand the canvas would serve just as well and it has the additional advantage that it is very much more easily carried than the bulky and awkward wire netting.

CARRYING RELIGION FAR AFIELD ON WHEELS

Catholic Church Extension Society Evolves a Portable Chapel With Which to Penetrate Texan Wildernesses and Spread the Gospel—Confessions and Illustrated Lectures Also Provided For.

THREE VIEWS OF MOTOR CHAPEL, SHOWING DETAILS OF ECCLESIASTICAL EQUIPMENT

If the mountain will not go to Mahomet, Mahomet must go to the mountain, according to the old saying, which, thanks to the motor chapel, shown in the accompanying illustrations, may be paraphrased: If the people cannot go to church, the church must go to the people. In many sparsely settled districts where the population is insufficient to support a church, as well as in small settlements where there are no churches and which are not reached by railroads and therefore are inaccessible to railroad chapels, there are people who would go to church if they had the opportunity, and it is with the purpose of affording such opportunity that the motor chapel, which was one of the exhibits at the Chicago motor truck show, was built.

The novel little church is erected on an Alco truck chassis of two tons capacity; the work was done by the American Locomotive Co., for the Catholic Church Extension Society, which will put the machine into service in isolated districts of Texas. The official designation is Motor Chapel St. Peter. Two priests will be in charge, and stops will be made at various places for from one to two weeks.

The rear part of the body of the car is arranged to open out, as shown in the illustrations, disclosing the orthodox ecclesiastical equipment of the Catholic Church; accommodation for a congregation of 200 is provided by a large tent carried, when not in use, on top of the car. With the aid of the electric lighting plant which is part of the mechanical equipment of the machine, stereopticon lectures, as well as religious services, will be given. In addition to the other ecclesiastical equipment, there is, as there should be, a confessional. It is of the orthodox pattern, except that it is arranged to fold into small compass.

In addition to being a moving church, the car will be the home of the priests while on the road, and a compartment is arranged as a living room, having a storage space for personal effects, lockers for folding cots, a typewriter with desk and drawers for a supply of stationery, etc., and a moderate stock of provisions and the requisite cooking and other utensils. A separate compartment contains a lavatory, supplies of towels, drinking water and medicine chest. Among other items, the equipment includes a folding organ, a set of large tubular bells for outside use and a small chime of bells for interior use.

The over-all length of the car is 21 feet and the width 6 feet 9 inches; the height to the top of the car is 11 feet 5 inches. The exterior finish is gray, with gold lettering, and the decoration includes the coat-of-arms of the society. The eight "cathedral" windows serve effectually to distinguish the car from a commercial vehicle, quite apart from the lettering. The motor chapel was built at a total cost, including equipment, of about $8,500.

HOLDS PATENTEES CANNOT CONTROL RE-SALE PRICES

(Continued from page 12.)

"But in the Waltham case," continued Dean, when his opinion was sought, "the counsel on both sides and Judge Ray seem to have treated this mere contract as if it were in fact a conditional license, notwithstanding the well-settled state of the law distinguishing between the conditional patent license and a mere contract."

"It is because of this apparent confusion of two different principles in law," continued Mr. Dean, "that the decision of Judge Ray has created such a stir, for that justice apparently has not only held that the Waltham contract is void under the Sherman law but has gone out of his way to say that in his opinion all attempts of the patentee to control the resale price of a patented article are outside of the patent law, and are within the Sherman act. The trend of his argument apparently is that while the patentee has three separate rights—namely, the right to make, the right to use, and the right to sell—and that while the patentee may dispose of one of these rights without disposing of any of the others, nevertheless in the case of sale, the long line of decisions in this district and other districts as well as in this circuit and other circuits are in error in holding that the patentee cannot sell a finished article subject to conditions that the device cannot be used or sold until certain conditions of the licensor are complied with.

"Judge Ray goes so far as to admit that the patentee can license another to manufacture and sell and to fix the price at which the licensee shall sell. If, however, he tries to license a man to sell at fixed price without also giving him the right to manufacture, he brings himself within the Sherman act.

"The decision is anomalous in so many ways that a full legal analysis must await an opportunity to study the full decision. The two things evident at the present time being that the Waltham Watch Co. sold under a plain contract, breach of which gave them the right to reclaim the goods, instead of under a conditional license, breach of which would terminate the license and constitute infringement of the patent; the other evident fact is that Judge Ray has not contented himself with holding this contract illegal under the Sherman act, but has gone beyond that and stated his opinion that when the patentee once accepts full pay for his patented article, he is compelled to release to the purchaser every other patent right or license which courts have heretofore held he has a right to reserve and specifically that such patentee, vendor, cannot fix resale prices.

"The important question in the profession seems to be how much of Judge Ray's opinion shall be considered as obiter dicta (passing remarks) and how much was really decided. Some lawyers go so far as to say that the true cause of action as disclosed by the facts of this case should have been a suit at law for violation of contract; that there was no real question of infringement of any patent and that the United States Equity Court had no jurisdiction under the patent statute.

"Judge Ray attempts to distinguish from the Dick vs. Henry case recently decided by the United States Supreme Court on the grounds that the Mimeograph was sold for cost and the patentee's profit came from the sale of ink, whereas in this case, the watch company gets full price in advance and nothing afterward. This overlooks the fundamental idea of the whole price license system. The patentee does not try to keep up the retail price in order to bleed the public.

"His object is to enable the dealer to make a profit which will enable the dealer to advertise and exploit and otherwise push the sale of the patented article. It is simply one way of hiring the dealer to drum up retail trade on the patented article and also should prevent department stores and other lirge corporations from underselling small dealers."

Aristos and Former Agent Lock Horns.

The old nursery rhyme of how "the cat began to chase the rat, the rat began to gnaw the rope, the rope began to hang the butcher," etc., finds a diminutive corollary in the affairs of the Ignition Starter Co., of Detroit, maker of the Disco starting and lighting system, for while it has been generally known that the Aristos Co., then the Disco eastern distributer, and the manufacturing company were locked in litigation, another suit has been set down for trial this month in the Supreme Court for New York county, in which, however, it is the Motor Specialties Co., of Philadelphia, Pa., that is the complainant and the Aristos Co. is the defendant.

Claims which were made by the Aristos Co. in its suit for damages of $43,000 in the Supreme Court for New York county to the effect that the Disco acetylene starter was defective and unsatisfactory are reiterated in the Motor Specialties' complaint and it is alleged that the resulting damage and loss of profits amounted to $40,000; $25,000 represents what is claimed to have been paid for goods and the remainder is for profits which never were realized. The Aristos Co. disclaims liability and has entered a counterclaim for a balance of $1,131.11 on a total account of $19,567.76.

The Aristos Co. is not the only litigant which has filed a counterclaim, for after it sued the Ignition company last summer the latter brought a counter suit in Detroit for $304,000.

Koehler Fails to Upset Goodyear Verdict.

Although thus far unsuccessful, the H. J. Koehler Co., Hupmobile dealer in New York City and adjacent terrirtory, is endeavoring to overturn a verdict which two New York City courts have rendered in favor of Frank Goodyear, who was a Hupmobile sub-dealer in Waterbury, Conn., about two years ago; the courts have ordered the Koehler company to pay Goodyear $490 and thus far the former has not succeeded in reversing the decision.

Goodyear contracted to sell 20 Hupmobiles in Waterbury and made a deposit of $25 on each car, this amount being deducted from the price of each car as Goodyear received it; he sold six cars in Waterbury and then declared he had reached the city's limit in the Hupmobile line. He asked for the return of his deposit, but it was refused; he then sued in the Municipal Court on the ground that there was a lack of mutuality in the contract and was awarded a verdict which the Appellate Term of the Supreme Court for New York county last week affirmed. The Koehler company, it is stated, contemplates carrying the case to the Appellate Division.

Wheels and Tires Are Not "Parts."

Reversing the ruling of Collector Loeb of the Port of New York, the Board of United States General Appraisers has decided that the tariff act of 1909 requires that automobile wheels and tires be assessed for duty separately, the decision being rendered in the case of Thomas Meadows & Co. and Irving Katz. Collector Loeb held that as tires and wheels were assembled articles they were properly dutiable at 45 per cent. ad valorem as "parts of automobiles." The board of appraisers, however, sustain the claim of the importers, who maintain that the tires should be granted a rating of 35 per cent. ad valorem as "manufactures of rubber," the board pointing out that tires are expressly excluded from paragraph 141, which covers "finished parts of automobiles."

New York Dealer Sued by Indianans.

Claiming that Bertrand D. Banker, who trades in Meridian, Cayuga county, N. Y., as the B. D. Banker Hardware Co., failed to pay in full for goods delivered to him, the Wayne Oil Tank & Pump Co., of Fort Wayne, Ind., has brought suit against him in the Supreme Court for New York county; the claim is that Banker's total bill was $145 and that he paid but $70. The goods were purchased June 17, 1912.

METHODS THAT PROMOTE THE SALE OF CARS

Observations Made and Recommendations Offered by a Prominent Manufacturer—Five Types of Prospects Defined and the Best Ways of Handling Them Suggested—Letting Customers Sell to Themselves.

"Don't take it for granted when a man walks into your salesroom, or consents to a demonstration, that he is half sold. This is merely an introduction and it is still up to you to make the sale.

Appearances May Be Deceptive.

"And you can't tell from the cut of a man's coat how much money he has in the bank. Selling automobiles is a merchandising proposition pure and simple, and it is your duty to give the customer the same amount of courtesy and attention that he receives in any high-class store. Buyers appreciate courtesy."

This is the first advice in "How to Sell More Motor Cars," a pocket-size booklet recently issued by the National Motor Vehicle Co., of Indianapolis, and which is of the sort that well repays careful reading. Wholly apart from the comparatively brief plea for National cars which it contains, the booklet is uncommonly strong in salessense and cannot well fail to sharpen the wits of salesmen who realize the necessity for that sort of thing.

"As John Lee Mahin once said: 'The buying unit is the family,' and you should as soon as possible ascertain the purpose to which the buyer wishes to put the car—who else is to be considered besides the prospect—and then shape your arguments accordingly," continues "How to Sell More Motor Cars.

Inattention that Lost a Sale.

"Here is an actual instance: A man walked into the salesroom of a Kansas City dealer about ten days ago. He was just an ordinary looking human being, possibly not quite up to the average in appearance. He did not walk right up to the proprietor, but wandered around among the cars on the floor. The dealer happened to be talking to a friend and was in the middle of a detailed description of a show he had seen the night before—so he allowed the unimportant looking stranger to remain unnoticed.

"The cars could not talk—they can't sell themselves unaided, so the man finally walked out.

"Just across the street there was a salesroom with newly painted front. A car was displayed attractively in the show window and the atmosphere of the whole establishment was up-to-date business methods. The window was clean and the interior presented an attractive, enterprising, inviting appearance. When the stranger stopped in front of the window a salesman immediately opened the door and invited him to step inside where he could get a much better view of the car.

"Drawing Out" the Prospect.

"Once inside, the salesman asked: 'Have you ever had any experience in operating a car?' This was a safe question, and it opened the door at once for a friendly discussion. Every man is eager to tell about his own motor experiences, even if he has at one time owned even an antiquated one-cylinder model. As the prospect told his experiences the salesman, without antagonizing him, was able to draw comparisons between the car the prospect once owned and the new car on display. No matter what car a prospect has driven, he does not want his judgment questioned.

"Often a man is just as sensitive to criticism about his car as he would be about his wife.

Buyer His Own Best Salesman.

"During the discussion the prospective customer mentioned the fact that his old car was not adapted for use by his wife and daughter. Owing to this bit of information the dealer then called the prospect's attention to the fact that the car on display permitted access to both front doors and allowed a lady passenger in the front seat with the driver to always be able to step out upon the curb and not be compelled to walk around the car in order to get to the sidewalk.

"As the conversation progressed, the prospect was unconsciously being sold and was led up to the point where he himself asked for a demonstration, with the result that the entire family as a unit bought the car.

Tact and its Influence on Sales.

"The salesman sold the car without the prospect realizing that he was being forced to buy. The main thing is to allow the prospect to think he is buying the car, while in reality you are selling it to him.

"The moral of all this is, that no matter how good your car may be it cannot possibly sell itself alone.

"This is just an example of one type of buyers—the man who has owned a car and who goes "shopping" when he buys.

"Know your man before you try to sell him. By using a little tact, any dealer can ascertain the purpose to which the prospect intends to put the car he buys—whether or not it is for family use, personal, pleasure, cross-country touring or for business purposes.

Five Types of Buyers Segregated.

"Experience in selling motor cars teaches that all prospective buyers may be separated into five main classes:

"(a) Price Tag.—The man who is looking for a bargain regardless of the age and often regardless of the condition of the car—just so that he gets a car that will run.

"A second-hand car or any old car will do.

"This class of buyers is limited usually to the 'wage earners,' who hesitate between a motorcycle and a second-hand motor car. Before wasting any time on him, find out how much real money he has to invest and unless he has cash on hand pass him up, courteously but quickly. Remember your time is valuable—your expenses are going on while you are talking to him.

David Harums as Car Buyers.

"(b) Second-Hand Fiend.—This man is a shrewd buyer; he is the David Harum of the automobile business, usually with little money and trying to unload on to you.

"In the first place he bought a much-used second-hand car. Then he invested a little more money and traded it with a friend for a better car, hoping that he could unload his new purchase on you by paying a small amount of cash and getting a brand new, up-to-date model.

"Don't let your desire to move a car from the salesroom to the street lead you into an unbusinesslike transaction. Just remember that the second-hand car may prove a White Elephant on your hands. (It costs just about as much money to keep capital tied up in a second-hand unsalable car as it would to feed and care for an elephant.)

"Rather than do this, let him go. Concentrate your time and energy upon the man who has cash in the bank. It is just as

Digitized by Google

much to know where not to work as where to work.

"There are exceptional cases, however, especially where a man owns a car that you sold him, and who wants to buy a new model from you.

Classifying Possible Purchasers.

"Tack this up on your wall over your office desk:

"'A certified check in your bank book ready for deposit is worth more than a second-hand car on the floor.'

"(c) Appearance and Pleasure.—This man is influenced largely by the lines of the car and the anticipation of the pleasure he is going to get out of it. He is usually in a hurry to buy. He belongs to that rapidly disappearing class that used to walk in and buy a car in ten minutes.

"It does not require a salesman to sell this man. But the wise, hard-headed, shrewd dealer with a view to his permanent success, will analyze this man's requirements and sell him the car best fitted to his needs, so that the sale will not act as a boomerang.

"(d) Social Prestige and Reputation.—This is the man who usually buys a car to please his wife with social aspirations. She knows absolutely nothing about a car, but has received the impression some way that 'to be anybody' she must have a nameplate with an artificial value rather than a car of merit.

"How have you been handling this class of buyers?

Selling the Average Buyer.

"A thorough analysis of sales made by successful dealers proves that this prospect, if handled right, is always easy to sell. The approach in this case is through the man of the house who realizes that $5,000 is 5 per cent. on $100,000, and when shown point for point that a car selling for $2,750 will give as good or better service, with accompanying elegance and atmosphere of refinement, he will not waste two or three thousand dollars on some fancy of his household.

"No matter how much money this man is worth, he is not willing to waste two or three thousand dollars on a nameplate. You as a dealer will sell more cars and make more money by giving your customers real value.

"(e) Service and Business.—This man represents the large majority of buyers to-day. He is motor-educated. He has probably owned a car before or else has made a very thorough study of motor car construction and is taking the advice of friends and benefiting by their experience.

"While this man is open to reason, he is not going to buy in a hurry.

"Before deciding he will get underneath the paint and the hood. Your first move is to as tactfully as possible ascertain if influence is being brought to bear upon him in favor of a particular car by some neighbor or friend. Then you will know what cars you are in competition with and what bias and prejudices you will have to overcome before you can make the sale.

"Probably the neighbor or friend of this prospective buyer owns a car that is not up-to-date, although it is apparently giving good service. And right here is where your salesmanship is tested.

Influence of Advertising "Copy."

"Prove to this prospective buyer that the car you are selling with left-side drive and center control (for example) is a year or more ahead of other cars, as a consequence next year it will still be up-to-date and will also demand a much higher second-hand value, taking it for granted, of course, that you are able point for point to show where your car will give as great or better service than the car owned by the neighbor or friend of your customer.

"All Buyers.—The majority of buyers are influenced greatly by Printers' Ink. They have more or less definite opinions of various cars formed by what they have read about them. Therefore, as a fundamental principle, you should not risk your time or money on an unknown car. A car, whose name is a household word, is naturally much easier to sell than a car that the prospective buyer has never heard of before. The well advertised and tested car means quicker and more frequent sales. Especially is this true with a car that has demonstrated its superiority in public contests such as races.

Benefit Derived from Service.

"Remember, a quick sale is more profitable than a slow sale.

"The modern automobile dealer is the one who is equipped to take care of his customers, especially if the buyer intends to drive the car himself.

"A little service and assistance gives the owner the feeling of confidence and good will toward both you and the car.

"Service means satisfied customers, and satisfied customers mean a permanent profitable business for you.

"Service also converts probable knockers into positive boosters. If your success is to be lasting, every man to whom you sell a car must, one year or more from date of sale, be as enthusiastic as the day on which he bought the car from you.

"This is possible by first giving real value and second by taking care of him. . . .

"If you are an experienced dealer you know that the sales methods used five or more years ago are not the methods that will sell cars to-day. Or, on the other hand, if you are new at the business, much will depend upon just how you begin."

Buda Adds a "Little Six" Motor.

Supplementing an already extensive line of motors of both the four- and six-cylinder type, the Buda Co., of Harvey, Ill., has brought out a new "little six," which, in conformity with the general tendency of the times, has its cylinders cast in a single rigid block; further increasing simplicity, the valves all are located on the same side, which construction facilitates their effective cooling and makes comparatively easy their enclosure by means of light metallic cover plates. In common with the other Buda motors in the line, the cams and camshafts are forged integral from open hearth steel, the cams themselves being case hardened the better to withstand wear. The oiling system is of the self-contained type, the oil being pumped from a crankcase reservoir to the top of the main bearings, whence it overflows into pockets into which the connecting rods dip.

Leaving little room for doubt regarding the aptness of the designation long-stroke, the cylinders measure 3¼ inches bore and 5½ inches stroke, the rating therefore being 45 horsepower, though it is no secret that this figure is easily exceeded. Cooling is by pump circulated water and in the design particular pains have been taken to ensure uniform cooling of the valves and valve pockets. To this end, the cool water is led in from the bottom of the radiator to liberal spaces directly beneath the valves, where suitably placed baffle plates ensure proper circulation. The exhaust manifold is provided with radiating fins to assist in the dissipation of heat. Quite as a matter of course, the motor is arranged for three-point support and provision is made for the mounting of any of the standard types of electric lighting and engine starting systems, as well as for a four-cylinder air compressor, enclosed gearing and an engaging lever being provided for the latter.

Home Made Case Hardening Material.

Case hardening, as a rule, is accomplished with the use of ground raw bone or bone black, and in some cases burned leather. Better than either of these is hydrocarbonated bone black, which is prepared by grinding pure white and hard bone which has been freed from pith and grease. It then is placed in sealed retorts and charred by a slow and uniform heat. When taken from the retort it is charged with carbon extracted from crude oil while it still it hot, thus filling all of the pores in the bone black to the exclusion of moisture, which seriously interferes with the proper working of the case hardening process.

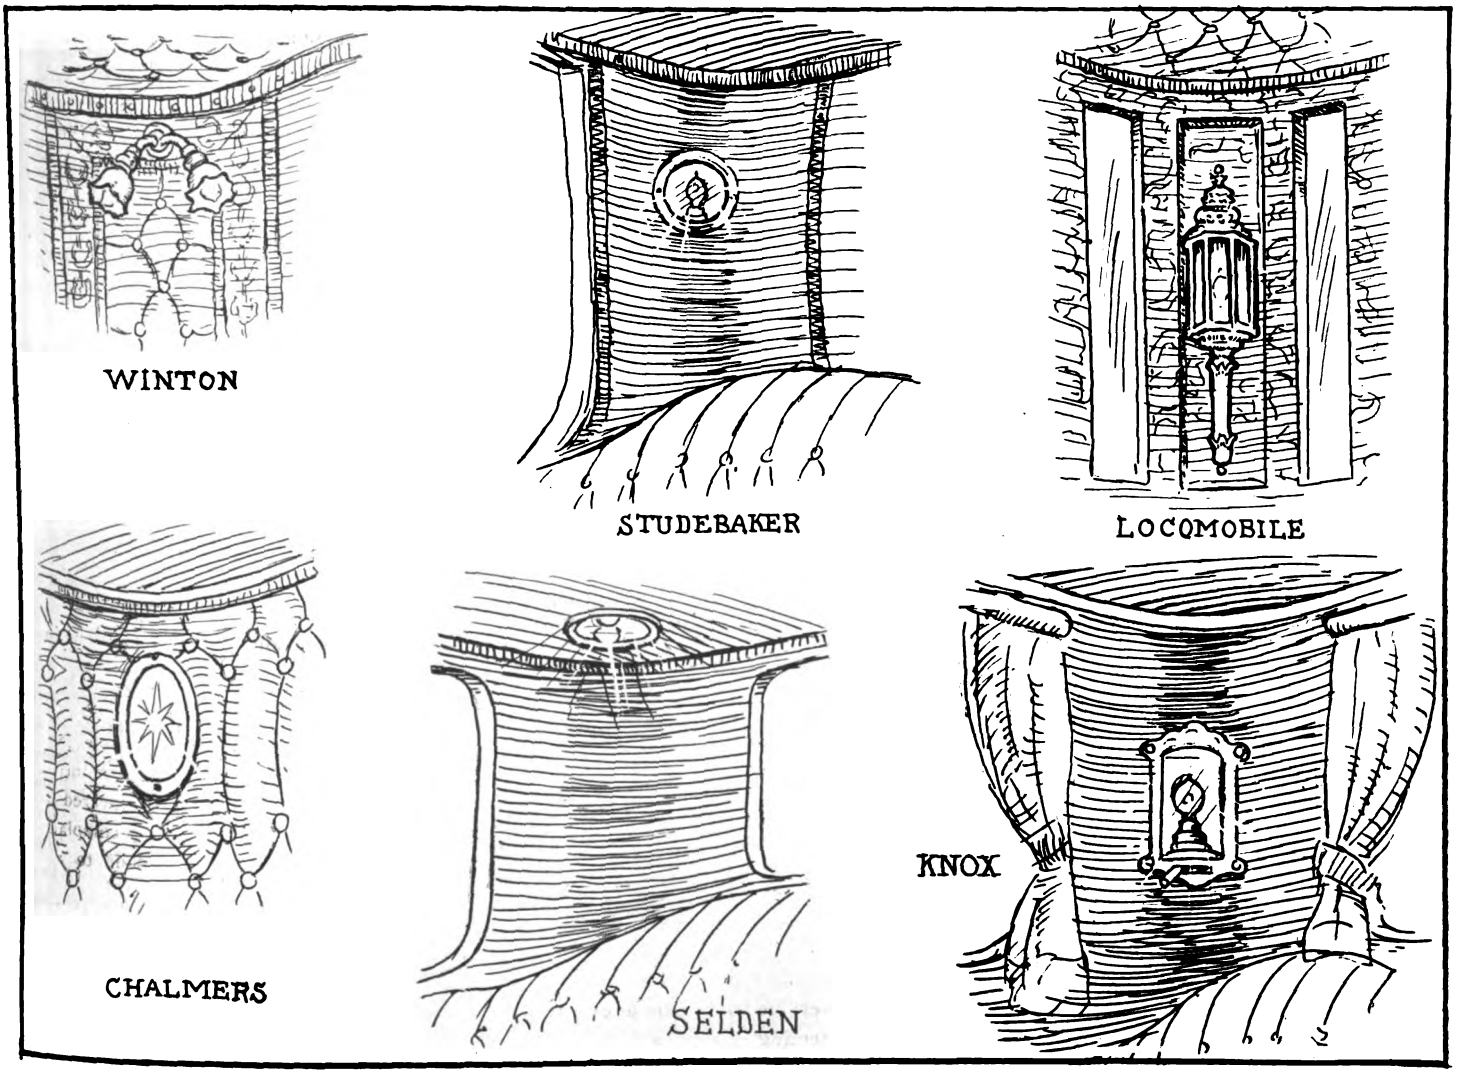
IGHTING THE INTERIOR OF THE LIMOUSINE BODY



Useful and Decorative Ends Served by Several Methods In Use and the Reason Behind Them—Importance of Positioning.

Lighting the interior of the limousine may be easy—that is, comparatively easy—or it may be hard, according to whether the object sought is merely "to counterfeit a gloom" or to add a touch of decorative effect, or both; it is not very easy to obtain distinctiveness and individuality and it is very easy to follow the "dead level of monotony" as regards the effectiveness of the lighting scheme or the sought-for embellishment. Still, that it is possible to obtain considerable variety both in designs and positioning is revealed by the accompanying illustration, which shows six solutions of the problem in which both utility and decorative properties are inherent in some and plain utility is apparent in others.

As far as utility is concerned, it is apparent that to be effective for reading purposes the light must be over the shoulder. Which fact, coupled with the ease of so mounting them, accounts in a measure for the preponderence of the "Pullman" style of corner lamp, a fixture which lends itself to plainness or illumination—in both senses—quite easily. Generally, such lamps, as in the Knox picture, for instance, are arranged to turn on a central pivot, the action of turning them serving at one operation to switch on the current and to bring the lamp itself out of its temporary retirement. When the lamp is extinguished it is invisible; nothing remains but a plain nickeled plate.

The perfectly plain flush lamp, whether it be round, oval, square or any other shape, manifestly is the simplest of all and with the aid of a little ingenuity on the part of the glazier can be made really decorative. As witness the Chalmers lamp, in which the glass is ground with the exception of a deeply cut central star. The Studebaker lamp is devoid of ornamentation of any kind and is one of the few that can be suspected of serving a useful purpose rather than a decorative one. The same applies also to the Selden lamp, the only difference being that it is inserted in the roof instead of in one of the corners. Its position is slightly different from that of the usual roof light, however, in that it is placed quite near to the corner where its beams will be cast over whatever the passenger may find interesting enough to read; a duplicate is located in the other roof corner, of course.

Where real decorative effect is desired, there are few things that lend themselves more readily to the touch of the artist than do electric lamps. Which fact, apparently, is known to Winton and Locomobile designers and it has been taken advantage of to the fullest extent possible. In the one, the lamp bracket is a double one from which depend two arms each carrying a socket and a receptacle for a decorative shade. In the other, which, by the way, is fitted to a really luxurious limousine fitted out in maroon broadcloth and finished off with gold-plated trimmings, a really ornate pillar lamp fills the corner and serves to add a touch of distinction that could not be obtained in any other manner.

SUPREME COURT DISSECTS A MOTOR TRUCK GUARANTEE

(Continued from page 7.)

"The company is to be given any opportunity which it desires to make the machine satisfactory and economical before it is returned.

"The above guarantee is upon condition that only men furnished or indorsed by the company operate the machine during trial periods as above referred to."

During the first 15 days of service the truck was operated by a chauffeur in the employ of the vendor, but its operation was not satisfactory to the purchasers, who so informed the representative of the Reliance dealer, one Sanders. The latter expressed his employer's intention "to make the machine satisfactory," but all efforts to that end proved unsatisfactory to the purchasers. On May 28th, 17 days after delivery of the truck, when the complaint was renewed, these reassurances were repeated, and on May 30th the final payment was made by check.

In the lower court, when the defendants objected to statements of Sanders as being construed to vary the terms of the contract the objection was sustained and that evidence was stricken out. The supreme court, however, holds that the evidence was competent. On this point the higher court says:

"Sanders had not signed the contract in behalf of the vendor, but he had conducted the final negotiations and had entire charge of the execution of the contract with respect to fulfilling the obligations of the vendor and to complaints concerning the operation of the truck; and, as has been seen, the agent who was sent out to collect the final payment referred the vendee's representative to Sanders to adjust the matter when payment was refused on the ground that the vendor had not performed. Moreover, according to the testimony of the vendee, Carroll, the general manager of the vendor, informed him that Sanders had charge of the automobile department, and when complaint was made with respect to the operation of this truck he said: 'Well, I have nothing to do with that. You will have to see Mr. Sanders; he has charge of that and you will have to fix it with him'; and this was not specifically denied by Carroll, who was subsequently called as a witness for defendant. Furthermore, it appears that Sanders in his correspondence for the defendant, to some extent at least, used a rubber stamp by which his name was signed as 'manager,' but Carroll says that he was not aware of this. Sanders was not a witness upon the trial."

The Dochtermann company continued to use the truck until September 27, 1907, during a large part of which period it was in a repair shop. While it was being removed therefrom the shaft broke and the plaintiffs then served notice that unless a new and satisfactory truck was supplied they would be obliged to sue for the return of their money. Later they were informed that the Reliance dealer would do nothing further until the Dochtermann people paid for the repairs, amounting to more than $200. Suit was then instituted and the defendants interposed a counterclaim for the repairs and for the services of a chauffeur for 10 days, but on the trial the counterclaim was withdrawn.

"Notwithstanding the fact that some of the evidence tending to show that the final payment was made by the vendee on the express representation that if the vendor was unable to change the machine so that it would work satisfactorily the money was to be returned was struck out," says the Supreme Court in its decision, "still the issue was submitted to the jury as if that evidence was sufficient to show an agreement on the part of Sanders for the return of the money if the machine could not be made satisfactory, for the court submitted to the jury the question as to whether or not Sanders was authorized by the vendor to change the contract and instructed the jury, in effect, that unless Sanders was so authorized the plaintiff could not recover. It is alleged in the complaint that the second payment was made on that agreement. The attention of the court in submitting the case to the jury was not drawn to the fact that some of the evidence bearing on this proposition had been stricken out, and it was not claimed that the evidence remaining in the case was insufficient to show that Sanders had undertaken to agree for the vendor to repay the money if the machine could not be so changed that it would work satisfactorily. The real question of fact presented to the jury was with respect to Sanders's authority to make such an agreement for the vendor."

Under the circumstances brought out at the trial, the Supreme Court declares, "it is not to be inferred that the complaint was dismissed upon the theory that the evidence was insufficient to show that the second payment was made on the agreement on the part of Sanders that it would be repaid if the truck was not so altered as to do the work of the vendee satisfactorily, for, as already observed, it was submitted to the jury upon the theory that there was sufficient evidence of a parol understanding between Sanders and the treasurer of the vendee to that effect. Nor can the dismissal be sustained upon the theory that Sanders was not authorized to make such an agreement. On the uncontroverted evidence the vendee was justified in refusing to accept the truck and in tendering its return at the expiration of the 15th day, and in demanding the return of the down payment. The vendor, however, by the express terms of the contract was entitled to further time to endeavor to perform on its part. During that period the vendee would have been justified in refusing to make the final payment; but it appears that the vendor manifested confidence in its ability to make such change and alterations in the truck as would be a compliance with the contract.

"In the circumstances it is quite clear that if the vendee was induced to make the final payment on the assurance that the vendor could and would fulfill its contract, such payment would be subject to the terms of the contract with respect to the original payment, and on the failure of the vendor to perform within a reasonable time the vendee would be entitled to a return of the amount paid. Regardless of whether Sanders originally had authority to change the contract or to make a new one, the vendor could not accept the vendee's money in these circumstances without becoming liable to return it if this payment was induced by representations on the part of the vendor's agent such as are claimed to have been made. Sanders unquestionably at this time was representing the vendor both with respect to performing its contract and requiring performance on the part of the vendee, and his principal is chargeable with knowledge of the negotiations which he had with the vendee which resulted in the final payment.

"It is contended in behalf of the respondent that at the expiration of the 15 days by the terms of the contract the final payment became due and payable, and that, as matter of law, regardless of whether any representation was made by Sanders with respect to the repayment of the money, the vendee would be entitled to a return of both payments if it ultimately appeared that the truck of which vendee justly complained at that time could not be made to comply with the contract, or that the vendor abandoned further efforts in that direction, and on that theory there would be no question for the jury. We are of opinion, therefore, that the court erred in dismissing the complaint."

Miller Embraces Parcel Post Service.

Charles E. Miller, the well-known New York supplyman, is one of the those who have to do with automobile accessories who is making the most of the new parcel post service. He is offering to send automobile supplies within the 11-pound limit by parcel post without charge for postage. On shipments that are too large or too heavy to go by post, he also has adopted the plan of paying freight or express charges.

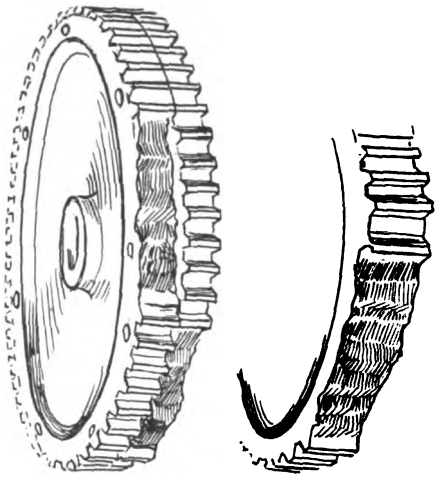
REPAIR OF TIMING GEAR THAT MET AN EMERGENCY

Fiber Idler Was Badly Damaged by Contact With a Nut Carelessly Left in Gearcase—"Doubling Up" That Was Effective.



There are many, perhaps, who fancy that as a power transmitter a stripped gear is about as good as no gear at all, and it may be added that in nine cases out of ten the assumptions of the many are not over far from being correct. But on occasion—of course very much depends upon the circumstances—that a marred gear wheel can be made to function properly for the interval necessary to effect the much needed replacement of the damaged part was demonstrated one day last summer.

It happened on the very last leg of a tour; the afternoon was about half gone and 25 miles more were to be covered before hotel accommodations could be reached. The car struck a bad rut and immediately afterward the motor "went bad"—brought up dead with a crunch of grinding metal. Little search was required to reveal that the valves were not operating when the motor was turned over and opening the timing gearcase cover disclosed the reason. A nut which had been carelessly left in the bottom of the case had been thrown up by the leap of the car and had been caught between the timing gear teeth and the idler gear, which happened to be fibre, was the sufferer, and emerged from the conflict minus four needed teeth.

A survey of the surrounding country revealed nothing more promising in the way of a "service department" than a wheelwright's shop about half a mile further down the road; a horse being pressed into service, the car was towed to that point of vantage. The wheelwright was possessed of a fair assortment of tools, none, however, that were adaptable to the purpose in hand save a generously proportioned vise mounted on a solid work table.

Speculation as to how the repair was to be made—for it was unanimously agreed that a repair must be made if the car was not to be left at the point for two weeks awaiting the arrival of a new gear—was long drawn out and methods such as the insertion of pins in place of the damaged teeth or wrapping the wheel rim with bare wire at the points where the teeth were missing, the strands being soldered together, were considered from all angles and finally abandoned as impractical. It was the shop proprietor who finally suggested the remedy and it was he who did the work, too.

The wheel was mounted in the vise and sawn directly in half, so that two wheels were produced, each with teeth of narrow face, as is shown in the accompanying sketch. The rough faces which resulted from this operation were smoothed off as much as was possible with the old file which the tool kit bore, and the two wheels were placed together again, but their relative position was altered—one was advanced over the other—so that the teeth on the wheel were continuous all the way around. Of course, in two places, where the original teeth had been demolished by contact with the nut, the teeth were but half of the original width, but that was sufficient to

STRIPPED GEAR AND ITS REPAIR

bear the strain for the time being. Clamped in the vise in this relation, holes were drilled through the rim spaced about an inch apart all the way around. Brass escutcheon pins were pressed into service as rivets and were inserted in the holes and headed with a peen hammer after the holes had been slightly countersunk both front and back so as to insure the hold of the rivets.

Naturally the keyway, after the wheels were riveted together in the new position, was no longer continuous. The matter was corrected by recutting the keyway in one half of the wheel so that the new way corresponded with the old way in the other half. To this end the hacksaw was again pressed into service to make the side cuts and the slot was cut out to the proper depth with a very narrow chisel which was "brushed up" on an oil stone.

When the wheel was finished and in place it was found that it did not run exactly true—which was to be expected. Upon the motor being retimed, however, the wheel served its purpose perfectly, that is, it caused the valve mechanism to function perfectly, although not a little noise was emitted by the timing gear train owing to the "wobble" of the wheel and the fact that several of the teeth which were not wholly obliterated were damaged.

KEEPING COOLING SYSTEMS WARM IN WINTER WEATHER

What Happens When Frost Penetrates —Supplying Heat to Melt the Ice—An Emergency Job of Thawing Out.

One of the most striking demonstrations of the effect of over-cooling on a gasolene motor may be had on any really cold day by stopping the car and throttling the motor, while thoroughly heated, until it is running at its minimum speed—that is, so that a little more throttling would cause it to stop. If the motor is allowed to run for a time the chances are that it will stop before long, owing to the gradual cooling that takes place, unless, of course, the radiator is protected from the air and the rapid loss of heat prevented by a shield, or robe.

Obviously, it is a wise precaution to leave the motor running a little faster in winter than in summer and, in case of extreme cold, to cover the radiator as well. Not a few motor stoppages, sometimes with disastrous results due to freezing up, have occurred through neglect of this little matter. Incidentally, if it is suspected that freezing has started in the circulating system of a motor that has stopped in the cold, it is decidedly risky to put much strength into the first pull on the crank. The leverage on the pump and its shaft, due to the two-to-one gear reduction and the length of the crank handle, is very considerable, and the pump is apt to be the first thing—at least, in some cars—to feel the frost. The pump is normally at the point where the water is coolest, drawing, as it does, from the bottom of the radiator after the water has passed through from the top, and this, together with the fact that its low position removes it from the influence of most of the engine's heat, makes it rather vulnerable to the effects of frost.

Thawing a radiator out of doors in very cold weather is apt to be rather more difficult than might at first appear to be the case. Presuming that the water at the bottom has frozen while that at the top is merely icy cold, pouring hot water in can have little or no effect for the simple reason that there is not likely to be room enough for sufficient hot water to do any appreciable good, and of course the drain cock and the way to it will be effectually blocked by ice. The best thing to do is to get the engine running slowly with the fan belt off; the gradual warming up will extend to the radiator by degrees. When there appears to be any chance of water getting to the drain cock, matters may be facilitated by thawing it out and leaving it

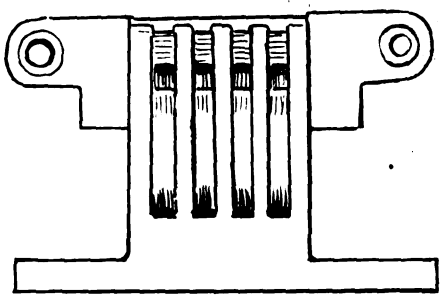
Digitized by Google

open, so that the cold water may be removed to make room for hot water to be poured in at the top.

A scheme that worked once at least, and might be worked in many cases, hurried up the thawing of a frozen radiator very considerably. The freezing in this particular case extended apparently about four or five inches up from the bottom of the radiator. It was a bitterly cold day; getting indoors was out of the question; and the only resources were those right on the machine, which was a big truck. The pump was frozen up hard, so it was disconnected by means of a joint in its shaft; the fan belt was removed and, after a great deal of priming and cranking, cranking and priming, the motor was started. It warmed up by degrees, but the radiator was discouragingly slow in responding to the heat. Presently one of the half-frozen crew stopped stamping his feet and swinging his arms to look hard at the fan for a moment. Then he rummaged out of the tool-box a couple of long pieces of belt-lacing and made of them a temporary fan-belt, which he applied crossed, so that the fan was made to rotate in the reverse of its normal direction.

The idea was to draw the warm air out of the hood and blow it against the radiator, and the result was almost magical. It was only a short time before the radiator thawed out. Meantime the pump had been disconnected and removed and laid on the exhaust pipe to thaw out, which it did, and it was not long before everything was again in normal running condition. Of course this was rather an extreme case. The water could not be drained off and there was no shelter available; to let the car stand would have meant the cracking of the water jackets and the bursting of the radiator, if nothing worse, so that it was well worth while to go to some trouble to make use of the heat generated by the engine itself.

Most of the water in the cooling system had boiled away by the time things thawed out, but there was plenty of snow around and there was a tin pail which, filled with the "beautiful," was set on the exhaust pipe to "cook," and in this way the deficiency in the supply was made up sufficiently to run the machine.



Dayton Dealers Made Brave Display.

Dayton's second annual show, under the auspices of the Dayton Automobile Club, was inaugurated in Memorial Hall on Monday evening last, 17th inst., to hold forth throughout the remainder of the week. Beneath the usual canopy of vari-colored bunting with which the interior of the building is disguised for the occasion, and perfectly illuminated by the glow from myriad incandescent lights festooned along the aisles, 30 different makes of cars are shown by 20 dealers; accessories are displayed by half a dozen dealers in those various needful appurtenances.

The cars on display are: Cadillac, Pierce-Arrow, Mitchell, R. C. H., Hupp-Yeats electric, Overland, Locomobile, Standard, Marmon, Cutting, Paige-Detroit, Warren, Abbott-Detroit, Chalmers, Buick, Peerless, White, Baker electric, Marathon, Reo, Ford, Hupmobile, Marion, American, Republic, Pathfinder, Speedwell, Winton, Stoddard-Dayton.

Invisible Hinge of Many Purposes.

The amount of hard work that falls upon the hinges of automobile doors is all out of proportion to the amount of consideration that the average car owner bestows upon them, unless they allow the door to sag, or

SOSS INVISIBLE HINGE

project so much as to be more than ordinarily unsightly. No hinge is entitled to be described as a thing of beauty The prevailing tendency to make car bodies perfectly flush makes the ordinary projecting hinge particularly conspicuous, and it is the aim of the Soss Mfg. Co., of 435 Atlantic avenue, Brooklyn, N. Y., to produce hinges that will be invisible when the door is closed, while improving upon other hinges in other respects.

The principle of the Soss hinge is that of a joint made up of a number of bearing surfaces or plates which slide together and fold into a recess in the door post when the door is closed; the accompanying illustration makes the construction plain, and also shows the large bearing area which gives the hinge long life and prevents the common and annoying sagging that occurs in car doors after considerable use. When the door is closed the plates in the hinge lock together and prevent rattling as well as holding the door firmly and closely in its place and so preserving the smooth outward appearance of the body. The plates which serve as foundations for the hinge are so formed that water cannot work past them and into the wood to cause decay; the removal of two screws from each hinge permits its removal from the car without disturbing the main fastenings. The Soss hinge is adapted to both straight and curved construction.

Albany Dealers Hold Third Show.

For the first time in two years the good people of Albany are enjoying a motor car show—the third effort of the Albany Automobile Dealers' Association—the inability on the part of the association to procure the First Regiment Armory, which houses the present show, and lack of another building of sufficient size to do the show justice having prevented the holding of an exhibit last year. And indeed a building of no mean proportions is needed to house the present show, for all told there are 59 different makes of vehicles on the floor—18 of which are commercials—shown by some 45 dealers; accessories are displayed by 20 dealers.

The decorations are very simple; they comprise alternate strips of orange and white bunting disposed with several flower entwined lattice work structures to form a canopy which covers the entire floor space in the drill hall. By way of rendering the exhibits of all the dealers accessible railings are not permitted; triangular hanging signs also done in orange and white announce the exhibits. The show, which was inaugurated on Saturday evening last, February 15th, will continue throughout the week and be brought to a close on the night of Washington's birthday, February 22d. The pleasure cars on exhibit are: Knox, Reo, Ford, Premier, Abbott-Detroit, Marion, Nyberg, Packard, Franklin, Henderson, R. C. H., Metz, Moyer, Stutz, Apperson, Paige, National, Kissel, Lozier, Oldsmobile, Oakland, Krit, Hudson, Flanders, Stearns, Buffalo electric, S. G. V., Rauch & Lang electric, Speedwell, Pierce-Arrow, Locomobile, Cole, Fiat, Cadillac, Haynes, Studebaker, Warren, Imperial, Pullman, Michigan.

The trucks shown are: Stewart, Selden, Alco, Knox, Reo, Adams, Packard, Mack, Saurer, Hewitt, Federal, Lippard-Stewart, Kissel.

Convenient Storage of Side Curtains.

Better than storing side curtains away in the compartment under the rear seat, where they are liable to be covered with all of the paraphernalia incidental to each trip, with obvious creasing and cracking of the material and breaking and scratching of the celluloid lights, is the method of storing them in a sheet metal tube made for the purpose. Such a tube, 29½ inches in length, and 6 inches in diameter, formed of No. 24 iron and provided with a partition 7 inches from one end, will serve to protect the curtains and also a pair of inner tubes; the tubes naturally are carefully rolled up and placed in the 7-inch compartment. Covers for both ends should be provided for the exclusion of dust and moisture.

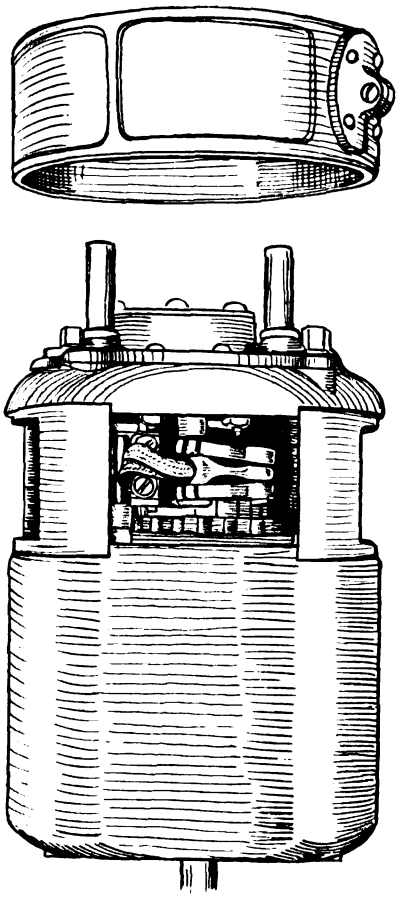
LIGHTING AND STARTING EQUIPMENT EXPLAINED

Where to Look for Trouble and How to Remedy It When It Is Discovered —The Adjustment of Brush Spring Tension Made Plain—Autoliter System as an Example of the Several Degrees of Accessibility.



(This is the nineteenth of a series of articles designed to make clear the electric lighting and engine starting systems in use and to render easier their care and repair by the dealer and owner alike.)

Your lights go out with unexpected suddenness. Your starter refuses to exemplify that power which it always has been your pride to exhibit in the presence of admiring friends. You fuss and fume and go over battery connections and switches and meters and wiring all to no purpose. Finally, in desperation, you "take a look at the generator, anyway," and even if you have looked at it before, when it was running properly and needed no attention, you are surprised at the accessibility of the vitals—the wiring connections and the brushes and commutator. Nine times out of the proverbial ten, you will find the trouble right there—a loose wire, perhaps, or a broken "pigtail," or brushes that are too short properly to reach the commutator, or, as more often is the case, nothing more serious than a dirty commutator.

Making Repair Work Easy

All of which serves to emphasize that there are degrees of accessibility in generators and starting motors just as there are degrees of accessibility in every other part of an engine or chassis. That is to say, the valves of an engine invariably are easy to get at; no special tools are required in the majority of cases to bring them out of their state of retirement into the light. Which is logical, of course, for it is expected that the valves will require to be ground from time to time. If the operation were hard and required special knowledge it is altogether likely that the manufacturer of the engine mould make the valves a little harder to get at in order to discourage indiscriminate tinkering with its possibility of damage. It is the same way with the differential. It is comparatively easy to remove the hand plate that closes it in and certainly it is no harder to re-pack the housing with grease. But it is a very much harder job for the amateur to remove the pinions, though, by reason of the foresight of the maker, it is comparatively simple for the experienced repairman.

So it is with the modern electric lighting and engine starting system; to the casual observer it appears to be bottled up tight—no chance of getting into its "internal economy" and less chance to make repairs. Actually, such is not the case; it is possible to get into any system on the market to the extent that is required in making adjustment or giving the care that they all demand—provided one knows how to go about it. The parts that cannot go wrong in a natural lifetime—the windings on the field and the armature—are securely sealed in the

AUTOLITER STARTING MOTOR

majority of cases, for the average person can do no good whatsoever in attempting to correct derangement in these parts should it occur through extraordinary accident; the repair of such parts requires the attention of a real expert, which means, briefly, the manufacturer. Hence, the manufacturer has taken the law into his own hands, so to speak, and has made the wiring hard to get at, secure in the knowledge that none but he can repair it in the event of trouble and equally as secure that the occasion for repair will be scarcely more frequent than a snow storm in the month of May. As a matter of fact, at least one manufacturer of electric lighting and engine starting equipment has made it absolutely impossible to get into the works of his machines—other than the brushes and the commutator, of course—without the use of special tools, and he does not supply the tools with the equipment.

Blood Vessels May Be Ruptured.

To the manufacturer, however, the extraction of the winding on the field, and its replacement with new winding offering no obstruction to the passage of current is a comparatively simple operation, and, be it added, a comparatively cheap one for the owner. It might not be so cheap for the owner if it were possible for him first to meddle with it; he might do more damage than already existed, or, on the other hand, he might do damage where none existed and the trouble was merely one of maladjustment of some part. From which appears the wisdom of the manufacturer and the precautions he has taken to ensure to the owner the best kind of service. Almost any one can doctor an ordinary cold in the head, but no one would think of attempting a major surgical operation; he would call in a specialist. And for the time being, the ordinary troubles which manifest themselves with electric lighting and engine starting systems can be likened to colds; 'most any one can doctor them quite successfully with the aid of the physics that have been recommended in the preceding eighteen articles on the same subject which have appeared in Motor World. Following the analogy, the repair of the more complicated parts of the systems, such as the wiring, must be likened to a serious operation which requires the service of a specialist—the amateur is likely to rupture a blood vessel and cause the thing to bleed to death, which means to short-circuit it and "kill" the battery.

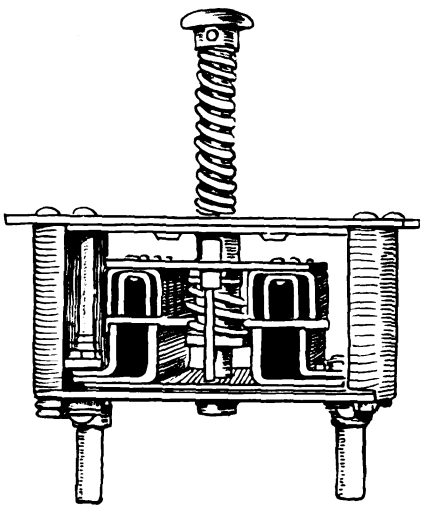
Aiding the Amateur's Efforts.

On the other hand, the manufacturers of such systems have, as a rule, been at particular pains to make those parts which are susceptible of successful treatment by the amateur particularly accessible and simple. In the majority of cases, the owner or the

Digitized by Google

dealer does not even require to know how to get at the parts; the modus operandi is perfectly apparent. The removal of a small metal plate, spring held in place; the lifting of a little "trap door"; the unlatching of an encircling band; nothing more is necessary, and in few cases is any tool as complicated as a screwdriver necessary to expose the brushes and the commutator, which are the parts that really require periodic inspection and care. Trouble may never occur, and then, again, it may, and when it does it generally can be traced to one or the other of these parts. Accordingly, the owner and the dealer have real cause to rejoice that the manufacturer has made these parts as simply accessible as he has made them; it is a mutual advantage. .

Starter that Stands on End.



Carrying this same accessibility idea just a little further than is usual, the Electric Auto-Lite Co., of Toledo, Ohio, has evolved an engine starting motor and a method of mounting it that not only leaves little to be desired as far as the "getatability" of the brushes and commutator is concerned, but places these parts in a position where they cannot well be overlooked. Hence, their inspection—and probably their care, for one follows the other as naturally as a chaser follows a drink—is ensured, for the very conspicuousness of the device tends to invite attention. The starting motor stands up on its end, so to speak; it is not in a reclining position, as is every other starter on the market.

Obviously, the starter forms part of a complete electric system, the generating portion of which was illustrated and described in Motor World under date of November 14th in an article in which the care and repair of the generator also were outlined in a comprehensive manner. The generator itself is a compact, light-weight machine of the permanent magnet type in which current regulation is effected with the aid of a friction speed governor, which maintains the speed of the armature practically constant over a wide range of engine speeds.

Passage of current to the battery automatically is controlled by an electromechanical circuit breaker of the orthodox pattern contained in a housing within the arch of the magnets, where it is fully protected from accidental injury and the insidious action of road dust and dirt or moisture.

The brushes of the commutator also are fully housed, though, as is the case with the starting motor, they are quite easy to get at for cleaning, etc. The generator is the same as is used for the plain lighting system, except that its output has been increased slightly to compensate for the added drain of the starter on the battery. Consequently, there are but two parts in the combined system that have not already been covered, viz., the starting motor itself and the switch which controls it.

Of these two, the switch, of course, is the simpler, though it has no more moving parts than has the motor—each has but a single moving part. Similarly, both are completely enclosed, though neither is more difficult to get at than the other. In common with other devices of the same general kind, constructed to perform the same function, the switch is designed to be mounted beneath the floorboards with nothing visible

AUTOLITER BATTERY SWITCH

but the plunger; the whole mechanism is shown herewith in section, the better to make plain its construction. Briefly, the plunger carries a double row of inverted U-shaped contacts, and when depressed as in starting these contacts slip over others, thus making the connection between the battery and the starting motor.

Cleaning the Starting Switch.

As sliding contact is provided by the movement of the plunger, the device is made self-cleaning insofar as the actual contacts are concerned. Hence, small accumulations of dust and dirt, or even a small amount of oil can have no appreciable insulating effect. But, though the switch is carefully enclosed to keep out just such trouble-breeding foreign matter, a certain amount of dust will in all probability find its way in after continued use, and the paraphrased proverb, "Cleanliness is next to efficiency," should be remembered. Which is to say, a soft, long-bristled brush carefully wielded, is one very good way of ensuring against possible troubles, manifest in short circuits or the passage of insufficient current due to the insulating effect of dirt or other foreign matter. Incidentally, the presence of dirt results in more rapid wear than ordinarily would take place, because of the abrasive action of the particles.

Pursuant to previous instruction regarding the necessity for closing starting switches quickly, it is equally as important that they be opened quickly. Unless switches are closed quickly, the full strength of the battery is carried for a time by but a small portion of the total contact area, with the result that an excessive strain is placed upon it and fusing of the metal might take place. Hence, it is essential that the switch be closed with a quick, firm motion. In opening the switch, the button should be released quickly for substantially the same reason. When the switch is opened slowly, arcing at the break of the contacts, with consequent burning, is likely to follow. With the Autoliter switch, however, the latter trouble is impossible, for the reason that the device is of the "quick break" type in which the opening is controlled by a fairly strong spring, making it impossible to open the switch slowly.

To the owner or the dealer, the starting motor need be no more complicated than the switch, regardless of the multiplicity of its parts and its seeming complexity. There is only one moving part—the armature—and there are only two parts which need ever be touched from one season's end to the next; they are the brushes and the commutator. Both are easily accessible by removing the name-plate band, which is held in place by means of a single screw and nut.

Lubricating the Armature Bearings.

Electrically, the motor is of the plain series wound type and mounts a drum-wound armature carried in liberal sized ball bearings. The frame is continuous and solid and carries the field windings, which are fully protected both from accidental injury and dirt, the whole assembly being practically dirt- and water-proof when the name-plate band is in place. As may be seen by the accompanying sketch of the brushes and the brush-holding mechanism, the machine is of the four-pole type, thus ensuring a high torque moment at very low rotational speeds, a factor which is well-nigh indispensable for work for which it is intended. It is a natural characteristic of the motor, of course, that its torque increases with the load up to certain limits.

As the armature is mounted in ball bearings, its wants in the matter of lubrication will be exceedingly moderate, both for this reason and for the reason that it is in motion but a few moments at a time and at comparatively long intervals. A few drops of fine machine oil about once every 1,000 miles should suffice, unless the starter is used a great deal, when the frequency of the applications, but not the quantity of oil

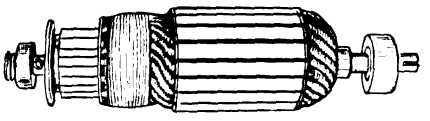
Digitized by Google

applied, should be increased. As so many times has been pointed out, too great a quantity of oil will serve no other purpose than to gum the commutator and dirty the brushes.

As the illustration of the brush-holding mechanism shows, the brushes are held in place by spring-impelled arms and are equipped with "pig-tails"; there are two points in connection with the construction which should not be overlooked in caring for the system. The first of them is to make certain that the tension of the brush springs is not altered through accident or design, and the second is to make sure that the "pig-tails" do not become detached from the brushes.

Adjusting the Brush Spring Tension.

In the majority of cases, the brush spring tension is set very carefully at the factory with the aid of apparatus designed for the purpose, from which the importance of preserving the setting may be appreciated. If the tension is increased, there is danger that the brushes will cut into the commutator and cause expensive damage which may require the commutator to be re-turned in a lathe. If, on the other hand, the tension is decreased, poor commutation will result, sparking will take place, and the commutator may be partly fused in consequence.

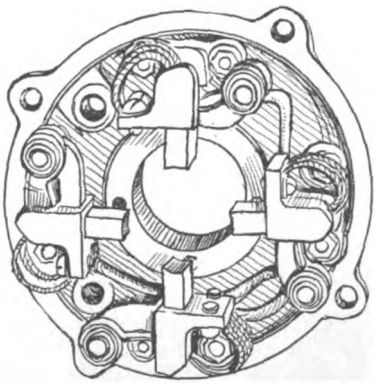


In either case, the symptoms suggest the remedy which best may be applied by testing the spring tension on a new machine with the aid of a small weighing scale such as is used for weighing material up to about 10 pounds in weight. The hook of the scale should be attached to the brush arm and the number of pounds registered on the scale the instant the arm lifts noted down for future reference. It is a comparatively simple matter to adjust the springs to correspond to the figure obtained, testing each with the scale. Needless to add, brushes that are too short will result in trouble of the same kind as that manifested by brush springs that are too weak. It is poor economy to attempt to run with brushes that are too short properly to reach the commutator, for new brushes cost but a few cents at the outside and can be inserted in not more than ten minutes by almost any one.

"Pig-Tails" that May Cause Trouble.

The accepted method of attaching "pig-tails" to metallic brushes is to solder them in place, in which case there is little chance of them working loose. With carbon brushes, however, they generally are fastened by means of lugs and consequently there is some slight danger that vibration may loosen them. As their purpose is to ensure the proper distribution of current by eliminating the hazard of dirty or oily brush holders (which thus are relieved of the duty of carrying current), it is essential that their connections be intact. In previous articles, stress already has been laid upon the absolute necessity of tight electrical connections; there are few things that can cause more trouble of a mystifying nature than loose wires or loose connections.

How Excess Lubrication Hurts.



There are a number of reasons for the trouble that results from excessive lubrication. In the first place, too much oil, if permitted to remain, will result in one of two conditions: it will either partially dry out, leaving the commutator in a sticky, gummy condition, which disease rapidly will spread to the brushes and brush holders, or, if frequently added to, the commutator will remain always wet, which is bad for the insulation and bad for the commutation. The sticky, gummy condition is bad for commutation, too.

AUTOLITER ARMATURE

Commutator Care Made Plain.

The first palliative for either condition, naturally, is to reduce the supply of lubricant, after which attention can be turned to cleaning away the grime. Unless the commutator has been in such a state for a long time, which is unlikely, for the trouble generally manifests itself early in a noticeable loss of power, the excess oil generally can be removed with a cloth wrapped around the finger and dampened with gasolene and held against the commutator with the armature rotating. Then, if the commutator exhibits a clean surface unmarred by scratches, the brushes may be cleaned and re-assembled after a very minute quantity of fine vaseline has been applied to the commutator with the aid of a small piece of felt, or the finger tip.

BRUSH HOLDERS IN DETAIL

Generally, however, the use of too much oil results in abrasures of the surface of the commutator due to the burning of the oil as a consequence of sparking, and in such cases more drastic treatment will be necessary, though it scarcely is more difficult of application. It consists, briefly, in applying No. 00 sandpaper to the commutator while the armature is rotating and continuing the application until all the scratches and burned marks disappear. To run the motor will necessitate that the brushes be left in place, of course, though they should be taken out and cleaned of particles of sand and copper from time to time during the refinishing process. Incidentally, as the motor is operated at practically no load, it will draw very little current from the battery, which knowledge should conduce to thoroughness in removing the last vestige of scratching. Needless to add, great care must be taken to apply the sandpaper evenly and not to cause "hills and dales" in the surface of the commutator. Of course, where the scratches are very deep and the commutator appears in a very bad condition, the application of sandpaper may serve no useful purpose, the only remedy being refinishing in a lathe. The job, however, scarcely is one for the amateur and had best be turned over to the manufacturer.

The peculiarly characteristic brownish, glazed appearance of the normal and healthy commutator never should be disturbed for any reason. If it becomes necessary through any cause to disassemble the machine, care must be taken to see that the glaze is preserved and that the brushes are replaced in exactly the same positions they occupied before the machine was taken apart.

Operation of Roller Clutch Pulley.

The Autolite starting motor is attached to the gasolene motor through its own train of gears, or through the intermediary of a "silent" chain operating through a roller clutch pulley, which obviates the necessity for disconnecting the gearing after the starter has performed its mission and the gasolene motor is operating under its own power. The roller clutch permits the electric motor to drive the gasolene motor, but instantly the latter picks up its own cycle of operations the driven member of the clutch overruns the driving member, releasing the clutch rollers and permitting free movement.

The battery employed in the Autoliter system is rated at 120 ampere hours capacity and is ample to "spin" a heavy motor at considerable speed for a length of time calculated to be sufficiently long to induce even the balkiest of carburetters to furnish mixture of the proper proportions to start the motor. The system operates at six volts.

GUARANTEED

A Good Single-Tone Electric Horn With Unlimited Guarantee Cannot Be Made to Retail At Less Than $8.00

THE Rexo horn is a real electric warning signal guaranteed for life. It is made on modern electrical principles in use upon thousands of telephones throughout the world. The big point is that it is manufactured in its entirety by a company with years of experience in the manufacture of all kinds of electrical apparatus, including power boards, switch boards, police flash light systems, city telephone systems, and other constant service electrical devices.

On account of the reliability and low price of the Rexo electric warning signal, it is destined to be "standard equipment" upon most good cars of medium price for 1914. We have already sold over 65,000 Rexo horns for 1913 cars. 45,000 Rexo horns of special design are specified by one car maker—the largest electric horn order ever placed.

The Rexo horn comes complete with push button and cord. It is designed to operate from any 6-volt battery. The Rexo does not contain any moving parts to require tri-weekly lubrication, monthly overhaul, washing in gasoline, greasing, etc. There is no danger from dust or moisture.

The operation is positive, winter or summer, as there is no oil to congeal.

The sound of the Rexo is loud, abrupt, clear and instantly responsive—unlike the motor-driven horn.

The standard Rexo for outside mounting is finished in black enamel with polished nickel bell, or black enamel with polished brass bell. We also make a special "under the hood" horn.

For those who desire a complete warning system on their cars, the Tuto two-tone horn offers the highest grade and finest electric warning signal ever devised.

TRADE MARK

The Tuto Two-Tone Electric Warning Signal

Electrically transmits two different and distinct sounds through the horn, the degree of sound being regulated by the pressure of the thumb upon one button located upon the steering wheel.

A Complete Signalling System For All Driving—In One Device

THE Tuto Horn is a **complete** warning **system.** It **electrically** transmits two different and distinct sounds through a horn projector. **One** button located upon the steering wheel produces a **service** warning and an **emergency** signal—the sound being regulated by the degree of pressure on the button.

This is the **only** warning signal ever devised to give the motorist a complete warning system in **one** horn. Before the Tuto two-tone electric warning signal was introduced, careful motorists found it necessary to equip their cars with two different horns—one for touring—the other a bulb horn for city driving. This has proven both expensive and inconvenient.

Besides, the **habitual** use of the bulb horn for ordinary driving has been the cause of accident upon accident, as it did not make itself heard. Often it was too late for the driver to change position from the bulb horn to the emergency signal, because both hands and feet were needed to operate the steering wheel, clutch, brake and gears.

The Tuto electric warning signal is not a motor-driven horn. It is made upon modern electrical principles in everyday use upon thousands of telephones. There is nothing to get out of order. It is **instantly** responsive—a very important point in its favor and a feature not possible with the motor-driven horn.

It is made to operate upon any 6-volt storage battery or five ordinary dry-cell batteries. Neat metal conduits for enclosing the cord where it passes up the steering column preserves the neatness and beauty of the car.

We manufacture ELYRIA-DEAN Ignition Systems, Speedometers and electric starting and lighting systems.

Not Coming

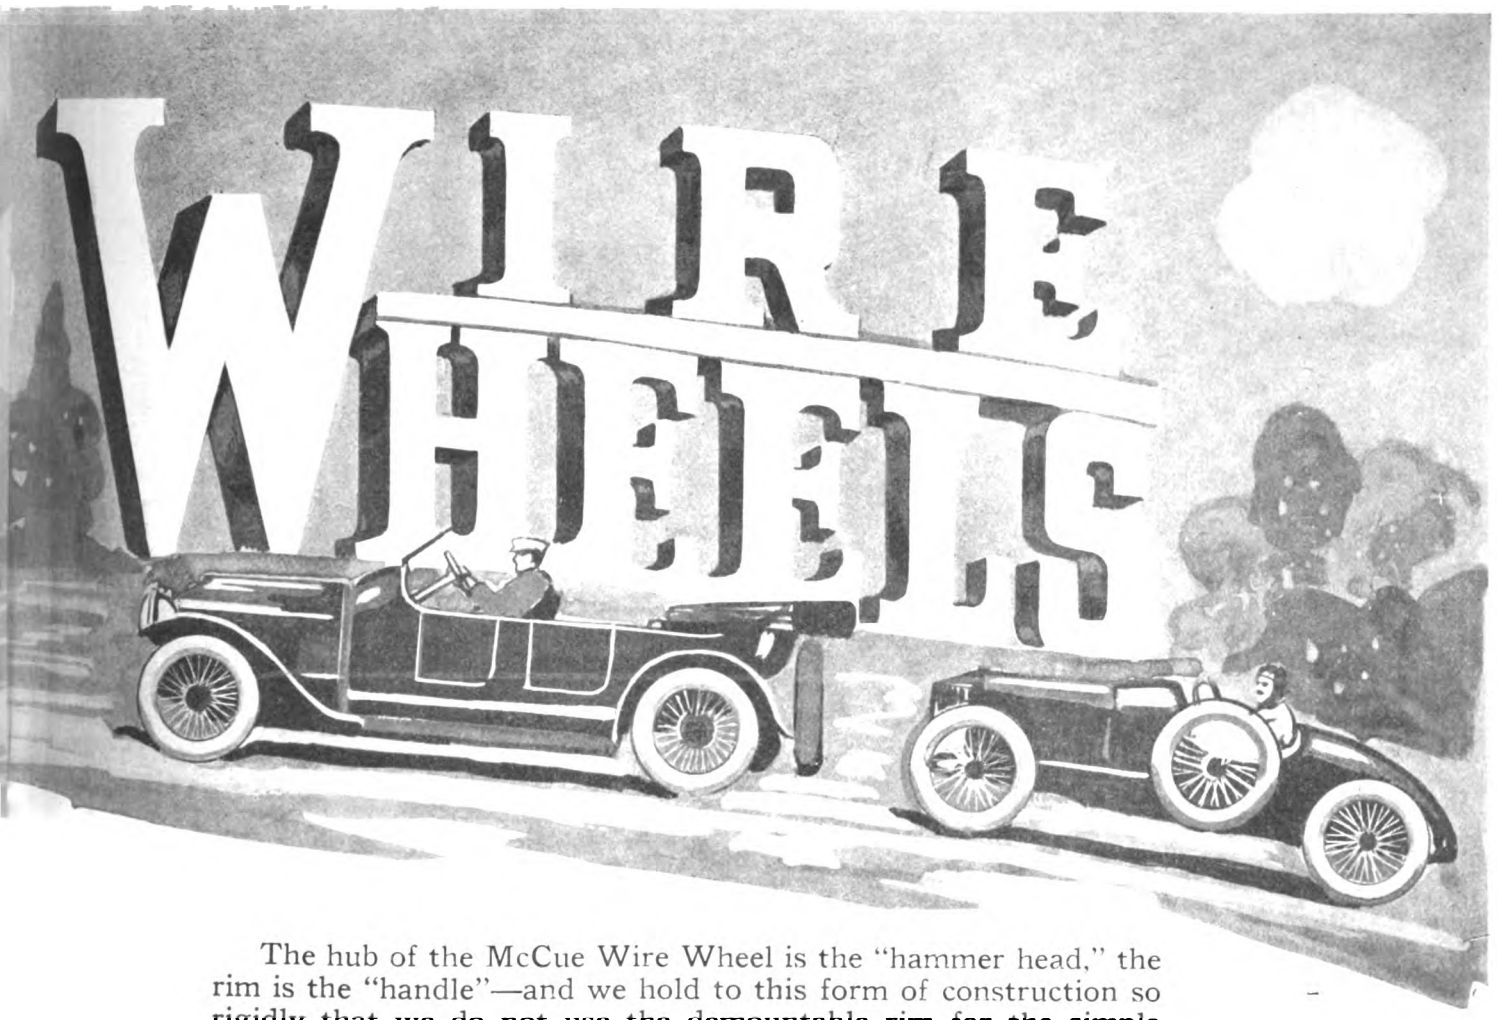
Not radical, freaky departures from so-called established design, but proved by every test superior to wooden wheels in strength, lightness and resiliency, giving an overplus in tire saving too big to be ignored or overlooked—

Explaining why they are standard equipment on many of America's leading cars.

You have got to form your own estimate through your confidence in the judgment of car manufacturers who have grasped and adopted the wire wheel idea as a big quality addition to their outputs.

Aside from their unusual ability to stand up under side swipes and unusual radial shocks, the point you, as a dealer, want to emphasize is the tire economy made positive and practical by McCue Wire Wheels.

It is the biggest selling argument ever hung on to any car, because it reduces cost of upkeep. You know how this reduction appeals to the buyer.



McCue Wire Wheels hold tire—road pound—deterioration to a minimum, for the very simple reason that they carry their maximum weight at the hub—the minimum at the rim.

We have used the following illustration before. It is good enough to reprint.

You can strike a destructive blow with a ten pound hammer if you grasp it by the handle. Reverse the operation by holding the head and striking with the handle, and the result is harmless.

Digitized by Google

But Here

The hub of the McCue Wire Wheel is the "hammer head," the rim is the "handle"—and we hold to this form of construction so rigidly that we do not use the demountable rim for the simple reason that it adds weight when and where it should not be added.

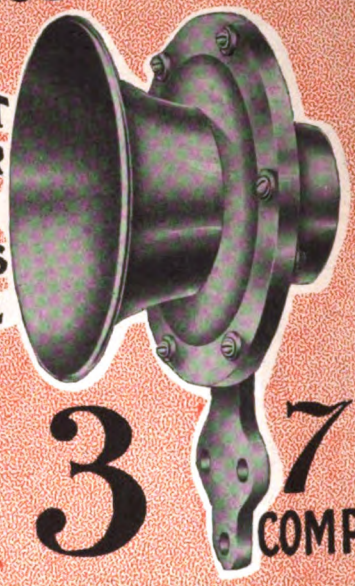
Here is our message to dealers:

You specify wire wheels on the cars you sell—now. Don't wait for competition to take this step; but entrench yourself now back of this wonderful improvement.

Ⓢ Standard Company Spokes Ⓢ

McCue Wire Wheels are built with Ⓢ spokes, products of the Standard Company of Torrington, Conn.

Ⓢ spokes are made from wire of the same standard set by the Coventry (England) Swaging concern.



It is superior to all other spoke material in tensional and torsional strength, combining these with extreme bending quality. Special drawn carbon steel is used in the construction of Ⓢ spokes.

THE McCUE COMPANY, Buffalo, N. Y.

We Are Creating More Demand For

We Want to Get Into Communication With Dealers Who Know That the Service They Render to Their Customers Is Bound to Bring Big Returns in the Holding and Making of Trade.

To such dealers, we are prepared to submit a spark plug proposition that is as faultless as the plug itself—one, which, in addition to yielding a liberal commission, will keep car owners satisfied and in a good humor.

MADE BY ONE OF THE OLDEST SPARK PLUG MAKERS IN AMERICA.

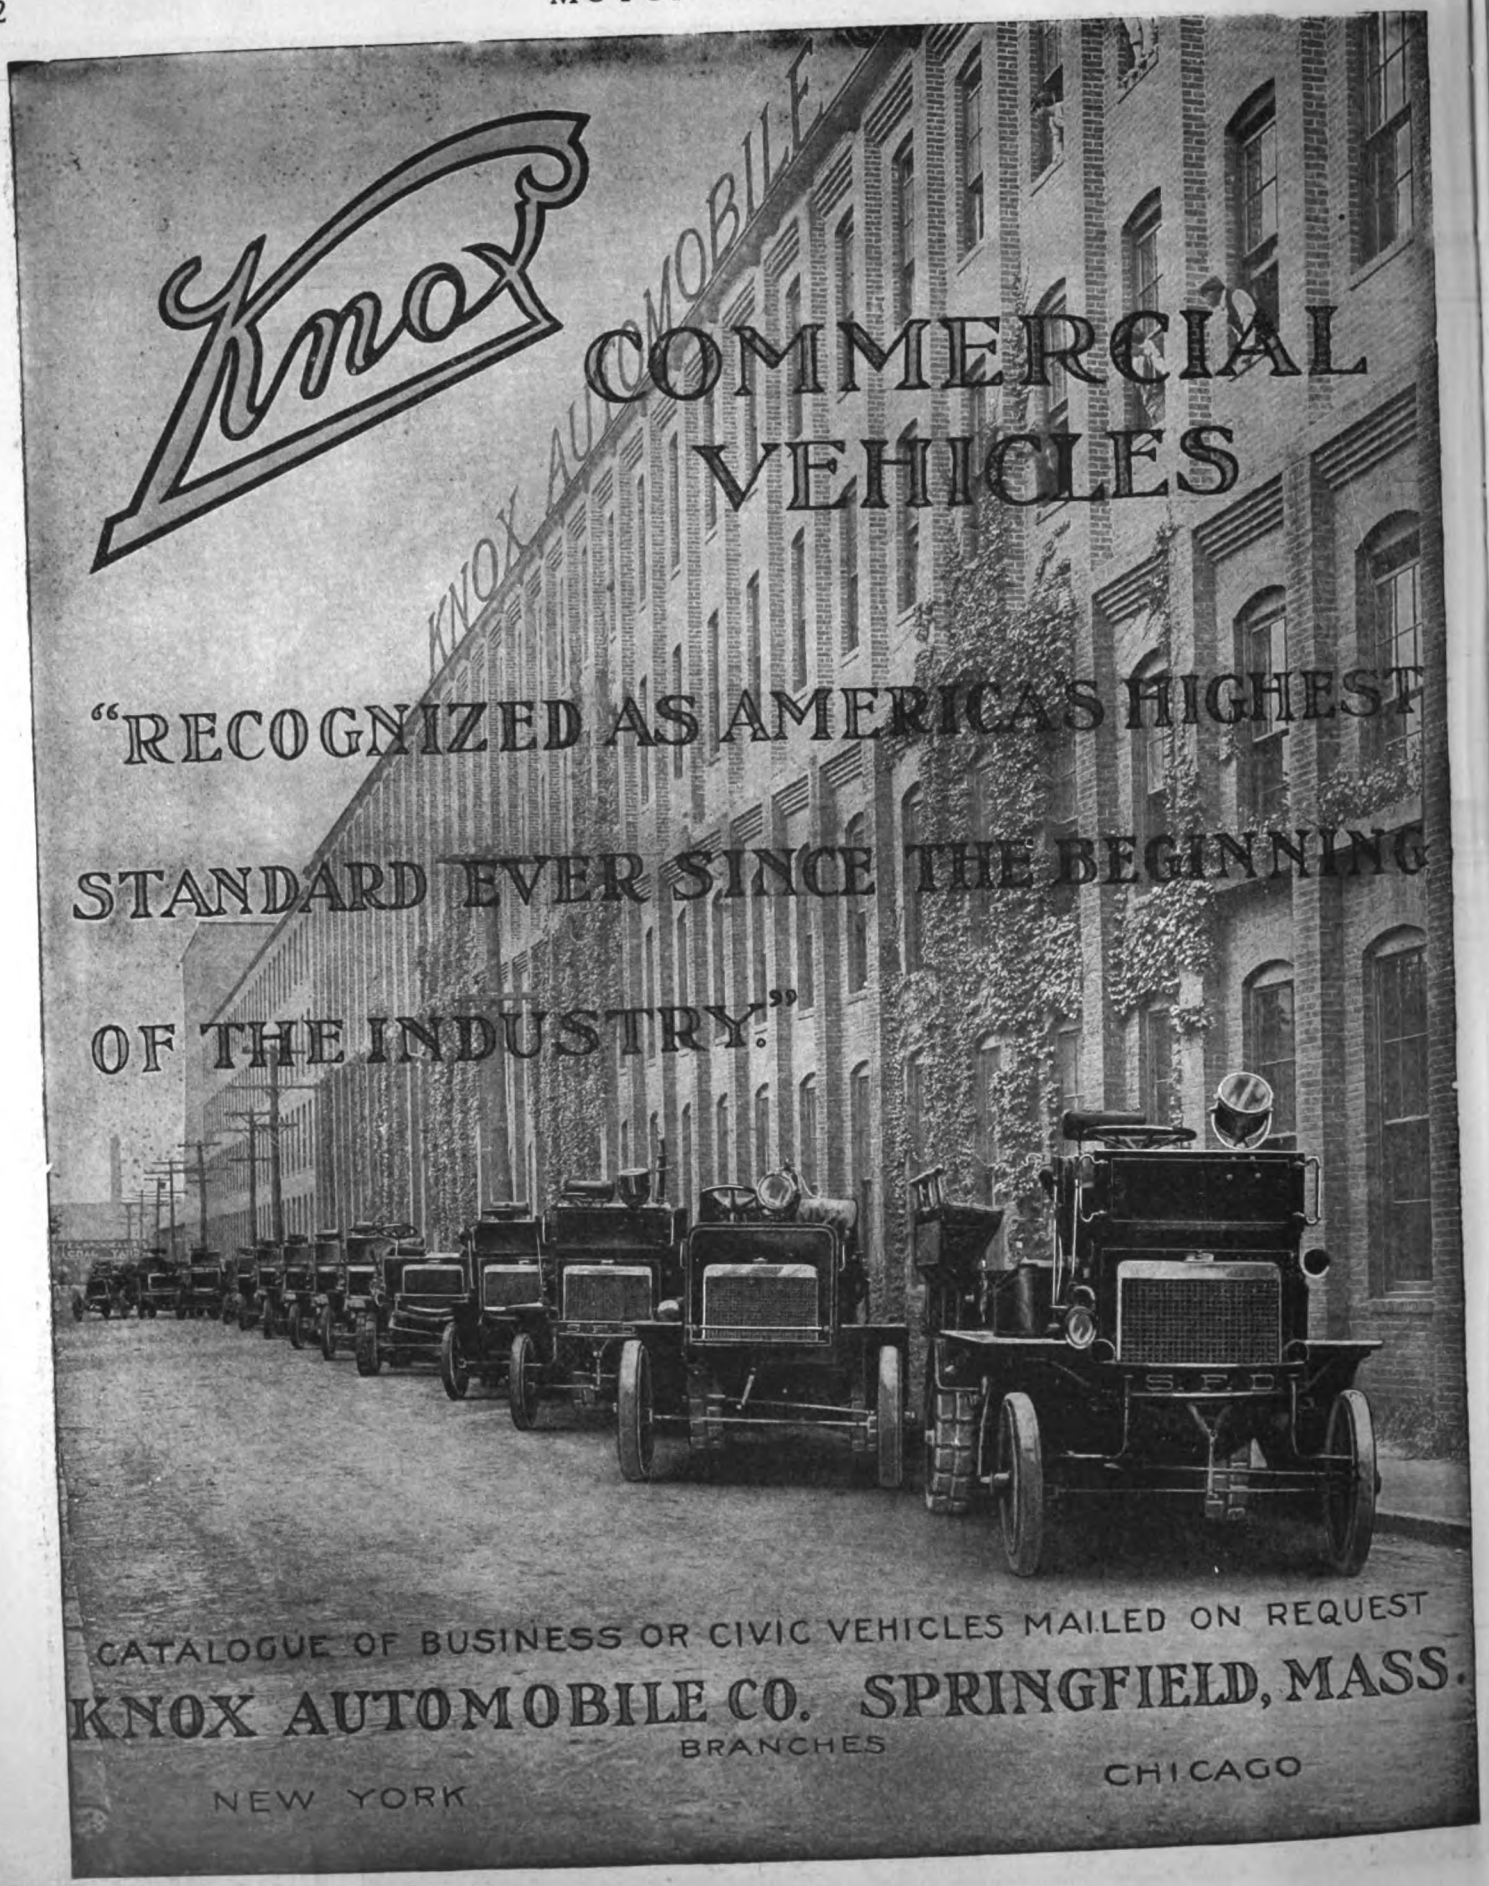
Digitized by Google

Are You in Shape to Meet it?

Mezger Soot Proof Spark Plugs, made by one of the oldest plug makers in America, guarantee their users against short circuit or leakage. They cannot break down or they cannot go wrong.

These plugs, when installed, do their work year in and year out, even practically eliminating the necessity for cleaning through burning up their own soot.

We want every dealer to know that we are telling this story in detail to a good many hundred thousand intelligent car owners—this, through a most covering campaign involving the leading automobile publications of America. These, in the aggregate, reach practically every car owner in your vicinity.



We want to help you to sell Mezger Soot Proof Spark Plugs. We are taking this method to do it for we believe that a plug of recognized merit should be brought to the attention of the car owning public through the use of printer's ink rather than through word of mouth "across counter."

Write and get our interesting proposition. Let us send you literature telling in plain words how Mezger Soot Proof Spark Plugs are permanently good and permanently "troubleless."

We are creating the demand—you be prepared to meet it.

SPRINGFIELD
CONVERTIBLE BODIES

Springfield Convertible Bodies are the embodiment of refinement in the matter of lines, material, finish and ease of adjustment.

The runabout convertible body shown here illustrates one extreme of a line that goes on up to the highest grade limousine, landaulet and town car.

Even this faithful reproduction cannot approximate the beauty and convenience of the equipments as they actually appear. They must be seen to be fully appreciated.

The ease of operation is remarkable; the tops are rapidly raised into position, the doors are opened, the hinged glass swung up into position, the remaining windows are removed from a box in the back of the front seat and buttoned into position, completely enclosing the car in less time than an ordinary top can be erected and the curtains adjusted.

Write for brochure of reproduced photographs.

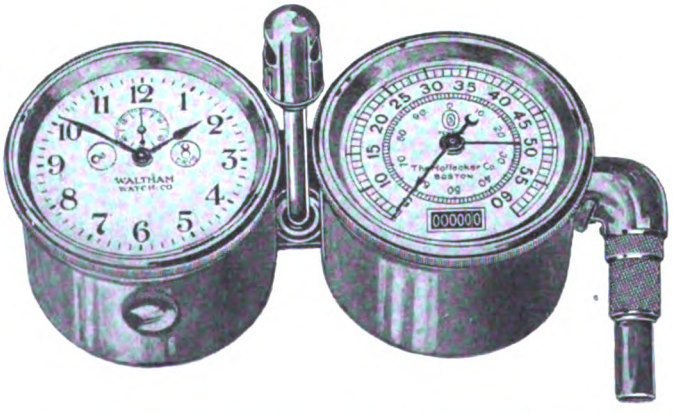
Advertising that is 100% Efficient-

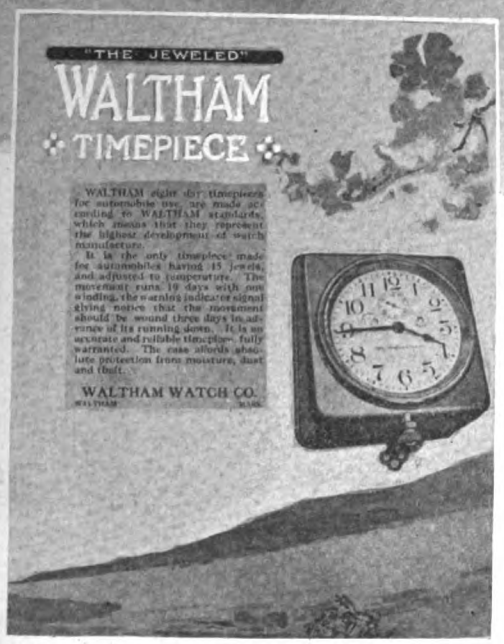
HOFFECKER SPEEDOMETERS



Write to your car manufacturer—tell him to equip the cars you sell with Hoffecker Speedometers and Waltham Time Pieces—then you are selling another important item of service.

Hoffecker is to a speedometer what Waltham is to a timepiece—both names stand for quality of product known and used wherever cars are found.

Hoffecker is to a Speedometer What Waltham is to a Timepiece



You cannot find better instruments anywhere at any price—and the fact that we can sell this combination to manufacturers at moderate cost emphasizes this argument.

We subordinate selling cost (which is overhead) to cost of production, and to do this we concentrate our advertising in a group of publications that reach prospective car owners and owners only. A sample two-page spread of this advertising is shown here.

Digitized by Google

What it means to you and your Trade

WALTHAM TIME PIECES

You can judge Hoffecker-Waltham worth by cost of production. These instruments are turned out in factories where design, material and workmanship are paid for on a scale commensurate with our ideals—and they are high.

Hoffecker is to a Speedometer What Waltham is to a Timepiece

You, as a dealer, get the benefit of this advertising—it reaches the people to whom you sell cars and accessories.

The car manufacturer gets the money we save (through economical, effective advertising) in the shape of the highest grade instruments at prices he can well afford to pay.

Again we say:

If you want to help your prospective car owner to exceptional speed and time recording service, then specify Hoffecker Speedometers and Waltham Time Pieces.

ONE LOOK locates the trouble

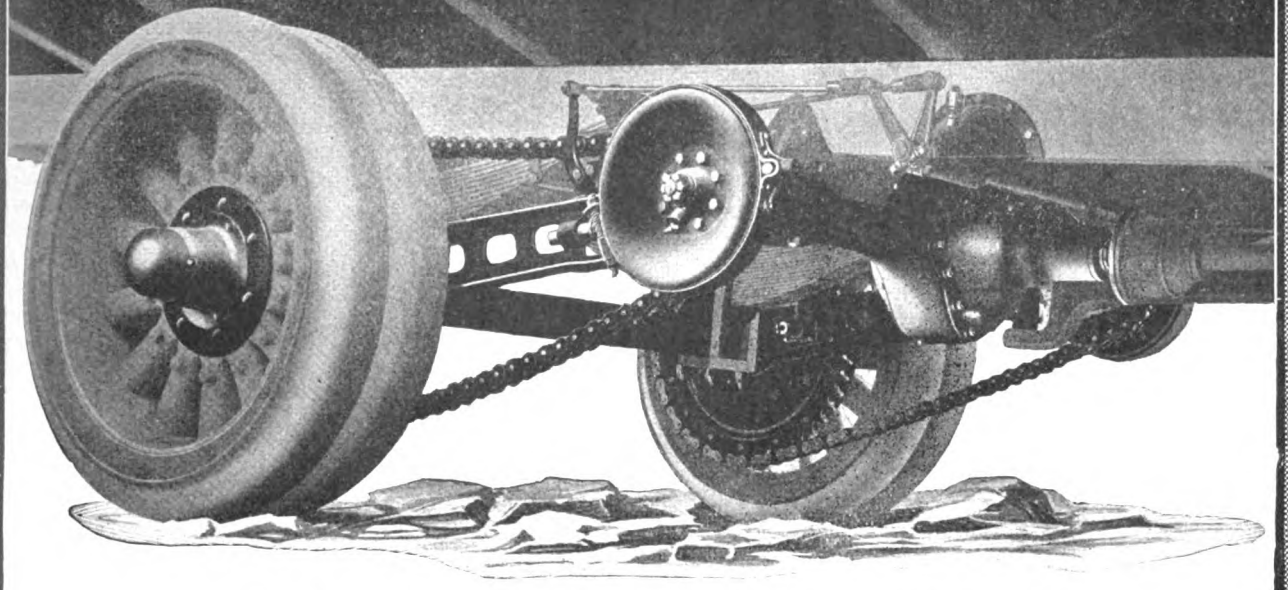
Lift the hood and look. A single glance, bright day or darkest night, tells the whole story of what's wrong with your ignition when your motor is equipped with J-D Visible Gap Spark Plugs. Hunting around with matches, short circuiting with a screw driver, unscrewing the plugs to examine the points—all that fuss and loss of time are needless.

J-D Visible Gap Spark Plugs

See how simple the secret of their efficiency is. In the porcelain—outside the motor—is an opening or port. In the portion of the central electrode and facing this port is an adjustable gap, regulated by knurled nut at the cap so that it can be widened or closed entirely. Through this port you see if the spark is jumping the gap in the electrode. If there is no spark at the gap you know the trouble lies behind in wiring, magneto, coil or batteries. If the spark jumps, but proper ignition fails to follow, then the points must be fouled or carburetion is faulty. By widening the gap you can increase intensity of spark and scour the points clean through the J-D patented electrical action found in no other plug.

There are other services this plug can render. It facilitates timing of engine, regulates spark for any cylinder and uses minimum current.

Yet the Price Is Only $1.00



If your dealer cannot supply you, we will mail as many as you want prepaid on receipt of price. Our guarantee, "Your money back or a new plug unless you are absolutely satisfied," goes with every plug. A new edition of our classic "Ignition and Spark Plug Talk" is just off the press. Write for a free copy.

TIMKEN
AXLES & BEARINGS

Look Beneath the Motor Truck

WATCH the axles of the giant motor truck as it rumbles by, over the rough roadway.

It swerves about other vehicles, bumps across car-tracks, jolts over cobblestones. The great load bears with grinding force first to one side, then to the other.

Truck tires are solid, truck loads are heavy. Engine and transmission are attached solidly to the frame and ride smoothly on the powerful springs, but the axles and their bearings get every bit of the tremendous pound and vibration.

A five-ton truck itself weighs about 8,000 lbs., its load 10,000 more. The whole of this immense weight is supported by the spindles of the front and rear axles.

In Timken-Detroit Axles (sizes for 5-ton work) the front spindles are 2 5/16 inches, the rear spindles 3 3/8 inches, in diameter. And Timken-Detroit are the strongest axles made.

Regard for a proper factor of safety decrees that the spindles shall not be smaller or lighter. Years of actual service show that they need not be heavier.

Think how good the steel must be, how carefully selected, machined, heat-treated and ground to carry that 18,000 lbs.!

Only long years of experience and the concentration of an entire great organization on axle-building can develop the knowledge of how to make axle spindles that are good enough for heavy commercial-car service.

The 18,000 lbs. rest, too, on the bearings that fit over the axle spindles—two bearings on each spindle, eight in all. And in a Timken-Detroit Axle these are Timken Tapered Roller Bearings, that carry the load along their whole length, not on mere points as ball bearings must.

So the 18,000 lbs. rest really on the rollers, and not on all of them either, because only one-fifth of those rollers are under the load at any one time. Actually 18,000 lbs. on 24 rollers —an average 750 lbs. to the roller—twice that on some—and the rollers average 5/8 of an inch in diameter.

And mere weight isn't all—isn't even half. Hammer blows due to jolting over rough roads, and side pressure when corners are turned often exceed weight! The bearings are constantly meeting all of them at once!

Yet even this is not all! It is only what the axles and bearings meet under ideal conditions. What about emergencies? Careless driving, overloading, the hundred and one *extraordinary* stresses that the truck must meet, and meet every day.

You can't count on your driver as you could on yourself. You can't be sure he won't travel at excessive speed, take chances, cut corners, back too hard against the curb.

Axles and bearings have to meet these *emergency* requirements. They are inevitable in motor-truck service. They must be anticipated in truck axle and bearing design.

That's why, with succeeding years, there has been steady development in truck axles toward the Timken ideal of surplus strength for emergencies.

From long experience, minutely tabulated, Timken engineers have discovered the points in axles where extra strength is required.

And Timken engineers are backed by two great Timken production organizations that live up to their exacting specifications. Organizations of men whose whole hearts are in the work of building the best possible axles and bearings for use in motor trucks and pleasure cars.

Look then beneath the loaded truck as it goes about the streets, watch the axles at work, think of the bearings hidden in the hubs, and you will gain a new appreciation of the intricate problem of good truck axle and bearing construction.

Get the whole interesting story of axles and bearings by writing to either address below for the Timken Primers, T-3 "On the Care and Character of Bearings," and T-4 "On the Anatomy of Automobile Axles."

Abbott-Detroit

THE ONE PERFECT CAR

THOSE who are attending the Shows for the purpose of making an unprejudiced study of motor car values, unanimously declare that all honors go to the Abbott-Detroit.

The Abbott-Detroit maintains its position as leader of motordom. It is the incomparable and unapproachable car. Persons already intimately acquainted with this superb line go away with even greater appreciation of its superior value than before. Every owner is fully convinced of the wisdom of his choice.

Some lines you have perhaps passed by with no more thought of buying or selling than were you a customer looking for all-wool goods and nothing but cotton were shown you. But when you approached the Abbott-Detroit booth you at once recognized the genuine article. You were unable to find any other car that offered such beauty, comfort and mechanical perfection at anything near the price and nothing in all-around qualities that could excel at any price.

We cannot put the truth too strongly. We are dealing in cold, hard facts. The Abbott-Detroit is the maximum car. Ask any Abbott-Detroit owner what he thinks of his car. Those who previously owned other cars are unanimous in their declaration that the car cannot be matched at any price. This is as true with those having owned $5000 and $6000 cars as those who paid much less. Unsolicited testimonials being received daily show that in scores of instances the 1912 model Abbott-Detroits have been driven from 10,000 to 20,000 miles through all sorts of weather and road conditions without a single cent being spent for repairs.

If as an owner you want a car that will give you the same consistent service year after year, you should buy an Abbott-Detroit. As a dealer you will hold your trade and insure future success by handling the only perfect and reliable car.

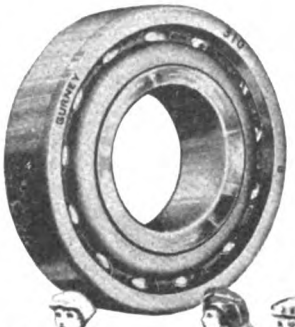
CAPACITY
GURNEY
ENDURANCE

Full complement of balls;
Solid one-piece separator;
Uninterrupted raceways;
Full depth of raceways to resist thrust.

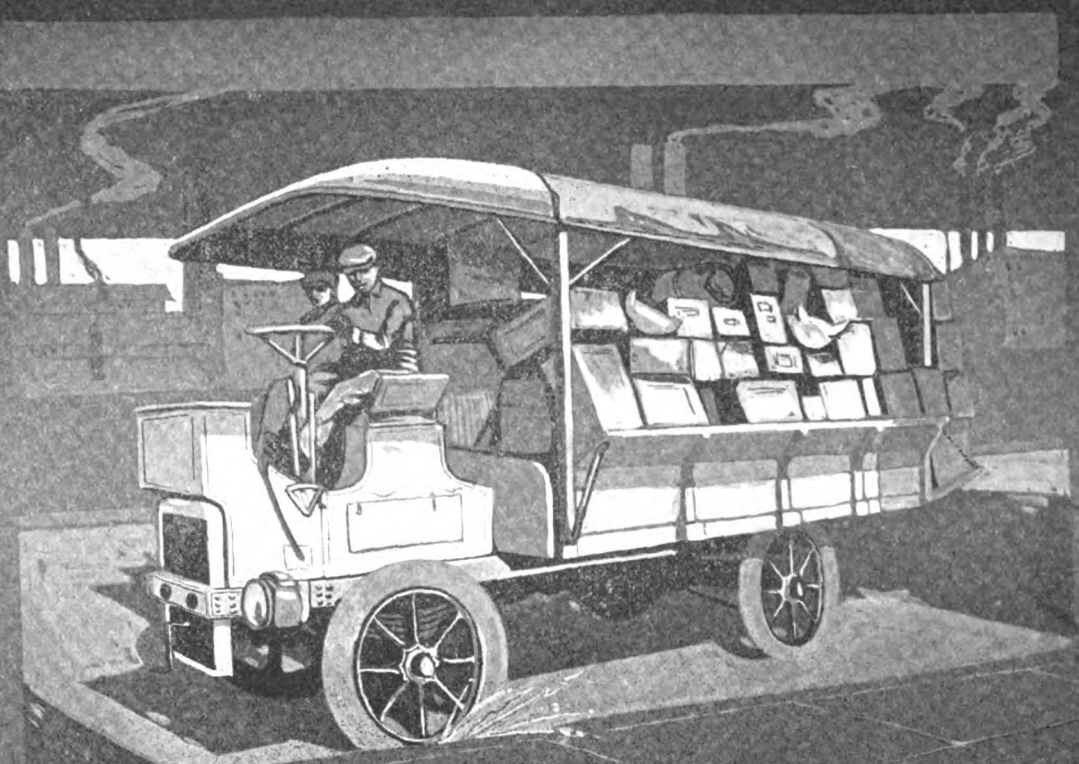
These are the four essentials in ball bearing construction, found only in Gurney Ball Bearings which enable us to make the broad claim that no ball bearing on the market today has the capacity and endurance of the



GURNEY BALL BEARING

No ball bearing is better than its raceway. Gurney Ball Bearings excel because they are the only bearings possessing uniform raceways of the right contour.

No other ball bearing manufacturers can produce the perfect raceways that we produce, nor can they assemble, with as many balls, a complete bearing, with a single piece separator, as we do, without slotting the raceway.



Our right to claim the position of producers of the most efficient ball bearing on the market lies in the fact that the above statements are all true, and proveably so.

Nothing will please us more than an opportunity to demonstrate the truth of these facts to your entire satisfaction.

SHELDON
STEEL WHEELS

The Sheldon Steel Wheel performs a double function in truckdom. It positively eliminates the necessity of wheel replacement and it reduces tire wear to the minimum.

Destruction tests carried out in our factory showed conclusively that a pendulum blow which demolished a wooden wheel had little or no effect on the Sheldon Steel Wheel.

The Sheldon Steel Wheel is resilient. Its weight at the periphery is negligible. All frictional heat radiates quickly from the metal. These three points contain a message of vital importance to truck owners or manufacturers because they mean greater tire economy.

All the quality of design and workmanship that have made our springs and axles famous for their indestructibility will be found in this latest addition to the Sheldon line.

Every Reliable Accessory Dealer

should have our attractive proposition on

The FEPS CARBURETOR

You've heard so much about wonderful carburetors that you're probably case-hardened in skepticism. We submit, however, these two series of facts for your consideration.

FIRST. The Carburetor is today the most imperfect part of the automobile, and far behind, in efficiency, every other accessory. There's real need of a real carburetor.

SECOND. The Feps Carburetor splendidly meets that need. It involves an entirely new principle of auxiliary air supply, producing a marvelous increase in flexibility; an absolutely perfect mixture at all speeds, with an increase of 25% to 50% in miles per gallon of fuel on any car. It contains no springs, no balls, no cams, no reeds, and all adjustments once made are permanent. It gives a perfect mixture with any grade of gasoline and is unaffected by altitude, weather conditions or change of temperature. It also embodies a never-failing quick-starting device.

The first fact you cannot dispute, the second you probably will, until you test out the Feps at **our** risk. Get in line with the Feps now for increased business and profit.

A Steel Truck Body That Is Worthy of Your Truck

The Budd All Steel Body represents the last word in the art of truck body building. It stands for security, strength, safety and sanitation. It insures your truck a body that is practically indestructable---a body that will stand up under the most severe wear and tear---giving the maximum of service---needing the minimum of repair. It will not rot or crack. It cannot split or warp. It eliminates fire risk entirely and by reason of its light weight is correspondingly easy on tires. In a word it represents truck body efficiency to the utmost degree.

BUDD All Steel BODIES

are made of patent, leveled, open-hearth steel. By use of special machinery and dies and an exclusive process of manufacturing, the bodies are fashioned into shape. The frame is strongly welded together and becomes practically a single unit.

The panels are either welded or hot riveted into place. The floor is corrugated and will withstand the roughest usage. Thus great strength, the main requisite of a truck body, is achieved. But not at the expense of lightness, for the strength of the Budd All Steel Body lies in its scientific construction—each pound of metal used being carefully apportioned and balanced.

All corners are made round. There is no place for the accumulation of dirt or germs, and as each body can be readily flushed with water without any danger of damage or absorption, perfect sanitation is possible.

The perfected welding process employed carefully conceals all joints and seams, thus the surface of the body is perfectly smooth. This, together with the fact that the enameled finish is "oven-baked" on at a higher temperature than is possible with wood, assures a finish that is not only extremely handsome but exceptionally long lasting as well. Yet with all these manifold advantages the Budd Body actually costs no more than a first-class body of wood.

Budd All Steel Bodies are furnished with priming coat only or completely enameled or lettered. They can be made in any style or design and of any capacity. Whether you manufacture commercial vehicles or simply contemplate purchasing a truck, it will pay you to investigate the Budd All Steel Body. We'll be pleased to furnish you estimates and any information you desire. Write us today.

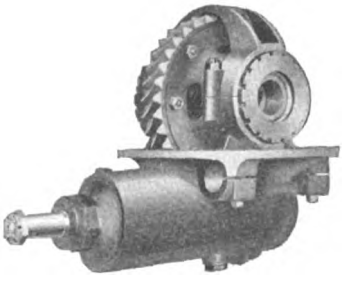
American American



American Axles

Having Least Friction Give Most Power

Whether your motive power is electricity or gasoline, your problem is one of power transmission rather than power creation. *American Axles* least obstruct the flow of power from your motor to your wheels.

After an electric car leaves the garage, no further addition can be made to the charge which its batteries carry. *American Axles* because of their minimum of friction, perfect construction and highest quality workmanship, will give you the maximum mileage of which that charge is capable.

Our position in this industry allows us, we believe, to speak with authority to every prospective car owner on this important subject. We designed and built the first Bevel-Drive Axle used by an electric car in America. Today 80 per cent. of the electrics in this country use *American Axles*

Only in *American Axles* can you have the choice between the highest developed type of bevel gears and the famous Lanchester-Daimler Worm Drive.

We hold the exclusive American rights as axle manufacturers of the Lanchester-Daimler Worm Gearing, through the Warner Gear Co., of Muncie, Ind.

Victory

For the Magnetic Speedometer

Scientific Approval

Below we publish the report of Henry S. Carhart, of Michigan University, one of the world's foremost scientists. In this paper he proves from start to finish the superiority of the magnetic speedometer. Read every word. It's interesting. Thus you see the scientific world approve and select the magnetic speedometer as the most practical and most accurate.

In addition to this over 98% of the automobile manufacturers have chosen the magnetic speedometer.

Over 95% of all the speedometers to be manufactured during 1913 will be built on the magnetic principle.

Over 400,000 cars for 1913 will be equipped with a magnetic speedometer.

What more need be said?

Professor Carhart submits his purely scientific and unbiased report as follows:

"The problem in designing a speedometer is to convert the continuous rotation of a flexible shaft into the one-way deflection of an indicating dial; in addition, this conversion must be effected in such a manner that the deflection at any instant shall be proportional to the speed with which the shaft rotates."

"It is clear that there can be no continuous mechanical gearing to effect the transfer; for while the shaft goes round and round, the dial turns against a retractile or biasing spring only until a balance depending upon the speed is established. The dial then remains stationary until the speed of the shaft changes."

The Magnetic vs. Centrifugal Type

"Two principles only are in use for the transfer of the motion of the shaft to the indicating dial: **centrifugal force** and **magnetic induction.** In the centrifugal instrument the rotating mass must change its position relative to the shaft in obedience to the centrifugal force acting upon it; this motion must be transmitted by complex mechanism to the indicating hand sweeping over the dial. The mechanism includes levers, springs, rings, and cams, and the transmission is **indirect** and **circuitous.**"

"In the magnetic type of instrument, the rotation of the magnet by the shaft induces electric currents in the disc or cylinder of the indicating member, and by a well known law the disk or cylinder is flexibly dragged around after the magnet. The disk or cylinder would rotate continuously with the shaft were it not held back by a biasing spring. This device may be described as a magnetic gearing or friction drive **directly** converting a rotation into a one-way defection by means of the withholding spring."

"There are several evident advantages in favor of the magnetic instrument:"

One Magnetic Advantage

"Its simplicity of design and construction. It contains only one rotating member, one deflection indicator, and one spring, as compared with the multiplicity of springs, levers, and cams of the centrifugal type. The various members of the

Digitized by Google

Read Every Word of this Important Report

centrifugal system are held in contact by springs with sliding friction; hence the liability to change in tension with age and use, with a consequent derangement of the indications."

Another Magnetic Advantage

"The torque on the indicating member of the magnetic speedometer is strictly proportional to the speed. The rotations of the shaft are directly and immediately convertible into a deflection of the disk or cylinder with its indicating hand or scale. On the other hand it is a well known law that centrifugal force varies as the square of the speed of rotation. Further, the motion of the rotating mass in obedience to the centrifugal force acting on it increases the radius of rotation and thus further augments the acting centrifugal force above the square of the speed. Again, a resolution of this force into an effective and a non-effective component further complicates the transmission, so that an open scale of approximately equal parts is obtained only by the use of an irregular cam at the end of a series of springs and levers."

Still Another

"In permanency of calibration the magnetic speedometer is superior to the centrifugal. The experience of twenty-five years and of thousands of electricians with the Weston direct current ammeters and voltmeters shows without any question that permanent magnets, properly aged, retain their magnetic strength to a most remarkable degree. The degree in the accuracy of reading of electrical measuring instruments is much in excess of that needed in speedometers; and yet the magnets of the former are so permanent as to leave almost nothing to be desired."

"On the other hand, it is well known among engineers that "tachometers," which measure speed of rotation by direct application to the shaft of a machine, are not reliable to anything like the degree obtaining with electrical measuring instruments. Tachometers must be frequently checked to be at all dependable. They work on the centrifugal principle, and differ from speedometers only in certain details of arrangement. All mechanical engineers know that the centrifugal steam engine governor has long since been displaced by more sensitive and dependable devices."

The Most Important Advantage

"The simplicity of construction and the small number of parts and bearings in the magnetic speedometer justify the conclusion that its durability is superior to that of the other type. There is nothing to wear out in the indicating section of the magnetic instrument, and the shaft carrying the magnet suffers no more from use than the corresponding member of the centrifugal type. **Manufacturers' Note** (in fact, because of sixty per cent less speed, the advantage on this score must of necessity be with the magnetic type). The multiplicity of contacts and springs in the latter offer many more chances for wear and depreciation."

(Signed) **HENRY S. CARHART,**
Professor Emeritus of Physics,
University of Michigan.

Which Car? It *Is* Hard to Decide, Isn't It?

TO you who are trying to decide which car to buy—we want to offer a few suggestions.

You have looked at many different makes of cars. You have found that in most respects they are very much alike. They have nearly the same specifications; the same equipment; the same general appearance—at least, while new.

To choose wisely, you must look into all the unseen factors, in which lie the differences between cars. Study the cars, of course. Insist that your car have all the modern features. But before you invest your money—whether you buy a Chalmers or not—be sure to get satisfactory answers to the following questions:

1. How long has the company been in business?

Is it a sound, well-managed institution? Has it demonstrated its ability to manufacture successfully? Is it progressive? Is it likely to be in business permanently? Is it big enough and strong enough to attract the best class of dealers?

The kind of car you get depends absolutely upon the kind of a company that is behind it.

No company is more firmly established or better managed than the Chalmers. It has long been "first" in its class.

2. Does the company manufacture its own parts or merely assemble?

This is a vital question. The company that eliminates the parts-makers' profits is able to put into its car better value for your money. It can manufacture its own parts more accurately, and it can give you service and supply your needs for years to come.

No automobile company manufactures a greater proportion of the parts of its car than the Chalmers Company.

3. What do owners say about the car? Are they satisfied?

Owners of a car are the people who know. They are the ones whose opinion is the result of experience—satisfactory or otherwise. So take the general opinion of the owners and you will make no mistake. Be guided by their opinion of car, company and dealer.

Chalmers owners are satisfied. We are glad to have you ask their opinion of Chalmers cars.

4. Has the car itself quality or is it merely a collection of "features"?

Be sure the car you buy has the real "class" and in-built quality that comes only from painstaking workmanship all the way from designer to final inspector.

Chalmers cars have all the "features" and all the conveniences that any cars have. In addition they have Chalmers quality in every line, in every part.

5. Will the car command a good price in case you care to sell it two or three seasons hence?

Of course you are not buying your car with the idea of selling it. But it is well to know that you can sell it at a good price—if later you want to do so. Furthermore, the cars that bring good prices second-hand are the cars that are standard, the cars that are built to last, the cars that the public knows are good.

Chalmers cars have for years brought the highest second-hand prices of any cars in their class.

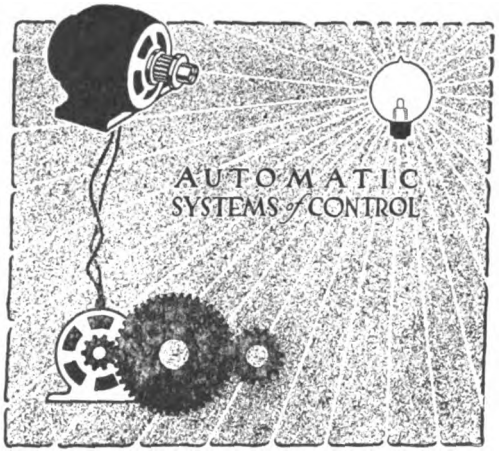
"Thirty-Six" (4 cyl. 36 h. p.) $1950
"Six" (6 cyl. 54 h. p.) . $2400
"30" (4 cyl. 30 h. p.) . $1600

(Prices include full equipment and are f. o. b. Detroit)

THESE cars have all the modern features of convenience and comfort. In power, speed, comfort and convenience, in beauty, style and luxury the Chalmers offers you the utmost value.

But greater than these tangible things, more valuable to you, more worth the money you invest are the intangible things behind the car—the Chalmers factory and the Chalmers organization. No other cars can give you these added values that make the Chalmers the choice of the wisest motorists.

If you make careful comparisons, we believe you will decide on the Chalmers. And when you do we urge you to place your order at once. It's not long till spring now, and the only way to insure early delivery is by an early order.



Chalmers Motor Company, Detroit

The Ward Leonard System

No car complete without it

· WARD LEONARD ·

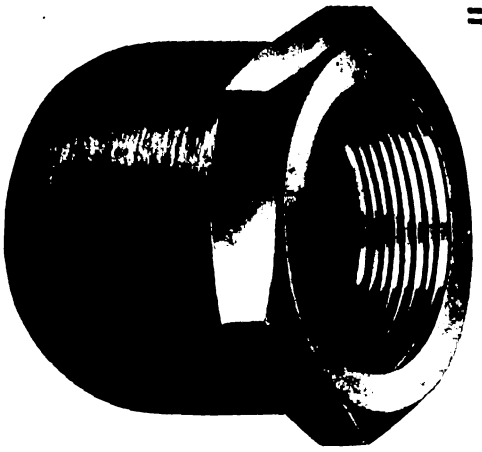
· Lighting - Starting ·

The completely equipped car of the future will as surely have a reliable and efficient lighting and starting system as it will have tires.

The motoring public has been educated to demand electric lighting and starting, and its demands can be easily and satisfactorily met by the installation of the WARD LEONARD SYSTEM. Motorists want electricity to light and start their cars. Manufacturers have always desired to give it to them, but they have failed because they have absolutely missed the connecting link between satisfactory lighting and starting, and the automatic control of the lighting dynamo.

It is this control of the dynamo that gives the WARD LEONARD user satisfaction with his lighting and starting outfit. We use a shunt-wound dynamo for lighting and a series motor for starting. Every electrical engineer knows that the use of these two standard devices, not joined in the same unit, represents the height of electrical experience and judgment.

No guess work about the WARD LEONARD SYSTEM. Its electrically operated switch controls the amperage with absolute regularity, regardless of the speed of the automobile.



Engineers the world over have endorsed the WARD LEONARD design. Satisfied users in all parts of the earth testify to the practical perfection and the unerring operation of the finished WARD LEONARD product.

Endurance Gives Satisfaction

Parts of automobiles, motorcycles and accessories must be made accurate to stand severe strain.

NAMCO products are made exactly to your specifications. The threads are clean and accurately cut. They start easily and fit correctly. This snug fit makes them hold under the pound and jar of rough roads. They reduce repairs and help to make your car a satisfactory investment to its owner.

We carry also a full line of cap and set screws, A. L. A. M. and hex. brass nuts.

Send us one of your parts. Let us show how economically you can buy NAMCO parts —how much they will save you in the end. Ask for the "Special Milled Products" book.

"SOSS" INVISIBLE AUTOMOBILE HINGES

The detachable and water-tight features of our No. 119 Automobile Door Hinge, in addition to the interlocking action, makes this the best, as well as the strongest constructed concealed hinge on the market. Made in two parts, it is easily attached and detached. Water will not reach the wood of the body through the hinge. When installed holds the door rigid and at the same time has a perfectly smooth action.

Send now for catalog and full particulars.

BOSCH

Spark Plugs

IN the 14 important automobile road races of 1912, Bosch Spark Plugs were on every winner—14 long, trying contests—14 proofs of Bosch Plug superiority. These tests included

The Vanderbilt Cup
Elgin Trophy
500 Mile Sweepstakes
The Grand Prize
The Santa Monica
The Aurora Trophy

When the majority of racing drivers and manufacturers entering cars in important road races use one make of plug you can be positive that reliability and efficiency are in that plug; you can be assured of its meeting your every requirement.

When fitting out be sure you buy Bosch Plugs; they are as good as Bosch Magnetos.

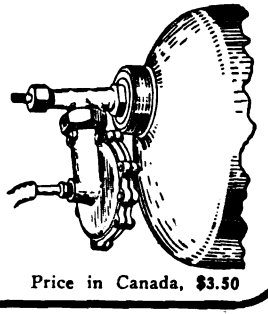
The Prest-O-Lite
Automatic Reducing Valve

With this device attached to your Prest-O-Lite, you do not have to turn the tank valve up or down to get the correct flame in the lamps.



Turn on the gas, light your lamps, and the flame is bound to be just right, without any adjusting.

It pays for itself in gas saved, so its convenience costs you nothing.

Unlike other reducing valves, the Prest-O-Lite Automatic gives the correct gas pressure **at all times,** whether the tank is full, half full, or nearly empty. It is truly automatic in its action. **Price $3.00**

Anyone can attach it in less than five minutes.

Your dealer has it or will quickly get it for you. If not, we'll send it to you on receipt of price. Try your dealer first. Every Prest-O-Lite Branch Office has this Automatic Reducing Valve in stock.

The Atwater Kent Ignition System

Time was when automobile engineers and the general motoring public thought they must equip their cars with a magneto. Today this idea is fast waning—in fact, it has been discarded by many of the foremost automobile engineers and discriminating motorists who are now demanding a more dependable source of current on their cars.

The increasing use of electric lighting and starting equipment necessitates an ignition system better than the magneto—a system producing a uniformly hot spark at low speeds as well as high—a system giving a hot starting spark with the motor at a standstill—a system that is simple in principle and mechanism as well as in operation, and reasonable in initial and maintenance cost—in brief, a system of ignition that will measure up to the highest requirements of the most modern automobile practice.

Such is the Atwater Kent Ignition System—embodying the best features of both magneto and battery, without the weaknesses of either.

Remember the Atwater Kent System can be easily and quickly installed on any standard make of motor, new or old, without the price of a magneto.

If you have an unsatisfactory magneto, or if your motor is not equipped with a half time shaft, you can use the Atwater Kent System by means of our magneto gear mounting, the cost of which is nominal.

In addition to our standard Type F System, we are marketing a new model —Silent Type K with automatic spark control and insulated primary circuit.

Whether you are interested in motor cars as manufacturer, dealer, owner, or prospective buyer, you should have a copy of our booklet "D." It covers the subject authoritatively and thoroughly and even the most experienced will find it interesting reading.

BENZ

Since the introduction of BENZ cars to the motoring public of America no car has attained such world-wide supremacy as to its construction, standing up quality, and material. The new type of 35 and 50 H. P. BENZ models are the last word in automobile construction.

The noticeable features of this type of BENZ cars include the offset crank shaft, smokeless oiler, and SILENT CHAINS instead of timing gears.

The BENZ Carrosseries are noted for their beautiful lines and thorough comfort.

To those desiring AGENCY of this car the Benz Company will offer special terms. We want RELIABLE, ENERGETIC agents to further our interests for both BENZ pleasure cars and BENZ-GAGGENAU trucks, which today stand recognized by those who know, as the leading 6-ton truck. Wire or write us, no matter where you are.

TRIPLEX

A FUEL SAVER and A MONEY SAVER

Increases Power
Decreases Cost

The Triplex is a device placed between the manifold and the carburetor to break up the mixture. No matter how imperfectly the carburetor does its work, the Triplex equalizes the mixture, producing an explosive gas of even, uniform quality that will burn clean to the last atom. This means that the user gets all the power all the time—that every fraction of energy to be obtained from the gasoline is produced and used. There is absolutely no waste. High proof gasoline is made out of low, and over 25% is saved on every gallon. For further information write us.

THE McCUE CO., Buffalo, N. Y.

The Motor Lamps with Distinctive Features
There are no other motor lamps on the market with the advantages of Solar Lamps. Solars are always exclusive in style and in quality. They are the strongest lamps as well as the most effective.
In no other lamps can you obtain the Solar Special Short Focus Lead Glass Lens Mirror Reflector—the patented system of double ray light projection which gives two distinct fields of light for town and country use—or the new and exclusive black finish with a metallic lustre which is unaffected by heat or moisture. All of these features are exclusively "Solar."
Do not equip your car or specify equipment to the maker until you have seen all of the Solar advantages. See Solars at any live dealer's or write for the catalog.
Solars are made in all styles for oil, electricity, gas and in combinations.

INTERLOCK INNER TIRES
Stop Tire Troubles
The one weak point of the automobile is that you cannot depend on the tires. Thousands of motorists have solved their tire problem by discarding inner shoes, reliners, fillers and other makeshifts and equipping their tires with **Interlock Inner Tires.**
Interlocks are complete inner tires (not inner shoes) placed between the outer casing and inner tube to strengthen the casing and protect the tube from punctures. They double the mileage of new tires and add 1,000 to 5,000 miles to old ones—save half your tire expense—and make tires trouble proof.
Dealers and Motorists—Investigate Interlocks
Don't delay—write now for booklets, data, prices, testimonials of users, road tests, etc. Mention size and kind of tires you use.
DOUBLE FABRIC TIRE CO. 600 W. 9th Street, Auburn, Indiana

Weed Chains

The Great Anti-Skid DEVICE

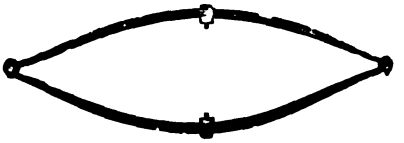
Nine-tenths of all accidents to automobiles are caused by skidding or slipping.

Either you skid into the "other fellow" or the "other fellow" skids into you.

No matter how careful a driver you may be, you cannot prevent skidding or slipping on wet, muddy snow-covered roads or on icy, slippery greasy pavements unless you equip your car with Weed Chains.

Cannot Injure Tires

Because They Creep



An absolute necessity on both rear wheels and if you want to know what real steering steadiness means put them on the front wheels too.

For your own safety—for the safety of the public, fully equip your car with Weed Chains. Make it your business to get a set today.

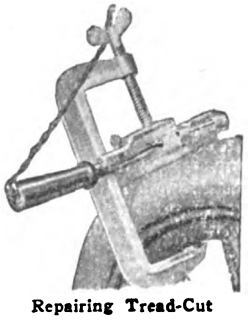
Portable Electric Vulcanizers for Every Garage Requirement

Repairing Tube

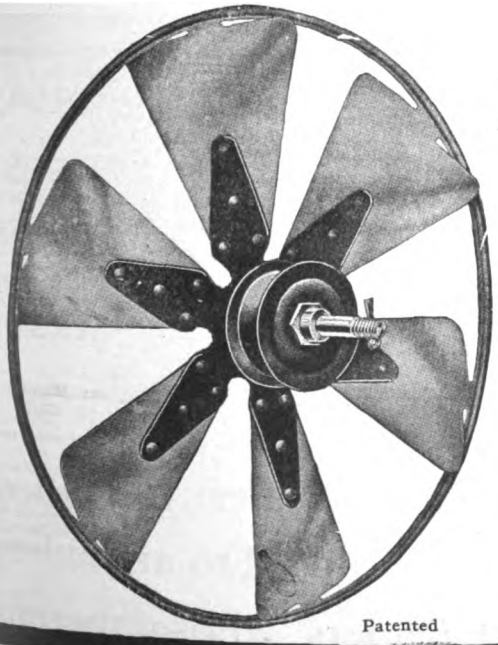


Repairing Two Tubes

You're missing one of the biggest opportunities connected with the automobile business unless you are equipped to vulcanize tires. Vulcanizing pays big profits. The machine illustrated here heats from your lighting current—from any lamp socket. It is so simple to operate that anyone can, without experience, make tube and casing repairs that you can guarantee. Repairs one or two tubes at a time and works on side or tread of a tire. Safe, clean, and economical. The profits take care of themselves if you have a reliable vulcanizer.

SHALER Vulcanizers

There is a model heated by electricity, steam or gasoline to suit every requirement of motorist or garage. Tell us your needs and let us advise you what other repairmen have found most profitable under similar conditions. Shaler vulcanizers are acknowledged to be the standard line by all distributors because they are the only vulcanizers with temperature control that is automatic, and therefore the only vulcanizers that can safely be put in the hands of inexperienced operators.



Repairing Tread-Cut

Write for Free Garage Handbook

If you write to us on your letter head showing that you are in the auto business, we will send you, free, the booklet, "Common Sense about Tire Repairs" and confidential trade discount. Take advantage of this offer at once.

A MOTOR TRUCK INVESTMENT

There is a motor truck factory in operation in the East with a complete line of the latest and most up-to-date tools in a fine plant, that is about ready to undergo a transformation owing to the dissention of the stockholders. This is a going concern with many agencies established and trucks operating in most States.

The truck has been well advertised and is favorably known and has made good.

There is nothing wrong about the concern except the stockholders are not compatible. The company does not owe a dollar.

I have the future disposition of this plant in my hands, and I know the truck business, from buying raw material to selling its finished product. The entire assets can be had for fifty cents on the dollar (actual inventory is about $175,000) and there are no liabilities. I want the right man or men to couple up with me and take over the business. It has a tremendous future.

Full particulars to legitimate inquirers.
BOX 245, care Motor World.

AUTO LEGAL MATTERS

Have you a troublesome chattel mortgage, bad insurance, or disadvantageous contract, bad debts you want to collect? Do you want to borrow money, or need expert legal advice? I specialize in automobile law. Charges nominal. EDWARD ENDELMAN, Attorney at Law, 299 Broadway, Manhattan, N. Y. C.

Covers solid one coat for enameling lamps, radiators and fenders. No undercoat required. Heat does not affect it. Ask your garage and supply dealer.
The Columbus Varnish Co., Columbus, O.

ALUMINUM vulcanizers for both casings and tubes. $3.50 prepaid to any address. Money back if not satisfactory. TRUSCOTT SUPPLY CO., St. Joseph, Mich.

RURAL Parcels Post Delivery Car—Any party with capital and push interested in placing one on the market, correspond with E. P. COWLS, Sparta, Mich.

WANTED—New or slightly used unit power plant, 25 or 30 H.P., 4 cyl. Must be a bargain. BENTON & IVES, Kiowa, Kans.

AUTOMOBILE CYLINDERS reground, new pistons and rings fitted. Garage air compressors. CAST IRON BRAZING CO., Manchester, N. H.

PEERLESS LEATHER TOP DRESSING
An oil preparation that softens the leather and pantasote. Makes old tops look like new. Ask your garage and supply dealer for it.
The Columbus Varnish Co., Columbus, O.

WANTED—Salesman for agencies in every city to install new process in demand, showing over 300% profit to garages, supply dealers, breweries. Entirely new, big seller. This means big money. Experience not essential. H. J. WEBER, South Orange, N. J.

PEERLESS LINING DYE.
Dyes the cloth linings of tops and curtains a black, uniform color, covering up water stains and grease spots. Does not wash off. Ask your garage and supply dealer.
The Columbus Varnish Co., Columbus, O.

FOR SALE OR LEASE—The most modern garage in Southern Colorado, with fine repair shop and storage room for sixteen cars, doing good business and fine prospects for coming year. A snap for someone. Address BOX 208, Monte Vista, Colo.

FOR SALE—Cheap, one American Traveler, color battleship gray; just like new; run a little over 4,305 miles. MICHIGAN AUTO CO., 410 7th St., Calumet, Mich.

ARE YOU in need of any additional help in any department of your business? Are you out of employment or looking for a better connection? Have you second-hand apparatus of any kind or do you want to buy second-hand material, Have you a factory site for sale or do you want to buy one? If so, use the Want and For Sale column of the Motor World. Seven words to the line, fifteen cents a line. Advertisements can be inserted over a number when it is desired and identity of the advertiser will be kept confidential.

PEERLESS BACK AND CUSHION DRESSING.
Softens the leather and will not crack, wash or rub off. Makes old leather look like new. Dries in twenty minutes. Ask your garage or supply dealer.
The Columbus Varnish Co., Columbus, O

BROKEN Cylinders and Crankcases—Send them to be made good as new at fraction of replacement cost. Scored cylinder repaired, $12. No new piston and rings required because bore is not enlarged. Where cylinders are worn (not scored from loose wrist pin) reboring is only remedy. We do it expertly. Write for complete information and estimates. WATERBURY WELDING COMPANY, Waterbury, Conn.

WANTED—A first-class man to take the agency for the latest invention on the market, a rubber cover for automobile handles called Steerease; write for full particulars. Address DEPARTMENT E, GOODYEAR RUBBER HOSE AND PACKING CO., 221 Chestnut St., Philadelphia, Pa.

PEERLESS EXTRA FINE BLACK BAKING JAPAN.
Bakes either to a high gloss finish, eggshell gloss or dull finish on lamps, radiators and fenders. Will not crack, chip or peel. Ask your garage and supply dealer.
The Columbus Varnish Co., Columbus, O.

BROKEN CRANKSHAFTS, cylinders, crankcases, flywheels, gear teeth, pistons, perfectly welded and machined ready to replace. Guaranteed and references. Machinery up to 5 tons welded. ATLAS WELDING WORKS, 74-76-78 Irving St., Rahway, N. J.

AUTOMOBILE FOR SALE—1912 Marmon Speedster, Indianapolis Speedway type car. A-1 condition; run 4,000 miles. For particulars apply W. F. BURROUGHS, 66 Midland Ave., Arlington, N. J. Tel. 29 Arlington.

FOR HIRE—White 1½-ton truck by week. CHAS. HONEHEIN, 2027 3rd Ave., New York City.

KEROSENE FOR AUTOMOBILES.
New Model B uses successfully half and half mixture lowest grades kerosene and gasolene. Satisfaction guaranteed or money refunded. Greatly increased power, very slow speed on high. Starts easy at zero. Special agents' prices. Dept. 8. THE AIR-FRICTION CARBURETOR CO., Dayton, Ohio.

Why the Chicago Electric has been Klaxonized

"PRIOR to the use of your horns, we always equipped cars with bells. One of the difficulties in connection with using bells was the fact that they became inoperative in the winter time due to slush, mud, etc. To find out what your horn would do under such circumstances, we packed the horn from tip to the diaphragm full of snow and found that after one or two applications of the button the snow freed enough to give a very distinct signal and the muffling effect was practically negligible."

— Excerpt from a letter by the President of the Chicago Electric Motor Car Co. to the Makers of the Klaxon.

And there are 5 other electrics — 42 gasolene cars — regularly Klaxon-equipped

Studebaker

You Cannot Exaggerate Studebaker Quality

STUDEBAKER automobiles are built as well as automobiles can be. From radiator to rear-axle they lack nothing a good automobile should incorporate.

Studebaker automobiles are built in three sizes—a "25"—a "35"—and a "Six." But each car, whatever its size, owes nothing to its brother in construction perfection, in materials, or in the quality and integrity of its sterling Studebaker manufacture.

You cannot buy better VALUE, nor sell better VALUE, than Studebaker cars.

The Studebaker "35" at $1290 is a six passenger, four-cylinder car with 116-inch wheelbase, deep, luxurious upholstery, and scientific spring suspension, which insure solid motoring comfort. It is an electrically started and lighted car—a car embodying every piece of equipment that gives the stamp of thorough up-to-dateness. The motor is of the enclosed valve type—the cooling system the most efficient yet devised—and the full-floating rear axle banishes all possibility of axle trouble.

The Studebaker "Six," at $1550, is six-cylinder long stroke construction perfected. In mechanical efficiency, elegance and luxury the Studebaker "Six" stands pre-eminent. Electrically started and lighted. Motor cast enbloc from best close grain iron—a quiet running motor of tremendous reserve power. Also a six-passenger car.

The Studebaker "25" is a light weight car equal, however, to the most strenuous service. The steels used in this car are the same heat-treated as carefully and as many times as those of the "35" and "Six"; designed by the same engineer and built by the same skillful workmen. The Studebaker "25" is a thoroughbred throughout.

Three truly great cars, Mr. Dealer, and just as truly three magnificent sales opportunities.

Regular Equipment of the World's Best Cars

Truffault-Hartford SHOCK ABSORBER

TWENTY-FIVE engineers—master builders of the world's best cars—have turned to Truffault-Hartfords for maximum car comfort and made them a regular part of their supplied equipment. Without them, it is impossible to enjoy the utmost motoring ease, for they make good an always existing deficiency in spring construction. They prevent the violent rebounds which the spring itself cannot control.

Your riding comfort—and that's principally what enjoyable motoring amounts to—is made sure. Your springs are safe from breakage, your mileage is appreciably increased, and you're "in" a good bit on up-keep cost as a season's use will show. No motorist can afford to be without Truffault-Hartford Shock Absorbers—and least of all, the man who owns a six-cylinder car with a wheelbase of over 118 inches.

Five models—the New Automatic, $60; Standard, $50; Intermediate, $40; Junior, $25; Juniorette, $15, per set of four. See your dealer and write for our catalogue.

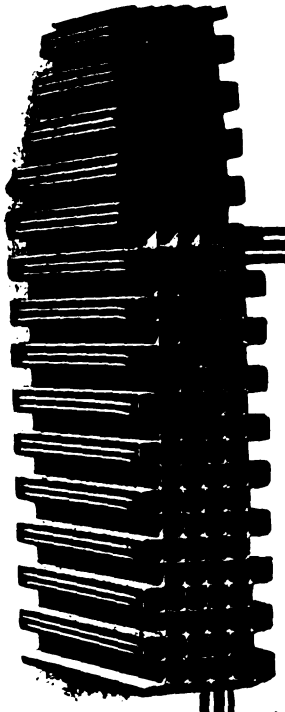
Fedders Radiators

The square tube radiator is acknowledged to be superior to any other form of construction and Fedders design and methods of manufacture give Fedders radiators a standing second to none in the field.



Fedders Square Tube Radiators offer a maximum of radiating surface — all four sides are surrounded by water—cannot clog and can be repaired in short order by any tinsmith.

While we specialize on square tube types, we are also equipped to build on any specifications that may be furnished. Send us blue prints and our engineering department is at your disposal for co-operative work.

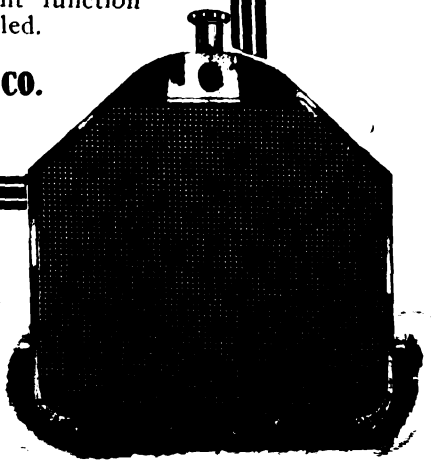
Livingston Radiator

You truck makers and truck sellers need the selling force of Livingston Radiators more than any one else in the industry.

Your life, commercially, depends absolutely on the service of the product you are handling. Excuses and apologies won't go in the commercial field. You know it is a question of dollars and cents saving over other modes of delivery that makes it possible for you to sell trucks and commercial wagons.

Unquestionably one of the most serious liabilities in the average motor truck of today is its inefficient cooling system. Inefficient cooling means high cost of truck service because an overheated motor means loss of power—an overheated motor means excessive consumption of both gas and oil—and an overheated motor means time lost in filling and refilling the radiator, frequently necessary when water is to be had only by carrying it a considerable distance, in buckets full.



Livingston Radiators assure the greatest cooling efficiency with the least pounds of weight, the least wind resistance and with the greatest ability to resist stress and strain to which motor trucks are commonly subjected.

Livingston Radiators assure minimum truck operating cost in the all-important function of keeping the motor properly cooled.

LEWIS RETIRES AS HEAD OF MITCHELL-LEWIS COMPANY

Unexpectedly Relinquishes Presidency to Representative of Banking Interests—Lewis Family, However, Retains Control.

Without an inkling that anything of the sort was contemplated, William Mitchell Lewis, on Wednesday of last week, relinquished the offices of president and general manager of the Mitchell-Lewis Motor Co., of Racine, Wis., with which he and his forebears have been intimately identified for at least two generations. His retirement created a mild sensation, as he was considered one of the Mitchell-Lewis fixtures.

The vacancy was filled by the election of Joseph Winterbotham, Jr., who became chairman of the executive committee in November, 1911, when the Mitchell-Lewis company floated a $2,500,000 note issue. Winterbotham represented the banking interests which stood behind the loan and has been their official representative in the Mitchell factory.

Mitchell's retirement gave rise to a variety of rumors, some of which involved its financial condition, but they were promptly repudiated by an official statement issued by the board of directors through William T. Lewis, chairman of the board, who is also the father of William Mitchell Lewis.

The statement declared that Lewis's resignation "had nothing whatever to do with the financial condition of the company, which is splendidly financed and never in better condition to serve the public."

Hereafter William Mitchell Lewis will devote his entire attention to his other interests, which include the Racine Rubber Co., formerly the Kelly-Racine Co., and the Racine Daily Times, the leading daily newspaper of Racine. The Times itself states that his retirement from the Mitchell-Lewis Motor Co. will have no effect upon its policy, adding that the Lewises, father and son, will continue to hold a controlling interest in the corporation.

Receiver for Syracuse Tire Jobber.

On the petition of the Firestone Tire & Rubber Co., among others, Claude L. Forbes, an attorney representing the Empire Tire & Rubber Co., was on Tuesday last, 25th inst., appointed receiver for the Central City Rubber Co., of Syracuse, N. Y. In addition to the usual charges of insolvency, it is alleged that the company had permitted some of its creditors to bring suits against it, and that it made preferential payments while in an insolvent condition. Its liabilities aggregate $35,000. The value of its assets are problematical. An effort is being made to effect a settlement on a basis of 25 cents on the dollar. As its title indicates, it dealt largely in tires, no less than six tire manufacturers figuring in the lists of creditors with claims between $500 and $4,000.

Louis Hupp Brings Monarch into Being.

Louis C. Hupp, former secretary and treasurer of the R. C. H. Corporation, of which his brother, R. C., was president and general manager until recently, has organized the Monarch Motor Car Co., of Detroit, which has been incorporated under the laws of Michigan. It will engage in the manufacture of a 30-horsepower, five-passenger touring car to sell at about $1,000, fully equipped. Temporary headquarters have been acquired on Scotten avenue, pending the closing of a contract for the erection of a modern factory building which, it is stated, already has been practically consummated. The names of those who are identified with Hupp in his new enterprise have not been disclosed.

Date Set for Sale of Thomas Assets.

March 17th has been set as the date for the receiver's sale of the assets of the E. R. Thomas Motor Car Co., of Buffalo, none of the real estate, however, being included in the sale. The property to be disposed of comprises 6,000 separate lots of machinery, equipment and parts.

"MOTOR SPIRIT" FAR FROM BEING RECENT DISCOVERY

But New Process Renders Quantity Production Possible—How Obtained and its Possible Effect on Gasolene Situation.

Whether or not the price of "gas" comes down "within a year," as not the press agent but a man high up in the Standard Oil Co. predicted to a Motor World man early this week, it is quite within reason to expect that the almost immediate production of quantities of what has been hailed as a new "discovery" under the name of Motor Spirit will have at least a steadying effect on the market.

Unfortunately, however, the immediate effect must of necessity be confined to the West, for the fuel, which, contrary to general belief, is not new at all and has been in use for five or ten years, though its production has been so limited that it never has constituted a real factor, is controlled by the Standard Oil Co. of Indiana under patents issued since the first of the year to W. M. Burton, who is the analytical chemist and a director of the Indiana company. Burton's patent covers a new process by which the fuel is produced and not the fuel itself, the process permitting of its production cheaply and in quantity, whereas the previous method of extracting it made the cost of its production for general use practically prohibitive.

Just what the ultimate effect of Motor Spirit on the market will be, it is difficult to foresee, though it is certain that its use in quantity in the West will at least release a like amount of real "gas," and even if it does not result in a reduction in current prevailing prices, it ought to put a crimp in the "demand and supply" theory. Similarly, what its price in the East will be, if it is available in the East at all, is problematical, for though its price in the West is understood to be about three cents a gal-

Digitized by Google

lon less than that of gasolene, it is unlikely that there will be so great a difference, for the simple reason that the process is owned outright by the Indiana company and to utilize it elsewhere will entail the payment of royalty.

In appearance and in characteristics, Motor Spirit is not unlike gasolene, except that it is slightly yellowish in color and emits a more pungent odor when permitted to evaporate in an open dish; in fact, it virtually is a low-grade gasolene of from 54 to 56 Beaume and, as such, can be used instead of the lighter fuel in any internal combustion motor constructed for gasolene, provided only that minor carburetter adjustments are made; compression need not be altered.

As might be expected by reason of its greater weight, it burns under normal conditions with a whitish smoke and leaves slightly more sooty deposit in the cylinders than does gasolene. It is declared, however, that both of these undesirable features can be eliminated by careful carburetter adjustment and in any case they are more than compensated for by the fact that as the fuel contains a greater percentage of heat units per unit of volume it permits of the generation of greater power on slightly less consumption.

According to Burtons' patents, and an analysis of the fuel, Motor Spirit is a last and "destructive distillation" of the residue which remains after the production of lubricating oils and which nominally is styled "gas oil" or "fuel oil" and sold as such for a low price. In the distillation of crude oil there is first produced naphtha, varying in percentage according to the grade of crude oil used; part of the naphtha afterwards is converted into gasolene by further distillation and chemical treatment. After the naphtha and gasolene are extracted, the refined oil of commerce is made, after which there is produced a distillate known as "paraffin distillate," which, after being chilled and pressed for the removal of paraffin wax, is again subjected to distillation, producing various grades of lubricating oils. It is the residue from this latter product, which upon "special destructive distillation" yields Motor Spirit in paying quantities.

Thus, it may be made from any grade of crude oil; its boiling point is somewhat higher than that of commercial gasolene, which may range from 115 degrees to 350 degrees, though by reason of the fact that it actually commences to boil at a lower temperature than does gasolene there should be no difficulty whatsoever in starting an engine upon it. The final boiling point may be as high as 400 degrees, though it probably flashes when heated to about 100 degrees.

FORD CARS BECOME WHITE ELEPHANT FOR STEAMSHIP

Although Court Will Permit Their Delivery, Steamship Company Has Agreed to Retain Them—Appeal May Further Involve.

The thirteen Ford Model T's which were put into the hold of the steamship Minnehaha in New York City about two weeks ago, consigned by Bowring & Co., exporters, to New Zealand, before the Ford Motor Co. could get into court to ask that the shipment be held up because they were being shipped into the territory of Ford's New Zealand dealer, have developed into a white elephant on the hands of the steamship company, for while it agreed to keep the cars in its possession on condition that the ship be allowed to sail, despite an injunction to the contrary, the injunction has been dismissed, but the agreement to keep the cars has not been abrogated. Hence the Minnehaha is somewhere between New York and New Zealand with the baker's dozen of cars in the hold and is under the agreement with the Ford company to keep them from entering the New Zealand dealer's territory, although the court has decided that the cars may enter that island.

The tangle may be straightened out by further legal proceedings; in fact, the court this week stated it would hear argument on such a proposal inasmuch as the Ford company has announced its decision to appeal from the order dismissing its injunction. The cars in question were intended for the Chili dealer, but are claimed to have been directed improperly toward New Zealand, whereupon Ford hurriedly secured an injunction forbidding the cars to leave port; however, the Atlantic Transport Co., owner of the Minnehaha, explained that the cars were at the bottom of the cargo and that to get them out would cost $3,000 and cause a delay of 24 hours, which resulted in the agreement that the ship be permitted to sail but that the cars either be kept in the possession of the steamship company in London or be returned to New York.

Weed Finds Itself in Wrong Court.

The fact that the Q. D. Hook Co., of Washington, D. C., exhibited its cross chains for the quick repair of tire chain grips in the Grand Central Palace show in New York City last month does not give the Hook company a place of business in the metropolis, according to a ruling of the United States District Court for the Southern District of New York, which this week dismissed the case brought against the Hook company by the Weed Chain Tire Grip Co., on the grounds that the New York court has no jurisdiction over the Washington concern. This ruling will necessitate the filing of a new suit by the Weed people in the national capital. Besides the Q. D. Hook Co., the defendants were Randolph T. Warwick and Edwin S. Holmes, Jr., the latter of whom holds the patent under which manufacture was carried on. Prior to the dismissal of the suit a preliminary injunction had been granted.

Knox Files Schedules in Bankruptcy.

Schedules in bankruptcy for the Knox Automobile Co., of Springfield, Mass., which were filed in the Federal Court in Boston on Tuesday last, 25th inst., show liabilities of $1,286,409 and assets of $1,370,907. The only secured creditors are the Springfield Institute for Savings and Alice E. Aldred, whose indebtedness of $24,500 is secured by real estate. There are more than 500 unsecured creditors, a large number of them representing merchandise accounts.

The principal creditors are the administrator of the estate of Alfred N. Mayo, of Springfield, $790,000; Fisk Rubber Co., $80,473; First National Bank of Boston, $40,000, and Chicopee National Bank, $30,000. The assets include incumbent real estate to the value of $268,300, machinery, tools, stock in trade and patents to the value of $750,000 and complete automobiles to the value of $125,000.

Creditors Break into "Armored Car."

Three creditors, who claim the Bellamore Armored Car & Equipment Co., of 258 5th avenue, New York City, is insolvent, filed a petition in bankruptcy yesterday, 26th inst., against the Bellamore company in the Federal court in New York City; the petitioners and their claims, which total $569.23, are: Sulzberger & Sons Co., merchandise, $227.31; Allen W. Terry, services, $292.30; William Dauphin, merchandise, $49.62. The Bellamore company built at least one armored, burglar-proof car, designed to be used by banks, and at one time acquired a factory in Bridgeport, Conn., which later caused it all manner of litigation in which unpleasant allegements were made.

Pope's Taxicab Venture in Straits.

The Taxi-Motor Cab Co., of Boston, Mass., of which Arthur W. Pope is president and treasurer, made an assignment on Tuesday last, 25th inst., to Benjamin N. Johnson. Pope's leather and shoe finding firm, Arthur W. Pope & Co., also made an assignment, as did Pope personally. The embarrassment was caused by the maturity of about $80,000 worth of Taxi-Motor notes endorsed by Pope, who believes, however, that all creditors will receive dollar for dollar.

SECURES RIGHT TO DESIGN OF ITS YELLOW TAXICABS

Court Denies Monopoly of Color, but Says Design of New York Company's Cabs Cannot be Imitated—Appeal as Test.

Although apparently conflicting decisions in preliminary features had been given by judges of the Supreme Court for New York county in the litigation instituted by the Yellow Taxicab Co. to substantiate its claim to the design of painting employed on its cabs, the deciding of two cases this week in favor of the Yellow company has paved the beginning of the way to a final settlement of the dispute. The two defendants in these cases, Wallace Carpenter and Geo. Rosemeier, who had painted their cabs yellow, are enjoined from colorably imitating the design of the Yellow cabs, and pending the carrying of the cases to the Appellate Division will rest the final settlement of all of the actions. The court to a certain extent forbids the Yellow company's competitors from running yellow cabs.

As was told in Motor World in November, when one judge refused to make preliminary injunctions in six cases permanent during the pendency of the actions, no company has the right to a monopoly of any one color in decorating its cabs, yet the disposition of the cases approaches the same end by a different route. Carpenter and Rosemeier are enjoined from "colorably imitating" the cabs of the Yellow company with the object of inducing the cab using public to believe their cabs are Yellow taxicabs and the matter reduces itself to a question of infringement of design, which in the Yellow company's fleet is a "Bristol orange" trimmed with black.

The competing cab owners may use yellow, but it must be so used that the cab using public can differentiate between a cab of the Yellow and a competing company. How this differentiation may be effected in one way is shown by the tactics pursued by Carpenter and Rosemeier following the order of the court that they be enjoined pendente lite, or during the pendency of the cases, from imitating the Yellow cabs. Upon agreement with the Yellow company they did not repaint their cabs, but placed upon the doors "I. T. O. A.," the initials of the Independent Taxicab Owners' Association.

With this lettering no objection was made to their operation. Similarly the cab doors might be painted with black latticework or the cabs might be distinguished in some other way, but should the design approach at all near that of the Yellow company the fight which that concern has thus far put up indicates that further litigation might follow.

Rubber Workers' Strike Weakening.

Although all the Akron tire manufacturers continue to be more or less affected, it is evidenced that the backbone of the strike of the rubber workers appears to be bending, if it is not broken. Since Monday last large desertions from their ranks are reported, though at least 10,000 still are said to be holding out.

The strikers have formulated demands for a new wage scale, which provides for an average increase of about 25 per cent., and for an eight-hour day—two hours less than at present. The wage scale demanded ranges from a minimum of 22½ cents per hour to 60 cents. The tire makers, however, steadfastly refuse to deal with either of the labor organizations which have projected themselves into the affair, and maintain that they will treat only with their individual employes.

Dunlop Secures Fabricord Rights.

The Dunlop Tire & Rubber Co., of Toronto, Can., has acquired from the Century Rubber Co., of New York, the exclusive rights to manufacture and sell Fabricord tires in the Dominion, where the tires will be known as Dunlop-Century Fabricord tires. The feature of Fabricord construction is a new method of application of the fibres of cotton fabric, the strength of the fabric being almost entirely radial to the wheel.

Consolidated to Take Wagner's Name.

Directors of the Consolidated Lubricants Co., of New York, have voted to change its name to the Wagner Oil Co., taking that title from the well-known F. J. Wagner, who recently assumed the presidency when A. R. Pardington relinquished the office. J. C. Nichols will remain treasurer of the company.

Lewis Forming His Own Engine Company.

Ralph C. Lewis, who recently resigned the general management of the Beaver Mfg. Co., of Milwaukee, Wis., is organizing the Lewis Motor & Engineering Co., which will engage in the manufacture of gas engines of all types. Lewis, however, is not ready to disclose his plans.

Studebaker Profits Increase $650,000.

According to a report of the Studebaker Corporation, of Detroit, Mich., for the year ending December 31st last, its profits from manufacturing and trading amounted to $3,342,560, an increase of $650,712. The surplus, after making all charges, amounts to $2,313,245, an increase of $659,663.

BOUGHT CHEAP TIRES BUT NOW CLAIMS POOR QUALITY

Rutherford-Stepney Suit Brings Countercharges and Airs Contract—Stepney Says Some Casings Lasted Only Ten Miles.

An effort by the Stepney Tire & Rubber Co., of New York City, to get 10,000 tires at a low price from the Rutherford (N. J.) Rubber Co., which was extensively exploited several years ago by Charles Austin Bates, once a widely known advertising expert, who proposed among other things to sell stock to car owners and permit them to buy tires at "trade" prices, evidently did not result satisfactorily, according to a suit which has been filed in the Supreme Court for New York county by the Rutherford Rubber company against its former customer.

The complainant demands $3,789.92 for tires which it claims it delivered and which were not paid for.

The trouble centers about a contract made November 22, 1911, which stipulated that the Stepney company, formerly the American Stepney Co., was to buy 10,000 tires, and the contract stated that "the tread of said tires shall be made of the same composition as that used in the manufacture of the high-grade Sterling tires made by the party of the first part, but that all other parts of the tires ordered herein shall or may be of cheaper material than that used in Sterling tires and that no guarantee of any kind is made or implied."

In modification of this contract the Stepney company submits a letter accepting the contract and stating that certain changes in construction are agreed to, but "it being understood, however, that such change is in no way to reduce the standard or wearing qualities of the cover stock."

In its answer the Stepney company makes the assertion that many of the tires delivered would not last for more than ten miles, that it went to great trouble in adjusting difficulties with its customers, that whereas the Rutherford company claims the tires delivered were worth $43,376.81 they were worth not more than $10,000, and that inasmuch as $40,836.31 was paid, the tires have been more than paid for. The amount asked is the balance—$2,540.50—and $1,249.42 expended for moulds and stencils, which latter the Stepney company claims it has not possession of and should not pay for.

The wholesale prices named in the contract range from $6.50 for 28 x 3 clincher to $20.50 for 37 x 5 clincher and quick detachable types.

NEW COURT RULES UNCOVER MANY FORGOTTEN LAWSUITS

Cases Supposed Long "Dead" Found to be Officially "Alive"—Echoes of Earlier Days Awakened by "House Cleaning."

As a result of the new set of equity rules promulgated by the United States Supreme Court for the guidance of the lower courts and which became effective February 1st, a mighty effort is being made to clear the records of "deadwood"; the effort caused a considerable rattling of dry bones, and some not so dry, this week, when the court clerk of the District Court for the Southern District of New York, where many trade actions have been filed, published a list of over 3,000 cases which have accumulated within the last decade or more and which have not been disposed of. The publication of the list brought to many men and manufacturers within the automobile trade the information that whereas they thought they were through with certain lawsuits, these same suits still are on the court records as "alive" and the calling of the cases on near dates will bring recollections of some former famous trade fights and troubles. Many of the cases will be officially discontinued or withdrawn when brought up, and hereafter, according to the new equity rules, cases must move forward with reasonable speed or they will be dismissed.

One of the old-timers is entitled Leonard H. Dyer and Association Patents Co. vs. Acme Motor Car Co., and was brought April 5, 1906, for alleged infringement of Dyer's change-gear gate patent, No. 657,650, but since the suit was started the patents company and Dyer have dissolved relations and Dyer has entered into a new agreement with the Automobile Board of Trade, which makes further continuance of the action problematical.

More bones will rattle when the clerk sings out "Hartford Rubber Works vs. Electric Vehicle Co.," and what will become of the case is yet uncertain; it was filed December 10, 1907, when the Hartford company asked a receivership on the grounds that it had a claim of $11,785.67 against the Vehicle company, and the records show that the receiver finally turned over his holdings to a reorganization committee; but the case was never wiped off the records.

The Electric Vehicle Co. and the Morton Trust Co., as trustee, appear in another action, filed December 13, 1905, as complainants against the Hartford Rubber Works Co., this time alleging infringement of patents Nos. 750,633 and 750,838, both covering a tire, and issued to Henry G. Fisk but becoming the property successively of the Electric Vehicle Co., the Columbia & Electric Vehicle Co., the Electric Vehicle Co. and the Morton Trust Co.

Of not so early vintage is the H. W. Johns-Manville Co. vs. the Keasley & Mattison Co., wherein Johns-Manville, September 18, 1909, charged infringement of patent No. 792,901, covering a gasket, and one which the parties concerned apparently have forgotten all about is a suit filed July 7, 1909, by Edward V. Hartford, George H. Hartford and the Hartford Suspension Co., makers of Truffault-Hartford shock absorbers, against the Winton Motor Carriage Co., which company the complainants allege infringed the Trauffault frictional shock absorber patent of the reissue number 12,437. The defendants likely will ask a dismissal.

Harking back to the early days of the tire chain industry is Parsons Non-Skid Co. vs. Weed; this was the suit which the Parsons company, which originated the Parsons patent in England and secured an American grant, instituted some ten years ago against Harry D. Weed, whom it claimed was infringing the Parsons patent and which suit led to the union of Weed and the Parsons company and the perpetuation in the trade of the Weed Chain Tire Grip Co. The antiquity of the action is evidenced by the fact that the defendant, Weed, has since cleaned up something like a half million of dollars and retired, selling his Weed chain interests. This case will be terminated.

In the big collection of 3,000 "old stagers" are four cases of the Enterprize Automobile Co. against the Winton Motor Carriage Co., the Locomobile Co. of America, Maxwell-Briscoe, Inc., and the Commercial Motor Car Co. These, which are under patents Nos. 885,986 and 921,963, have practically been disposed of by the recent Dyer-Board of Trade agreement, and since the Commercial Motor Car Co. is out of business, that case likely will be ended as soon as called.

An enumeration of the trade cases involved would form a small booklet, but in addition to those already named are two by the Whitney Motor Wagon Co., one against the White Sewing Machine Co. and the other against the Prescott Automobile Mfg. Co., and some of the others are: Aerated Fuel Co. vs. Prescott Automobile Mfg. Co., Rushmore vs. Manhattan Screw & Stamping Works, American Diesel Engine Co. vs. American & British Mfg. Co., Consolidated Rubber Tire Co. vs. B. F. Goodrich Co., the same vs. Doherty, and the same vs. Republic Rubber Co., Parsons Non-Skid Co. vs. Green-Beebe-Weed Co., A. R. Mosler & Co. vs. E. M. Benford, Hartford vs. E. J. Edmond Co., and Parsons Non-Skid Co., Ltd., vs. U. T. Hungerford Brass & Copper Co. The latter suit involves the Reliance grip and is in fair way of settlement.

GOODRICH NET SALES FOR NINE MONTHS $37,500,000

On This Volume of Business Net Profits Were In Excess of $3,500,000—Assets Aggregate Ninety-eight Million.

During the nine months which ended December 31, 1912, the net sales of the B. F. Goodrich Co., of Akron, Ohio, according to figures just made public, amounted to $37,533,861, on which the net profits were $3,522,489. The statement in full follows:

Net sales	$37,533,861
Manufacturing, selling and general administration expenses	33,814,527
Net profit from operation	3,719,334
Miscellaneous income	571,845
Total income	4,291,179
Depreciation	440,852
Interest and bills payable	327,838
Net profit	3,522,489

The consolidated balance sheet of the B. F. Goodrich Co. as of December 31, 1912, follows:

Assets:	
Real estate, buildings, plant, good will, etc	$70,685,722
Investments in other companies	1,635,958
Preferred stock in treasury	2,227,117
Current assets	24,007,698
Deferred charges to operation	229,619
Total	$98,786,114
Liabilities:	
Common stock	$60,000,000
Preferred stock	30,000,000
Current liabilities	7,679,879
Reserve for contingencies	300,000
Surplus	806,235
Total	$98,786,114

Goodyear on Fictitious Stock Values.

Whatever may be the outcome of the strike of the Akron rubber workers, Frank A. Seiberling, president of the Goodyear Tire & Rubber Co., has praiseworthily placed himself on record as stating that one of its good results "has been the pricking of the bubble of fictitious values on the stocks of various corporations."

"Speculators," he adds, "had carried the value of Goodyear common stock to a basis of $465 per share ten days ago. It is now around $350, while its intrinsic value is approximately $125. Let this good work go on, and we will not have as much false reasoning when this fictitious basis of value has been properly exploded."

All of the Akron tire shares have declined in corresponding measure.

Seamless Rubber Issues Treasury Stock.

The Seamless Rubber Co. of New Haven, Conn., which makes the Bragg stitched tire, has certified to an issue of 5,000 shares of its treasury stock. The issue makes the total outstanding stock $1,000,000, of which one-half is common.

The Week's Incorporations

Brooksville, Ohio—Brooksville Auto Co., under Ohio laws; authorized capital, $10,000; to deal in motor cars.

Norfolk, Va.—Tidewater Automobile Co., under Virginia laws; authorized capital, $15,000; to deal in motor cars.

Piqua, Ohio—Auto Commercial Delivery, under Ohio laws; authorized capital, $10,000; to operate a motor delivery.

Knoxville, Pa.—Hollis Automatic Traction Co., under Delaware laws; authorized capital, $250,000; to deal in motor vehicles.

Moose Jaw, Sask.—Canadian Standard Automobile & Traction Co., under Canadian laws; authorized capital, $250,000; to deal in motor vehicles.

Alexandria, Va. — Express Spark Plug Co., under Virginia laws; authorized capital, $200,000; to manufacture spark plugs. Corporators—C. H. Duffey and others.

Chicago, Ill.—National Tire & Repair Co., under Illinois laws; authorized capital, $3,000; to repair motor car tires. Corporators—William Erkert, E. H. Tillson and others.

Jacksonville, Fla.—Gallatin Motor Co., under Florida laws; authorized capital, $10,000; to deal in motor cars. Corporators—H. B. Philips, Harold T. Philips, Harry Botts.

Sacramento, Cal.—Owners' Auto-Tire Co., under California laws; authorized capital, $5,000; to deal in motor car tires. Corporators—H. C. Muddox, Frank Smith, W. W. Bassett.

Rochester, N. Y.—Alling & Miles, Inc., under New York laws; authorized capital, $20,000; to deal in motor cars. Corporators—Edmund M. Alling, Alice R. Alling, Milton B. Miles.

Greenville, Ohio—York Supply Co., under Ohio laws; authorized capital, $25,000; to deal in motor cars and supplies. Corporators—C. F. York, A. Z. Heller, J. H. Byard, Lillie M. York.

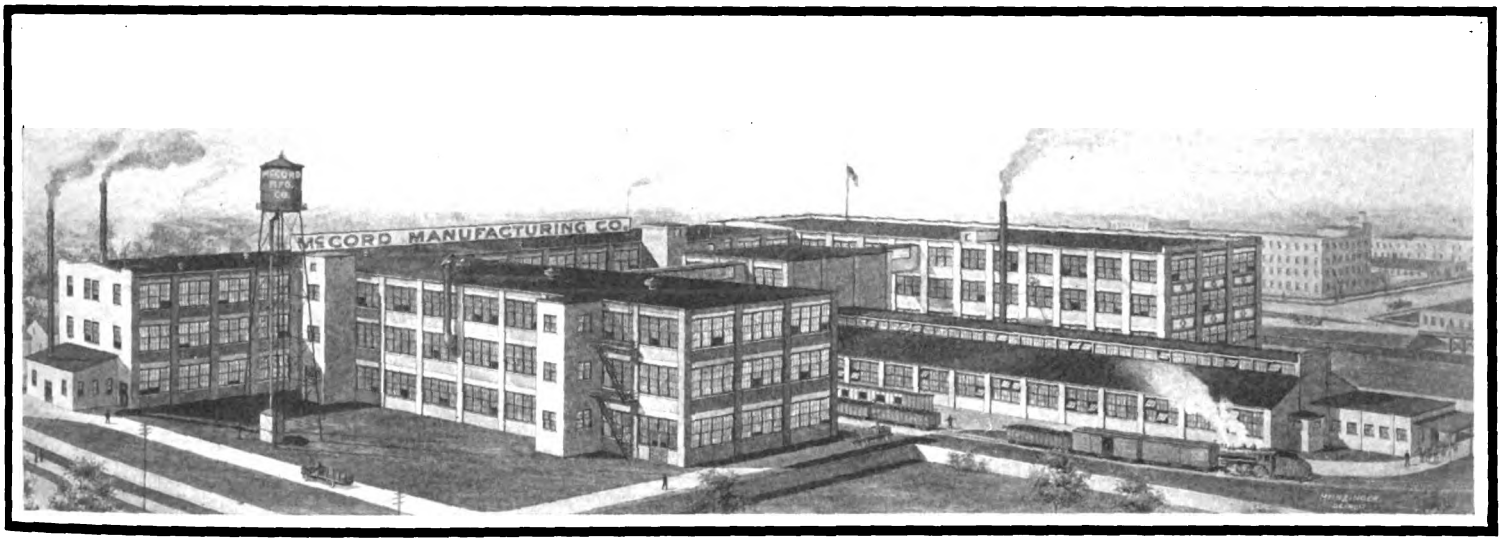
Saratoga Springs, N. Y.—Ross-Ketchum Co., Inc., under New York laws; authorized capital, $18,400; to deal in motor cars. Corporators—J. Arthur P. Ketchum, Norman B. Ross, James W. Northrup.

Indianapolis, Ind.—Capitol Body Co., under Indiana laws; authorized capital, $10,000; to manufacture motor car parts. Corporators—Elmer Hinshaw, Fred W. Henschen, Elmer W. Hughey.

Nashville, Tenn.—State Motor Car Co., under Tennessee laws; authorized capital, $25,000; to deal in motor cars. Corporators—W. F. Anderson, R. M. Meriges, Jr., John A. Welsdorf, John E. Shelton.

Wheeling, W. Va.—Lavender Auto Supply Co., under West Virginia laws; authorized capital, $25,000; to deal in motor car supplies. Corporators—A. B. Kennard, Jr., C. E. Lavender, R. M. Lavender.

Chicago, Ill.—International Automobile Supply Co., under Illinois laws; authorized capital, $5,000; to deal in motor car supplies. Corporators—William L. Loeffel, Mark T. Adams, William E. Stephens.



New York, N. Y.—Munnich's Garage, Inc., under New York laws; authorized capital, $500; to operate a garage. Corporators—Christopher Munnich, Elizabeth Munnich, John Munnich, all of 225 Brown Place.

Detroit, Mich.—Timken-David Brown Co., under Michigan laws; authorized capital, $250,000; to manufacture worm-drive gears and worm wheels. Corporators—Eugene W. Lewis, Herbert W. Alden, Lewis H. Paddock.

Cleveland, Ohio — Diamond Stamping Works Co., under Ohio laws; authorized capital, $35,000; to manufacture motor car parts. Corporators—J. C. Royon, Phelps Crum, H. H. Henry, M. T. Gorton, Rose L. McCarthy.

Brooklyn, N. Y.—Bensonhurst Auto Renting Co., Inc., under New York laws; authorized capital, $3,000; to operate a motor livery. Corporators—Louis Flatow, 187 So.

BIRDSEYE VIEW OF McCORD MFG. CO.'S ENLARGED PLANT IN DETROIT

Additions include a testing laboratory and a department for truck radiators exclusively. Apart from other things, the McCord factory now has a capacity of 85,000 radiators annually.

2nd street; Harry Harrigan, Max Levy, 150 Bay 22nd street.

Brooklyn, N. Y.—Cumberland Garage Co., Inc., under New York laws; authorized capital, $25,000; to operate a garage. Corporators—Willard L. Gray, Cumberland street; Alfred Wilmarth, Marie F. Wilmarth, 626 East 18th street, New York City.

New York, N. Y.—Gotham Sight Seeing Corp., under New York laws; authorized capital, $1,000; to operate motor buses. Corporators—George Laury, 56 West 112th street; Louis Brown, 520 East 77th street; David Lebowitz, 64 East 118th street.

New York, N. Y.—Chrome Mfg. Co., under New York laws; authorized capital, $25,000; to deal in motor vehicles. Corporators—James E. Marshall, 25 West 136th street; William H. Buckley, 445 Lenox avenue; William P. Green, 21 West 134th street.

New York, N. Y.—Dann-Gorman Co., Inc., under New York laws; authorized capital, $10,000; to deal in motor cars. Corporators—Thomas F. Dann, 99 14th street, Broolyn; John L. Gorman, 372 East 156th street; John B. Gouger, 142 West 49th street.

Changes of Capitalization.

Toledo, Ohio—Ohio Electric Co., from $250,000 to $500,000.

Detroit, Mich.—Detroit Carburetter Co., from $25,000 to $50,000.

Chicago, Ill.—Imperial Brass Mfg. Co., from $100,000 to $200,000.

St. Louis, Mo.—American Automobile Co., from $200,000 to $300,000.

Detroit, Mich.—Federal Motor Truck Co., from $100,000 to $200,000.

Recent Losses by Fire.

Ithaca, N. Y.—Lang Garage, garage destroyed. Loss not given.

Amesbury, Mass.—J. H. Leitch, automobile plant damaged. Loss, $12,000.

Norwich, Conn.—Turnbull Auto Co., building damaged. Loss not given.

Newport, N.H.—Napoleon Geoffrain, garage damaged and six cars destroyed. Loss, $10,000.

Union, Ia.—Woods Carriage & Automobile Co., garage and 20 cars destroyed. Loss, $44,000.

Greensburg, Ind.—George Montgomery, repair shop and several cars destroyed. Loss, $15,000.

Cincinnati, O.—Western Motor Car Co., 127 West 7th street, damaged by explosion. Loss not given.

Healdsburg, Cal.—Sonoma Garage and Consolidated Vehicle Co.'s warehouse destroyed. Loss not given.

PROMINENT MEN IN TRADE WHO ASSUME NEW DUTIES

Resignations and Promotions That Serve To Place Many Workers In New Places—Few Leave the Industry.

Frank M. Ridler has been promoted to the post of sales manager for the Pope Mfg. Co., of Hartford, Conn. He has been connected with the company for many years.

J. C. Austin, former chief engineer of the Regal Motor Car Co., of Detroit, has joined the Studebaker staff. He has become engineer of passenger cars under chief engineer Heaslet.

Fred W. Plumb has been appointed sales manager of the Palmer-Moore Motor Truck Co., of Syracuse, N. Y. He obtained necessary experience in the service of several of the best known dealers in Syracuse.

W. C. McElwain, manager of the Stewart-Warner Speedometer branch, of Cincinnati, has resigned that position to become Ohio representative of the Hoffecker Co., of Boston. He will have his headquarters at Cleveland.

J. T. Rose, of Washington, D. C., has been appointed manager of the Invader Oil Co.'s branch in that city. Previously he was identified with T. E. Tomlinson, general manager of the Invader company, in his earlier enterprises.

C. W. Whitston, who it is stated was one of the organizers of the Krit Motor Car Co., of Detroit, has been added to the field staff of the Keeton Motor Car Co., of that city. He will cover Eastern territory, New England excepted.

On April 1st, Glenn Buck will become advertising manager of the Ford Motor Co., of Detroit. As the Ford account has been handled by the Glenn Buck Advertising Co., of Chicago, for some time, his duties will not be strange to him.

A. J. Diefenderfer, former assistant manager of the Lozier Motor Co.'s New York branch, has been promoted to the post of manager. He succeeds W. S. M. Meade, who resigned to become secretary of the new Chandler Motor Car Co.

Charles W. Cross has been appointed sales manager of the Holly Bros. Co., of Detroit, Mich. He has been identified with the automobile trade for more than ten years, latterly in the sales department of the General Motors Truck Co.

Hugh H. Goodhart has been promoted to the post of advertising manager for the Lippard-Stewart Motor Car Co., of Buffalo, N. Y., with which he has been identified for some time. Before joining the Lippard-Stewart staff, Goodhart was a member of the Franklin advertising department in Syracuse.

Frank H. Martin has been appointed Eastern sales manager for the Stewart-Warner Speedometer Corporation, with headquarters in New York. He succeeds Arthur J. Interrieden, who recently became sales manager for the Jones Speedometer Co. Previously, Martin was manager of the Firestone solid tire department in Akron.

William R. McCulla, a specialist in carburation, has been appointed assistant research engineer for the Packard Motor Car Co., of Detroit, Mich. McCulla has had extensive experience since 1899, when his father purchased the second car that appeared in Ireland. He has been identified with the Mercedes, Renault, Napier and Rolls Royce cars.

Walter E. Holland has been appointed manager of the Anderson Electric Car Co.'s mechanical and electrical research department in Detroit. He brings with him ripe experience, having had to do with electric vehicles and storage batteries for many years. From January, 1911, to February of the present year Holland was chief electrical engineer of the Edison Storage Battery Co., of West Orange, N. J.

Panama Rubber Chooses its Officers.

W. D. Newerf, the Los Angeles tire jobber who recently organized the Panama Rubber Co., with an authorized capital of $1,000,000, has assumed the presidency of the corporation. The other officers are: W. E. McCune, first vice-president; Motley H. Flint, second vice-president; J. S. Benner, secretary; John F. Roe, treasurer. Executive offices have been opened in the Los Angeles Investment Building, but a factory site has not yet been secured. It is stated, however, that "one of the best known tire-builders in the country" has been engaged as factory superintendent, but his identity has not been disclosed.

International Re-elects Coleman President.

Reports that he would retire from the presidency of the International Motor Co., of New York, were put to rest at the annual meeting of the board of directors last week when C. Phillip Coleman was re-elected president of the corporation. F. C. Richardson was chosen treasurer, and Vernon Monroe secretary. E. C. Converse, the New York banker, retains chairmanship of the board of directors, and W. C. Dickerman the chairmanship of the executive committee. Three new men entered the directorate, viz.: William E. Corey, W. T. Graham, and T. L. Chadbourne, Jr.

In the RETAIL WORLD

B. F. Schmidt is constructing a garage in Exeter, Cal.

Robert Bryanton is building a garage in Allerton, Mass.

H. Grote has established a repair business in Eugene, Ore.

Ralph Metzger will open a garage in Chillicothe, Ohio.

C. W. Clare proposes to construct a garage in Smithville, Tex.

Gustave Fribkle is about to open a garage and repair shop in Havre, Mont.

James J. Reynolds just has completed a concrete garage in Port Chester, N. Y.

Frank McCullen and Edward Jepson are about to open a garage in West Bend, Ia.

Mazza & Questa, dealers, in Olean, N. Y., plan the construction of a new garage.

Howard Tracy has opened a repair shop in Oshland, Ohio. It is located on Orange street.

W. H. Rattenburgh is about to erect a garage in El Paso, Tex. The site is on Missouri street.

The Black Hills Garage & Supply House, of Deadwood, S. D., is having a new garage constructed.

A new garage is being erected for H. L. Cook in Palestine, Tex. It is located on Spring street.

A new garage is being erected in Atlantic, Ia. When completed it will be occupied by Hans Thiessen.

R. K. Woodrum and Bruce Purvis are establishing a garage and repair business in Louisburg, Kan.

The F. O. Engstrum Co., of Los Angeles, Cal., is about to have a new garage erected; it will cost $30,000.

The R. P. Smith Garage in Port Arthur, Tex., has been purchased by R. E. Howland and George Wynall.

A. B. Neyhart has purchased the Sixth Street Garage in Stroudsburg, Pa. He will conduct the business.

George F. Fleet, owner of the People's Taxicab Co., in Altoona, Pa., plans to erect a garage on Beale avenue.

Campbell & Cottrill have completed a new garage in Long Beach, Cal. They are Chalmers and Maxwell dealers.

Ketchum-Ross Co. is the style of a new accessory dealer in Saratoga Springs, N. Y. J. C. Lovemoney is manager.

William Couffer is about to enter the trade in Urbana, Ohio. He will open salesrooms on South Main street.

The Souhegan Auto Co., of Milford, N. H., has opened a new repair shop and salesrooms on Nashua street.

J. M. Carmer has organized the Auto Accessories Co. in Fort Wayne, Ind. He will locate at 122 West Washington street.

R. W. Morrison has retired from the firm of Hardy & Morrison, dealers, in Fonda, Ia. Hardy & Son will be the style hereafter.

A. E. Reed, a dealer in Louisville, Ky., has established a branch of his business on South 4th street; he has the Overland line.

Morris Yingling and Michael Rice, who constitute the City Auto & Machine Co., in Latrobe, Pa., are about to build a new garage.

Ralph Schwarz has purchased an interest in the Central Motor Co., of Reading, Pa. The style hereafter will be H. B. Schwarz & Son.

W. W. Conley, formerly of Hastings, Minn., has entered the trade in Merriam Park, in the same State; he has the Pratt agency.

F. J. Rie and Ray Davis have established a tire repair business in Petaluma, Cal. They will operate as the Petaluma Tire Repair Co.

Andrew Murphy & Son, of 1410 Jackson street, Omaha, Neb., have had plans prepared for a new garage; the estimated cost is $10,000.

C. W. Deane, formerly of McCallum & Deane, in Grand Rapids, Mich., has "flocked" by himself. He has opened a garage on State street.

George E. Quay, owner of Quay's Garage in Dunkirk, N. Y., has completed a new garage and machine shop; it is located at 218 Washington avenue.

Rosenthal & Thompson, automobile and implement dealers in Redwood Falls, Minn., have dissolved partnership; William Rosenthal will continue the business.

Charles W. Kruger of Alta Vista, Kan., has purchased a garage in Peabody, in the same State; he will remove to the latter town and conduct the new business.

Clifford Caley, of Bluffton, Ind., is about to establish a garage and agency business in Huntington, in the same State; his location is in the Bender building, on Main street.

George M. Height and Theodore Bennett of Spring Lake, N. J., have sold their garage business to Timothy Hurley; the former owners have embarked in the meat trade.

W. C. Spear, owner of the Manchester (N. H.) Auto Garage, has had plans prepared for the erection of a new garage and salesrooms; the new building will be on Granite street.

Fred Yoho, formerly with the Oliver & Martin Garage in Martins Ferry, W. Va., has entered the trade for himself. He has leased a building on North 6th street and will open a repair shop.

W. E. Dehler, of Crane, Wis., has purchased the interests of Peter Herring in the Bloomer Auto Garage & Supply Co. in Bloomer, in the same State; he will make his residence in the latter town.

Harry Corbaley and Edward Allen, of Palo Alto, Cal., have merged their interests under the style Corbaley & Allen; they will deal in automobile supplies and will handle the Chalmers, Overland and Kissel lines.

E. L. Kaufman of Keota, Ia., has purchased a half interest in the Lawler Garage in North English, in the same State; the style has been changed to Kaufman & Lawler Auto Co. A new garage will be erected.

Hanson & Tyler, who distribute cars over a considerable territory in Iowa, are to remove their headquarters from Webster City to Fort Dodge; Tyler will remain in Webster City in charge of the business there.

The Boehmer-Sheridan Auto Co., of Fort Smith, Ark., has dissolved. Boehmer will continue the business and Paul W. Sheridan will operate the Arkansas Garage at North 10th and B streets. Sheridan retains the Ford agency.

G. W. Jones, former manager of the United Motor Des Moines (Ia.) Co., has purchased a controlling interest in the Moyer Automobile Co., in that city. William E. Moyer, former head of the company, died last week. The concern is Iowa agent for Krit and Hudson cars.

The W. L. Huffman Auto Co, of Omaha,

Digitized by Google

Neb., has opened a branch salesroom in Sioux City, Ia., at 222 South Phillips avenue; Fred Nair is manager. The company has the Hupmobile agency for South Dakota, Nebraska and Iowa and the new station is to care for the business in the former State.

The Reliable Motor Car Co. has entered the trade in Salt Lake City with salesrooms at 65 West 4th street, South; it is Oakland distributer. S. C. Sherrill is president, Harry Nightingale vice-president, secretary and treasurer, and Harry Elliot sales manager.

The Osen-McFarland Auto Co., San Francisco dealers, have arranged with J. H. and M. L. McCullough to handle the company's retail business in San Francisco; they will trade under the style McCullough Bros. and their line will comprise Mitchell and Empire cars and I. H. C. delivery wagons.

G. S. Holmes, proprietor of the Semloh Hotel in Salt Lake City, Utah, and his son, Dwight L. Holmes, have entered the automobile trade; they have established an agency for Speedwell cars and trucks and Wagenhalls delivery cars at 223-25 South State street. Dwight L. Holmes also operates a similar agency in Los Angeles.

The W. D. Sweet Motor Car Co., which recently was organized in Binghamton, N. Y., has taken over the garage and repair business of W. A. Crandall at 233-35 Water street. Crandall will continue in charge of the repair shop, which is in the basement, and the first and second floors of the building will be utilized by the Sweet company for the exploitation of the Speedwell line.

The General Motor Truck Co. has been formed in Toledo, Ohio, to take over the business of the Heavy Tonnage Transportation Co., a trucking concern; the new company will continue in the old location at Michigan and Jefferson streets. The officers of the new company are: Frank M. Hackett, president; F. M. Dotson, treasurer; W. C. Prickett, general manager; directors, the foregoing and C. B. Grandy and C. O. Morton.

John G. Webber, J. A. Rose and E. T. James have formed the Auto Sales Co., Inc., in Charlotte, N. C., to handle the Studebaker line which formerly was handled by a factory branch, recently discontinued. The old Studebaker location at 222 North Tryon street will be occupied. Rose, for the past year, has been manager of the Ford Sales Co. in Asheville, N. C. James continues to stock Cadillac cars and will display them in the new company's salesrooms.

The Alliance (O.) Motor Car Co. is a new entry into the trade in that Ohio town. A garage and machine shop, 160 x 50 feet, and having a capacity of from 40 to 60 cars, will be erected. The officers are: President, C. G. Mummert; vice-president, C. G. Cline; secretary, Sydney L. Geiger; treasurer, J. O. Ellis; directors, the foregoing and Morris W. Geiger, G. K. Pritchard, S. F. Oyster, H. D. Tolerton, R. M. Scranton, G. H. Hubler and E. P. Kinney.

Americans in Canadian Wheel Company.

Backed chiefly by American capital, the Chatham Wheel Co., of Chatham, Ont., has been organized under the laws of Canada with an authorized capital of $50,000. The company will build complete wheels, including the wood parts, hubs and rims. It represents a joint enterprise of men prominently identified with the Sparks-Withington Co., the Hayes Wheel Co. and the Jackson Rim Co., all of Jackson, Mich. M. Davies, of the Hayes company, will be general manager of the Chatham plant. Among the other stockholders are William Sparks, R. H. Withington and Winthrop Withington of the Sparks-Withington Co., C. B. Hayes of the Hayes Wheel Co., O. W. Mott and C. B. Williams of the Jackson Rim Co., and M. V. Chaplin of the Chaplin Wheel Co., of Chatham, Ont.

Blakeslee Assumes Lansden Management.

George E. Blakeslee, one of the veterans of the industry, who has been identified with the Lansden Co., of Newark, N. J., practically since its inception, was elected vice-president and general manager on Monday last, to fill the vacancy caused by the resignation of W. L. Case, who, it is stated, has disposed of his holdings and will return to his practice as a consulting engineer. Originally Case was president of the company, but he gave way to R. S. Holtz, of Chicago, whose participation in the company's affairs of late, however, has been largely of a nominal character. In September last, John M. Mack, of Allentown, Pa., former head of the Mack Motor Truck Co., became chairman of the Lansden executive committee and took over many of the president's duties.

"35%" Beats Rubly a Second Time.

Because Holmes Jones, attorney for Wm. Rubly, a grease gun manufacturer in Tuckahoe, N. Y., was not on hand when the suit against Rubly by the 35% Automobile Supply Co., of New York City, was called in the Supreme Court for New York county this week an inquest, or, in lay language, a one-sided trial, was taken with a resulting judgment of $2,474.95 for the "35%"; the suit was based upon an advertising contract whereby Rubly was to exchange $3,360 worth of grease guns for advertising in a monthly circular gotten out by the 35% company, and the claim was that he failed to live up to the contract. In an earlier stage of the suit the "35%" secured judgment for $2,383.30, but Jones carried a point to the Appellate Division and it was only this week that the matter was again brought to a head in the lower court. The present verdict, which is slightly larger than the first one, includes interest and certain costs.

King Reincorporated with $200,000.

Artemus Ward, of New York, who several months since purchased the King Motor Car Co., of Detroit, and of which he is the three-quarter owner, has reincorporated it, under the laws of Michigan, with an authorized capital of $200,000. Ward himself will figure merely as a director of the company, of which his son, Artemus Ward, Jr., is vice-president. J. G. Beyerline is president, and F. A. Vollbrecht treasurer. The other directors are T. A. Bollinger and T. P. Chase, of Detroit.

Work Begun on Delion Tire Factory.

The Delion Tire & Rubber Co., of which R. S. Peale, of New York, is president and which was incorporated about four months ago under New York laws, has acquired a factory site in Hamilton township, near Trenton, N. J., on which it will at once erect a modern tire building plant. It will be a three-story brick and steel structure, having a frontage of 258 feet. It is expected that the work will be completed about May 1st.

Foreign Service System for Splitdorf.

Oscar J. Rohde, treasurer and general manager of the Splitdorf Electrical Co. of New York, which maintains a New York branch and service station for the Splitdorf Electrical Co., of Newark, N. J., sailed to Europe on Thursday last, where he will establish a system of Splitdorf service stations, with London as headquarters. He took with him four of the factory experts.

McGraw Becomes $1,000,000 Corporation.

The McGraw Tire & Rubber Co., of East Palestine, Ohio, which heretofore has been a Pennsylvania corporation, has taken out a new charter under the laws of Ohio. The authorized capital of the new corporation is $1,000,000. When additions and improvements now in progress are completed, it is stated that the McGraw plant will have a capacity of 1,500 tires per day.

Gauge Company Reorganized and Renamed.

The National Gauge & Register Co., of La Crosse, Wis., an outgrowth of the Hans Equipment Co., has been refinanced and reorganized and the style changed to the Hans Motor Equipment Co. A $50,000 factory building is now being erected in La Crosse which will permit of a largely increased output of gasolene and oil gauges, and all other gauges.

MOTOR WORLD

PUBLISHED EVERY THURSDAY BY

The Motor World Publishing Company

1600 BROADWAY NEW YORK, N. Y.

A. B. SWETLAND, President and General Manager
F. V. CLARK, Business Manager

EDITORIAL DEPARTMENT
R. G. BETTS, Managing Editor
S. P. McMINN HOWARD GREENE
R. W. SHERMAN E. F. HALLOCK

ADVERTISING DEPARTMENT
BROCK MATHEWSON, Advertising Manager
HOWARD L. SPOHN LOUIS R. SMITH

Western Advertising Manager
W. H. TRIPP, 1001 Ford Building, Detroit
Chicago, 1441 Monadnock Block
MAXTON R. DAVIES C. H. HANDERSON

Subscription, Per Annum (Postage Paid) $2.00
Single Copies (Postage Paid) . . . . . 10 Cents
Foreign and Canadian Subscriptions $3.00
Invariably in Advance

Postage Stamps will be accepted in payment for subscriptions. Checks, Drafts and Money Orders should be made payable to The Motor World Publishing Co.

Change of advertisements is not guaranteed unless copy therefor is in hand on SATURDAY preceding the date of publication.

Contributions concerning any subject of automobile interest are invited and, if adequate, will be paid for; or, if unavailable, will be returned provided they are accompanied by return postage.

Cable Address, "MOTORWORLD," NEW YORK

Entered as second-class matter at the New York Post Office, November, 1900

NEW YORK, FEBRUARY 27, 1913

TWO MEANS OF REDUCING FUEL COSTS.

Having fully aroused them to the urgency of what has come to be known as the gasolene situation, and being intent on discovering future sources of supply, Motor World repeats to automobile manufacturers that two avenues which lead to a considerable measure of relief remain wide open. We refer to a change of carburetters on particular brands of cars, and to the use of one or another of the many atomizers, auxiliary air valves or other so-called gas-savers which are so numerously available.

Why so many car manufacturers will persist in the use of carburetters that are not only wasteful of fuel but which actually unfavorably affect the power and performance of their vehicles is almost beyond comprehension. That many of them are doing so is abundantly proven by the experience of individual purchasers of their cars who, on their own account and at their own expense, have tried other carburetters—possibly not so well or so widely known—with results that have been not short of remarkable. In several known instances, the saving in fuel alone has more than paid for the change of carburetters.

But whether or no carburetters are changed, it is beyond cavil or question that very many of the so-called gas-savers have demonstrated that they actually do save fuel, and in quantities ranging from 20 to 40 per cent.

With such remedies immediately available, why car manufacturers should fail to apply them is not short of astounding. The economy of car operation is a selling point of no small magnitude, and the manufacturer who believes, or fancies, that the cost of gasolene is of small consequence to anyone able to afford a motor car is sadly deceiving himself. Within the last month we have heard two men whose resources are well above the million mark rail at the price of gasolene.

The situation is one in which the price of carburetters, or personal predilictions for a particular carburetter, should not be permitted to obtain, it is also a situation which offers rich opportunities to dealers. Few, if any of them, have exploited economical carburetters, or gas saving devices, as they are capable of being exploited. For no owner of an automobile will refuse to listen to anything which promises a reduction of his gasolene bill.

FOR DEALERS WHO LOOK FAR AHEAD.

Of course there are not yet enough of them to go around, and it probably will be several years before motor plows and other motor-propelled agricultural implements of the one-man variety are generally available; but, meanwhile, it is the better part of wisdom for those dealers who have to do with automobiles, particularly in rural districts, to follow closely the development of such implements preparatory to laying hands on them in a commercial way immediately the proper moment arrives.

There is every reason to believe that, sooner or later, the manufacture and sale of gas-propelled plows suitable for use on the average farm will attain gigantic dimensions, and, with the subsidence of the fuss and fireworks which has attended a large part of the automobile industry, the automobile dealer probably will find need for goods that will fit into his scheme of things. Motor plows and the like will very happily fill the bill.

It may be argued, of course, that the established implement dealer naturally will fall heir to such trade, but the field is an open one and there is every reason why the men who have to do with gas engines in motor cars and motor trucks can and should rightfully lay claim to agricultural implements and everything else propelled by gas engines.

INTRODUCING MR. BREDENBECK, "HERO."

Let the name Bredenbeck go thundering down the halls of time! It is not a particularly poetical name but the man who possesses it has done a truly wonderful thing. He is a member of the New Jersey legislature and he actually has introduced a bill providing for the registration of horse-drawn vehicles.

The Bredenbeck bill would require a registration fee of $1 for each vehicle drawn by one animal, $2 for each vehicle drawn by two animals, and an extra dollar for each additional animal.

Of course, the measure will never pass—horse owners object even to the life saving legislation requiring them to display lights on their vehicles—but it does not alter the fact that Assemblyman Bredenbeck deserves to have his name written somewhere in a hall of fame.

Despite its hopelessness, the Bredenbeck bill is an indication of an awakening to that sense of equal and exact justice which is supposed to prevail in all legislative houses.

BOSTON BORROWS FROM BABYLON FOR ITS SHOW

Famous Hanging Gardens for Grand Hall and Another Kind of Garden for the Rest—There'll Be Waterfalls, Too.

The New York show—either of them for that matter—nor yet the Chicago show will have anything on the Boston function which is scheduled to open its doors March 8th and keep them open till the 15th, for pleasure cars, and from the 19th to the 25th for commercial vehicles, in the matter of decorations at least. For the artist has gone way back into the archives of history for his motif and if everything goes well, Grand Hall in Mechanics Building will be transformed into a semblance of the Hanging Gardens of Semiramis at Babylon, even to the twinkling waterfalls and the mosses and the palms and everything else that went to make that famous garden spot one of the seven wonders of the world.

It is said that the Babylonian king of the time had shekels galore with which to satisfy the cravings of his wife or wives as the case may be. There must have been some truth in the rumor if the original gardens looked anything like Grand Hall will look when the decorators get through with it. The main floor scene will be one of a huge tropical garden with sure enough palm trees from the Bermudas (25 feet high, measure 'em), and mosses and other equatorial flora with unpronouncable names tastefully disposed between terraces, which, according to the artist himself, are an exact replica of the original Babylonian period. The names of exhibitors are to be blazoned from illuminated glass "turrets," and it is expected that the waterfalls (two of them) will do nothing to dampen the admiration of visitors. Also, the rear wall is to be hidden by a tremendous mural decoration from the brush of no less a person than Walter Burridge; its title is "Nebuchadnezzer's Tribute to His Median Bride," and it is said that it is all that the name implies.

Exhibition Hall is to be a garden, too—a "Garden of a Century Ago," with its old-fashioned flowers and white picket fences serving to mark off exhibitors' spaces. The walls, of course, will be covered with paintings and papier mache and a whole lot of other things that will be pretty even if they are unnamable. Down in the basement of Mechanics Building the decorative scheme will not be so elaborate, though it will be none the less effective in hiding ugly beams and supporting columns. They will be covered with a material suggesting greenish marble and the whole will be set off with festoons of electric lights of nearly every color in the rainbow.

Rubber Falls Below $1 a Pound.

For the first time in five years, the previous low mark of 67 cents being recorded in 1908, the price of crude rubber has declined below $1 a pound. Lack of demand, due partially to the strike of tire workers in Akron, and the recent failure of two important and well-established rubber trading firms—the New York Commercial Co. and the George A. Alden & Co. of Boston, Mass.—are given as the cause of the decline. Since the first of February, when upriver fine Para was quoted at $1.02, the prevailing price has been $1, until the 16th inst., when a gradual slide which brought the price down eventually to 96 cents, where it now rests, was commenced. The price has been gradually declining since the furore of 1910, when it bounded up to $3.10.

Receiver for "Dead" Truck Company.

Harry Unger has been appointed receiver for the Braun-Sautter Motor Truck Co., of Newark, N. J., which, although organized in 1910 with an authorized capital of $100,000, made no substantial progress. Business was begun in the plant in Newark but, as only $2,800 of the capital stock was paid in, financial embarrassment quickly ensued, and as a result, the factory was shut down about a year ago. The application for a receiver was made by Mrs. Alice Hanauer who, as the holder of a second mortgage, sued on her bond, the first mortgage having been foreclosed without yielding her anything. Her suit resulted in her obtaining judgment for $5,871.60, plus $40 costs.

S. A. E. to "Look Into" Tire Sizes.

For the purpose of organizing, and to hear the views of representatives of a majority of all manufacturers of pneumatic tires, wheel rims and steel bands on the propriety of materially reducing the number of tire sizes in use at present and on several other suggested alterations, the committee appointed at the annual meeting of the Society of Automobile Engineers will hold a meeting in Cleveland, O., on March 12th. Henry Souther is chairman of the committee.

U. S. Motor's Note Bothers a Bank.

The receivers of the United States Motor Co. and the Maxwell-Briscoe Motor Co. have entered suit against the Citizens State Bank, of New Castle, Ind., to recover $10,000 alleged to have been taken in payment for a note over which a dispute has arisen. The note was issued by the United States Motor Co., endorsed by the Maxwell-Briscoe Motor Co. and was purchased by the bank.

February 22-March 1, Brooklyn, N. Y.—Brooklyn Motor Dealers' Association's annual show in the 23rd Regiment Armory.

February 24-March 1, Omaha, Neb.—Omaha Automobile Dealers' Association's annual show.

February 24-27, Kansas City, Mo.—Kanscis City Automobile Dealers' Association's annual show. Commercial vehicles only.

February 24-March 1, Paterson, N. J.—Second annual show of the Paterson Automobile Dealers' Association.

February 24-March 1, New Orleans, La.—Annual Show of the New Orleans Automobile Dealers' Association.

February 24-March 1, Memphis, Tenn.—Memphis Automobile Trade Association's annual show in the Memphis Auditorium.

February 24-March 1, St. Louis, Mo.—St. Louis Automobile Dealers' Association's annual show in the Coliseum.

February 24-March 1, Cincinnati, Ohio—Third annual show of the Cincinnati Automobile Dealers' Association in the Cincinnati Music Hall.

February 25-28, Topeka, Kan.—First annual show of the Kansas Motor Show Co.

February 25-March 1, Syracuse, N. Y.—Syracuse Automobile Dealers' Association's fifth annual show in the State Armory.

February 26-March 1, Fort Dodge, Ia.—Second Annual show of the Fort Dodge Dealers' Association in Armory.

March 3-8, Pittsburgh, Pa.—Pittsburgh Automobile Dealers' Association's show in Duquesne Garden.

March 3-15, Des Moines, Ia.—Des Moines Automobile Dealers' Association's fourth annual show in the Coliseum. First week pleasure cars; second week trucks.

March 8-15, Boston, Mass.—Boston Automobile Dealers' Association's annual show in Mechanics' Hall. Pleasure cars only.

March 10-15, Dallas, Tex.—Annual show of the Dallas Automobile Dealers' Association in the Fair Grounds Coliseum.

March 19-25, Boston, Mass.—Boston Commercial Vehicle Association's annual show in Mechanics' Hall.

March 24-29, Indianapolis, Ind.—Indianapolis Automobile Trade Association's show.

March 24-29, Watertown, N. Y.—Annual show of the Watertown Automobile Dealers' Association in the State Armory.

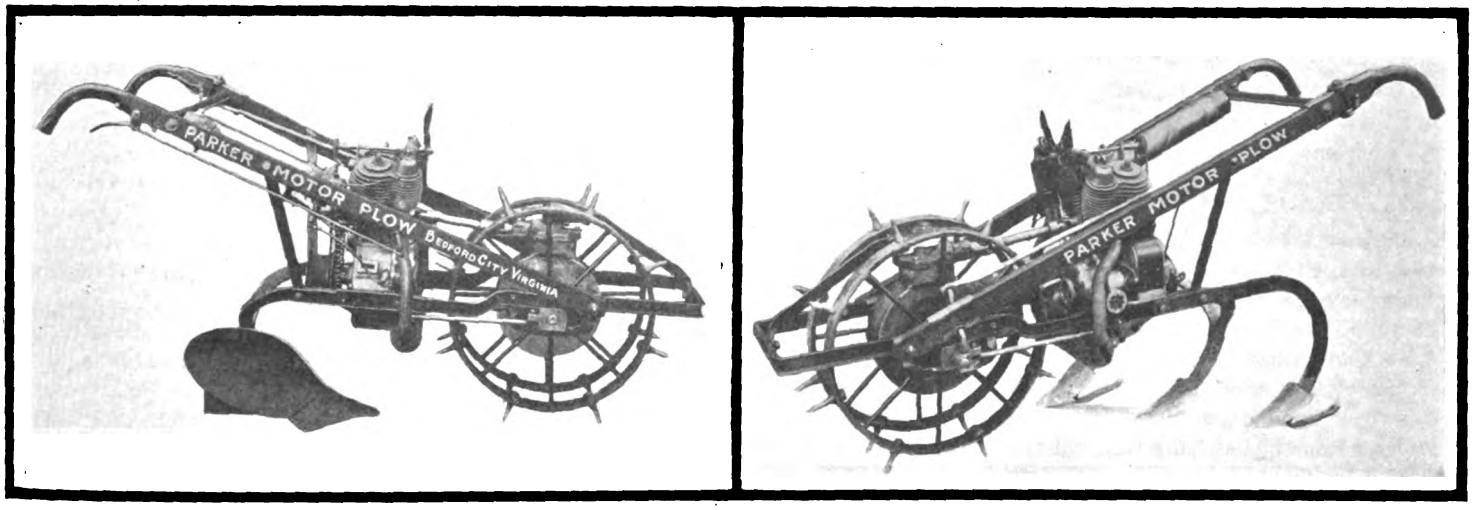
ONE-MAN GASOLENE PLOW DESIGNED FOR MANY TASKS

Parker Implement Grinds Feed and Sprays Trees as Well as Turning Sod—Employs Two-Cylinder Air-Cooled Motor.

Evidence that the day of the one-man gas plow is not far removed continues to accumulate. So far as known only one automobile manufacturer of prominence has seriously considered the subject, but that many independent inventors are cudgeling their brains is undoubted and that their efforts are gradually developing a practical implement is equally certain.



The latest device of the kind to be placed on the market is the product of Parker Bros., of Bedford City, Va., and that it was no "accident" is indicated by the fact that it has been in course of preparation for upwards of three years, during which time some 12 different models were constructed and discarded before the present perfected version, shown by the accompanying illustrations, was evolved; and that it is a remarkably simple and attractive implement and one well adapted to the ends in view is not to be gainsaid.

Like other implements of its kind, the Parker plow is designed to be a good deal more than scratch the soil. It is designed not only to break the land with either an ordinary plowshare or a disc, but to mow it, rake it, plant corn, cotton or peas, etc., and to cultivate it as well. And despite this fact, the machine is comparatively light; it weighs 350 pounds complete, though by reason of the careful balancing only 65 pounds need be lifted in turning at the end of a row. As the machine is small, it is pointed out that it can be used to advantage in orchards where overhanging branches ordinarily would interfere with the operation of the usual horse-drawn equipment.

For power, the Parker plow relies upon a twin-cylinder, air-cooled engine nominally rated at nine horsepower. Like a motorcycle engine, its cylinders are set to form a V and cooling is effected with the aid of a fan driven by belt from a large pulley at the rear. The pulley, by the way, is made for a wide, flat belt to permit of the engine being used to run any of the multifarious farm apparatus normally operated by horse power. Thus the plow is calculated to earn its keep in the farmyard as well as in the field. The engine is set transversely in the "chassis," if such the body portion of the plow may be termed. Ignition is by high tension magneto.

From the engine, power is transmitted to the tractor wheels through the intermediary of a shaft and two universal joints, the gear-case being located between the two tractor wheels, which are steel and are equippepd with great spikes to ensure traction. That the operation of the plow is as easy as the operation of a horse-drawn plow, if not easier, is revealed by the fact that without letting go the handles the engine may be throttled or speeded up or thrown in or out of gear simply by moving the fingers, levers being provided for the purpose. Incidentally, a reverse gear is provided to assist in getting the plowshare out of "sticky" ground at the end of a furrow, or to release it from under a boulder.

It is in orchard work, for plowing under limbs of trees and in restricted places hitherto forbidden ground to horse-drawn equipment that the Parker plow is calculated to get in its most effective work, for, it is pointed out, the whole equipment is so small and so easily handled that there is little danger of "barking" trees, less danger of "treading" on crops already planted, and no danger of breaking low hanging branches. Included in the attachments that go with the plow are turning points for breaking land; a seeder for planting corn, cotton or other seeds, dropping them in rows or hills; cultivators, including a disc harrow, weeders, listers, etc. A spraying attachment, for spraying two rows of trees at a time, and consisting of a tank and pump to be fastened between the handels, also may be applied. For grinding corn, or other feed, or for operating a churn or a threshing machine, it is a comparatively simple matter to slip a belt over the pulley provided for the purpose when power and to spare is available.

TWO VIEWS OF THE PARKER GASOLENE AGRICULTURAL IMPLEMENT

Putting a Stop to Smoking in Garages.

There is at least one chauffeur in New York City who will not smoke within the confines of a garage again for some time to come, and if the lesson conveyed by his arrest at the instigation of Fire Commissioner Johnson is as efficacious as it is hoped it will be, few others will care to risk the seduction of the fragrant weed unless they are out in the open. The chauffeur in question was fined $20 in the police courts, the technical charge being violation of Section 1,539 of the Penal Law, which prohibits smoking in any garage whether it be private or public. Indicating that the letter of the law is being strictly enforced, 12 other chauffeurs whose guilt was discovered by a squad of firemen in civilians' clothes sent out to collect evidence, have been held for trial in Special Sessions. So far, the activities of the Fire Department have been confined to Manhattan, but they are about to extend to the other boroughs.

Hudson Pledges $100,000 for Highway.

The Hudson Motor Car Co., of Detroit, Mich., has pledged $100,000 to the fund for the Ocean-to-Ocean highway projected by Carl Fisher and J. A. Allison, of Indianapolis. The amount, it is stated, represents one per cent. of the Hudson gross earnings for one year.

WIDE-AWAKE MERCHANDISING In the MOTOR TRADE

CREDIT SYSTEM TO HOLD TRADE

Credentials That Induce Tourists to Patronize a Chain of Stores—How the System Is Carried Out.

The Chanslor & Lyon Motor Supply Co. of Los Angeles, Cal., which maintains branch stores at Fresno and San Francisco, Cal.; Portland, Ore.; Spokane, Wash., and Seattle, Wash., is a live merchandiser of automobile supplies. The members of the company are not only keen on making new customers, but when they get a motorist's trade they seek to keep it.

As is well known, California is a great State for automobile touring, and this applies, in a modified degree, to most of the Pacific Coast States. With many of their customers continually on the move, it is not wholly strange that Chanslor & Lyon should develop a plan by which they manage to control and hold this trade. To do so their touring customers are provided with the following card addressed to "The Chanslor & Lyon Stores" which entitles the holder to any desired credit at any of them.

No..... Issued by.....Branch

To "The Chanslor & Lyon Stores"

Please extend Mr..... the courtesy of your best attention and grant him desired credit, charging his purchase thru this house.

.....
Manager.

Car..... Date.....
(Good for one year only)

State License No.....

[Void if mutilated or changed in any way]

These cards, which are numbered serially, are issued by the home office and by managers of the various Chanslor & Lyon branches. For proper identification the name of the tourist is given and also the make of his car and its license number. As will be noted by a reading of the card, not only is the holder of it to be granted credit but "the courtesy of your best attention." Thus when a motorist is thinking of touring, for example, from Los Angeles to San Francisco, one of the first things he thinks of is his Chanslor & Lyon card. Should he discover on the way that he is likely to need additional supplies to complete his tour, the chances are ten to one that he will, if possible, defer purchasing till he reaches the Fresno or San Francisco store. Here he presents the card to the manager, who gives him every attention, extends him credit, charges the account in the tourist's name to the Los Angeles headquarters and sends him on his way rejoicing. Should he decide to pursue his tour still further northward he knows that there are Chanslor & Lyon stores in Portland, Seattle and Spokane where his card will secure for him similar careful attention.

It will be readily seen that this "card system" is of a very practical sort that makes a decided appeal to the tourist and gives Chanslor & Lyon a merited grip on business that otherwise might be diverted.

KEEPING RECORDS OF GAS TANKS AND THE VALUE THEREOF.

Prest-O-Lite tank thieves are busy, especially in the larger cities, where detection is more difficult and means of disposing of tanks comparatively easy. This suggests to the thoughtful dealer an opportunity to serve his customers.

Each Prest-O-Lite tank is numbered serially. When you make a sale have the purchaser's name and address entered opposite the serial number of the tank bought. It takes only a few seconds' time and the Prest-O-Lite company furnishes properly accredited representatives and dealers with blank books, specially made for the purpose, free of charge.

The next step is to tell the customer why you want his name; that it is for his protection; he can come to you any time and get the number of the tank in case it should be stolen; this gives him the correct idea—namely, that you are out to protect his interests—and he will likely come again.

What have you got when you are through? You have a list of names that, if correctly kept, is exceedingly valuable to you. Every one of them is a live owner of a machine. Everyone of them has purchased something from you, therefore is a customer. Everyone has had contact with your garage and its methods, and, as a dealer-merchant, you can cash in on this list in great shape if you wish. Follow up each name on the list three weeks after tank or refill has been sold, reminding that it is about time to have tank changed. That will prove one source of profit; you will not get all to-day, but you will get some, and those that you do get will probably leave you a profit beside paying for the cost of advertising to those who do not buy.

Then, to make the list still further an asset, you can not only circularize them on cars but on oils, gasolene, polishes, repair service, tires, and many other items you find it profitable to push. And right here it is wise to recall the slogan of the modern automobile dealer-merchant—namely, that "It pays to sell the automobile owner as many things as possible—at a profit."

KEEP SHOW WINDOWS CLEAN.

At the very times when it is hardest to keep windows clean and bright is when it pays most to have them clear as crystal, for it is then they stand out sharp and clear in contrast with the smoky, mist-covered windows of the ordinary salesroom. One dealer who makes a practice of having windows washed once a week in ordinary times, doubles this dose during these doubtful months, and after two years' carrying out of this plan is thoroughly satisfied with the profitableness of it.

TELLING CAR TRUTHS TERSELY

How It Operates to Lift Advertising Out of the Common Rut—Brevity and Consistency Essential.

When the average man sits down to write an advertisement, the only fit comparison is the average committee of one appointed to draw up resolutions for "our deceased brother." One by one he enumerates the virtues of the car until he gets a long list of them. Then all are strung together, a picture of the car placed at the top, price on the right hand side up in the corner, signature at the bottom, and lo! the advertisement is written.

After it is set up maybe a proof is submitted and, while he looks it over, the writer smiles at himself as he wonders whether or not the public will "fall for it." The salesman peeping over his shoulder smiles too; he is thinking of what an easy berth he would have if the car was worthy of all those high-sounding expressions. He has never seen any car yet that deserved them all, and he never expects to. But—it's only advertising, and the other fellow is doing the same thing.

Honesty as a "Different" Method.

That's the point! The other fellow is doing the same thing! Let him do it. But you do it differently! Instead of running advertisements that you know are full of moonshine—instead of trying to equal the impossible claims of someone else, tell your own story sincerely, truthfully, honestly. Build a reputation for saying nothing in your advertisements that will not be backed up by the car itself. That will take your "copy" out of the common run instantly and surely.

The idea of an advertisement is to create a favorable impression in the mind of the reader that will cause him to investigate and to buy. In other words, your advertisement should be doing precisely what a good salesman does—establishing a correct, sound idea of the value of the car you are selling in the mind of the reader.

What will do that? The truth about your car. If the truth about the car you are selling will not do it, then it is foolishness to waste time advertising that particular car. Stick to the truth. Tell what you know will interest purchasers. Tell it straight from the shoulder. Emphasize one or two points at a time. Use enough space to tell your story, and make your advertising campaign regular and consistent.

THE WAY TO REACH OUT FOR ACCESSORY BUSINESS.

The live-wire accessory merchant is the one who takes advantage of every circumstance of time, place and weather, and instead of calmly sitting down and waiting for business to come to him, reaches out for it and compels it to come in. He uses as a basis for his argument the completeness of his service and the fairness of his prices, and then to show that he means what he says, he quotes a figure on some standard article of popular consumption.

Weather and Accidents that Help.

Weather to such a man is not a source of anxiety but a source of business. He studies the maps sent out by the United States Weather Bureau and plans accordingly. He has his window signs made and perhaps prints several thousand postal cards and sends them to a mailing list of car owners. On such cards he makes a complete proposition, quoting prices for various sizes of the article offered, and states that his catalogue, sent on request, gives similarly fair prices on the whole range of automobile accessories. He backs anything and everything he sells with a guarantee of satisfaction or "your money back."

He watches the records of accidents and discovers their causes. Lack of chains, lack of non-skid tires, lack of proper signalling devices, poor lights, or whatever the cause was, and draws a moral from it with which to make a pointed campaign for the merchandise he sells. He can sell only one thing at a time, but in making that sale he knows he may create a customer for many other articles in his stock. And therefore he is more than ordinarily anxious to make the initial sale.

KEEPING DEMONSTRATING CARS TUNED UP.

Is your demonstrator tuned up and ready for the business? Or will you have to explain to the prospect that in "regular models the springs don't squeak; the bodies don't rattle, and the gears do not make that uncanny noise," and so forth? In a word, will you have to explain to the prospect the queer fact that you are showing him one thing but trying to sell him another? Doesn't it seem odd that anybody should even think such a situation could arise? How silly you would think a typewriter salesman who tried to sell the latest model by demonstrating with a last year's left-over or used model! It is more than likely you would tell him to "go take a jump in the lake" or do some equally uncommercial thing. And yet, are not many automobile dealers employing selling methods just as harmful to themselves?

TRIUMVIRATE THAT MAKES SALES.

Dynamic force is what the word artists call that otherwise indefinable something that makes other men know you are there. Sometimes it comes from energy; sometimes from abundant health; sometimes from enthusiasm; often from a combination of all three qualities. Like Josh Billings's flea, "when you put your finger on it it isn't there." But if you have it the others know it—and that's all that's necessary.

CAMPHOR AS A FUEL "DOPE" WILL MAKE A SMELL AT LEAST

But is not Good for Anything Else, Says Standard Oil Expert, Despite Contrary Claims—Its Possible Effects.

The methods of "doping" gasolene, either to obtain greater power or greater mileage or some such other desirable feature, are legion. The dangers of picric acid and ether are fairly well known and, though they still are advocated by a small and select clientele of motorists who reck little of possible damage — and not infrequently wreck their cars as well—with the glamor of speed, or power, or more miles per gallon of fuel leading them on, these adulterants are, as a rule, left the one to the chemist and the other to the physician, which is at it should be. Also, chlorate of potash has been advised by the ill-advised as a power producer of marvelous strength — despite the apparently inconsequential fact that it is insoluble in gasolene! Next!

It is, briefly, and pungently and oderiferously, camphor. Just plain gum camphor, made familiar by solution in alcohol and application by means of suitably constructed "nose bags" to the human proboscis as a means of alleviating the common or garden variety of "cold in the head." It is said to be very good for a cold—that is, a cold in the head; though its beneficial effect on a cold motor is problematical. Still, one motorist claims that by adding the almost infinitesimal portion of one ounce of gum camphor to each five gallons of "gas" his motor can be made to "behave itself" very much more soberly with regard to its voraciousness for fuel, but with a vivaciousness withal that is alluring, to say the least. Twenty per cent. greater mileage is what he claims for the use of camphor in the fuel, to say nothing of the ability to climb hills on high gear that could not be climbed on high gear without the juice of the Cinnamomum Camphora, which is Latin for camphor tree; also, he can start his motor very much more easily with it than without it. Wherefore, he uses it steadily, and he says it does not soot up the plugs a little bit.

Just wherein lies the efficacy of the fragrant product it is difficult to foresee. According to text books, the chemical symbol for camphor is $C_{10}H_{16}O$, which may or may not mean something to the layman unversed in such things. For his elucidation be it noted, therefore, that it signifies that camphor is proportioned of 10 atoms of carbon to 16 atoms of hydrogen and one atom of oxygen. From which it appears that the carbon content is fairly high and that in burning it might increase power and might result in a sooty deposit.

However, a "man higher up" in the Standard Oil Co., when asked the probable effect on the fuel of the addition of an ounce of camphor to five gallons of gasolene, laconically answered: "Nothing, except that it might create an infernal smell." He added: "Even if the addition of camphor would decrease consumption and increase power, which is not at all likely, such a small amount could have no effect of the kind—it could not increase power nor cause a deposit, for the amount is too small."

Electric Vehicle Aids Surgical Operation.

It would not appear, at first thought, that any direct connection existed between automobiles and modern surgery—except

BORLAND ELECTRIC IN HOSPITAL SERVICE

where the automobile has figured in an accident with a surgical sequel, or helped surgeons quickly to reach the scenes of accidents. A very close connection recently was established, however, between an electric motor car and an operation that was performed in Chicago.

A noted New York surgeon, who had gone to Chicago to superintend an operation of which he has made a specialty, found that the hospital where he was to work was without the direct current that was required to drive a small circular saw for cutting bones—an instrument that was of primary importance in the operation in question. As there was not time for the installation of a converter to change the alternating current, which was supplied to the hospital, to direct current, the surgeon got an inspiration and sent out a hurry call for an electric automobile. The Borland-Grannis company sent up one of its machines, which was drawn up to the curb in front of the hospital and a long cable run from it and led through an upper window into the operating room at the top of the building.

MULTIPLYING THE USES OF SOME COMMON TOOLS

How One Tool Sometimes Can Be Made To Do the Work of Two or Three—Little Suggestions and Kinks.

It is quite true that the best work usually can be done by using tools for the purposes for which they were intended. A nail can be driven better with a hammer than with a monkey-wrench; a hole can be enlarged better with a drill or reamer than with the tang of a file; and a scriber is better to "mark off" with than the point of a divider leg. Nevertheless there are times when work must be done and, furthermore, must be done with tools not intended for the purpose. At such times a knowledge of what can be done with the material at hand is valuable.

Take the hack-saw, for instance. It is good not only for sawing up metal, but makes a pretty good slotter. If a wider slot is needed than can be made with a single blade, two blades can be put in together, when the slot will be twice as wide as if only one blade were used. Even more than two blades can be used in some frames, if a still wider slot is needed. Another thing that can be done with a hack-saw is to cut grooves around the shanks of bolts or pins, and it is on record that even a rough thread has been cut with the same useful tool.

In the absence of a center-punch a serviceable "pop-mark" can be made with the corner of a cold chisel. A wide-bladed screwdriver with the edge ground sharp and square and smooth makes a fair scraper for soft metal, if it is of fairly decent steel. A hand vise can often be improvised with the aid of a pair of pliers and an iron ring, placing the article to be held in the jaws and squeezing the handles together by forcing the ring tightly on. A pair of pliers with very rough-milled jaws sometimes can be used to cut down the end of a soft metal rod by gripping the rod with the pliers just hard enough so that the pliers will not hold but will move when forced, scraping the metal off. A coarse-cut file will put a fairly good milled edge on a brass or copper blank rolled under it on a board. And so on, ad infinitum.

Making Square Act as Spirit Level.

A common square can be made to act as a very accurate level if a spirit level is not at hand. Set the square on the surface to be leveled and hang a plumb-line along the vertical edge of the blade. When the line and the edge are perfectly parallel the surface under test is level.

REILLY HEARS A CLOCK-WATCHING EXPERIENCE

Sales Manager Relates the Story of a "Strike" for Over-Time Pay—Shock He Received When He Found Himself in Debt to Employer—Reilly's Observations.

"What's become of Rawlins?" asked Reilly, as he dropped into a chair next the Sales Manager's desk. "I haven't seen him around here lately."

"HE ISN'T WORKING FOR US ANY MORE," SAID THE SALES MANAGER

"He's gone," tersely answered the Sales Manager.

"You're a satisfying son-of-a-gun!" responded Reilly. "I was able to guess that much, but in the largeness of your intellect I thought you might condescend to let me know why he went. You know you thought he had the earmarks of a wonder."

"Wonders" that Don't Pan Out.

"That's true; but even wonders sometimes pan out badly."

"Well, open up and tell us what was the matter with him."

"Oh, he proved to be one of the clock-watching sort," rather testily answered the sales manager, to whom the subject appeared not wholly agreeable.

"Didn't he do the work he was hired to do?" asked Reilly.

"Y-yes," slowly responded the Sales Manager, "I guess he did; the trouble was that he was too anxious to stop right there. Spending an hour or two over-time got on the young man's nerves, and when I discovered it my good opinion of him began to shrink. I haven't a great deal of use for men who feel that they are paid to do only so much and no more. In fact, Rawlins disappointed me so greatly that I don't like to talk about him."

"Oh, very well; then don't talk about him," exclaimed Reilly. "The only reason I pressed the subject was because when you hired Rawlins you so gleefully shared with me your belief that you had unearthed a 'find.'"

Cleverness Directed the Wrong Way.

"I guess that's what makes me feel so badly," responded the Sales Manager. "He was one of the brightest chaps with whom I have had to do in a considerable period; in fact, he proved so bright that when he had put in a few hours after the whistle blew he came to me and asked if we did not pay for overtime. He was so cool about it that he almost took my breath away and I lost faith in him from that moment. The answer I gave him was evidently one that he did not expect, but I tried him out for another week and once purposely required that he remain after office hours to finish a small job on which I needed assistance. The look on his face reflected his thoughts and—well, he isn't working for us any more; that's all."

"I wouldn't have a man like that around my place, either," earnestly declared Reilly. "A clock-watcher is a drawback to any establishment. The man who isn't willing to do a little more than he is paid to do never climbs very high."

Tilted back in his chair and twiddling his thumbs, the Sales Manager for several moments gazed reflectively at the blank wall.

"Reilly," he finally said, in a semi-confidential tone, "can you believe that at one time in my career I came near being a clock-watcher?"

"I'm ready to believe almost anything of you," quickly responded the little dealer, with a twinkle in his eye.

"Well, it's true," said the Sales Manager, paying no attention to the banter in Reilly's tone, "and it taught me a lesson I never forgot. I think it was the turning point in my life."

A Lesson in Clock-Watching School.

"Well, out with it! What's the answer?" queried Reilly.

"It was all of 20 years ago and long before automobiles were thought of," went on the Sales Manager. "I had a good job; I liked my work; I was getting a good salary and the boss apparently thought well of me. He had raised my pay twice in the course of the two years that I was with him.

"The store kept open till eight o'clock

"I WOULDN'T HAVE A MAN LIKE THAT, EITHER," DECLARED REILLY

two evenings each week during the winter months, and I took my turn on the 'evening watch,' as we called it. I accepted it as a matter of course and, up to that time, the clock held no interest for me. I was keen for making sales and added many a large dollar to my record during the evening work. We were really a happy little family until the boss took on a new man to fill a vacancy.

Disturber Enters Contented Family.

"He was a bright, alert chap—of the Rawlins type, I suppose—and he had not been with us more than a month before he began sowing the seed of discontent. He induced us to believe that we were being badly treated and that we were entitled to pay for overtime work; he so thoroughly imbued us with the idea that finally I was prevailed upon to beard the boss in his den and lay the matter before him.

"I guess I was badly rattled when I bearded him, but I managed to stammer out what was in my mind, but, believe me, I had no sooner done so than I wished that the floor might open up and swallow me. The boss was a kindly man, but as he realized the force of what I was trying to say his face hardened—I can see him yet—but gradually his features softened. His eyes continued to bore straight through me until

Digitized by Google

I was so thoroughly unhappy that I hardly knew where I was.

"Finally he picked up a pencil and, giving me another searching look, he asked, 'Jim, how long have you been with us?'

"'Nearly two years,' I replied.

"'Been well all that time?'

"'No, sir; I was sick for a week last fall,' and as I answered I saw him jot the figure '6' down on a memorandum pad.

"'If I remember rightly, you several times have asked for an afternoon off.'

"'Not more than four times in the last year—once when mother was very ill,' I gulped, and down went the figure '2' on the pad.

"'You had two weeks' vacation at full pay, didn't you?' he went on.

Figuring up Donations of Time.

"There was no denying it and, as first mystified, when he penciled '14' on the paper it dawned on my befuddled brain what the boss was driving at, and I felt myself shriveling.

"'And there are at least six legal holidays, and we have also observed the Saturday half-holiday regularly throughout the year, haven't we? And 52 half-days are equal to 26 full days,' he remarked, as he jotted down that figure. 'And you've been paid for all of them, and for the legal holidays, too,' he added, looking up.

"I was in a cold sweat by this time, and tried to stammer out an apology and beat a retreat. But the boss wouldn't have it that way. I had to remain while he added up the figures he had penciled.

"'That makes a total of at least 54 days for which you've drawn salary when you did not do a tap of work,' he remarked."

"Gads!" ejaculated Reilly, who had followed the Sales Manager's narrative intently. "I never saw it put that way before That sure was a clincher!"

Clipping the Day in the Morning.

"I really felt the need of fresh air, but the boss never let up," went on the Sales Manager, not noticing the interruption. "'Have you and the rest of the boys arrived promptly at 8.30 in the morning? Have you always returned from lunch on the stroke of one? Have you ever "beat the clock" at closing time? Have you ever written personal letters or done any other personal work during business hours? Have you?' he insisted, his tone rising almost to anger.

"I knew every man in the place was guilty on practically all of those counts, but I couldn't make reply; my tongue refused to move. I simply hung my head.

"'I'm sorry for you, Jim,' he went on in a kindlier voice. 'I worked for a salary myself for a good many years and know men pretty well. Although you probably think I don't know it, I've seen all you boys slip in late in the mornings and quit before quitting time. But this is not a great big concern and I have a dislike for time clocks, and as long as you did not make a practice of it I closed my eyes and said nothing. I knew you all made up for it by working 10 or 12 evenings during the year, so I've not been too strict. I'd rather overlook an occasional lapse than make my men grouchy by calling them down every time they make a slip.'"

"That's right!" blurted Reilly. "When an employe nurses a grouch he isn't worth much to the man who pays his salary."

"'But when I have occasion to call them down,'" continued the Sales Manager, still repeating his boss's language, "'I try to make myself thoroughly understood. Do you think you understand me?'

"I managed to mumble 'Yes, sir,' and, rising, the boss remarked, 'You may go now.'

"My brain was in such a whirl that I was not sure that I did understand, after all, and at the door I turned and half gasped, 'Does it mean I'm discharged?'

Employe's Debt to His Employer.

"'It means nothing of the sort,' the boss replied. 'Go back to your work; but let this be a lesson to you, and to those who sent you here; tell them that if they prefer to be paid by the hour or the day instead of by the week, we'll try it for a while,' he interjected with a quizzical smile, and added: 'And at any time, or wherever you may be, and the notion again seizes you that your employer owes you something, or isn't treating you fairly, just ask yourself if you owe him anything, or are treating him fairly, and, unless I'm mightily mistaken, you'll find that there's a great big balance due him.'"

The Sales Manager heaved an involuntary sigh of relief at the recollection of his experience, and added:

"And believe me, Reilly, I have never forgotten that lesson."

"You'd be all kinds of a damned fool if you did forget it," airily but earnestly retorted Reilly. "It has given even a wise gentleman like myself something to think about."

Origin of the "Steel-Eating Worm."

That metals have become diseased and that the diseases themselves may be contagious is fairly well known, though it is only comparatively recently that any real light has been shed on the habitat and habits of the so-called "steel-eating worm," even though it long has been known that that interesting "species" is the result of a highly imaginative brain. It appears that as long ago as 1866 in the great iron and steel center about Haspe in Germany, a society known as the "Ulk," which in English means fun, was formed, for the discussion of matters pertinent to the trade. It was at one of the meetings of this society that the "steel-eating worm" was evolved and its fame spread far and fast.

Briefly, it consisted of nothing more terrifying than a short length of rubber tubing of small diameter partly closed at each end and filled with a dilute solution of hydrochloric acid. The "worm" was imprisoned in a small bottle partly filled with steel scales, and when properly agitated with a glass rod emitted a drop of acid, which, of course, attacked the steel, thus supposedly proving that the corrosion was due to a secretion of the "worm," which also, supposedly, lived by eating the scale.

Why Springs Require Lubrication.

Most people who own automobiles have a more or less vague appreciation of the fact that there ought to be lubrication of some sort between the leaves of springs, but it is probable that few ever stop to figure out just why this is so. The usual notion is that if the springs are not oiled or greased they will squeak. Which is all right as far as it goes; but really it is only a small part of the truth. The resiliency of a spring is due to the fact that it is made of a number of comparatively thin leaves which slide upon each other as the spring is alternately compressed and relieved.

If the spring was a solid piece of steel it would have practically no "give"; the more friction there is between the leaves the nearer it approaches to a state of solidity. On the contrary, the less friction there is the more resiliency and life the spring will possess, and this is where smooth surfaces and lubrication play their parts. Many cases of hard riding can be traced directly to friction in the springs, and if there be any who think spring lubrication a matter of small moment in its relation to comfort, they should try a few experiments and set themselves right.

Rope "Tires" to Prevent Skidding.

By way of overcoming the skidding proclivities of steel shod wheels, which are much in favor abroad for the heavier types of commercial vehicles, a prominent firm of steel wheel makers has evolved what is known as a "winter wheel." In its simplest aspect, it consists of the usual wheel with a deep recess cast in its periphery. Into the recess there is pressed rope in short sections, the sections first being impregnated with pitch and subjected to heavy pressure to impart to them the required curvature. It is said that the rope tires give mileages up to 6,000 before requiring replacement and that the replacement itself is a simple and inexpensive operation.

BROOKLYN SHOW OPENS WITH ONE-LAP PUSHMOBILE RACE

"Pipe-Torpedo" and "Fierce-Barrow" in "Deadly Combat" on Armory Floor — Fifty-three Dealers Display in Spanish Setting.

Ralph Mulford, who drove a Pipe-Torpedo which was "engined" by Edward Carter, Jr., led home Louis Disbrow behind the wheel of a Fierce-Barrow, the motive power of which consisted of Charles Tate, in their one-lap match race on the 23rd Regiment Armory track at Brooklyn on Saturday evening last, 22nd inst. All of which marked the opening of the third annual show of the Brooklyn Motor Vehicle Dealers' Association, which is holding sway in the building for the remainder of the week, until Saturday evening next, March 1st.

The Spanish garden setting of last year has been supplanted by a California "garden," and to this end the regular lighting fixtures and those which have been introduced to supply the added brightness are fairly laden with orange blossoms. The arched roof has been draped with alternate strips of gold and white bunting, and draperies of the same character bedeck the galleries. In the matter of booths, the same scheme that was indulged in last year prevails; the various exhibits are designated by ornate columns, white in the semblance of marble, which carry captions bearing the names of the dealers and of the cars on view. Smaller columns interposed between the larger ones are topped with potted plants. The lobby has been treated in altogether different style, with the result that it has been converted into a Venetian garden. Much of the eye-pleasing effect is due to the illuminated colored glass columns which have been reared on either side and the vine-entwined lattice bower which hides the ceiling.

LOOKING DOWN MAIN AISLE OF BROOKLYN (N. Y.) SHOW IN TWENTY-THIRD REGIMENT ARMORY

While the comparative nearness of the show to the New York show would seem to indicate that nothing not on view at the latter would crop out in Brooklyn, such is not the case, as the exhibits of the 53 dealers who have 68 different makes of motor vehicles, either pleasure cars of commercial cars, on view, reveal no less than three of the former and two of the latter that were conspicuous by their absence at the national show. They are the Palmer-Singer, Crawford and Church-Field electric pleasure cars, which are respectively shown by Drouet & Paige, Inc., Prospect Park South Garage, and Church-Field Electric Car Co., and the White Star and Cass commercial vehicles, shown by the White Star Motor & Engineering Co., and the Farrell Automobile Co., respectively. Of the five, the White Star truck alone is a local product, although the Palmer-Singer is made not many miles away in Long Island City. Nothing new cropped out in the displays of the 25 accessory dealers. The cars on view are:

Haynes, R. C. H., Henderson, Jackson, Cadillac, Hudson, Baker electric, Standard electric, S. G. V., Pierce-Arrow, Mitchell, Stutz, Kissel, Reo, Premier, Packard, National, Herreshoff, Peerless, Crawford, White, Locomobile, Abbott-Detroit, Buick, Simplex, White Star truck, Winton, Maxwell, Olds, Knox, Ford, Cole, Paige, Velie, Oakland, Saurer truck, Mack truck, Hewitt truck, Garford, Stevens-Duryea, Hupmobile, Pathfinder, Rambler, Lozier, Moon, Studebaker, Pope-Hartford, Firestone-Columbus, Columbus electric, Apperson, Cass truck, Regal, Chalmers, Mercer, Pullman, Lansden truck, Maccarr truck, Palmer-Singer, American, Autocar, Church-Field electric, Universal truck, Benz, Norwalk, I-H-C truck, Sternberg truck, Rauch & Lang electric.

Swinehart to Enlarge Akron Plant.

Contracts have been let by the Swinehart Tire & Rubber Co. for the addition of a three-story building to its main plant in Akron, Ohio. The new structure will be 100 x 70 feet. Several other buildings, including a laboratory, 30 x 60 feet, only recently were completed.

HOLD LARGER TORONTO SHOW IN GOVERNMENT BUILDINGS

Exhibit, Having Outgrown Armouries, Accommodated by Dominion Officials—Fifty-one American Cars in Total of Sixty-one.

Having outgrown the Armouries which has housed the exhibit for several seasons past, the annual show of the Toronto Automobile Trade Association and the Ontario Motor League, which was inaugurated on Thursday evening last, February 20th, is this year being presented in the Canadian National Exhibition Grounds, the Transportation Building and the Dominion Government Building forming the housing. All told, 61 different makes of pleasure cars and commercial vehicles are shown by the 46 dealers who are displaying, and of the number all save eight which are of British manufacture, and three local products, bear American nameplates. Comprehensive displays of motor appurtenances are made by the 37 accessory dealers who hold space.

The cars of local manufacture which are on view are the Russell, McLaughlin, and Canadian Keeton. The Russell is built in four models on as many chassis, three of which are Knight engined; the fourth is provided with a poppet valve motor. The price range is from $2,600 to $6,200, the cars being fully equipped even to electric lighting and starting systems. The McLaughlin is built in three chassis sizes, all of which are equipped with four-cylinder motors; the price range is from $1,450 to $2,350. The Keeton is built in a single six-cylinder model and lists at $2,850.

Decorations, while by no means elaborate, are more than ordinarily eye-pleasing. The long halls which lead from the entrances of the buildings to the exhibition halls have been green burlapped to a height of four feet on the walls. The remainder of the walls and the ceilings are trimmed with white lattice work entwined with smilax and rambler roses, the foliage serving partially to conceal myriad vari-colored incandescent lights which furnish the illumination. In the Transportation Building, the walls have been draped with red bunting and the ceiling girders with white, green and yellow streamers; the floor is covered with green burlap and 40 flower-entwined lattice work posts serve to designate the booths. In the Government Building the decorations are much the same, save that red burlap covers the floor and the Canadian coat-of-arms done in artificial flowers embellishes each of the four walls. The exhibit will remain open until Saturday evening next, March 1st.

The cars on view are: Russell, National, Ford, Pierce-Arrow, Chalmers, Paige, Hupmobile, Cadillac, Pope-Hartford, Reo, Mitchell, Matheson, Auburn, Republic, Oakland, Tudhope, R. C. H., Norwalk, Alco, McLaughlin, Fiat, Studebaker, Henderson, Cole, Locomobile, Albion, Case, Winton, Mack truck, Jackson, Wolseley, Keeton, I. H. C., Cutting, Chevrolet, Empire, Little, Nyberg, Straker-Squire, Peerless, Stevens-Duryea, Hudson, Autocar, White, Sheffield-Simplex, Peck, Brockville-Atlas, Commer truck, Stutz, Overland, Gramm truck, Buffalo electric, Humber, Tate electric, Rauch & Lang electric, Regal, Kissel, Metz, Ohio electric, Packard, Detroit electric, Lozier.

Paterson's Show Staged in Armory.

Paterson, N. J., which made its initial venture into the show-producing field last year, when the Paterson Automobile Dealers' Association offered its first annual show in the State Armory, is now engaged with its second attempt. As was the case last year, the dealers who are exhibiting automobiles, either pleasure or commercial, number 18; they represent 29 different makes. Accessories are shown by 16 dealers. In the matter of decorations, walls and ceiling have been hidden by the profuse use of bunting and the drill room made more than ordinarily bright by the addition of many electric lights festooned over the aisles. The exhibit, which opened up on Monday evening last, 24th inst., will be in progress for the remainder of the week until Saturday evening next, March 1st. The cars shown are: Henderson, Paige, Cadillac, Ford, Marion, American, Overland, Franklin, Alco, Buick, Stevens-Duryea, Studebaker, Nyberg, Fiat, Michigan, Oakland, Lozier, Chalmers, I-H-C truck, Premier, Reo, Hudson, Little Giant truck, Cole, Stutz, Moyer, Brockway, Abbott-Detroit.

Three Cities Join in Davenport Show.

That in unity there is strength amply was demonstrated at the annual show of the Tri-City Automobile Dealers' Association, which held sway in the Davenport (Ia.) Coliseum from Wednesday evening, February 19th, until Saturday evening last, February 22nd. The 35 dealers—with business locations either in Davenport or in the two across-the-river towns, Moline and Rock Island (Ill.)—presented in all 40 cars, products of as many different automobile factories. The cars shown were: Abbott-Detroit, American, Auburn, Buick, Cadillac, Case, Chalmers, Cole, Ford, Havers, Hudson, Imperial, Kissel, Knox, Krit, Lozier, Maxwell, Michigan, Midland, Mitchell, Moline, Nyberg, Oldsmobile, Overland, Paige-Detroit, Packard, Pierce-Arrow, Pope-Hartford, Rambler, Stearns, Studebaker, Thomas, Velie, Baker electric, Broc electric.

DECORATED ARMORY HOUSES SYRACUSE DEALERS' DISPLAY

Both Drill Halls of State Structure Required for Event—Five Local Manufacturers Are Numbered Among Exhibitors.

Both of the drill halls of the massive State Armory at Syracuse, N. Y., have been pressed into service to house the pleasure car displays of the fifth annual show of the Syracuse Automobile Dealers' Association which was inaugurated on Tuesday evening, February 25th, to continue until Saturday evening next, March 1st. The basement is given over to the displays of commercial cars, motorcycles and accessories.

Smilax laden trellises conceal the walls in both of the halls and the ceilings have been covered with draperies of magenta and gold. By way of designating the different booths, standards bearing classical busts are utilized and each space is marked with ornamental pillars, from which hang signs of scroll design. Facing the main entrance is a huge fountain, in the shape of a female figure holding aloft a torch.

Naturally the products of the local manufacturers, the H. H. Franklin Mfg. Co., the Sanford Motor Truck Co., the Palmer-Moore Motor Truck Co., the Chase Motor Truck Co. and the Moyer Motor Car Co. are much in evidence among the exhibits of the 42 dealers who are displaying. In all 49 pleasure or commercial vehicles of different makes are shown, but only the Moyer car was not on view at either of the national shows. Accessory manufacturers are amply represented by the two dozen dealers in appurtenances who hold forth in the basement.

The vehicles on view are: Franklin, Overland, Cadillac, Reo, Rambler, Packard, Moyer, Ford, Buick, Stevens-Duryea, National, Krit, Winton, Chalmers, Oakland, Pierce - Arrow, American, Cole, Locomobile, Case, Regal, Lozier, Velie, Studebaker, Pope - Hartford, Haynes, Firestone - Columbus, White, Palmer-Moore truck, Baker electric, Federal truck, I-H-C truck, Chase truck, Cartercar, Standard electric, Moline, Michigan, Alco, Sanford truck, Packard, Garford, Overland, Cadillac, Abbott-Detroit, Menominee truck, Metz, Detroiter, Rauch & Lang electric.

Motometer Opens Chicago Branch.

The Motometer Co., of New York, which makes the device of that name for indicating the heat of a motor, has opened a branch in Chicago at 1322 Michigan avenue. It is in charge of R. G. Ames, who also represents the Long Horn in the West.

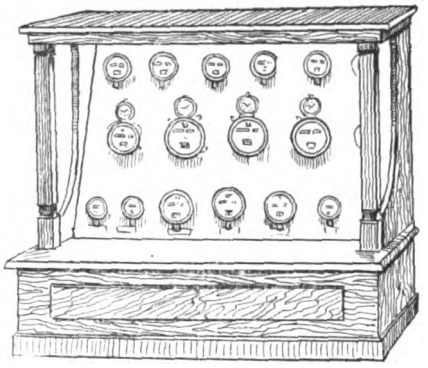
EFFICIENCYIZING DISPLAYS OF ACCESSORIES

Fixtures That Help Speedometers Connect Themselves With the Dormant Desire of the Customer—Poor Displays Seldom Effective—How Sales May Be Inexpensively Accelerated.

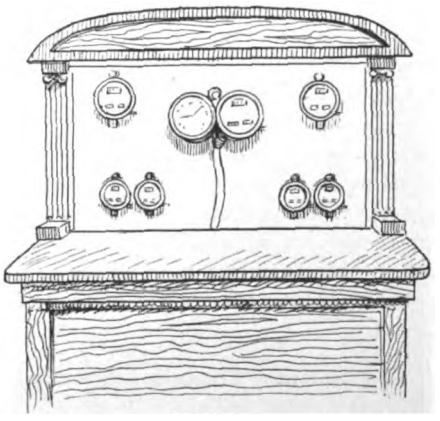
One day old man Van Ornam, whose prototype may be found in any community in the country, was downtown when an irregular cough in the ordinarily smooth sing of his motor reminded him that one of his spark plugs had been giving trouble and that, not having an extra plug, he had driven home on three cylinders the last time he was out, so old man Van Ornam thought this a convenient time to buy a couple of plugs and be prepared for future emergencies; he drove around to the thoroughfare where an accessory dealer held forth, went into the store, bought the plugs, put one in the "dead" cylinder and drove on.



Need of a Speedometer Realized.

Now, old man Van Ornam had a pretty good car and enjoyed driving, and often took long tours on Sundays and holidays, which journeys often ran well over the century mark, and the way the car stood up under such long-distance work was a matter of pride with the owner; he liked to tell about how far he had driven and the speed his car would make when he wanted to "let 'er out," but he often had felt the handicap which was imposed upon his story-telling by the fact that when it come to a matter of actual figures he was forced to guess, for he happened to have one of those cars which are not equipped with a speed and distance recording device when they come from the factory. Sometimes the manufacturer may include a speedometer in his equipment, but he hasn't done so yet.

Old man Van Ornam had often lamented the lack of a speedometer and several times after he had gotten home from an unusually satisfying tour he had vowed he would get a speedometer the next day; he wanted one, he could well afford one, and all that was needed to effect the purchase of such a device was for the desire to arise in his mind at a time when it was convenient to buy one.



Lack of Display Loses a Sale.

When he went into the accessory store to buy the spark plugs he was in the proper place to have purchased a speedometer, but he didn't buy one; the accessory man had such wares in stock and would have been glad to sell one to old man Van Ornam, and as evidence that the accessory man wished to accommodate his trade with a complete stock there were several speedometers securely reposing on a stock shelf waiting for just some such man as Van Ornam to step up to the counter and ask for such an instrument.

STEWART'S ELABORATE CABINET

"I display them," an accessory dealer may say, "I have several of them lying in view on a counter," but the accessory man, when the question of display is gone into, must admit that speedometers lying tipped over in any old position on top of a counter are but half displayed, and half a display is often as good as no display at all. Maybe the accessory man has nothing on which to

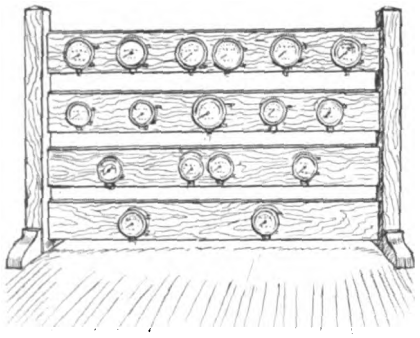
WARNER DISPLAY "BUREAU"

display his speedometers, and if such is the case a trip to the recent national automobile shows would have been instructive to him, for manufacturers, at least, realize the value of displaying speedometers, and there were presented numerous methods not only of holding these instruments up before the public but of forcing them upon the attention of those who come within the classification of possible buyers.

These methods involved fixtures of varying sorts, and while some were inclined to be a trifle elaborate others were very simple and there probably was none which would not eventually repay the dealer for the expenditure necessary for the installation of the displaying device.

Effective Fixture of Low Cost.

One of the simple type, but one which achieved the purpose for which it was designed was utilized by the Hoffecker Co., of Boston, Mass., and its construction should not prove difficult for a man of average mechanical ability; certainly a clerk who handles accessories ought to be able to construct the device. It was made to rest upon a counter and consisted of a flat board base and a glass dash at the back, the board base, of course, being polished and finished to a high degree of attractiveness, and over the base was another sheet of glass which accentuated the luster of the wood; the whole was nothing more than two planes of glass, fastened together at right angles and set upon a large, flat board.



The instruments were attached to the glass dash by means of the customary attachment which secures them to the dash of a car, holes bored in the glass dash allowing the passage of bolts or screws. This device possessed the quality of being simple and not overcrowded, and neither did the fixture assume such prominence that the speedometers became a secondary consideration. A dash clock occupied the top center position on the dash and two speedometers at each side with a fifth on the base near the dash completed the layout. Also, with this fixture, as with any other, it would not be difficult to connect at least one of the devices by a flexible shaft to a motor underneath the counter and thus make the whir of wheels compel the possible buyer to let the seed of covetousness be sown in his mind.

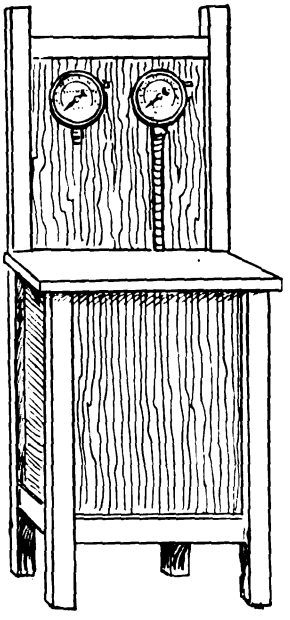
Device that Looks Like Bureau.

Should the accessory man not wish to utilize counter space for a fixture of this class he may find the alternative in a device worked out by the Dean Electric Co., of Elyria, Ohio, which won its full measure of

Digitized by Google

attention, although it had but two Elyria-Dean recording devices upon its display device. With the speedometers removed, a newly-married man might mistake the fixture for some kind of a boudoir accessory, and had it a mirror and drawers it might well answer the purpose. It was a small, bureau-like structure of some attractive wood, walnut, perhaps, and was an excellent sample of cabinet work and, while speedometers to the number of a dozen might have been heaped in a pile upon the top of this device, but two were shown, and they were attached to the upright surface which usurped the place that might have been held by a mirror. One instrument was connected by a flexible shaft to a small motor in the place where drawers might have been, which explains the reason for what might be imagined to be waste interior space. This device could be placed in any

CORBIN-BROWN SIMPLICITY



advantageous position on the store floor and a few booklets, left on the polished top, would likely be noticed by a man who had any interest in speedometers.

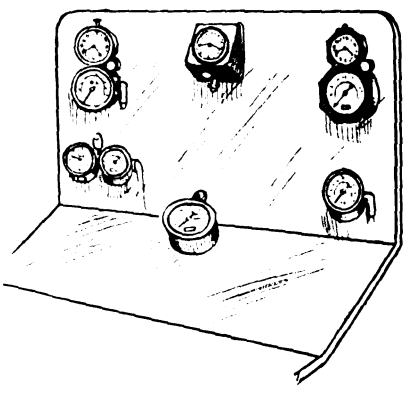
Ornamentation and Good Arrangement.

Similar in construction was a fixture which carried the wares of the Warner Instrument Co., of Beloit, Wis., but it was wider and more ornate and was able to carry a larger number of instruments without giving the appearance of being overloaded; while the Elyria-Dean "bureau" was of a strict mission design the Warner device went in a trifle more for decorative work and the upright posts at the sides of the upright back were fluted and the cross-piece at the top bore a wide, square bead about its edge. Where the mirror might have been were this a bureau was a polished wood surface of almost mirror finish and upon this the instruments were mounted; an accompanying illustration shows the taste of arrangement, a large-dial, dual instrument, running, occupying the central position, while others, of smaller size, were appropriately located. As in the Elyria-Dean device, a motor in the box-like base furnished action.

It might require a man with some cabinet-making experience to turn out a neat job in either of the last two named, but any boy who ever cut and fitted tenon joints in Sloyd school would make easy work of the fence-like structure which did good service on the counter of the Corbin Screw Corporation, of New Britain, Conn., which company produces the Corbin-Brown speedometer. What description is needed for this piece of constructive work is necessarily much less than the value of the device, for while it was nothing but two upright standards with four cross-boards tenoned into the supports, it effectively carried a number of instruments, as an illustration shows.

In passing from the Corbin-Brown display to that of the Stewart & Clark Mfg.

DEAN'S EFFECTIVE DISPLAY STAND



Co., of Chicago, Ill., the accessory man necessarily would be impressed by the elaborateness of the device which displayed Stewart instruments and which, by the fluctuating of dial pointers, the gentle hum of moving wheels and the exposure of the "internals" of the products transformed the casual passerby into an interested onlooker; in fact, it caught and held his attention not for a moment but for a considerable time, for the examination of all the alluringly displayed wares could not be made in an instant.

Elaborateness Compelled Attention.

Stewart & Clark, who in reality are one with the Warner company in the new Stewart-Warner Speedometer Corporation, went to some expense in fitting up their cabinet, of which the fundamental construction was a wood box base with a recessed upright section on top of it, square pillars being a part of this latter section. In the recess, as an illustration shows, was a flat wood surface, covered with black cloth and tipped backward at a small angle; the instruments were attached to this black surface, where they stood out in fine detail, and a motor, horizontal shaft, belts, wheels of different diameters and six flexible shafts beneath the box caused six instruments to operate at different speeds. Plain speedometers and odometers and combinations of these and a clock were visible, intact and in section, while in one corner was a gradometer which told the grade to which the tilted plane was inclined. In a window a fixture of this kind could hardly fail to let the most uninterested person know that the accessory man carried speed recording devices.

Interest in Exposure of "Internals."

Few dealers, probably, would care to fit up such a display fixture, and in the same class was a sectional hub odometer shown in the Veeder exhibit, for to the dealer this latter would mean the sacrificing of an in-

HOFFECKER'S GLASS DISPLAY "DASH"

strument which cost him good money and would necessitate great labor, but few dealers, on the other hand, would decline the use of such a novelty if loaned by the maker.

In all of these fixtures not only is display afforded, but there is opportunity for that greater drawing power which is obtainable through motion; practically everyone knows what a speedometer looks like, but the average motorist, if he is wise, seldom sees what the inside of his looks like, and often he wonders what makes it go, so it is no more than natural for him to be interested in a running instrument of which the mechanism is exposed.

Had old man Van Ornam, when he entered the accessory store, seen a speedometer attractively and effectively displayed he might have stopped to look at it and, had it been running, it is certain he would have given it more than passing attention, whether it were in section or not; and had old man Van Ornam gone this far, the dealer, were he a good salesman, would have investigated the customer's need or desire for such a ware and the possibilities, at least, of a sale would have been greatly increased.

WHY STORAGE SHOULD BE GARAGE'S MAINSTAY

Metropolitan Garageman, Who Raised His Rates, Explains Why Storage Should Be Backbone of the Business—Deriving All Profits From Gasolene an Unnatural Business Arrangement—Stable Rates vs. Garage Expenses.

Ask any garageman whether prices which he to-day obtains are sufficient to enable him to realize a substantial profit on his business; nine out of ten will answer in the negative. Ask him if his is not just as legitimate a business as keeping a grocery store or running a hotel and he will answer in the affirmative, and emphatically. From which, then, is deduced the question, "Why do garage rates prevail on such a basis as to afford a scant profit or none at all?"

Origin of the Car Storage Rate.

There are two answers; one is that the garage business is largely an outgrowth of the stable business and, as such, has brought with it the old stable charges, but with enlarged expenses. The other answer is that garages which were started as new businesses were instituted without the charges being fixed according to the running expenses, both of which answers account for a storage charge which is a money loser.

There probably is no more reliable a source of information on garage history and conditions than a man who has graduated from the horse stable business into the garage field, who knows the charges and costs of the former business and who has watched and been a part of the development of the garage industry, and of such men probably as capable of discussing the situation as any is William J Joscelyn, proprietor of the Joscelyn Garage, at 112-26 West 52nd street, New York City, the earlier history of which is indicated by the fact that the business is operated by the Joscelyn Stable Co. Joscelyn, whose services as an officer in the National Guard of the State of New York several years ago has caused the title of "Captain" to remain with him, inherits the business from his father, who established the stable something like a half century ago.

Urges Garages to Raise Their Prices.

Joscelyn recently not only raised his car storage rates $5, but issued a circular letter to his fellow tradesmen urging them to follow his example; it is the only way, he says, to put the business anywhere near where it belongs. At the time he raised his storage rate he fixed a retail price for gasolene which is but three cents above the wholesale price of 17 cents per gallon. It is his intention that the retail price will fluctuate with the wholesale figures and thus remove for the garageman that terror which ensues when the garageman, whose profit comes from gasolene, sees the advancing wholesale price cutting big holes in his net income.

Joscelyn's idea is that the cost of gasolene and storage should make the charges and that the charges should show a profit, just as the stable business made money. His garage may differ somewhat from some others in that the proprietor knows to a fraction of a cent where the expense money goes to and whence the profits come, and there is a rigid business system in the whole establishment; to find how much per car per month it costs for sponges or cleaning material it is necessary only to look in the company's books.

Early Charges Fixed by Dealers.

In the beginning of the trade, stated Joscelyn, the first garage in New York City, and doubtless in many other cities, was opened by a dealer in cars who wished to care for those who bought cars of him; a man bought a car and on congested Manhattan Island it could not be kept at home, wherefore this dealer rented a building and charged a price which was as small as could possibly be made and bring in the rent. This was a beginning of present-day storage charges. This dealer made his money on sales; making profits on storing the cars was not his intention, and this evolved a rate schedule which would not permit a profit to the man who wished to run a garage as a separate business.

COMPARATIVE MONTH'S EXPENSES AND RECEIPTS FOR STABLE AND SAME BUILDING USED AS A GARAGE.

Stable		Garage	
Expenses			
Capacity	115 horses		120 cars
Rent, $5.50 per horse and two wagons	$633	$7.44 per car	$893
Office payroll	240		773
Labor payroll, $4.32 per horse	596	$14.42 per car	1,543
Feed, $12 per horse	1,360	Cleaning material, $2.17 per car	232
Expense account	224		744
Advertising	80		50
Sundries, water, etc.	24		100
Loss and breakage account	0		10
Total expenses	$3,157		$4,345
Receipts			
112 horses, $35	$3,920	107 cars, $37.50	4,012
		9 "dead," $10	90
			$4,102
		Total loss	$243
		10,700 gallons of gasolene at profit of 11 cents	1,177
Total profit	$763	Profit realized by high retail price for gasolene	$934

Beginning of Repairshop-Garage.

Then there was the garage which sprung from the repair shop, and this is what Joscelyn terms the second step in the development of the garage; those who have followed the automobile trade from its incipiency remember well the numerous repair shops which sprang up everywhere. This man's profits were made from his repairing work; and if he could persuade a man to store his car in a vacant part of the building or if the owner wished space and the repairman could accommodate him the shop owner figured that by having this kind of a hold on the car he was fairly sure of getting practically all of the repair work, which in the early days was no small item. Therefore there sprang up a low storage

Digitized by Google

rate in this direction, fixed as in the first case by a man who did not care to make money on his rental of space because his profit was derived from some other source.

Many times the man who stored a car with these first two named classes of tradesmen had stored a horse and his carriage or carriages and, naturally, he did not believe he ought to pay more for car storage than for horse storage, and here enters the garage rate which has sprung from the stable rate. As Joscelyn, himself, says, "We figured that if we stored a horse and generally two carriages for $35 a month and had to feed the horse we were stepping into a fine thing when we turned our stable into a garage wherein we would store one car alone for $35 and the owner would be paying for fuel, where before we had been paying for feed. We figured on a double profit." This was in 1909.

Why Stable Didn't Pay as Garage.

But that Joscelyn "figured wrong" is indicated by the accompanying comparative table of receipts and expenditures, which shows where the mathematical error cropped out; just as many men started up garages as a new business and charged what corresponded with the stable rate, or was less. Joscelyn turned the 75 x 100 four-story building which had been a stable into a garage and proceeded to wonder why the investment did not bring the dividend which had been taken out regularly with stable equipment.

The systematic operation of the establishment soon revealed the true conditions. To start with, when the building was altered and improved, with concrete floors, electric lights where gas had been before, steam heating, gasolene tanks and the numerous other necessary improvements, the rent proceeded to just about double up. Also, where there had, for the stable, been a superintendent and bookkeeper in the office, there now was necessary in addition a night superintendent, stock man, two telephone operators, a checker and an engineer.

Cars Necessitated More Workmen.

In the other parts of the establishment there had been washers, floormen and grooms; now there were needed more washers and floormen, with doormen and elevatormen, and the labor payroll nearly tripled. Two or three washers used to take care of the 220 or 230 wagons, and the men got $16 a week, but in the garage 10 or 12 washers were required to keep the cars in shape and their pay was in the neighborhood of $20 a week. Cleaning as charged off against feed shows a saving in the garage, but it is not sufficient to offset the other increased expenses.

What Joscelyn itemizes as "Expense account" includes lights, heat, repairs and such costs, and the increase is accounted for by the fact that where the lighting with gas cost $60 a month electricity cost $150, heating the stable cost $50 a month, the animal heat from the horses being a source of considerable warmth, and now the heating jumped to $500 a month; there likewise were more repairs necessary in the garage.

Made Gasolene Supply Deficiency.

The figures given in the accompanying table are an average of two Novembers and Decembers, two of the busiest months in the year, and, as is shown, the stable expenses were $3,157 while the garage cost $4,345. The profits in the stable, which had a capacity of 115 horses, were derived from 112 horses, with which went, generally, two wagons for each horse, and at $35 a month the income was $3,920, which left a profit of $763 a month. Now, the garage could accommodate 120 cars, but in the months in question there were stored 107 "live" and 9 "dead," the latter bringing in $10 and the others averaging $37.50, the number being about half open cars at $35 and half closed cars at $40. This totaled an income of $4,102 and a net loss of $243 a month.

How, then, may be asked, could the owner afford to keep up the business? The answer is "gasolene," and this same answer is the reason that garagemen have been so much more hard hit than owners by the climbing proclivities of that petroleum product; Joscelyn bought gasolene at 9 cents and sold it for 20 cents and every car consumed about 100 gallons a month, most of which was bought at the garage. This meant a profit of 11 cents on 10,700 gallons, which amounted to $1,177. Deducting from this the loss of $243 on storage, and the Joscelyn Garage made $934 profit, which is $171, or 22 per cent. better than the stable.

Reorganized Expenses and Profits.

Then gasolene, about 15 months ago, began to increase in price, and with every increase there disappeared a part of the garage profits; some garagemen went out of business, but the Joscelyn Garage did not. The proprietor said, "The business is on a poor basis; it is not businesslike. We will fix a storage charge which will allow a profit independent of gasolene sales and, whereas we have been inclined to increase gasolene and continue extracting out profits from that, we will cut gasolene to a profit of 3 cents a gallon and make our retail price fluctuate with the wholesale price on a 3-cent profit basis; if the wholesale goes up a cent we will raise a cent, and if it drops a cent we will drop a cent."

This decision was made at the beginning of last October, but before going further it may be explained that Joscelyn had taken other steps to make more money; the first Joscelyn Garage had been in the same space as the stable, but about two years ago, just after the date the comparative table describes, the space was doubled, a duplicate of the old stable building, also four stories and 75 x 100 feet, being acquired. This made it possible to double the number of cars stored without quite doubling the number of garage employes and the office force was not increased at all. Also, certain efficiency-producing changes were effected; where there had been two washrooms on each floor one washroom was made for each floor. This reduced the number of washers by cutting out waste time in the moving around of crews and by substituting pushers for washers in several instances, and at lower wages. Also, the new washstands utilized what had hitherto been a passageway between the two halves of the building and the old washstand space was used for storage. Numerous changes such as this cut the labor payroll per month from $2,962 for the winter of 1911-12 to $2,764 for the present winter.

Owners Satisfied With $5 Increase.

To return to the raise in storage five months ago: Every owner who stored with Joscelyn was notified that storage was being raised from $35 for open cars and $40 for closed cars to $40 and $45, respectively. Out of 238 owners but four left the garage, and they were speedily replaced by others; many of those who stayed wrote to Joscelyn stating that they were satisfied with the new arrangement. Joscelyn states that it is his belief that it will not be long before another five-dollar increase will be justifiable. He states that he is making money now, but that he would not be making an exorbitantly large amount if this raise was made, and he adds that he believes supply and demand will support the higher price.

Supplementing his circular letter to the trade urging garagemen to follow him in his increased storage and reduced gasolene prices, he says the garageman who doesn't get a living rate for storage is bound to be weeded out. He doesn't advocate $40 and $45 storage for all garages, for he is in the high rent district, but he does urge garagemen to put profit where profit belongs and charge accordingly. The answer that "So-and-So around the corner won't raise—he cuts prices," is met by the statement that So-and-So is only digging his own financial grave and would raise only too quick if the movement were general. As to cut-rate garagemen he said: "I do all I can to help them; I fill 'em up as fast as I can. If a man thinks I am too high I send him to some cut-rate neighbor; the more I send the quicker the cut-rate man will go out of business."

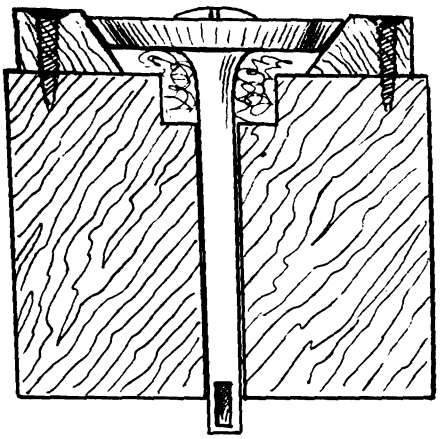
ROBBING VALVE GRINDING OF SOME OF ITS TERRORS

Making a Simple Device that Faces the Valves—Easily Made, Easily Used and the Material Costs Next to Nothing.

Grinding in a set of valves that are rather the worse for wear is not always a particularly easy job, especially if they belong to a six-cylinder motor; by the time all the seatings are brought down to their normal condition the grinder is very likely to wish the valves in a climate even hotter than their accustomed habitat.

Making Up a Valve Grinding Block.

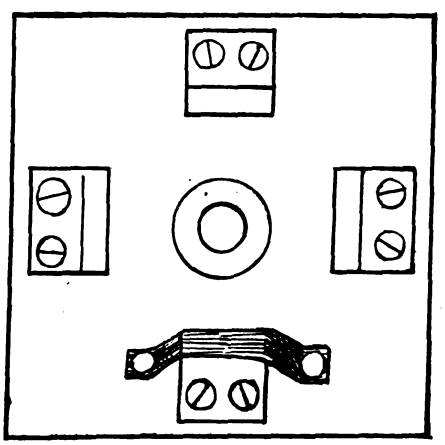


A valve that is in bad condition is not uniformly worn, as a rule, and in order to get it down to a proper bearing more must be taken off one part than another—a job which can be done with a fine file in skilled hands and, of course, in a lathe if one is available. Assuming, however, that a set of valves that is in bad shape must be put right without a lathe, and one does not care to take the time needed for filing, a good deal of time can be saved and good work done by means of a "rig" that is somewhat crude, to be sure, but answers the purpose very well and is easy to make.

As the accompanying illustration shows, the grinder is made of a block of wood, preferably hard wood, in which a hole is bored to take the valve stem. The hole should pass clear through the block, unless the thickness of the wood is greater than the length of the valve stem, and should be of such size that the stem will be rather a tight fit. A little countersink at the top will allow for the fillet under the valve head. Four small hardwood blocks are screwed or nailed to the main block at equal distances from each other and at equal distances from the center hole.

Cutting and "Loading" the Bevels.

The only part of the work of making the grinder that requires any degree of accuracy is the beveling of the blocks; they must be cut so that the valve bevel will bear equally on each. The way to do it is to cut the bevels as nearly as possible to the correct angle before fastening down the blocks and lining them up against the valve itself, which is put in place for the purpose. By turning the valve and at the same time bearing down on it, not too hard, marks will be made on the wood where there is contact and no marks where there is none; or there will be heavy marks where there is close contact and light marks where the faces barely touch. A fine file, carefully used on the blocks, will quickly bring about an even bearing. It does not matter if the hole has not been bored exactly at right angles to the surface of the block; the trimming of the small blocks will compensate.



The grinder is now about ready for use. Before commencing operations, however, the hole for the valve stem should be thoroughly lubricated with very thick graphite

GRINDING BLOCK IN SECTION

grease, or graphite and oil mixed to the consistency of a thick paste and worked into the wood with a valve stem or a close-fitting rod. There is a good reason for using thick grease or paste, for not only would oil fail to provide the right kind of lubrication, but it would cause the hole to contract and grip the valve stem too tightly.

To use the grinder, it must be "loaded" by stretching a small piece of medium emery cloth—not emery paper—over each of the beveled blocks, the cloth being held by a couple of good, stout thumb-tacks in each piece, pressed into the surface of the main

APPLYING EMERY CLOTH

block. The cloth must lie close and flat on the beveled faces of the blocks. Put a valve stem in the hole, bring the face against the emery-covered bevels and turn the valve, preferably with a brace and screwdriver; the emery will, of course, cut down the valve surface. The cloth is easily renewed when worn. The grade or coarseness of the emery must be regulated according to the condition of the valve; a badly worn valve needs a coarser grain than one only slightly worn.

This method of facing valves does not by any means eliminate the usual grinding; it merely reduces the time and labor when the valve faces are in bad shape. When the grinder has brought the faces to a fairly smooth condition the valves should be tried on their seats, when any inequalities in either will be indicated by the usual marking. If the high spots on the valve appear to be too prominent to be easily removed by grinding in place, they may be reduced on the grinder by turning three of the pieces of cloth blank side up and rubbing down the high spots of the valve on the remaining piece of emery that is right side up. Truing up the valve in this way, testing it from time to time on the valve seat, has the advantage of removing the minimum amount of metal from the seat as well as from the valve itself.

Knack in Getting Best Results.

In order to prevent particles of emery from getting into the hole and scratching the valve stem a little bunch of waste may be packed around the stem under the head, filling the countersink, or a thick felt washer may be used. When a valve has been faced off in this kind of a fixture it will be found that the stem has been beautifully smoothed up and the graphite well worked into it. Not only is the grinder easily made, but there is nothing about it that will wear out rapidly, and it will last for a long time. With a little practice the operator becomes quite skilled in its use and work can be turned out quite rapidly. There is a knack in getting the best results from it; once acquired, it will be found well worth the trouble.

Of course, only a single size of valve can be ground in a single block, so if it is desired to work on valves of different sizes there must be a block for each size. The blocks are so easily made, however, that the trouble is well worth while. While grinding a valve the "rig" should be held in the vise or in some other secure way that will eliminate the possibility of the end of the valve stem coming against anything.

Adjusting Gap to Suit Load.

If the motor misses when under a light load it is well before making carburetter adjustments to make the spark plug gaps just a trifle wider—that is, if magneto ignition is adhered to. Missing under heavy loads or when the motor speed is slow may sometimes be corrected by closing the gaps slightly. In either case, the amount of change in the length of the gap should be slight.

BALTIMORE CONDENSES ITS EXHIBITION TO ONE WEEK

Display, Which Last Year Ran Two Weeks, Takes But One This Season—Forty-two Dealers Show Half Hundred Vehicles.

Unlike the procedure of last year, when the annual automobile show of the Automobile Club of Maryland and the Baltimore Automobile Dealers' Association was given in two parts, with pleasure cars exploited during the first week and commercial cars on view during the second, this year's show did not run for even a full week. The exhibit "opened up" in the Fifth Regiment Armory on Tuesday evening, February 18th, and continued throughout the remainder of the week until Saturday evening last, February 22nd.

The vaulted roof of the Armory was almost hidden, for just beneath the ceiling was stretched a canopy of mountain laurel and smilax supported on a wire cable structure and studded with many electric lights. The side walls and the balconies were draped with bunting of alternate pure white and delicately tinted green interposed with American flags and the black and gold emblems of the automobile club.

In the ranks of the 42 dealers who had on display 33 different makes of pleasure cars and 17 different makes of commercial vehicles, were two whose products are foreign to shows outside of Baltimore—Carl Sporer's Sons Co., which makes the Sporer pleasure car, and Lord Baltimore Car Co., which makes the Lord Baltimore truck. Both are native products. The Sporer is built in three models on two chassis, the larger of which mounts a 40-horsepower motor and the smaller a 25-horsepower motor. The motors both are of the four-cylinder type and are of standard construction throughout. The larger model, the 7-passenger touring car, lists at $2,000. All models are fully equipped, even to a motor starter of the electric type.

The Lord Baltimore trucks, two of which were on the floor, are made in four sizes ranging from 1,000 pounds to five tons carrying capacity; price range is from $2,000 to $4,250. The trucks exhibit standard practice throughout, employing a four-cylinder motor, three-speed selectively operated gearset and roller chain drive.

In the displays of the two dozen accessory dealers who crowded the galleries, nothing that is startling cropped out; motorcycles were shown by ten dealers. The pleasure cars on view were: Packard, Studebaker, Oakland, Locomobile, American, Apperson, S. G. V., Pierce-Arrow, Peerless, Chalmers, Rauch & Lang electric, Ford, Sporer, Lambert, Church-Field electric, Cartercar, Lozier, Paige, Norwalk, Stevens-Duryea, Overland, White, Pullman, Cole, Stoddard-Dayton, Maxwell, Empire, Stearns, Mitchell, Michigan, Havers, Detroit electric, Kissel, Krit. Commercial vehicles shown were: Packard, Universal, Studebaker, Oakland, Locomobile, Lippard-Stewart, I-H-C, Kelly, Pierce-Arrow, Chalmers, Peerless, Lord Baltimore, Chase, Mack, Saurer, Schacht, White, General Vehicle.

Plans Altered for St. Louis Show.

Despite the original plans which called for a two-week show, the first week for the exploitation of pleasure cars and the second for the display of commercial vehicles, both types of motor vehicles were on the floor at the same time when the St. Louis Automobile Dealers' Association opened its eighth annual exhibit in the Coliseum on Monday evening last, February 24th; the show will continue for a single week, until Saturday evening, March 1st. The change in plans resulted from the fact that many of the commercial vehicle distributers have their display cars at Kansas City and cannot get them back in time.

The exhibit comprises some 34 different makes of pleasure and commercial vehicles displayed by 26 dealers; accessories innumerable shown by 11 dealers, and five different makes of motorcycles, shown by four dealers. The displays are staged in a summer garden setting artfully created by virtue of the use of mountain laurel, smilax and southern moss; the scheme eliminates all view of either walls or ceiling, as well as of the many electric lights.

The cars on display are: Reo, Little, Staver, Borland electric, Speedwell, Marion, Cutting, Detroit electric, M & T, National, Warren, Argo electric, Marathon, Cartercar, Midland, Kissel, Imperial, Ames, Crow, Haynes, McFarlan, Penn, Pullman.

The commercial vehicles shown are: Reo, Speedwell, Brown, Smith, Gramm, Modern, Palmer, Indiana, Dart, Commerce, Little Giant.

Evansville Winds up its Second Show.

Saturday evening last, February 22nd, saw the close of the second annual show of the Evansville (Ind.) Automobile Dealers' Association, which was staged in the Evansville Auditorium. For four days the even dozen dealers displayed the products of 17 different automobile factories in an improvised southern garden setting. Half a dozen accessory and motorcycle dealers augmented the ranks. The cars on view were: Pope-Hartford, Auburn, Detroit electric, Locomobile, Chalmers, Krit, Studebaker, Cadillac, Overland, American, Marion, Oakland, Cole, Ford, Rambler, Reo, Marmon.

CARS A WEEK, TRUCKS THREE DAYS AT CINCINATTI SHOW

Green and White, Club Colors, Adorn Hall Which Houses Exhibit—Forty-eight Cars Presented by Thirty-five Dealers.

Green and white, the colors of the Cincinnati Automobile Club, form the color scheme at the fourth annual show of the Cincinnati Automobile Dealers' Association, which opened its doors in the Music Hall on Monday evening last, February 24th. Walls, floor and ceiling all are green, bunting and streamers of that tint, with an occasional strip of white serving to hide the plaster, while the floor is covered with burlap; the booths laid off with white fixtures form a pleasing contrast.

For the first week, until Saturday evening next, March 1st, pleasure cars will hold sway; during the first three days of next week, until Wednesday evening, March 5th, the commercial vehicle will come into its own. During the present week pleasure cars to the number of 48, of different makes, are being exhibited by 35 dealers; accessories are shown by an even dozen dealers.

The cars on display are: Buick, Marmon, Pope-Hartford, Pierce-Arrow, Packard, Hudson, R. C. H., Rauch & Lang electric, Locomobile, Detroit electric, Oakland, Stearns, Cole, Baker electric, Fiat, Chalmers, Speedwell, Overland, Krit, Pathfinder, Schacht, Hupmobile, Apperson, Ford, Cadillac, Stevens-Duryea, Paige-Detroit, Herreshoff, Franklin, Haynes, Regal, Premier, Reo, Alco, Michigan, Empire, White, Peerless, Ohio, McFarlan, Abbott-Detroit, Ohio electric, Nyberg, Chadwick, Dorris, Rambler.

Oshkosh, too, Stages an Exhibit.

Eight automobile dealers who exhibited just twice that number of motor cars of different makes comprised the annual show of the Oshkosh Automobile Dealers' Association, which was brought to a close Saturday evening last, February 22nd, after having been in progress four days. The exhibit was housed in the Oshkosh Auditorium, which was suitably "glad ragged" for the occasion. The cars on view were: Cadillac, White, Studebaker, Pope-Hartford, Overland, Winton, Kissel, Reo, Regal, Buick, Chalmers, Ford, Rambler, Mitchell, Empire, Imperial.

Fisk Lets Large Warehouse Contract.

The Fisk Rubber Co. of Chicopee Falls, Mass., has placed contracts for the erection of a large warehouse in that city. Its cost will approximate $400,000.

KEEPING PAINT SHINING ON AUTOMOBILE BODIES

Fundamentals of Body Washing Expounded — Simple Methods that Produce Best Results—Using Cold and Hot Water.

There are a good many things that can be done in a good many different ways, all more or less satisfactory as to results; but it is doubtful if there are as many methods of doing any other one thing as there are of washing automobile bodies. Every painter has his favorite way of restoring a travel-stained vehicle to its "pristine beauty" and every garage that takes pride in its work has a method of its own. So it happens that an inexperienced person who is looking for the right way to keep his car body looking as it ought to look is apt to become embarrassed by the very wealth of information on the subject.

While doubtless most of these "favorite methods" are entirely satisfactory, there are a few general rules that are at the bottom of the whole business of washing automobile bodies, and if they are followed the varnish will retain its good appearance for the maximum length of time. These rules, which are recommended by the Franklin Automobile Co., do not cover the whole art of body washing; they are sufficiently comprehensive, however, to enable anyone who follows them carefully to keep his car looking its best. They are as follows:

"Never use soap on the body of the automobile.

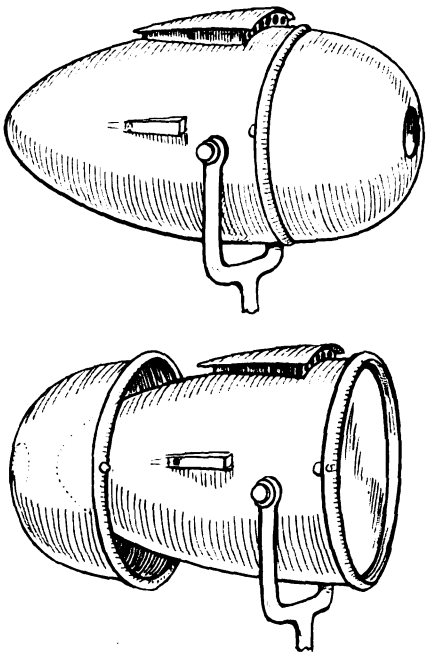
"Never use a sponge or chamois on the body until all the dirt and grease has been washed off.

"Keep the sponges and chamois clean. This means cleaning them half a dozen times while washing one car.

"Use different sponges on the body and on the running gear.

"Rinse the car thoroughly and carefully after washing.

"Do not use a strong force of water on a newly painted car.



"Do not wash the car too much, as each time it is washed it takes just so much of the luster off.

"All mud should be taken off with a hose, as any other way scratches the car."

Every time a car is washed the varnish loses some of its lustre; it is best, therefore, not to wash oftener than is necessary, and the process should not be unduly prolonged. Ordinarily the washing water should be at such a temperature that it will not cause discomfort to the person doing the work; if the car is covered with ice or frozen mud warm water will greatly facilitate the washing. Under no circumstances, however, should the water be hot.

"Dousing the Glim" of Headlights.

The disagreeable, not to say dangerous, effects produced by the glare of the powerful headlights commonly used on automobiles have stimulated lamp makers to devise means for diffusing the light and eliminating the blinding parallel beams that are as unnecessary in the city streets as they are advantageous on country roads. Translucent shades, adjustable shutters and other means have been employed with more or

HEALY LAMP, DOUSED AND UNDOUSED

less success. Among the effective methods is one adopted by the well-known New York firm of body builders, Healy & Co., in a special form of headlight.

The Healy lamps — which, incidentally, are made only to order—are designed primarily for cars of speedy types, such as high-powered roadsters and other machines of the class known to Britishers as "sporting" cars. Of the bullet outline, they offer little resistance to the air. The lenses are of more or less standard form. The light-reducing device consists of a conical cap which is placed over the front of the lamp, pointing forward, of course, and held in place by spring catches. In the apex of the cone is a small aperture, about an inch and a half in diameter, with a plain lens, and all the light that escapes is what can get through this small opening. With the shield in place the lamp is a double-pointed affair and has every appearance of belonging to a car of power. When the conical shield is not in use it is ingeniously disposed of by slipping it over the back of the lamp, where it is held by snaps so constructed as to be free from rattling.

CHARGES SCALPING METHODS IN INSURANCE REPAIR WORK

St. Louis Dealer Explains Why Such Jobs Are Refused by the Average Shop—Rebates and Discounts One Reason.

"Insurance jobs," as repair work done for insurance companies under the liability clauses in their contracts is styled, are "exceedingly distasteful" to at least one St. Louis dealer, and from his own conclusions in regard to this apparently perplexing problem he may not be alone in his likes and dislikes.

"There is a never ending struggle between the repair shop or service department of the automobile concern and the insurance adjuster," he says, and further intimates that much of the trouble can be laid directly at the door of the insurance companies themselves for their predatory methods in obtaining estimates for work from one repair shop, preferably that connected with the agency for the disabled car, and then relegating the work to a smaller shop which can do the work, or is willing to "make a show of doing it" more cheaply.

If a car which has been disabled is returned to the agency for repair, he points out, the agency finds it incumbent upon itself to place the car in the best possible condition and for the work a legitimate charge must be made. Often, however, he continues, the insurance company can get the work done more cheaply (and not so well) for less money, with the result that the inferior work reflects against the credit of the car and the agency. "Dope jobs," they are styled, also, and they are expected to look well though their lasting qualities are problematical.

"Many legitimate repair departments," he says, "hesitate about estimating on repair work, for they know that the very schedules for needed repairs that they make up at expense to themselves will simply be used by certain insurance concerns as guides to other houses which do the work at less cost."

"For instance," he continues, "there is one concern whose foreman will make an estimate only on a cash payment of $100. His reason is this: To take down a car and inspect it thoroughly in every part to make sure just how much new stuff must be put in and what hours of labor are necessary to complete the work and so to turn it out as good a car as it was before the accident are things which mean a great many hours of time used by mechanics and also call for a large amount of exact mechanical knowledge, which certainly deserves being paid

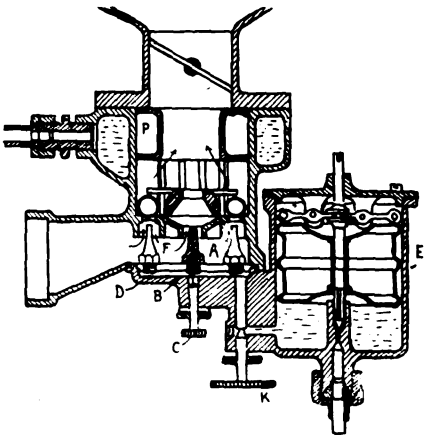
Digitized by Google

for. If it were a surety that the job would be turned in to his repair shop he probably would not be disposed to charge for making the estimate, but he knows that if he prepares a full list, giving in detail the things that will have to be done, chances are that this will be taken at once to some other concern, whose mechanics may not get the same scale of wages as do his, and who are able, when it is plainly indicated to them just what must be done, to turn the work out more cheaply.

"Then, again, not having the same pride in the work or not being impelled by any feeling that it must reflect on the merits of the car if the job is not well done, the outside concern is not going to put the same careful attention on things that the regular repair shop would do. Furthermore, inasmuch as the repairers that the insurance companies are more likely to hire will have to come for needed repair parts back to the agency repair shop, and as selling these parts is necessarily a source of a certain amount of profit without any chance of loss, this is another reason why, rather than undertake the annoyance of the insurance company's work, it is refused by the average concern.

"Arrangements cannot be made with the insurance company as they can with the owner direct, and there are certain requests for discounts and rebates which are likely to be made by the insurance concern which also are distasteful to the agency. This is another and very important reason why 'insurance jobs' are not popular with the automobile repair shop.

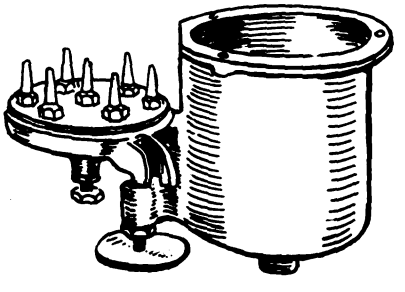
"Very often a good deal more work is put on the replacing of the body and in patching it up than is done on the running gear of the machine itself by the outside repair man, and although this makes a nice appearance when it is completed, it cannot be expected to go the route. The making of an estimate offhand is nearly an impossibility, especially when a car has been damaged by fire. There may be a hundred and one things to do that do not appear on the surface, but some repair men will undertake to do a job for almost nothing and then of course must slight some part of it in order to come out ahead of the game. How the situation can be met with satisfaction to all concerned is a problem. The average result is that the owner gets something the worst of it."



Proper Position for Lock Nut.

When a thick nut and a thin one are put on the same bolt, one nut acting as a lock- or jam-nut, it is the thickest nut that should be put on top. The reason is that when the last nut is screwed home hard it takes the bulk of the load, pulling up the slack of the thread of the first nut, which thus has less of the load to carry.

"FLOATING" STEEL BALLS CONTROL GASOLENE SUPPLY



Unusual Manner of Proportioning Fuel to Speed in New Daimler Carburetter—Seven Jets Employed.

Taking a leaf out of the book of those carburetter designers who regulate the amount of air content in the fuel mixture with the aid of "floating" metal balls raised

DAIMLER CARBURETTER IN SECTION

by suction, the British Daimler company has evolved a new type of carburetter which operates on somewhat the same principle and for which great claims for efficiency and economy are made. The carburetter differs from those in which "floating" balls control the extra air, however, in that the balls control of the fuel instead of the air. The amount of fuel in the mixture, therefore, is directly proportioned to the suction,

ARRANGEMENT OF JETS

which, in turn, depends upon the speed of the pistons, thus governing the quality of the mixture by the speed of the motor without regard to the size of the throttle opening.

In its simplest aspect, the carburetter is of the usual float-feed type and differs from others of its kind essentially in that it has seven jets, six of them being arranged concentrically about the seventh, the arrangement being shown by the accompanying sketches. Only one of the jets, however, is adjustable; it is centrally located (A) and is provided with a needle valve (B) and an adjusting screw (C). Adjusting the needle valve permits of proportioning the amount of fuel in the mixture for slow running, the central jet being the only one which opens directly into the mixing chamber. The other six jets are fed from a common chamber (D) which is directly connected to the main float chamber (E), the latter being orthodox in every particular.

Above each of the six jets there is an orifice (F) which normally is closed by a small steel ball the motion of which is limited by a spider and a distance piece (P). In operation, and with the motor running slowly, all of the suction is concentrated upon the central jet and is not sufficient to raise the balls off their seats and permit the other jets to come into action. Directly the speed of the motor is increased, however, the increase in suction operates to lift the balls off their seats, thus permitting fuel to be drawn from all seven jets, and as the amount the balls are lifted off their seats is governed by the suction which, in turn, is governed by the speed of the motor, the fuel content in the mixture remains practically constant for all piston speeds.

One of the peculiarities of the carburetter is that all the jets are of the same size and are interchangeable, thus facilitating assembly in case it becomes necessary to take the device apart for cleaning. As a means of adjusting the main gasolene supply, there is provided a valve with a milled screw head (K), the purpose of which is to increase or decrease the amount of gasolene fed from the float chamber to the chamber beneath the jets.

When Lights May Damage Paint.

For the sake of the battery, it is not well to allow the lights of a car on exhibition to be illuminated for prolonged periods, but there is also another reason why the headlights should be extinguished—the rays are liable to singe the car ahead. The parabolic reflector not only acts in conjunction with the mirror to concentrate the rays of light but to concentrate the heat rays also, and it so happens that if the car ahead is positioned in the focus of the lens the heat accumulated at the spot after some time is sufficient to damage the paint work.

Quick Way to Cut Sheet Metal.

The quickest way to cut tin or other sheet metal with a cold chisel is to put it in a vise with the cutting line level with the jaws, and use the chisel along the top of the jaws. A straight, easy cut can be made in this way, and the sheet can be shifted if the cut is longer than the width of the jaws.

JEFFERY NAME PLATES ON TWO LIGHT MOTOR TRUCKS

Standard Features Throughout Both Models—One Chain Drive and One Shaft—Pneumatic Tires on Lighter Machine.

Two new light trucks bearing the name "Jeffery" on their name-plates have been placed on the market by the Thomas B. Jeffery Co., of Kenosha, Wis., well and widely known as manufacturer of Rambler pleasure cars.

The new machines have carrying capacities of 1,500 pounds and one ton, respectively, and in both cases the propelling power is generated by a motor rated at 32 horse-

SIDE VIEW OF JEFFERY 1,500-POUND DELIVERY WAGON

power, driving, in the case of the lighter machine, through shaft and bevel gears to the live rear axle, and in the case of the heavier car through countershaft and side chains to the rear wheels. The motor of the lighter of the two is placed under a hood forward of the dashboard and is cooled by pump-circulated water, and its charges are ignited by a high-tension magneto. Three forward speeds are provided for in the gearset, which is controlled by a lever on the right side. Semi-elliptic springs are employed for the front suspension and three-quarter elliptics support the rear. Internal and external brakes are on the rear wheels.

The wheelbase of the light car is 120 inches. Pneumatic tires 4½ x 34 inches are fitted to both front and rear wheels. Over all the chassis measures 168 inches; the length of the frame back of the seat is 68 inches and the space available for loading is 78 inches wide. When the car is fully loaded the platform stands 30 inches from the ground. There is tanking capacity for 20 gallons of gasolene and for one gallon of lubricating oil.

Considerable experience and not a little experimenting has led the manufacturers to distribute the weight 40 per cent. on the front axle and 60 per cent. on the rear axle; this gives sufficient weight for traction on the rear wheels, sufficient for steering on the front wheels, and the tires are not overloaded. The maximum speeds are 6½, 13 and 27 miles an hour for first, second and third speeds, respectively. The price of the chassis is $1,250, and of the machine complete with open express body, $1,325.

New York Dealers Elect Officers.

Henry M. Bronner, of the Edwards Motor Car Co., was elected president of the Automobile Dealers' Association, of New York City, at its annual meeting on Thursday last, 20th inst. He succeeds John F. Plummer. Arthur M. Day, of the A. Elliott Ranney Co., was elected vice-president, to succeed Frank Eveland, of A. G. Spalding & Bros., who in turn became secretary-treasurer because of the retirement of C. P. Skinner. In addition to the three officers, the new directors are as follows: M. J. Budlong, Charles M. Brown, I. N. Uppercu, C. H. Larson, H. L. Stratton, Wm. C. Poertner and W. Arthur Lesser. The directors who retired are: John F. Plummer, Robert D. Garden, C. P. Skinner, W. S. M. Mead and A. L. Newton. Charles A. Stewart remains in office as general manager. The Dealers' Association also appointed a committee to watch legislation at Albany.

Prest-O-Lite Continues Refilling Campaign.

As a part of its campaign in New York State against dealers who refill Prest-O-Lite tanks with other than Prest-O-Lite products the Prest-O-Lite Co., has filed suit in the Municipal Court in Syracuse, N. Y., against the Central City Rubber Co., of that city; the charge is made under a section of the New York State Business Law and a penalty of $100 is asked. Similar cases have been tried in the Municipal Court in New York City and a decision is being awaited Suits in numerous other "York State" towns are contemplated.

HE DID THE RIGHT THING BUT IT STALLED THE TRUCK

What Curtailed the Trouble Man's Morning Sleep—A Driver Who Carried Out His Instructions Too Literally.

It was about six o'clock in the morning when the Trouble Man awoke with a start, looked at his watch, observed that a blustering wind was driving dry snow against the window, and turned over for another snooze. The bed was warm and comfortable and the hissing of the snow outside the window soothed the Trouble Man only less than the consciousness that there was nothing likely to occur to disturb him for the best part of an hour. So he slept.

Possibly he slept for five minutes; certainly it was no more than that when the telephone bell rang. The instant the Trouble Man heard the silvery jingle he knew, by virtue of a well-developed telepathic instinct that someone was in trouble somewhere and that there was to be no more snoozing that morning.

"Hello!" said a discouraged voice at the other end of the wire, "Is this the Trouble Man? Well, No. 2 is stuck in the middle of 48th street with seven tons of coal on an' I can't get her started. No, the snow don't stop her, but the engine won't run. What? No. She runs a little when she's cranked an' then stops dead. Yes; plenty of gas; spark all right. Can't you come down right away? The load's part of a rush delivery."

To the accompaniment of a choice assortment of grunts and cuss words the Trouble Man got into his clothes, swallowed a cup of hot coffee and butted into the storm. Arrived at the scene of inaction, he found the truck occupying a prominent position in the middle of the street, its bulk increased by a liberal capping of snow and the driver industriously cranking the motor, which would run for a few revolutions, cough a cough or two, and stop.

"Well," said the Trouble Man, without enthusiasm or warmth, "what's the trouble?"

"Dunno," said the driver, a new man, unhappily; "watch her."

He switched on the battery—there was a dual ignition system—and gave the crank a vigorous swing. Off went the motor, apparently as lively as could be desired; round went the driver to the switch and threw her over to the magneto. The immediate result was a cessation of activities.

"Well," said the Trouble Man, agitating his head sideways to get an accumulation of snow out of his left ear, "she won't run on the mag; why don't you let her run on

Digitized by Google

the battery till you get back and then have a look at the mag?"

Then it came out.

"Why, you told me always to start on the battery and run on the magneto. I didn't know I could run on the battery."

"Start her up," said the Trouble Man with a weary sigh, "and let her run on the battery. I'll go along with you till she's running right."

Half a mile along the road the magneto was switched in for an instant. Result: Nothing better than an occasional husky cough. Another trial half a mile later, and the motor ran on two cylinders. A mile further along she would run on three cylinders and the fourth would spit occasionally with the magneto on the job. A few minutes later the little dynamo was grinding out "juice" in its usual efficient way.

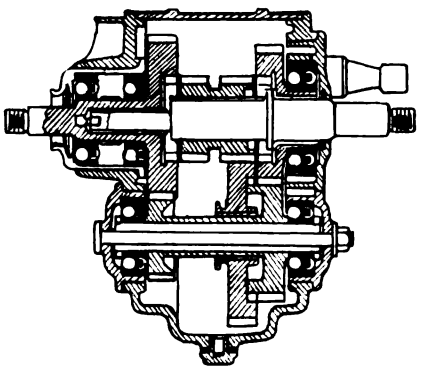
At the point of delivery the Trouble Man explained.

"You left the cover off your magneto," he said, "and it got wet, and magnetos don't like to be wet. The fan drew the snow in through the radiator, you know. The warmth of the engine and the movement dried out the magneto by degrees until it would work again. That's all. Yes, you can run on the battery when you have to. But when you get back, for goodness sake put the cover on your magneto."

And the Trouble Man disappeared through a doorway outside of which was a large placard bearing the legend, "Combination Breakfast, 25 Cents."

New Orleans Show in Smilax Bower.

Washington Artillery Hall, which is in New Orleans, La., although far too small adequately to house the exhibit, was again pressed into service for the third annual show of the New Orleans Automobile Dealers' Association, which held sway in the Crescent City from Wednesday evening, February 19th, until Sunday evening last, February 23rd. While ceilings in the structure are low—too low, it would seem, to lend themselves readily to effective decoration—the decorative artist had not the slightest trouble in converting the place into a "bower" by the use of much smilax and moss and wistaria commingled with streamers of electric lights.



The eighteen exhibitors who displayed cars had a total of 29 different makes of pleasure and commercial vehicles on the floor; accessories, due to the scarcity of space, were meager. The cars shown were: Peerless, Reo, Cole, Michigan, Garford, Paige, Packard, Baker electric, Cadillac, Pierce-Arrow, Buick, Premier, Adams truck, White, Saurer truck, Hewitt truck, Mack truck, Hudson, Alco, Locomobile, Cartercar, Mitchell, Lozier, Stearns, Ford, Little, American, Case, Oakland, Overland.

GEARS CONSTANTLY IN MESH YET EMPLOYS NO CLUTCH

Unusual Construction in New French Gearset Employing Two Sliding Pinions—New Yorker Acquires American Rights.

H. L. Hardy, of 237 Fulton street, New York City, has acquired the American rights to the manufacture and sale of the Dux transmission, recently introduced in France by the Society de l'Evolution Automobile de Paris, and which is novel in that it is wholly devoid of dog clutches, although the gears always are in mesh; the design naturally permits very compact construction.

As is clearly shown by the accompanying illustration, which is of the three-speed type of transmission, the device is not unlike the orthodox gearset in general appearance.

DUX CLUTCHLESS GEARSET

The motor shaft carries splined to it so that it can be slipped from end to end in the usual manner, a small diameter pinion with a very wide face and grooved in the middle for the reception of the shifting yoke, and a loosely mounted gear wheel at the motor end provided with external teeth meshing with a gear wheel carried on the lay shaft and internal teeth into engagement with which the smaller pinion can be slipped, locking the larger wheel to the motor shaft. The driven shaft carries but a single gear wheel of considerable diameter which meshes with a pinion carried on the lay shaft; this pinion is formed integral with the larger gearwheel on the lay shaft, the connecting sleeve forming a shaft on which is mounted a slideable wheel meshing with the small pinion on the motor shaft and provided with an internal set of teeth designed to lock with the teeth of the larger wheel carried on the lay shaft.

The operation of the device is simple in the extreme. Starting from the neutral position—that is, with the small pinion of the motor shaft out of engagement with either the loose wheel on the engine shaft or the wheel on the propeller shaft, the loose wheel on the lay shaft is slipped into engagement with the larger of the integral pinions carried on the same shaft. Drive then is transmitted through the small pinion to the lay shaft with considerable reduction and from the small lay shaft pinion to the driven shaft wheel with further reduction. Second speed is obtained by locking the loose wheel on the motor shaft, whereat drive is transmitted to the lay shaft without reduction; the drive from the lay shaft to the driven shaft is always the same. High gear is obtained by engaging the small pinion on the motor shaft with the internal teeth formed in the gear wheel on the driven shaft whereby direct drive straight through from the motor to the propeller shaft results. When in the neutral position only the free wheel on the lay shaft is in rotation, but at all other times the lay shaft ensemble rotates. Reverse is obtained by means of a pair of integral clash gears, which are brought into engagement with the smaller pinion on the motor shaft and the gearwheel on the driven shaft and which naturally act as idlers.

How compact is the construction is exemplified by the fact the whole mechanism is contained in a case only 8 x 8½ inches; larger sizes providing four speeds and a type of heavier construction for use on commercial vehicles also are made to meet different conditions. The latter type, according to Hardy, has been adopted by the Society General des Omnibus de Paris for use in connection with motor 'buses.

Grand Forks's Show Lasts Four Days.

Grand Forks, which is in North Dakota, just has emerged from its "show season." The doors closed on the annual show, which is the second under the auspices of the Grand Forks Automobile Dealers' Association, on Friday evening last, February 21st, the exhibit having been inaugurated four days previous, February 18th. While the term "sumptuous" scarcely is applicable to the decorative scheme that prevailed, very much was done in the way of rendering the Auditorium eye-pleasing by the use of much tinted bunting, and not a few varicolored electric lights. Nineteen motor car dealers displayed, and their exhibits embraced 22 different makes of cars. The cars on view were: Overland, Regal, Oakland, Paige, Imperial, Velie, Reo, Michigan, Jackson, Studebaker, Buick, Kissel, Case, Rambler, Mitchell, Krit, Marathon, Staver, Hupmobile, Metz, Detroit electric.

A small amount of oil will help a hacksaw in going through wrought iron or steel, keeping the teeth cool and improving the cut. Only a little oil should be used however.

BATTERY REQUIREMENTS FOR AUTOMOBILE WORK

Necessity for Determining the Capacity of Accumulators by the Lighting Load Made Plain by an Expert—Why Special Types of Cells Are Needed—Influence of Starter and of Voltage—Weight a Secondary Matter.

Perfection of the electric lighting and engine starting system which within the past year has become such a tremendous factor in the automobile industry, is due in no small degree to the strides which have been made in battery design and construction. The battery virtually is the heart of the system for upon its efficiency depends the efficiency of both the lighting and starting portions of the apparatus, which fact long has been realized and has acted to stimulate the production of batteries especially constructed for the rigorous work—the alternate heavy discharges and light discharges and intermittent charging—imposed by automobile work.

Careful Test as Trouble Avoider.

In drawing attention to the fact that already a number of prominent battery manufacturers have seen the light and now are supplying batteries which have been designed and constructed especially to overcome the difficulties raised by lighting and starting conditions, J. W. Fitzgerald, who is engineer to the Ignition Starter Co., of Detroit, Mich., in a recent address, laid particular stress upon the necessity for careful and adequate battery testing as a means of eliminating future trouble and obtaining real satisfaction. His remarks, which were contained in a paper read before the Detroit Section of the Society of Automobile Engineers, are particularly pointed and show a clear insight into the requirements of the automobile storage battery.

"The battery, which in very few cases is made by the manufacturers of the motors and generators, has been more or less of a bugbear in the development of the electric starter," he said. "But there are now a number of manufacturers of storage batteries who are making deliveries of batteries, especially adapted for starting and lighting.

Wherein Laboratory Test Differs.

"It should be borne in mind by the engineer making the test of a battery for this purpose, that the conditions surrounding a laboratory test and an actual test under service on a car are entirely different. In making a test in a laboratory we will take it for granted that efficiency tests and voltage drop tests, under varying outputs, are satisfactory. The engineer then proceeds to demonstrate in the laboratory that a continuous charge of the batteries at a certain current value will unduly heat the plates and damage the battery.

Conditions Met In Actual Service.

"This same test, conducted on a car, would actually have no bad effect upon the batteries. In the first place it is almost impossible to charge a battery continuously at a high rate in actual service, as this would mean that the car would have to be traveling uninterruptedly at a fairly high speed for many hours. Even if this were possible, the continual jarring of the machine acts as a mechanical shaker, tending to jar the gas collections off the plate before any damage is done. We are bringing out this point to show that it is not necessary to provide any means for discontinuing the charging of batteries after they are full. Attempts have been made to provide such a device, but have been more or less complicated, and not entirely satisfactory, and as long as the battery manufacturers themselves are willing to stand behind their product under the conditions stated above—that is, of continuous charging after the batteries are full—in actual road work, there is no reason why any complication should be added to prevent continuous charging. It is absolutely necessary, however, to provide such regulation of the charging current as will hold its maximum down to a safe continuous charging rate.

Determining the Size of Battery.

"The size of the battery is determined solely by the length of time the manufacturer of the car figures that it is necessary to keep the lights burning without any charging of the batteries. The capacity of the batteries should be not affected by the requirements of the starting motor. Our point is that the amount of power required for starting the car is very small as compared with what is required for lighting, due to the very short time that it takes to start a car. The battery is only affected by the starting device as regards its construction for furnishing a heavy output for a short time, without any damaging effect on its efficiency or life.

"In making a decision as to the capacity of the battery we claim it is therefore only necessary to consider the number of watts required for lighting the car, also bearing in mind that the efficiency of a storage battery is very much less in cold weather than under moderate temperature conditions.

Necessities Imposed by Starter.

"A more important point is a decision as to the number of cells used in the battery. In other words, what voltage is best suited for a combined lighting and starting outfit. There is no question but that a six-volt battery would be better if lighting only were considered. This is so because in the first place there are fewer number of cells to take care of and because there are now on the market six-volt lamps of remarkable efficiency for automobile lighting work. However, when the starter feature is added, there are points in regard to the construction of the motor and generator which have a strong influence on deciding the voltage of the battery, and if the six-volt system is used, it requires very careful and more difficult generator and motor design, as well as properly designed leads and cable connections, to do away with as much of the voltage drop as possible. It does not mean that because six volts are used in preference to a higher voltage, that the battery would be any lighter. It takes a certain weight of active material in a storage battery for a certain number of ampere hours output, almost entirely regardless of the battery voltage. We make this statement only as regards fair limits of, say, 6 to 24 volts. Of necessity, a greater number of retainers and cells in a 24-volt battery would weigh more than those required for a 6, but the active element practically weighs no more, so that weight is really no serious consideration in determining the voltage of the system.

Charging In Series Is Essential.

"The method of charging the batteries has been found by practical experience to be one of great importance. It is absolutely essential that the batteries be charged in series in order to keep them all in a uniform condition. It has been found that batteries connected up in parallel sets for charging cannot be kept uniformally charged, and

Digitized by Google

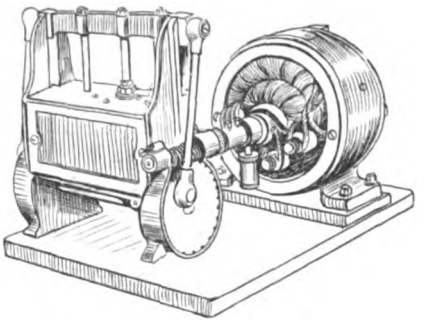
that sooner or later one or more of the individual sets must be disconnected and brought up to a standard condition. This is, of course, very objectionable. This feature, therefore, is a determining factor as to the voltage of the storage battery—that is, the battery should not be of such a voltage as to require means for connecting the various cells in different series and parallel groups for either charging or discharging. This, as stated above, is not only objectionable from the point of charging the batteries, but also from the added complication of a control for doing this work.

"If a 12-volt system is used, the batteries can be charged and discharged in series and at the same time the lighting system can be wired up on the three-wire plan so as to give absolutely satisfactory results, on 6-volt lighting and a 12-volt system affords additional advantage of better and more substantial generator and motor construction with less difficulty of caring for a drop in voltage and smaller cable connections, due to a much lower current requirement at the higher voltage.

Securing Minimum Voltage Drop.

"In drawing off a heavy current from the storage battery it necessarily pulls down the voltage a great deal more than when discharging the battery nearer its normal discharge rate. The greater the pull the greater being the percentage of drop. Battery makers are now building batteries to give heavy current outputs and at the same time guaranteeing a minimum drop in the voltage. At the same time, much better results can be obtained by reducing the amount of current taken from the battery and maintaining a higher potential across the terminals.

"If a battery of any higher voltage than 12 is used, it involves a serious problem of wiring for the lighting system, due to the fact that all the lamps now used for automobile lighting are 6 volts, and it becomes a difficult problem to distribute the load on the batteries so that each set will be supplying its pro rata output for lighting and so prevent one set from being discharged faster than another, unbalancing the battery system.



How Maximum Output Is Controlled.

"We have previously stated that it is, of course, necessary to limit the maximum output of the generator, as there is a safe maximum charging load for the battery used, and the current must not exceed this figure. The control of the maximum output and with as little mechanism as possible is provided for in many ways. The point to be kept in mind is to accomplish this regulation in as simple a manner as possible and still accomplish the result positively."

TIRE PUMP THAT OPERATES ON POWER FROM BATTERY

Judd-Leyland Evolves First Inflating Apparatus That Works When Motor Is Stationary—Worm Drive a Feature.

Not all motors are fitted with starters; nor do all which are not so equipped yield readily to the persuasion of the starting crank and pick up at the very first turn. Thus it happens that, however quickly and conveniently the motor driven tire pump will function once the motor is in operation, it sometimes is considerably less laborious to pump the tire up by hand than it is to start the motor, especially so in cold weather. It is for the purpose of eliminating starting the motor each time a tire is to be inflated and at the same time reducing the cost of operating the pump that the Juleco tire inflation pump has been brought out by the Judd & Leland Mfg. Co., of Clifton Springs, N. Y., which has been making manually operated tire pumps for a considerable period.

JULECO MOTOR PUMP

In its simplest aspect the Juleco pump is nothing more than a double-acting double-cylinder air pump driven by a small electric motor; power to operate the motor is furnished by the storage batteries to which the electric motor attaches through the intermediary of a starting switch positioned on the dash or other convenient location. By way of reducing noise to the minimum, the pump shaft is connected to the armature shaft of the motor through worm gearing and serves to impart the desired reciprocal motion to the pump plungers by virtue of a yoke connected to the pump shaft by a pair of pitmans operating on two wheels; the yoke operates in a pair of guides to the elimination of binding of the pump plungers.

The motor is more than ordinarily compact and at a speed of 3,000 revolutions a minute which it attaines when operating under ordinary conditions on a six-volt circuit, develops 1/7th horsepower; the current consumed is 20 amperes. Lubrication of the motor is by means of orthodox oil cups and the pump is provided with an oil-tight casing for the retention of the lubricant. The device is so compact that it is contained in a neatly enameled pressed steel box measuring but 8 x 10 inches and 9 inches high which looks like an ordinary tool box and which as a consequence and for want of a better position assumes the same position on the running board.

The pump is not only recommended by the manufacturer as a solution of the problem of quick and easy tire inflation, but also as an auxiliary pump for use in connection with the compressed air type of engine starter, and its usefulness in this connection will at once be apparent to those who have to do with air starters. The device is supplied with a suitable length of armored double wire for making the connection to the battery, 12 feet of five-ply air hose fitted with an air cock and a pressure gauge, switch and fuse.

Illuminating Gas in Lieu of Gasolene.

That the ordinary gasolene engine is in a measure omnivorous—that for temporary purposes where efficiency is not desired it can be made to run on gasolene or natural gas or kerosene or alcohol with but slight alteration—is being put to very good account by at least one big Detroit automobile plant—namely, the Ford company. For some time past, Ford engines have been "run in" on artificial gas instead of on gasolene, the requisite apparatus for the purpose having been developed by the Detroit City Gas Co., which is a subsidiary of the American Light & Traction Co. The apparatus is nothing more or less than a suitably constructed mixing valve, and it is estimated that in addition to saving a really great amount of money the use of gas instead of gasolene for the purpose of preliminary testing also has a beneficial effect in that it reduces the demand for the usual fuel even if only by a slight amount.

That the amount may be more than slight, however, is revealed by the fact that some 150,000 engines will be turned out by the Ford company during the year and each ordinarily is run upwards of an hour "on the blocks" before a final test is made and the engine is placed in a chassis. The same plan of employing city gas for preliminary "running in" also is used in some of the large British factories, and its advantages may be appreciated by the statement of the head of one of them that at least $5,000 a year is saved by the proceeding. In the factory in question, it is estimated that an amount of gas necessary to run an engine as long as it ordinarily would run on two gallons of "petrol," at 25 cents a gallon, costs just 8 cents.

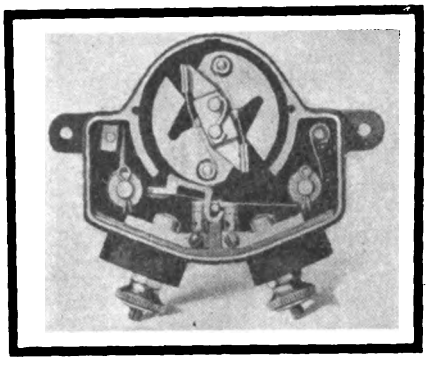
ELECTRICALLY LIGHTING AND STARTING THE CAR

The Analogy Between Accidents and Neglect and Its Bearing on the Condition of the Apparatus—Value of Truthfulness in Dealing With Troubles—Features and Care of New Westinghouse System Made Plain.

(This is the twentieth of a series of articles designed to make clear the electric lighting and engine starting systems in use and to render easier their care and repair by the dealer and owner alike.)

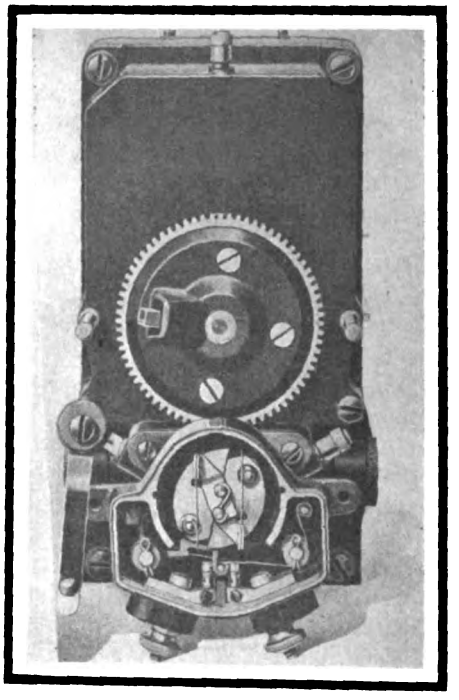
Once upon a time, as the fairy tales say, though this is no fairy tale, a man called in a surgeon to set a broken leg; he said he had suffered no accident; just found himself that way. So the medico put one part of him in splints and the whole of him in the psychopathic pard of the hospital. Which, of course, is an old, old story, but it is a good one, nevertheless, and like, all good ones, it bears telling twice, particularly inasmuch as it has a point that may illuminate other and somewhat similar matters.



COMBINED MAGNETO AND GENERATOR

Suppose, for instance, that an owner appears at his dealer's place of business with an electric lighting and engine starting system that refuses to work. He insists that he has had no accident; that "he just found it that way." The dealer or the repair man knows that if he did "just find it that way" there must be a very good reason for it. No lighting and starting system "lies down" for no cause at all. The days of such things are past.

It is certain that the man with the fractured femur figured in an accident of some sort; it is just as certain that the owner of the starting system would not deliberately stick a screwdriver into the works—for fun. Ergo: He must have had an accident of some sort, and it matters not a whit whether it was the result of physical impact or whether it was automatic and merely the result of plain neglect. The net result remains the same in either case. All of which assumes, of course, the apparatus was in perfect condition when the owner received it and that it was properly adjusted and fitted.

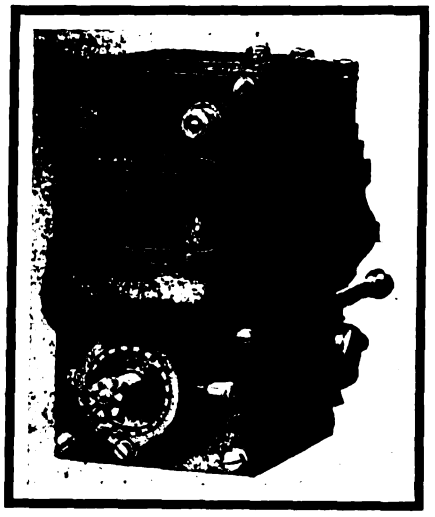


Bad Effect of Evasive Replies.

There is a conceivable reason for the reticence of the man with the broken leg, as his incarceration behind the walls of the psychopathic ward makes plain. (It also makes plain the reason for the broken leg.) His unwillingness to make public his failing for the cup that cheers is understandable. Also, he may not remember the accident that "laid him low." But the episode of the owner of the indisposed electric lighting and engine starting system is, as Monty Glass says in the satevepost, "something else again." Just why he should persist that he not only has had no accident but that he has "taken the best of care of the equipment" when the condition of the equipment itself belies him, is past reasonable understanding, if cognizance is taken of the uncontrovertible truth that the dealer is the owner's friend—that he wants to help the owner out of his difficulties if for no other reason than that it reflects to his own good credit.

ADVANCE POSITION OF BREAKER

If the owner affects ignorance of accident in the hope of "getting into" the dealer for repair work or replacements that legitimately ought to be paid for, his is a case of mistaken and misdirected efforts toward economy; it is unfair toward himself and unfair toward the dealer; it places them both in a wrong light. Rather than dispute the word of the owner, and thereby gain his ill will, the dealer must do the work and foot the bill uncomplainingly, knowing all the time that neither he nor the apparatus is at fault.



CIRCUIT BREAKING MECHANISM

If, on the other hand, diplomacy will draw from the owner a statement of the facts leading up to the trouble, both will be benefited eventually. The dealer will know exactly where to look for the trouble without needlessly taking the equipment down and thereby increasing the ultimate expense that must be borne by either one or the other and, what is even more to the point, he will have a foundation upon which to base instructions for future care of the apparatus. Which is as it should be.

But if the owner still persists in the statement that neither accident or neglect is responsible for the break-down, when manifestly such is not the case, he hits directly at himself. He increases the amount of work the dealer must do to get at the root of the evil, runs up the bill for time that the dealer is quite likely to hold against him and places himself in a position where his veracity on other matters may be ques-

Digitized by Google

tioned. It must be admitted that there are cases where electrical equipment just naturally "quits" through no fault of the owner whatsoever, though such cases are so scarce as to be the exception rather than the rule; to put it even more strongly, they are exceptionally scarce. Generally, troubles can be traced to neglect, for as a rule, electrical equipment is so placed on the chassis that ordinary accidents such as slight collisions will not harm it and nothing short of a real disaster will place it hors de combat. Hence, very little illumination is required to make plain that the owner's best course in any event is to make a confidant of his dealer—

REAR VIEW MAGNETO GENERATOR

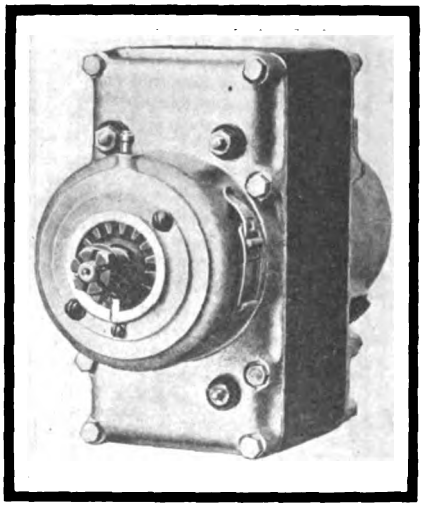
to tell him exactly "what's what," and his opinion of why it should be so.

When such a course is followed, the dealer is enabled, nine times out of ten, to put his finger directly on the offending part without any preliminary feeling around and without waste of time. And it gives the dealer an opportunity to set the owner's feet in the right path so that future snags can be sighted and passed by safely. It gives him an opportunity to make plain such passages in the maker's instruction book that may have been obscured and to supplement such information with his own experience in dealing with the troubles that are most likely to develop and his manner of averting them.

Simplicity Despite Apparent Complexity.

All of which assumes, of course, that the dealer is "wise" to the system with which his cars are equipped, and in the light of the present the assumption is a perfectly fair one. It can be said with a great deal more truth now than it could have been said a year ago that the average dealer is as well equipped to "doctor" his electric lighting and engine starting systems, mentally and physically, as he is to care for the rest of the car. The principal reason for the change is that all such systems are simple in principle, which fact has been reiterated many times in the nineteen preceding articles treating of the same subject which have appeared in Motor World. And the secondary reason is that that knowledge apparently at last has had time to seep in.

That a real degree of simplicity can and does exist, even where the more or less complicated functions of an ignition generator and a lighting dynamo are combined in a single instrument, is revealed by the accompanying illustrations of the newest Westinghouse equipment of the kind, which show an unusually compact combined magneto and generator in which there are to be found a number of features which are exclusive. Quite as a matter of course, the equipment also includes a starting motor, though there is little of the innovation in that part of the equipment. As either lighting alone, or lighting and ignition, or lighting, starting and ignition can be supplied in one system, and as the generating unit remains the same in either, except for the addition of circuit breaker mechanism, etc., for ignition, description of the combined ignition, lighting and starting system will suffice for all.



Benefits of Slow-Speed Generators.

In appearance, the generating unit is compact, as may be judged by the accompanying picture, and is completely enclosed to make it impervious alike to dirt and moisture. Furthermore, it is peculiar in that it is designed to operate at slow speed—crankshaft speed in the case of the four-cylinder instrument and 1½ times crankshaft speed for the "six"—which, of course, is necessitated by the fact that it is direct connected after the manner of the ordinary magneto. That is to say, it is driven by a straight-through shaft from the timing gear train in the orthodox manner.

The use of a machine of the type, it is pointed out, has several important advantages, not the least of which is that the height of the center of the shaft is the same as the corresponding height in the ordinary magneto. Thus the combined instrument may be substituted for the other with the minimum necessary amount of change; it is easily mounted and is light in weight; its slow speed, coupled with the method of constructing the armature, effectually precludes the possibility of centrifugal force loosening the windings.

Despite the slow speed at which the armature operates, the capacity of the generator has been arranged to be ample to carry the lighting load without drawing on the battery for power during the time the engine is in operation. When the engine is idle, power is drawn from the battery, of course, just as it is in any other system. The generator is of the straight dynamo type and therefore is devoid of permanent magnets; self-regulation is an inherent feature of construction, there being no outside relays or solenoids or other devices employed. Regulation is effected by connecting the generator to the battery through a reversed compound field winding. Current for the lights does not pass through this field, however, the result being that as additional lights are turned on the current increment increases automatically to supply them.

The operation of the generator naturally is controlled by the automatic cut-out, which, in the larger of the two sizes of

WESTINGHOUSE STARTING MOTOR

generators, connects the battery and the generator at about 325 revolutions a minute and disconnects them when the speed drops to about 225 revolutions a minute, these two speeds corresponding to about 10 and seven miles per hour, respectively, in the average four-cylinder car. For the smaller generator, the cut-out operates at 375 and 275 revolutions, for "in" and "out," respectively, the difference in speed in either case being sufficient to obviate the continuous operation of the device at critical speeds.

Characteristics of Current Supply.

Hence, with the battery connected to the generator at 325 revolutions a minute, for the larger instrument, the current rises very rapidly with the speed until a value of from 5 to 7 amperes is obtained, if the lamps are not burning. Above this value, the charging current increases very slowly in proportion to the increase in engine speed, though in no case can it rise to the point where the charging current becomes excessive. If, with the generator charging the battery, the lamps are turned on, the output of the machine automatically is increased to care for the lighting load without disturbing the charging current and without drawing on

Digitized by Google

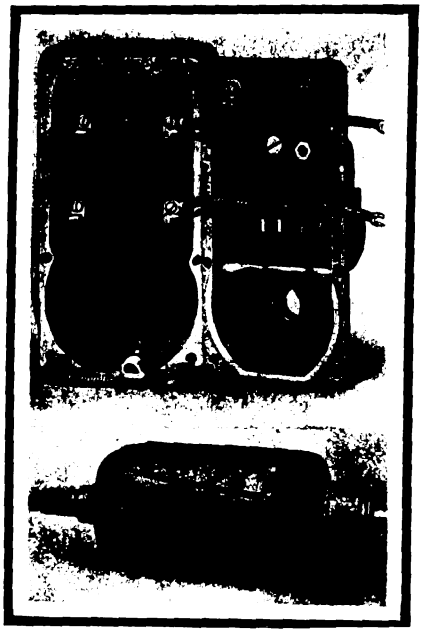
the battery at normal speeds. Of course, at low speeds, the battery must be expected to furnish part of the lighting load for that is one of its functions.

The automatic cut-out is of the usual electro-magnetic type and operates to close the circuit between the generator and the battery immediately the output of the former exceeds the output of the latter. When the engine speed is slowed down until the generator output is less than the battery output the reversal of the current through the cut-out coils operates to open the switch, thus preventing the battery discharging itself through the generator. The action is entirely automatic and the device is so constructed that it need never be touched from one season's end to the next.

Advantage of Twin Breaker Contacts.

The construction of the generator itself, barring the circuit breaking mechanism of the ignition portion, is orthodox in pattern. The wiring is treated with heat and moisture-resisting paint and virtually is a solid mass that cannot be harmed except in the case of disastrous accident. The armature is of the laminated drum-wound type and is especially treated to withstand temperatures up to 250 degrees Fahr.

In those types of instruments in which a source of current for ignition also is supplied, the system is a true dual one. Which is to say, the battery represents an individual source of supply and operates through the same interrupter and coil as does the generator. The most unusual portion of the mechanism is in the form and construction of the circuit breaking apparatus, which, as may be seen by the accompanying illustrations, includes two contacts instead of the one which usually serves. These two contacts are placed in series with each other, the theory being that the voltage, and consequently the sparking, at the individual points thus is greatly reduced.



Unusual Feature in Automatic Advance.

The interrupting mechanism also is unusual in that it is arranged to maintain the period of contact practically constant regardless of speed; at the same time, the time of ignition automatically is advanced as the speed of the engine increases, the action of centrifugal force on two movable weights being relied upon to create this feature. The distributer is of the usual magneto type, but has been especially designed so that the body portion can be put in place without interfering with the contact brush and without the necessity for special tools. The body portion is formed of a highly insulating heat resisting composition that will not soften under heat. The coil for stepping up the voltage to high tension is of the usual dash type except that the core is constructed of silicon steel to increase its efficiency and permit the generation of unusually hot sparks.

The starting motor of the Westinghouse system, like very nearly every other starting motor, is of the familiar series wound type in which the torque increases with the load up to the stalling point. And like all other starting motors, its care can be expressed in the words: "Keep it clean." Individual instruction in the care of the motor is the same as for the care of the generator, except that, naturally, the motor will not require as much attention as will the generator for the reason that it is in use but a small part of the time.

Accessibility of Generator's "Insides."

Despite the apparent complication added

WESTINGHOUSE GENERATOR VITALS

by the ignition apparatus in the Westinghouse generator, it is no more difficult to get at its "insides" for cleaning and to take care of it in general than it is to get into the average generator not equipped to supply ignition sparks. As may be seen by the accompanying picture, the vitals may be exposed by removing six screws when the whole armature, brushes and all, can be removed intact. Obviously, however, such drastic treatment will not be necessary, except at long intervals. In the mean time, it is a comparatively simple matter to clean the commutator by removing the brushes and covering their ends with tiny squares of No. 00 sandpaper cut to fit and replacing them. Then if the engine is started and permitted to run for, say, a couple of minutes that is all that will be required. Needless to add, the interrupter and distributer need be touched not more than are the same parts of the ordinary magneto, which is never; they are constructed to operate indefinitely without any attention whatsoever.

To get at the "vitals" of the starting motor, which always may be taken to mean the commutator and the brushes, is even simpler than in the case of the generator. It merely requires that a metal strap be removed, the unlatching of a catch serving to loosen it; the arrangement is clearly shown in the accompanying illustration of the motor. In the picture, there also is apparent a tiny oil fixture at the top, and the size of the fixture may be taken as an indication of the amount of lubricant that should be applied. Not more than a few drops of fine oil at a time ever should be used; and the applications should not be made more frequently than once every 500 miles or so.

Fuse Block as a Trouble Finder.

As the Westinghouse system is equipped with a fuse block and fuses, it follows, as often has been made plain before, that the first place to look for trouble in the event of failures either in the lighting or the starting circuit, is in the fuses. Obviously, if the fuses are burned out, current cannot be passed, and the mere fact that a fuse is burned out may be taken to indicate a short circuit somewhere in the line, the exact location being marked by the fuse itself. Needless to add, the short circuit always must be located before a new fuse is inserted for the burned out one. Also contained within the fuse block and placed between the fuses, there is a small resistance coil, or equalizer, the duty of which is to reduce the amount of current fed to the side lamps when the head lamps are not lighted. If unprotected in this way, excess current might burn them out.

Care Needed in Choosing Lamps.

Reducing the possibility of current leakage to the minimum, the system is designed to operate on six volts, which voltage has been chosen by reason of its widespread use and the comparative ease of obtaining lamp replacements. In this respect, it behooves every owner of an electric lighting system to ascertain the style of base fitted to his lamps before purchasing "spares." As a rule, the Ediswan, or bayonet, base is employed, this type having been recommended by the Society of Automobile Engineers. It differs from the Edison base, such as commonly is used for house and store lighting in that it has no screw threads. Hence, there is an important difference between the two types; one cannot be made to fit a socket constructed to fit the other, which fact must be borne in mind if inconvenience on the road in trying to make one kind of lamp fit another kind of a socket is to be avoided.

This is the time for Progressive Dealers to post themselves on

The FEPS CARBURETOR

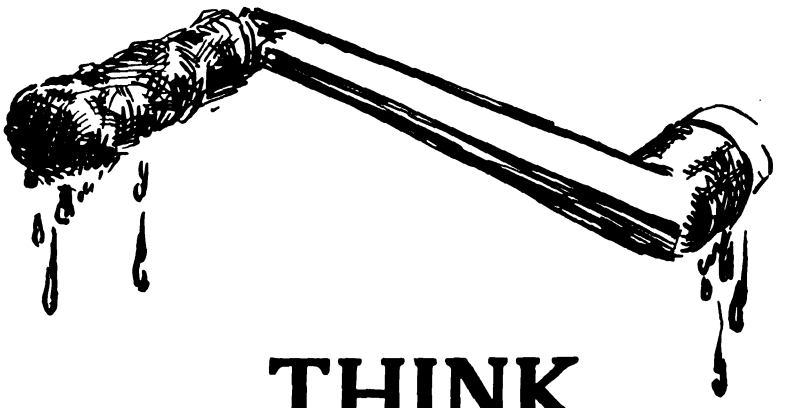
Very soon every worth-while dealer in the country will be clamoring for the Feps. The shrewd, far-sighted ones are testing and lining up NOW.

There is no question of the world-wide success of this wonderful carburetor. In the very few months since its advent on the market it has already taken its position in the front rank of automobile accessories.

Every Feps Carburetor sold, sells two more. This is experience, not optimistic prophecy.

The Feps fills a most imperative need. It involves an entirely new principle of auxiliary air supply, producing a marvelous increase in flexibility; an absolutely perfect mixture at all speeds, with an increase of 25% to 50% in miles per gallon of fuel on ANY car. It contains no springs, no balls, no cams, no reeds, and all adjustments once made are permanent. It gives a perfect mixture with any grade of gasoline and is unaffected by altitude, weather conditions or change of temperature. It also embodies a never-failing quick starting device.

Get ready for the Spring season now and try the Feps at our risk. Be prepared for the demand that is simply leaping ahead. It means big business and big profits for you.



See the Feps at the Boston Show, Mechanics Bldg.—Space E-426

What Are You Measuring— Speed or Magnetic Influence?

ACCURACY demands that you measure speed by something definitely related to speed. Speed of rotation and centrifugal force are inseparably related. One is impossible without the other. Every speed has a definite, unvarying value of centrifugal force. Every centrifugal force has a definite, unvarying value of speed. One means the other—both mean the same.

The JONES SPEEDOMETER

measures speed by centrifugal force—the unvarying, scientific relation accounts for the permanent accuracy of our instruments.

Magnetic instruments are not permanently accurate. Magnetism has absolutely no relation to speed. Each can be had without the other. Neither is connected or related to measure the other. Magnetic speedometers convert speed into magnetic energy, magnetic energy into movement of the dial. Every conversion of energy involves loss. Every magnetic instrument is disturbed and rendered inaccurate by the temperature, electrical and magnetic disturbances in the car.

The Jones Speedometer is geared-to-the-truth. It is not actuated or controlled—excited or impelled—induced or swayed by anything but speed. Centrifugal force always tells the speed truth.

What the Owners Say about THE HAVERS SIX

"To us our trip from Rochester to Los Angeles was a remarkable one and long to be remembered. Our tires were in excellent shape while two of them still held Rochester air after seven weeks of hard travel. For the car we have only the warmest of praise and genuine gratitude, for it carried us faithfully through thick and thin where so many other machines we passed had fallen down."

W. E. PALLISER,
Rochester, N. Y.

"My Havers Six has been in continual operation since I purchased it last April and after fourteen years of experience in owning and driving many motor cars, I am glad to tell you that the Havers is the most satisfactory car I know."

JEREMIAH CAMPBELL,
American Wharf, Gloucester, Mass.

"I consider the Havers the best doctors' car built. It is always ready, starting in an instant and never failing on the road. The car has never given me a minute's trouble and the expense for keeping up the car is very small, costing me but $12.00 per thousand miles."

DR. C. S. NOBLE,
Seattle, Wash.

The satisfied owner is the strongest asset any motor car manufacturer can possibly possess.

This asset is the secret of the success and the growth of the Havers Six.

It's the reason the first Havers Dealers are still Havers Dealers.

It's the reason we want more dealers. The satisfied owner has found the Havers Six so high in construction,—so low in upkeep,—that we are forced into a larger plant and a doubled capacity.

Here are a few unsolicited letters from Havers owners.

Sorry the space is so limited for we have scores of others we would like to show, all ending in that same grand chorus,—"Satisfied Havers Owner."

The Havers Six is big, powerful, graceful,—so perfectly balanced that it averages sixteen miles to the gallon of fuel.

And remember, it is not a first-year car,—an unknown quantity—but backed by the only test that is really a test,—years of steady grind and service.

Write today for further particulars.

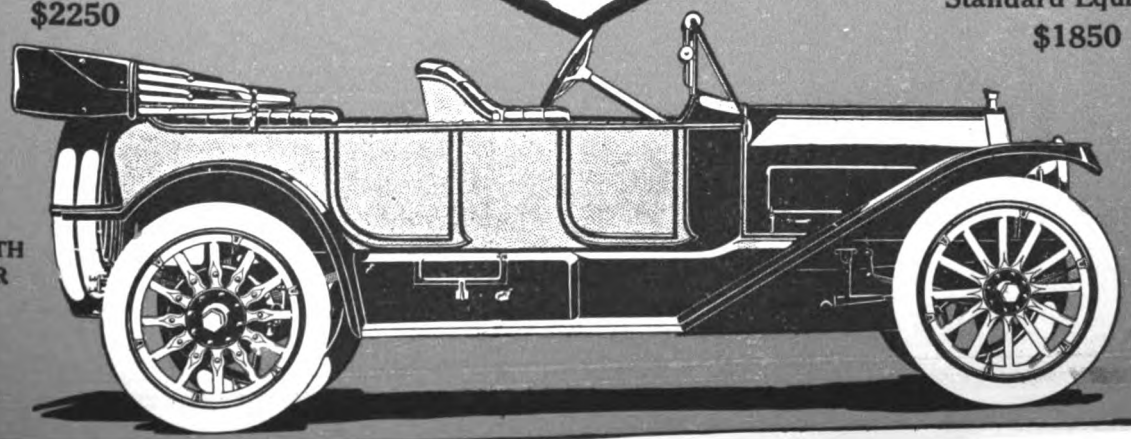
"There has been a great deal of favorable comment caused by the perfect showing of my roadster in the trip from Dallas to the beach races at Galveston. There were about twenty cars in the run and all but two higher powered cars than ours. We had over one hundred miles of 'crawling sand,' practically without bottom. Time and again we stopped to allow other cars to fill their radiators and allow their cars to cool off while we didn't boil water on the trip, although we carried about 100 pounds of luggage and three people in the roadster. In the hardest sand pull I passed four higher powered cars."

R. A. OBERCHAIN,
Hunter & Oberchain, Dallas, Texas.

"It is the eighth car I have owned, and I can truthfully say it is absolutely the best in every respect."

THOS. GERRITY,
M. Knoedler & Co., 556 Fifth Ave., New York.

"It is possible that the future will develop a better car, but now give me a Havers 'Six-44.'"



E. K. STRETCH,
615 Traphagen St., West Hoboken, N. J.

"AUTO-LITER"

"Auto-Lite" System Combines Simplicity and Efficiency

Scientifically correct, combining a maximum of efficiency with the simplest construction, the "Auto-Lite" electric starter and lighter is the logical motor car equipment today. It has been proved positive in action in thousands of trials.

The "Auto-Lite" system consists of two mechanically independent units. There is nothing to get out of order. It operates on a six-volt current, and thus excessive battery weight and other objectionable features are eliminated.

The starter turns the engine until an explosion occurs in the cylinders. Then it automatically disengages itself. The lighting system has given perfect service for many seasons.

We have an exceptionally attractive proposition for dealers. Write for catalogue and descriptive literature today.

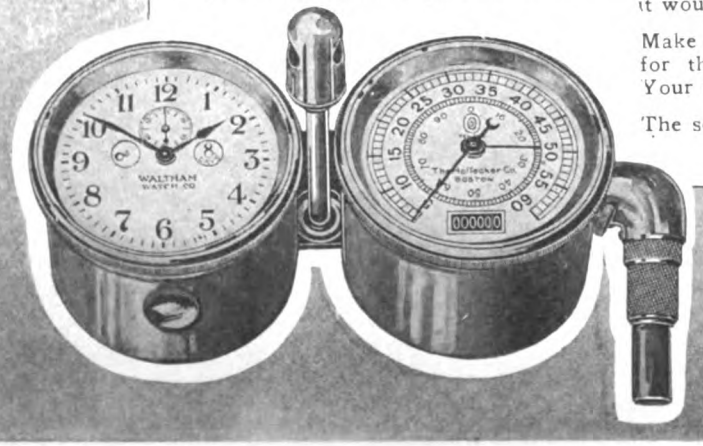
HOFFECKER SPEEDOMETERS

HOFFECKER IS TO A SPEEDOMETER WHAT WALTHAM IS TO A TIMEPIECE

To Automobile Engineers

With Speedometer Problems Which Involve Special Design to Conform With Certain Car Design.

Standard Equipment o



Our engineering department is made up of experts, fitted by technical education and training to help you in the work of getting the right recording instruments on the right cars. The brains, ability, and equipment are right here.

This feature of our business is specialized. It is part of our organization. We have made a study of co-operative design and so the service we render is particularly valuable to car designers.

This department is yours to command. Here we will co-operate with you in the designing of driving equipment and any out-of-ordinary form of installation to meet your own special requirements—and we will do it as quickly and perhaps better than it would be done elsewhere.

Make our designing department part of yours for the time being. Combine these forces. Your results will be positive and correct.

The service involves no cost to you.

WALTHAM TIMEPIECES

HOFFECKER IS TO A SPEEDOMETER WHAT WALTHAM IS TO A TIMEPIECE

DEALERS

The Entire National Car Output is Coming Through Hoffecker-Waltham Equipped. What is the Answer?

1913 National Car Output

The quality of the National car is established and recognized, for its designers have bought parts and accessories of quality to guarantee service from tires to top. They buy as well as manufacture, integrity of product.

They selected Hoffecker speedometers and Waltham time pieces, relying on them to add still more to National prestige. Quality came first—price was secondary. We furnished the ideal combination.

When you specify the Hoffecker-Waltham combination on the cars you sell, then you serve your customers well. You assure them of another high grade standard feature—one they know about and want.

Always bear in mind that your customer or your car manufacturer can pay more for a speedometer or time piece—but no amount of money can buy more accuracy and durability than are inherent in our sensibly advertised, splendidly built products.

If You Use Cast Iron Valves

This reinforced head will give you greater strength and longer service than any other type of cast iron head

Cast Iron Head

It resists the tendency of the heat to warp it out of shape.

The seat of the valve does not pit easily and will run for months without regrinding.

Strong Steel Disc

The saucer shaped disc reinforces the cast iron giving the head the necessary strength to stand the severe service.

It does away with the frequent breakage common to all cast iron valves.

CROSS SECTION OF VALVE HEAD
The iron is cast onto the disc and stem by a special process making disc, head and stem one solid piece.

The unique features in the construction of this valve are the result of long experience in valve making and careful study of the conditions under which the valve operates.

The valve is given two scientific heat treatments under the direction of an expert metallurgist and automobile engineer.

Every step in its manufacture is supervised by an organization which makes over 2,000,000 gas engine valves per year.

This valve can be made in a design to suit your motor.

Send your blue prints for quotation.

METALLURGIQUE

Will Sell in Your Community

DEALERS

The European Car Idea is Growing in America — is your Ear to the Ground

Dealers who read this announcement will do well to consider the advisability of forming an agency connection with us for handling the Metallurgique—a car for the classes—a distinct and exclusive product, sensational in body design, equipment and appointment. These cars are limited in quantity—unlimited in quality.

From the radiator of unique design to the end of the rear springs—from tire to top, this powerful, unbreakable car offers value in service away beyond that of any other European or any American product. There is a selling argument in every item from steering knuckle to engine.

Luxury of appointments are regal—beauty of design and finish supreme on both sides of the water. Service unlimited.

The Metallurgique is the only logical car for men of wealth and position who desire an equipment that will make all others appear commonplaec.

Let us help you find and please and sell to those in this class. As a preliminary, write and get the literature and terms. We can throw more light on the Metallurgique, Europe's choicest product.

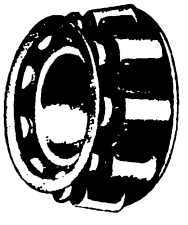
Hunting the Quarter Thousandth of an Inch



No. 1 A Tale of Sixteen Traps

¶ Every tapered roller of the Timken Bearing runs the gauntlet of the sixteen traps!

¶ Trap No. 1 catches one size only. A roller one quarter of the thousandth part of an inch (.00025") smaller than that size can't spring trap No. 1. But trap No. 2 is sure to get it! Trap No. 3 finds the next smaller size; and so on, by quarters of thousandths of an inch to trap No. 16.

¶ The traps lie 'round the disc of a Timken-made machine that sorts the rollers into eighteen lots. First lot too large; last lot too small; sixteen in between. All the sixteen are right, and each lot varies from the next by one fourth the thousandth of an inch. Each lot, too, goes into a separate canister which is sealed until used. So a workman who assembles the rollers on the cone *knows*, when he opens a canister, that every roller in it is the size of every other roller.

Timken Tapered  **Roller Bearing**

Reason for the Traps

¶ Thus you can be certain that each one of the rollers in a Timken Bearing takes its share of the load—no more, no less. There is no 'high' roller to stand extra strain and get extra wear. There is no 'low' roller to loaf and throw its share of burden on the neighbors.

¶ There are roller gauging machines in the Timken Plant to sort out every size of roller used in every size of the Timken Bearing. Sixteen sizes to each machine. And the sorting is done automatically by the sixteen traps. Frail human judgment is eliminated.

Gives an Added Value

¶ Time was when the gauging of Timken Rollers was left to human eyes and hands. Yet even in those days the unique Timken principle of tapered rollers revolving between a tapered cup and a tapered, two-ribbed cone gave a bearing that did what no other type of bearing could do.

¶ With the progress of the years such refinements in the making have added to the worth of right design an extra value in a still longer life of satisfactory service.

The Timken Roller Bearing Company

Canton, Ohio, U. S. A.

The only axle manufacturer licensed to make automobile axles equipped with Timken Roller Bearings is the Timken-Detroit Axle Company

This Ad. Deals with the Subject of Shortage of Sixes for 1913

FOR, OF COURSE, THERE'S GOING TO BE a shortage of Sixes. Nothing could be more certain—nothing is giving the trade more concern at this moment. Dealers are worried and prospective buyers are beginning to be.

THIS AD. IS PUBLISHED in all the principal newspapers east of the Mississippi, Sunday, February 23rd. Seven days from now is March 1st—then comes the deluge.

FOR PAST EXPERIENCE TEACHES us that with the coming of March comes also the tremendous spring demand. The condition that is, at the same time, the most welcome and yet the most dreaded by makers whose product, as ours, enjoys a ready sale.

WE WELCOME IT BECAUSE it means big business—and we dread it because we know it also means disappointment to many good customers—bitter disappointment to some.

IT ALWAYS HAS BEEN SO—it probably will continue to be so. Tardy buyers are bound to be disappointed. Yet among the tardy buyers are many good friends who have always depended upon this organization to furnish them automobiles of more advanced design, of a better quality and at a lower price than could be had elsewhere.

TARDY BUYERS ARE NOT TO BLAME for being tardy. Mostly they are too busy with other matters, or are unfamiliar with things automobile. Anyway, they are liable to believe there will be plenty of cars to go around.

PERHAPS THERE WILL BE—BUT there never has been, and those best competent to judge know that the shortage of the kind of cars you want will be greater this year than ever before.

GET THAT! THERE MAY BE plenty of cars. But there won't be plenty of Sixes, and there will be still less of the kind of Sixes that will measure up to the standard of the man who knows—and we are assuming that you are one of these.

WE ARE NOT INTERESTED so much in the man who doesn't know. We are not making cars to meet that demand.

BUT WE ARE VITALLY INTERESTED in those who do know. They are the readiest buyers of cars that do measure up to their standards—and the best customers afterward.

THAT'S WHY WE ARE PUBLISHING THIS AD—to warn those who know and who are going to insist on having a Six, that there is not only going to be a shortage of Sixes generally, but a discouraging shortage of Sixes of that kind.

LET US REPEAT—This ad. is only for those who know what does and what does not constitute a successful Six. Those, in short, who know what they want—want what they want—and who will not accept a substitute. And we repeat, we are assuming you are one of these.

NOW LET'S GET DOWN to brass tacks.

FIRST LET US SEE WHY there is a shortage of Sixes. Reason is simple—greater demand than possible supply. Why? Because buyers came to realize the superiority of Sixes sooner than most makers.

THE IMMEDIATE RESULT of our sensational announcement—aside from the impression it made on prospective buyers—was to upset all carefully made plans of competitors. There were conferences, meetings of the "Ways and Means Committees," and anxious discussions between directors and engineers. The problem was, how to meet the new conditions—how to meet the insistent demand for Sixes.

FOR YOU MUST KNOW that while all makers foresaw the conquest of Sixes in all cars of 40 horsepower or over, most of them agreed that, except in cars of the highest price (say, $4,000 and over), buyers would be willing to accept "Fours" for yet another season. There's where they miscalculated, and the matter had suddenly assumed a very serious aspect.

THE PROBLEM THAT CONFRONTED THEM was how to produce Sixes to meet the insistent demand. And most of them went about it by the shortest and most obvious route.

NOW GET THIS—IT'S VITAL. Demand always creates supply. The Six demand was no exception. It resulted in a supply of Sixes—but not the kind of Sixes you want if you know the difference between what constitutes a successful Six and the other kind. And we are assuming you do.

MANY CARS ARE OFFERED under the name of Sixes—but most of them are only converted Fours.

"WHAT IS A CONVERTED FOUR?" you ask. And we are glad you ask, because we know the answer. A "converted Four" is a Six that has been hurriedly produced to meet an unforseen demand, by the simple process of adding two to the Four the maker already had.

THAT'S SIMPLE, ISN'T IT? It's the obvious—in fact, the obviously obvious way to do it.

BUT "IT SIMPLY CAN'T BE DID." You can produce a "Six," but not a successful Six that way. There are engineering problems in a Six that do not arise in the designing or making of a Four. Space does not permit us to enter into this important matter in detail here, much as we should like to do so. For it is important—vitally important to the buyer.

WE HAVE, HOWEVER, TREATED THIS matter exhaustively in a little booklet, which we will be glad to send you, the title of which is "Two Added to Four Do Not Make a Six."

IF YOU WANT TO KNOW about Sixes so as to be able to choose intelligently, you'll find more real information in this booklet than you'll get elsewhere. And it's authentic. Without being too highly technical, its contents emanated from the engineer who knows, perhaps, a little more about designing Sixes than any other in this industry. He's the man who designed the Maxwell "50-6."

BETWEEN THE LINES we tell you wherein and why the Maxwell "50-6" is superior. But you are just as much interested in learning that as we are in telling you. Its perusal will be worth while—you'll be able to tell the average salesman more than he knows about Sixes, and once you've digested its contents, you will be able to tell, by **simply lifting the hood, which is a "converted Four" and which is a true Six—designed from the ground up as a Six.**

Digitized by Google

OR, TO PUT IT ANOTHER WAY; buyers learned the advantages of Sixes sooner than most makers thought they would. Makers knew all the time, but didn't think the average buyer was aware of it.

WE PLEAD GUILTY to having precipitated the trouble. And here's how it happened: in our advertisement announcing the sensational Maxwell "50-6" (then the Flanders "50-6") we said, "If You Are Paying More Than $1,200 for a Car, You Are Entitled to a Six."

AND WE TOLD YOU WHY. And you and all the rest of the automobile buying world understood—evidently; for a landslide followed immediately after. Buyers began to demand and to insist on Sixes in all cars from $1,200 upward. And as always happens, dealers echoed the demand of buyers.

NOW YOU'LL RECALL, WE DIDN'T say we had a Six at $1,200; but we did announce the five-passenger Maxwell "40-6" at $1,550 at the same time we announced the seven-passenger Maxwell "50-6" at $2,350. And we predicted that the man who knew would decide he would rather pay the difference and have a Six than have an obsolete "Four" at the lower price.

WELL, EVENTS PROVED that we were right. And it didn't take long, either. In fact it happened in a remarkably short space of time. Most makers were caught unawares. That's why we have termed it "an avalanche."

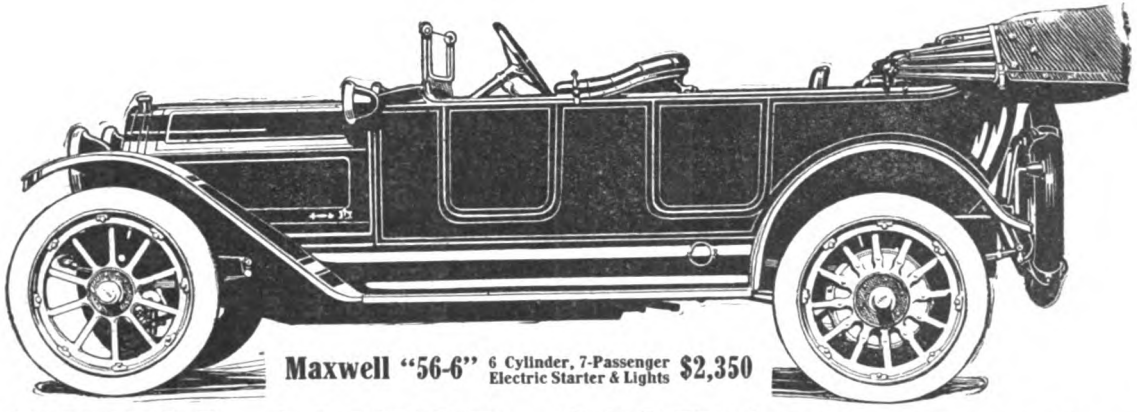
INCIDENTALLY, WE SUDDENLY BECAME very much disliked in the trade. We had committed the unpardonable sin of telling the buyer something that other makers protested was "none of his business." However, we will probably survive that. We're used to it.

WHAT WE ARE UP AGAINST—and the only thing that really matters to you or to us—is the fact that there aren't enough Sixes to go around. We know it. Everyone in the trade knows it. And we are telling you.

AND WHILE WE ARE TELLIN', LISTEN!—for here's something perhaps you didn't know.

MEANTIME, YOUR CHIEF CONCERN is how to get your Six, despite the shortage of Sixes generally, and especially of the type of Sixes you want—Sixes that have been designed by makers who believe in Sixes and who know how. That's your only concern.

ANSWER IS, GET IN LINE QUICKLY—see your local dealer and place your order, specifying delivery when you will want the car—and you will get it while others will be waiting and cussing as in years past because makers cannot make enough of the kind of cars that are in most demand.



YOU'VE NOTICED, DOUBTLESS, that we have said little in this Ad. about our own particular product—Maxwell Sixes. Reason is we don't need to. When, by a process of elimination, you have excluded from your consideration the converted Fours and other Sixes that do not come up to your standard, there will be few left to select from—and foremost and most desirable among these few will be the Maxwell "50-6."

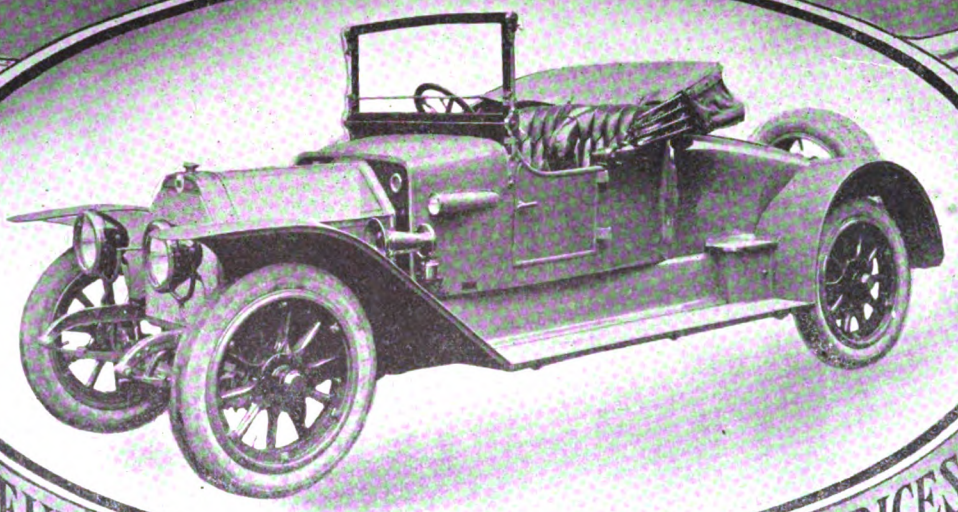
THE MAXWELL "50-6" is a car of such power, such beauty, such capacity and of such quality throughout, as you had expected to pay at least $4,000 for—and we contend it cannot be equaled even at that price.

BODY DESIGNED BY BRUCE OTT and already being copied by other makers. Motor designed by William Kelly, one of the earliest advocates of the Sixes and an engineer who is recognized by his contemporaries as one of the foremost, if not, indeed, the foremost authority on six-cylinder cars.

OUR PRICE ($2,350) is made possible only by our superior manufacturing facilities and the fact that we are the largest makers of Sixes.

IF YOU HAVEN'T SEEN and ridden in this magnificent car, you owe it to yourself to do so at once. There isn't a day to lose. Orders placed within the next ten days will be sure of delivery almost on the day specified. After that, we don't know. Each buyer will have to take his own chance.

Maxwell "56-6" 6 Cylinder, 7-Passenger Electric Starter & Lights $2,350



THE MAXWELL MOTOR COMPANY, Detroit, Michigan

MAXWELL BRANCHES:

New York, N. Y.	Chicago, Ill.	Detroit, Mich.	Pittsburgh, Pa.	Atlanta, Ga.	Denver, Colo.	Portland, Ore.

Philadelphia, Pa.	Minneapolis, Minn.	Dallas, Texas.	Des Moines, Ia.	Indianapolis, Ind.	Los Angeles, Cal.	

WARNING:—Dealers with good intent sometimes oversell their allotment, hoping by extra pressure on the factory to get a few more cars of the popular types. In the case of Maxwell sixes for 1913 this is dangerous. We have allotted to dealers (and there are over 1,000 Maxwell dealers) every six we can hope to make, even with our tremendous facilities. Buyers will do well, therefore, to insist on knowing how many sixes the local dealer has been allotted, and how many he has sold. Also, we are informed, some dealers are claiming to represent the new Maxwell line who have not been authorized. If in doubt, write us and we'll tell you frankly. Then place your order, pay a cash deposit to bind the sale, get a definite delivery date—and you are secure. Your car will be delivered within ten days of the date specified, if not on the exact date. But get the order in at once.

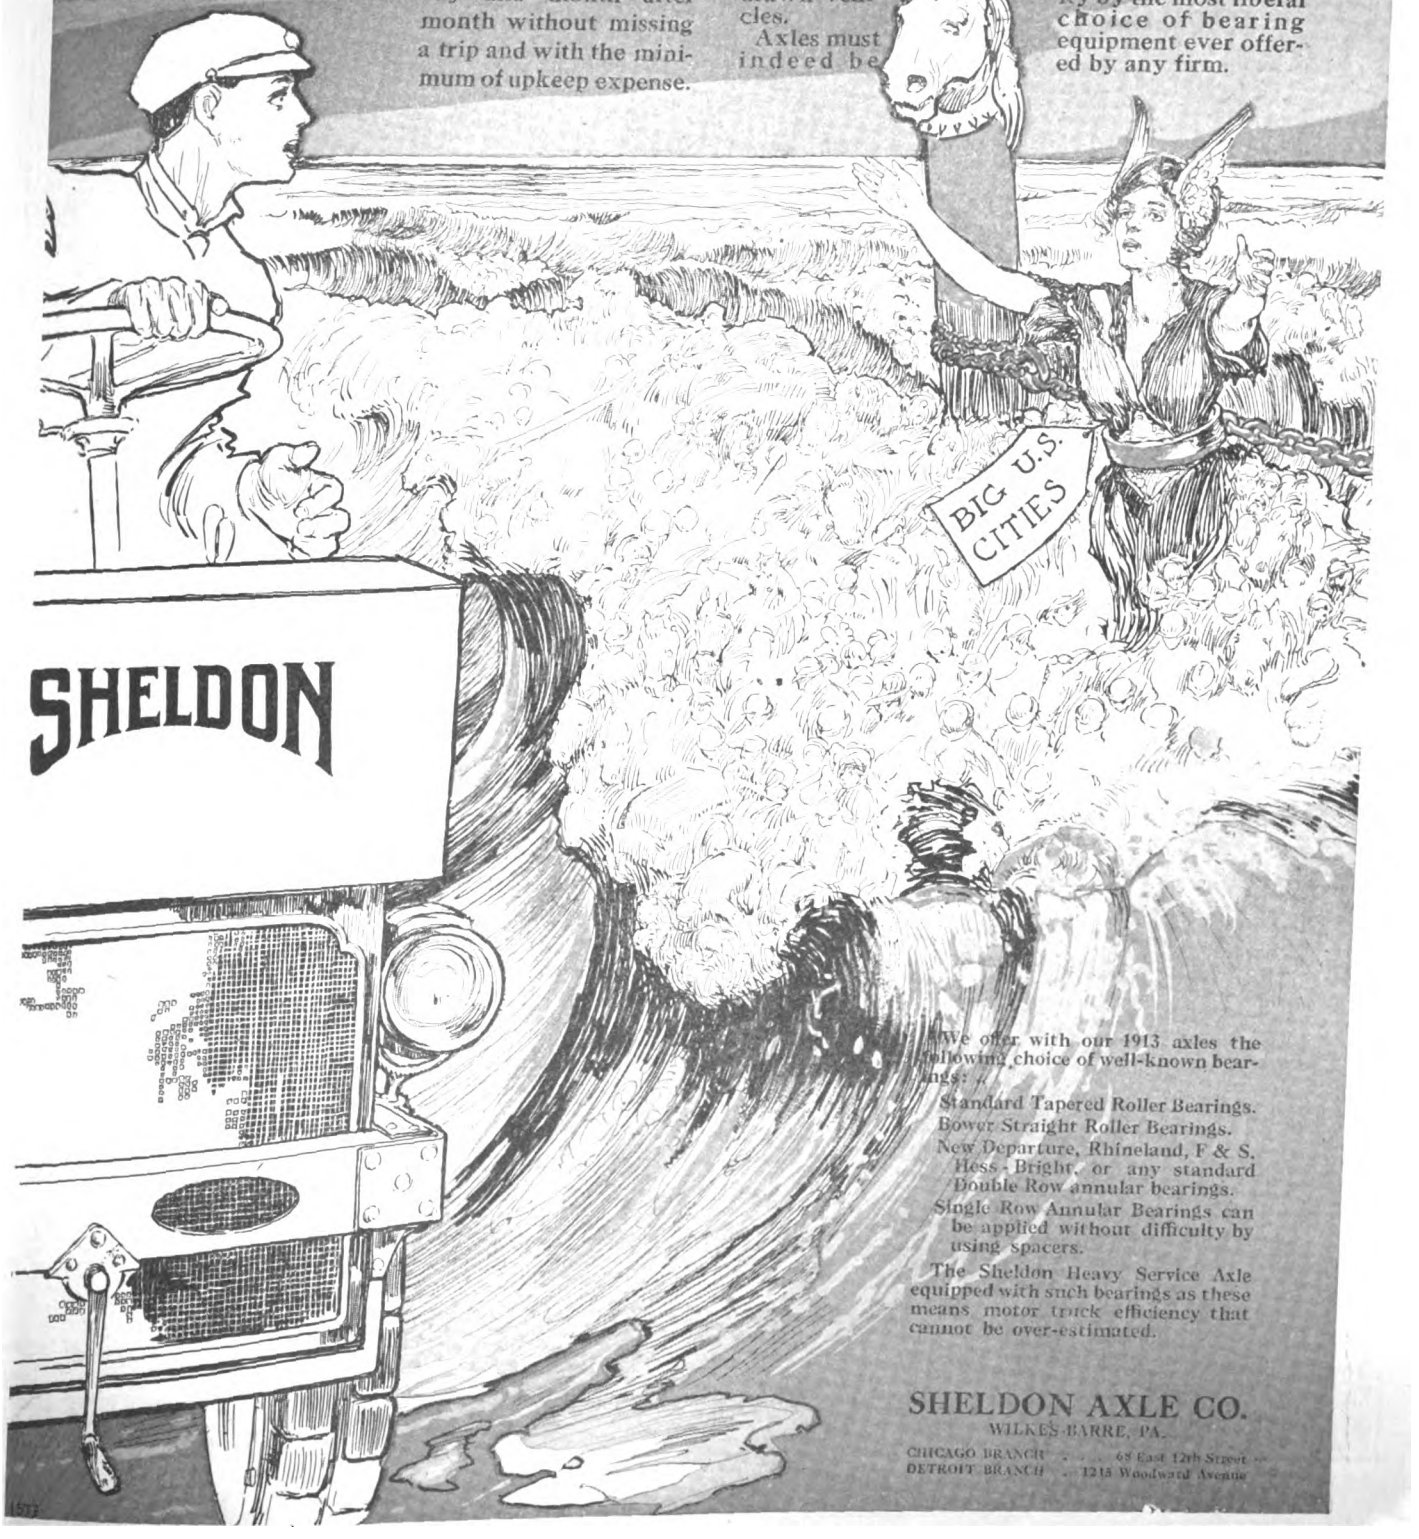
Almost Lost in the Tide of Traffic!!

SHELDON TO THE RESCUE



The substitution of motor trucks for horse delivery in our large cities has been made practicable by the flawless construction and the great serviceability of Sheldon Axles and Springs.

Wherever Sheldon Heavy Service Axles and Springs are used, you will find trucks making their deliveries day after day and month after month without missing a trip and with the minimum of upkeep expense.

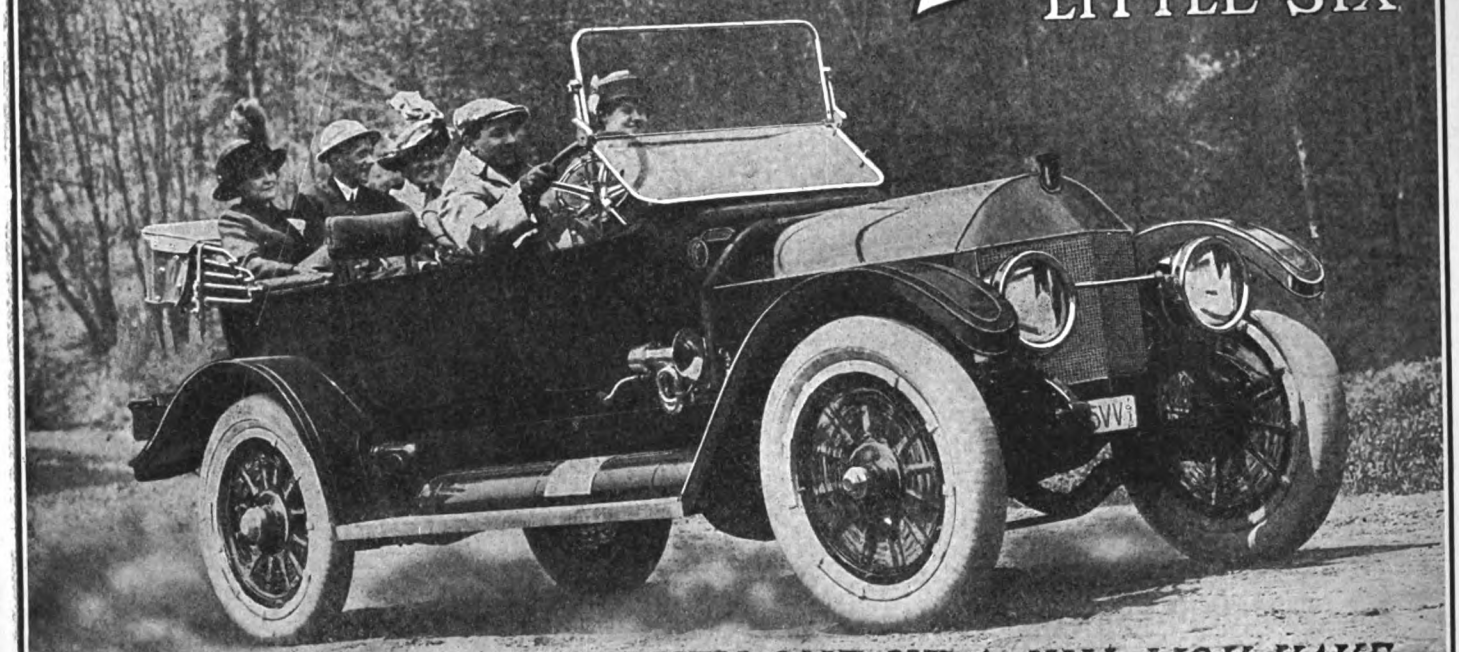
It is this reliability and high efficiency of Sheldon equipped trucks that have relieved the larger cities of our country from much of the congestion and disasters attending heavy delivery by horse-drawn vehicles.

Axles must indeed be well made and perfectly equipped to accomplish such a revolutionary feat.

The public is well acquainted with Sheldon design and construction, and we are now supplementing Sheldon quality by the most liberal choice of bearing equipment ever offered by any firm.

We offer with our 1913 axles the following choice of well-known bearings:

Standard Tapered Roller Bearings.
Bower Straight Roller Bearings.
New Departure, Rhineland, F & S, Hess-Bright, or any standard Double Row annular bearings.
Single Row Annular Bearings can be applied without difficulty by using spacers.



The Sheldon Heavy Service Axle equipped with such bearings as these means motor truck efficiency that cannot be over-estimated.

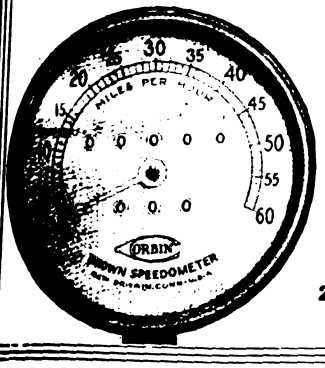
Another Feature that Contributes to the *Absolute* Accuracy of the

CORBIN-BROWN SPEEDOMETER



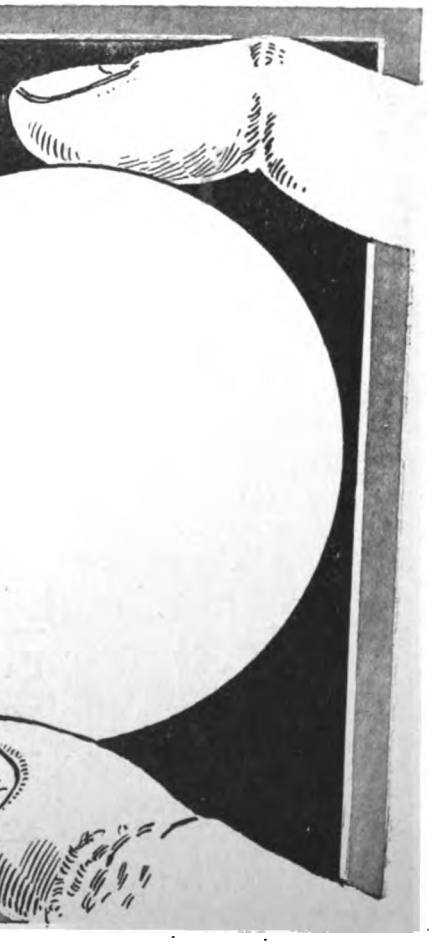
It is an unquestioned fact that the construction of the flexible shafting is responsible for much of the inaccuracy and unreliability of speedometers in general.

There is too much friction in the casing—or friction is minimized at the cost of durability.

The Corbin-Brown flexible shafting overcomes these faults.

It consists of a succession of eye-links and solid links as shown in illustration.

The solid link gives a smooth bearing thus minimizing friction and insuring smooth running.



The strength of these links makes breaking almost impossible. However, if perchance, one should break, the relacing with a new link is so simple a matter that anyone can do it.

Remember these facts about
Prest-O-Lite Exchange Service

When you turn in your empty Prest-O-Lite be sure to get a genuine Prest-O-Lite in exchange. Because Prest-O-Lite Service means more than merely giving you a fresh charge of gas.

In addition to this, ***Prest-O-Lite Service*** includes putting every cylinder that passes through our hands in perfect working order.

In many cases the actual cost of replenishing the solvent, regulating and refinishing the cylinder is more than the small exchange fee.

And on top of this, the owner of a genuine Prest-O-Lite has the privilege of having his empty cylinder, plus a small exchange fee, accepted without question as full payment for what is practically a new Prest-O-Lite, at any of our exchange agencies. When you get an imitation, or a Prest-O-Lite cylinder which some imitator has filled, do you get this service?

The user of genuine Prest-O-Lite pays nothing extra for this service. If you would protect your investment, be sure no one slips on an imitation for your genuine Prest-O-Lite.

Remember that no imitator ever stayed in business long enough to build up a satisfactory exchange service and that no imitator has ever stayed in business long enough to protect the customer's investment.

Mighty few wise dealers trifle with imitations of Prest-O-Lite now.

The Prest-O-Lite Co. 287 East South St. Indianapolis, Indiana

The Atwater Kent Ignition System

Time was when automobile engineers and the general motoring public thought they must equip their cars with a magneto. Today this idea is fast waning—in fact, it has been discarded by many of the foremost automobile engineers and discriminating motorists who are now demanding a more dependable source of current on their cars.

The increasing use of electric lighting and starting equipment necessitates an ignition system better than the magneto—a system producing a uniformly hot spark at low speeds as well as high—a system giving a hot starting spark with the motor at a standstill—a system that is simple in principle and mechanism as well as in operation, and reasonable in initial and maintenance cost—in brief, a system of ignition that will measure up to the highest requirements of the most modern automobile practice.

Such is the Atwater Kent Ignition System—embodying the best features of both magneto and battery, without the weaknesses of either.

Remember the Atwater Kent System can be easily and quickly installed on any standard make of motor, new or old, without the price of a magneto.

If you have an unsatisfactory magneto, or if your motor is not equipped with a half time shaft, you can use the Atwater Kent System by means of our magneto gear mounting, the cost of which is nominal.

In addition to our standard Type F System, we are marketing a new model —Silent Type K with automatic spark control and insulated primary circuit.

Whether you are interested in motor cars as manufacturer, dealer, owner, or prospective buyer, you should have a copy of our booklet "D." It covers the subject authoritatively and thoroughly and even the most experienced will find it interesting reading.

"SOSS" INVISIBLE AUTOMOBILE HINGES

The detachable and water-tight features of our No. 119 Automobile Door Hinge, in addition to the interlocking action, makes this the best, as well as the strongest constructed concealed hinge on the market. Made in two parts, it is easily attached and detached. Water will not reach the wood of the body through the hinge. When installed holds the door rigid and at the same time has a perfectly smooth action.

Send now for catalog and full particulars.

If You Need Motor Lamps
You Need This Catalog

We want you to write for the Solar Catalog before you decide on your motor lamps, for this is the most complete line of lamps on the market. Solar Lamps have been preferred by most motorists for the past fourteen years because of their brilliancy, their style, their strength and their several exclusive advantages —their special short focus lead glass lens mirror reflectors—the patented double ray light projection (in the Solarclipse), giving two distinct fields of light, for city and country use—the new black finish, the only such finish that's proof against heat and moisture—and other features that other lamps lack.

To fail to see Solars before you buy is to fail to include in your consideration the very finest lamps in existence. Solars are made for oil, electricity, gas and in combination, for pleasure cars, motor trucks, carriages, motor boats and airships. Write for catalog now—while you think of it. (136)

All Acknowledge the Necessity of

Weed Chains

In one of those friendly after-luncheon, get-together parties at a well known city club, eleven men drifted on to *the subject of the dangers of skidding.* With a single exception each of the eleven owned an automobile, and each had a *skidding experience* to relate, and each felt that *his particular predicament* was the most sensational and startling.

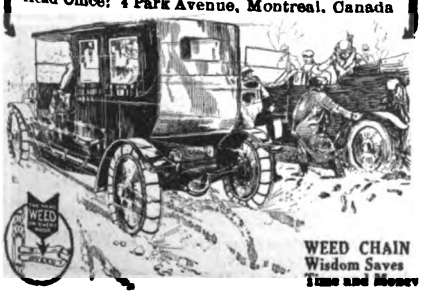
While nearly all had experimented with the various so-called anti-skid tires, and acknowledged their possible advantages when new—yet when it came right down to "Brass Tacks," there wasn't a single one in the crowd but admitted that for *sure results*, for the **absolute elimination** of every possibility of skidding, **nothing even approximated Weed Chains**, and nothing took their place. Every one of the ten owners carried at least one pair of Weed Chains in his car.

Go where you will, put the question to any assembly of automobile owners you like and the verdict will always be the same—"*We can't get along without them.*"

Weed Chains are universally acknowledged to be the only anti-skid device that can be absolutely relied upon at all times and under all road conditions.

Weed Anti-Skid Chains

Insure perfect control and safe, comfortable driving



Don't foolishly pride yourself on taking chances in order to prove your bravery, or to demonstrate your ability as a driver.

Weed Chains are an absolute necessity on both rear tires and to doubly guard yourself against accidents and to make steering comfortable and easy, put them *on the front wheels too.* They cannot injure tires because "they creep"—occupy very little space when not in use—applied in a moment without the use of a jack or other tool.

Take precaution now When you know the folly, the danger, the peril there is in driving your car over icy, slippery, snow covered roads and pavements, why not fully equip your car today with **Weed Chains** for your own protection and for the safety of other road users.

Dollar-Getters for your Workbench

Garage and Repair Men:

IF you don't repair tires you're neglecting a most profitable opportunity. You have an established trade with the people who have tire trouble. They'd rather have you mend their punctures and blow-outs than to have you send them to a tire-repairing plant.

A tire repair outfit will pay you big profits. It's a money maker for you as well as a convenience to your customers.

SHALER Vulcanizers

The workbench outfit shown above will handle every practicable kind of tire repairing—tube punctures to casing blow-outs. Each part is independent of the others; that is, you can start with one model of the Shaler line and increase as your work increases.

Heat comes from the most convenient source, electric current. Simply plug into any lighting socket. The vulcanizer heats while you prepare the repair—no smoke—no danger of fire. An **automatic temperature control** regulates the amount of current, so that the vulcanizer is held at the vulcanizing degree indefinitely. Anybody can make perfect repairs with the Shaler. We furnish instructions that anyone can understand and follow.

We also have a complete line of steam and electric vulcanizers for garages and motorists who do not have access to electric current.

Send the Coupon Today

You'll get a complimentary copy of our famous booklet, "Common Sense About Tire Repairs." Contains a lot of valuable pointers for the wide-awake garage man.

You-as a tire bill payer-now demand a vise-like rim grip-with no cutting or breaking above the rim-and here it is

It's the rim as much as the ad that wears out your tires.

So we said to our Engineers:

"You must build us a tire with perfect 3-point Rim Contact."

They did—and they also added the No-Pinch Safety Flap for inner tube protection

Then we called in our Chemists and said:

"Tire buyers are demanding a tough, flint-like, but resilient tread—a tire made of lusty young rubber—a tire giving the utmost mileage at no additional expense."

And the answer is the Diamond VITALIZED RUBBER in

Diamond {No Clinch} Tires

Here is a No-Clinch tire that appeals to the hard-headed, shrewd tire buyer—the man who insists on easy riding comfort and a good liberal mileage.

Each point of rim contact in a tire is a point of support. Where the points of rim contact are not perfect, undue pressure is brought to bear at an unsupported point of the tire.

Then what happens?

The result is a terrific strain on the tire that results in rim troubles, breaking above the bead and separation of the tread from the carcass.

All this is overcome in the Diamond No-Clinch because the three points of rim contact are absolutely **mechanically perfect**—the annealed steel cable wire bead holds with a vise-like, rim-grip.

Add to this the No-Pinch Safety Flap, for inner tube protection, the Vitalized Rubber advantage, the famous Diamond Safety (Squeegee) Tread and you have bought rubber shod mileage that has no equal at any price.

This time specify Diamond Vitalized Rubber Tires—you can get them to fit your rims at any of the

25,000 Diamond Dealers always at your Service

Studebaker

It's the VALUE—NOT the PRICE That Sells the $885 Studebaker "25"

Dealers know that prices only become salesmen when backed by extraordinary value.

We do not believe the automobile world ever saw greater value for $885 than the Studebaker "25" represents.

In this car there is every bit as much Studebaker quality as in the Studebaker "35" and "Six," and with good reason, too, because the "25" is built entirely in the Studebaker plants by the same skillful workmen who fashion the steels for the "35" and "Six"; and of the same materials that enter into the construction of the larger cars.

The Studebaker "25" is a noteworthy car in design—construction—equipment.

It's a self-seller to the man who wants a light but flexible car, capable of every achievement of the larger machines.

Light construction means less cost of production—a lower cost to the buyer—and consequently a better sales opportunity for Studebaker dealers.

Five passengers, 4 cylinders, Goodrich Tires, demountable rims, full elliptic springs, body of pleasing cowl design with rich upholstery, electric horn—adjustable windshield—Prest-O-Lite tank, extra rim and tire irons, speedometer, tools, robe rail, and Studebaker Jiffy curtains—the best $885 worth ever offered to automobile buyers.

MOTOR WORLD

A Trade Paper Giving the World's Motor News

Vol. XXXIV
No. 11

New York, March 6, 1913

Ten cents a copy
Two dollars a year

THE attractiveness of a car to the prospective purchaser depends upon the finish more than upon any other factor.

And upon the **permanence** of the finish—the continued beauty of the car—depends much of the owner's satisfaction.

Because they realize the importance of these two facts, manufacturers of quality cars—no matter what their price—are specifying Berry Brothers' special Automobile Varnishes and Japans. These are the result of 55 years of knowing how—55 years of experience in developing just the right varnish for any given purpose.

It will pay any manufacturer or body-maker who is interested in securing the maximum of attractiveness at reasonable cost to get in touch with us.

Write, 'phone or call.

Put YOUR Car in the Self-Starting Class

A push of the button starts the up-to-date car. The knell of the crank has been sounded. The self-starter has reached the highest stage of perfection in the

HARTFORD ELECTRIC
Starting and Lighting
SYSTEM

Fits any car, regardless of make, year or model. It's the most compact and lightest system ever devised; likewise the most efficient and powerful. Only 24 pounds to the weight of the motor that whirls a 90 H.P. engine at 118 revolutions per minute. Low current consumption and the smallest battery equipment of any starter.

Efficient, powerful and dependable, the Hartford System makes it possible for every car owner to enjoy the comfort of a self-starting, electrically lighted car. Built by one of the oldest and largest accessory manufacturers in the world, with a factory capacity of 90,000 starters a year. Prompt delivery is assured. Write for particulars.

The Greatest Test of All Is the Test of Time

MONOGRAM OIL

has been continually successful under that one brand name since the very start of the automobile industry. This alone stamps its quality and popular approval.

¶ If you are a dealer—carry MONOGRAM OIL and your customers will be pleased and satisfied.

¶ If you are an owner—use MONOGRAM OIL and you will be pleased and satisfied.

¶ If you are a manufacturer—recommend MONOGRAM OIL and the owners of your cars will be pleased and satisfied.

THE 1913 sales of Overland cars are already double those of any other manufacturer producing a similar car. And still we are unable to supply the demand. We have beaten our record for the corresponding months last year by over 300 per cent.

If we can beat all others in sales, surely we can in values. Investigate.

Vol. XXXIV New York, U. S. A., Thursday, March 6, 1913 No. 11

N. A. A. M. TO RETAIN SHOWS IN NEW YORK AND CHICAGO

That Is, the Pleasure Car Sections—Separate Truck Displays May Be Abandoned — Amalgamated Body To Be Incorporated.

Not only the national show in Chicago, the continuance of which already had been assured, but the New York show, will be repeated in 1914—that is, the pleasure car shows. It is exertmely probable, however, that the truck exhibits which form Part II of both the Chicago and the New York functions will be eliminated.

These subjects were discussed at the meeting of the executive committee of the National Association of Automobile Manufacturers at their regular meeting in New York yesterday, point being given to them by the movement undertaken by Albert L. Pope, of the Pope Mfg. Co., looking toward the discontinuance of the two big shows.

Pope himself was present at the meeting and brought with him a formidable array of communications endorsing his views, but the considerations and arguments of the executive committee finally convinced him that if the N. A. A. M., or some other strong trade organization, did not promote the national shows, independent promoters, with only their personal interests to serve, would step into the breach and bring about an undesirable state of affairs. When the force of these arguments bore him down, Pope admitted their weight, and when the vote for the continuance of both the New York and Chicago shows was taken, he made it unanimous.

There is no denying, however, that a strong sentiment exists that a two weeks' show in New York and another in Chicago is entirely "too much of a good thing," and serves sadly to disrupt or disorganize factory operations. In an effort to shorten the season, the N. A. A. M. executive committee placed itself on record as favoring the discontinuance of separate truck exhibits, but before definitely committing itself to their elimination, the opinion of the general membership will be sought.

The amalgamation of the N. A. A. M. with the Automobile Board of Trade was also brought much nearer at yesterday's meeting. The joint committees representing the two bodies were authorized to proceed with the incorporation of the Automobile Chamber of Commerce, as the consolidated organization will be styled, and they will gather later in the month to perform that service. The Chamber will be incorporated under the laws of New York and will retain the present offices of both the N. A. A. M. and Board of Trade, which adjoin each other. Belief that another location would prove desirable was expressed, but it was finally decided to retain the present quarters and remodel them.

Those present at the meeting were: W. E. Metzger, Charles Clifton, L. H. Kittridge, G. W. Bennett, Albert L. Pope, W. C. Leland, Alfred Reeves, S. T. Davis, Jr., W. T. White, R. D. Chapin, H. H. Rice, Alvin Macauley, who acted for S. D. Waldon, and S. A. Miles, general manager.

Lyons-Atlas To Make Cars, Too.

Almost without warning, the Lyons-Atlas Co., of Indianapolis, which several months since acquired the Atlas Engine Works and one of the four Knight American licenses, has decided to build cars as well as engines.

Equally surprising is the announcement that Harry A. Knox, former president and general manager of the Atlas Motor Car Co., of Springeld, Mass., which was thrown into bankruptcy last month, has removed to Indianapolis, where he will assume charge of the manufacture of the Lyons-Knight cars, which will be made in both four and six-cylinder types.

They will be similar to the ones produced by Knox's Springfield company and will be distinguished by worm drive, left hand steer, center control, dash tank and complete electric equipment.

COURT DECLINES TO ORDER $140,000 TIRES DESTROYED

Tells Consolidated Tire It Got Into Wrong Court—Grant Patent Officially "Dead," But Litigation Far From Ended.

Although the Consolidated Rubber Tire Co., which owned the famous Grant patent, No. 554,765, covering the imbedded-wire solid tire, was successful some time ago in its infringement suit against the Diamond Rubber Co. of New York, the court this week refused to grant the Consolidated's request that $140,000 worth of tires made in Akron and Kokomo factories be seized and destroyed on the grounds that they were made prior to the expiration of the patent, which "died" February 18 last. The Consolidated also asked that the Diamond Rubber Co. of Ohio, the Diamond Rubber Co. of West Virginia and the new and greater B. F. Goodrich Co. of New York be brought in as defendants in the suit which now is in the accounting stage, but this, too, was denied.

Judge Coxe, who heard the motions on these points in the United States District Court for the Southern District of New York, declared that the Consolidated company, in its requests for the seizure of tires in other circuits was in the wrong court and that what relief it asked could well be secured in suits of other form and in other circuits, which suits the Consolidated's attorneys state will be brought.

The contention was that the tires were made before the patent died and that their sale after the death of the patent would result in an injury to the Consolidated company; there also enters into the situation the fact that in 1903 the Kokomo Rubber Co., of Kokomo, Ind., succeeded in overturning the Grant patent, and although the United States Supreme Court has since upheld the patent on an appeal from another court, the Kokomo company has

Digitized by Google

claimed and has more or less enjoyed immunity from prosecution. The Goodyear company, of Akron, Ohio, was in a like situation.

In commenting upon the requested destruction of the $140,000 worth of tires, the court said:

"The complaint also asks that the marshal of this court be directed to take possession of said stock and destroy the same and that he also be directed to seize and destroy all tires made by the Kokomo company of Indiana prior to February 18, 1913, pursuant to an arrangement with the defendant or the Ohio company.

"The grant patent expired on February 18, 1913, and the invention is now open and free to all the world. The complainant does not point out the modus operandi to be pursued by the marshal of this court in seizing and destroying property situated in Ohio and Indiana, and I venture to think it will have difficulty in doing so.

"Whatever damages the complainant has sustained by reason of the defendant's infringement in this jurisdiction can be recovered upon the accounting. It cannot, however, recover here for the acts of parties in other jurisdictions where the making of the Grant tires was authorized by reason of the decisions of the courts of the Sixth and Seventh circuits that the patent was invalid.

"The petition shows that the complainant has brought action against the Kokomo company which was dismissed. A suit is now pending against the Ohio Diamond company which by an order of the court of the Northern District of Ohio was directed to disclose its transactions in infringing tires. A suit for damages may be brought against any of the parties which the motion seeks to bring in as defendants.

"I cannot resist the conclusion that all the relief to which the complainant is entitled may be obtained either in the present action or in such other actions as it may bring to recover damages against the parties who it insists have infringed the Grant patent.

"The doctrine of Kessler v. Eldred, 206 U. S. 285, cannot be ignored, and so long as it exists it will be lawful to do in one jurisdiction what is unlawful in another. This seriously affects the rights of patentees, but it is the law. The motion is denied."

Rapp to Become Toledo Spark Plug.

The Rapp Mfg. Co., of Toledo, Ohio, maker of Viso and Ohio spark plugs, has taken the necessary legal steps to change its name to the Toledo Spark Plug Mfg. Co. It also has acquired new quarters in the Manufacturers' Building, which will about quadruple its floor space.

BANKRUPTCY BLIGHT FALLS ON GEORGIA'S TIRE PLANT

Fraud and Stock Jobbing Alleged—Treasurer Missing, Apparently With Proceeds of Stock Sales —$200 of Assets Found.

That tire factory in Atlanta, Ga., which was to be the first full blown factory of the sort south of the Ohio River, seems wholly unlikely to throw out blossoms. A legal blight has attacked its roots in the form of a bankruutcy petition and a receiver, of the name F. Roland Alston, has taken charge of the effects of the Inter-State Tire & Rubber Co., as the project had been christened. It was incorporated late last fall, with an authorized capital of $500,000, of which, however, only about $125,000 had been subscribed and not all of which had been paid in. A co-related enterprise, the Inter-State Automobile Association, is also in the hands of Receiver Alston.

The sponsors and officers of both ventures were the same, R. H. Falbaum figuring as president, his wife as vice-president and L. R. Strauss as secretary and treasurer.

According to the bankruptcy petition, Falbaum was a liquor salesman before he engaged in the automobile supply business, first in Birmingham, Ala., where he failed. Removing to Atlanta, the petitioners allege that Falbaum, with his wife and Strauss, "entered into the present conspiracy to promote a fake corporation for the purposes of selling its stock for the benefit of its promoters."

Falbaum and Strauss, it is claimed, set forth that they had secured a factory site in Atlanta and that a building was being equipped with the necessary machinery, but meanwhile, it is charged, they were engaged in selling stock throughout all of the Southern States by "means of various fraudulent advertisements and allegations," the stock salesmen being paid a commission of 20 per cent. It also is alleged that when it was impossible to obtain full cash payment for the stock, small deposits were collected and notes, to suit the convenience of the subscriber, were taken for the balances due.

The attorney for the petitioning creditors states that the receiver found less than $200 in actual assets when he took control. He also declares that the Federal inspectors are on the trail of the company and its officers for violation of the postal regulations, and stamps the Inter-State enterprise as the "deepest saturated in fraud and corruption of any 'blue sky' scheme ever promoted in the South."

Falbaum, the Inter-State president, still is in Atlanta, but Strauss is supposed to have gone to Cuba, taking with him, it is alleged, the greater part of the funds which had been collected from the sale of the company's stock.

Maxwell Creditors Entered Wrong Court.

The Indiana creditors of the Maxwell-Briscoe Motor Co., who somewhat complicated the reorganization of the United States Motor Co., of which the Maxwell-Briscoe company was a part, by filing a petition in bankruptcy against the Maxwell-Briscoe plant in New Castle, Ind., failed to carry their point. The case was heard in the Federal court in Indianapolis last week and was dismissed for want of jurisdiction, the court holding that the action should have been instituted in New York.

When the bankruptcy petition first was filed, the Maxwell-Briscoe Co.—the new name selected by the United States Motor reorganizers—already had taken possession of the New Castle property, but its representative was displaced and the receiver reassumed charge immediately the petition was filed.

Hoover Buys Flanders's Ball Equipment.

J. T. Hoover, who formerly managed the steel ball department of the Flanders Mfg. Co., of Pontiac, Mich., has purchased the machinery and the finished balls and material in progress which were contained in the Flanders plant in Chelsea, Mich. He paid $80,000 for it, $40,000 of which was for the finished and unfinished material. It is stated that he almost immediately re-sold about $30,000 worth of the stock and that the machinery will be removed to Ann Arbor, Mich., where Hoover has organized the Hoover Steel Ball Co. Since the Flanders company went into the hands of a receiver on December 6 last, the appraisers have been at work, but their labors have not yet been completed. It is understood, however, that several parties are dickering for the Pontiac plant.

Goodyear May Build Plant in Brazil.

Although it was stated that the Goodyear Tire & Rubber Co. of South America, which was incorporated late last year, under the laws of Maine, with an authorized capital of $3,000,000, purposed acquiring or developing rubber plantations in Brazil, it now appears that the establishment of a factory in Rio de Janeiro was one of the objects in view.

Representatives of the company have been in Brazil for some time, and it is said that their efforts have met with so much encouragement that the establishment of a rubber factory in Rio de Janeiro "is one of the probabilities of the near future."

ONE "INTERNATIONAL" IS "INTERNATIONAL" NO MORE

Tire Concern, Offshoot of "League," Becomes Northland and Bidwell Quits Presidency—Former Relationship Off.

For reasons best known to itself, the International Tire & Rubber Co., of Buffalo, N. Y., which was an offshoot of the so-called International Automobile League of that city, has found it desirable to change its name to the Northland Rubber Co.

Incident to the change of name, A. C. Bidwell, head and front of the "league," has retired from the presidency of the Tire & Rubber company, although he still retains at least one share in it.

The new president of the Northland Rubber Co. is Bert L. Jones, who is general manager of the Gorge Route, the scenic trolley line at Niagara Falls. The vice-president is George C. Riley, a Buffalo lawyer, who on occasion has represented the International Automobile League. The secretary and treasurer is W. J. Hayes, a former State bank examiner who at one time was cashier of the Niagara Bank of Buffalo. It is understood that each of the officers hold but one share of Northland stock. Before the name of the corporation was changed, Jones was secretary and Hayes treasurer and general manager.

The Northland Rubber Co. is capitalized at $2,000,000, of which it is stated $1,000,000 has been paid in. When it was being formed under its original name, the "members" of the so-called International league who graciously are permitted to pay $10 per year for the privilege of buying supplies at cut rates, were as graciously allowed to subscribe for stock in the Tire & Rubber company, and it is declared that between 8,000 and 9,000 took advantage of the opportunity. These stockholders will be afforded the privilege of purchasing Northland tires "at a trifle more than cost," and, of course, will participate in any dividends which may be earned.

President Jones was very frank when seen by a Motor World man on Tuesday last and answered all questions without hesitation. He stated that the name of the company was changed because it conflicted with the "league's" title, and also because it simplified matters. He asserted positively, however, that there is no connection between the Northland company and the so-called "league" except to the extent that Northland tires will be sold to the "league," but not at special prices, as it is the purpose of the Northland company to make a bid for the patronage of the trade at large.

The Northland factory has been completed, and it is expected it will begin operations next week. Bidwell, the original promoter and president of the corporation and of the "league," is now in California.

Owners' "Trade Price" Man Disappears.

C. S. Holmes, of Pittsburgh, Pa., who in November last set up in Columbus, Ohio, as the representative of an association which purposed selling supplies to automobile owners at "trade prices," is among the missing. He left behind him a number of unpaid bills and two dishonored drafts which had been endorsed by a clerk whom he employed, and who also mourned the loss of two weeks' salary. James W. Carroll, E. C. Morton and Harry Patton, of Columbus, who vouched for Holmes when he came from Pittsburgh, made good the losses, however, and have taken over the remains of Holmes's business. They probably will reorganize it under the style Ohio Automobile Supply Co.

Portage Claims Note Was Protested.

Alleging that a 30 days note for $4,376.33, given to the Portage Rubber Co., of Akron, Ohio, by the Stein Tire & Rubber Co., which recently withdrew from the trade in New York City, went to protest at maturity, September 22, 1912, the Portage company this week filed suit in the Supreme Court for New York county; the protest fee of $1.30 is added to the face of the note. Because of endorsements, Arthur S. Stein, Ernest J. Willis and the E. J. Willis Co. are named as co-defendants.

Ford Plant to be Immensely Enlarged.

Despite its already enormous production, what the Ford Motor Co. thinks of the future of the automobile business is indicated by the fact that it has accepted plans for the enlargement of its plant in Detroit, which already contains 26 acres of floor space. The contemplated enlargement will consist of three new buildings, each three stories high and 1,700 feet in length.

Syracuse Dealer Freed from Restraint.

Frank P. Anderson, an automobile dealer in Syracuse, N. Y., who was placed on the county limits following the taking of a judgment against him by Mary H. Walsh, has satisfied the claim and is freed from restraint; the judgment was for $1,600 claimed to have been advanced as the price of a car which was not delivered.

Lansden Takes Over Boston Agency.

The Lansden Co., of Newark, N. J., maker of Lansden electric vehicles, has taken over its agency interests in Boston and converted them into a factory branch. The former agent, H. E. Taylor, will be in charge.

OHIO STATE LEGISLATORS ENDEAVOR TO END STRIKE

Senate Committee Investigating Trouble at Akron—Move Causes Workmen to Modify Demands—Manufacturers Remain Firm.

Despite continued desertions from their ranks, the strike of the Akron rubber workers still is in effect. The manufacturers remain firm and, in an effort to investigate conditions leading up to the trouble, and possibly to pave the way to peace, the Ohio legislature has appointed a committee of three senators who have been holding daily sessions in Akron. They have subpoenaed nearly all the prominent Akron tire manufacturers, and a number of the workmen, and their work is still in progress. It appears to have exerted some influence, as on Monday last, the strikers' executive committee drafted a new proposal which is to be submitted to the senate committee and which may lead to arbitration.

In their revised proposal, the strikers have reduced the wage scale at first exploited, the new terms proposing a 25 per cent. increase for all the lower paid workmen, 15 per cent. for tire builders and other highly paid employes and an 8-hour day and the abolishment of piecework.

Pending the settlement of their demands, the strikers have suggested to the senatorial investigators that a board of arbitration, composed of strikers and manufacturers, be appointed in an endeavor to settle the differences. The Ohio State Board of Arbitration previously had not only failed to attain that end but had aroused the resentment of the strikers by reporting to the governor that "the strike is not one of underpaid workers against a greedy, overreaching, cruel industry, as has been portrayed by the I. W. W. and others, but the trouble is due to a state of unrest among rubber workers, occasioned by the report of large and swollen profits realized by the manufacturers."

Fisk Elects Two New Directors.

In accordance with the reorganization plans of the Fisk Rubber Co. when it transferred its charter from Delaware to Massachusetts and increased its capital to $15,000,000, its board of directors has been increased by the addition of R. B. McGraw and E. A. Luddington. The other directors are H. T. Dunn, president, J. C. Cole, vice-president, and H. G. Fisk, treasurer, who constituted the original board. McGraw, one of the new directors, has been chosen to fill the office of secretary of the company.

CAR EXPORTS IN 1912 GAIN IN EVERY COUNTRY BUT ONE

Revolution-Ridden Mexico Only Division to Fall Below 1911 Figures—Grand Total $30,700,000, a 46 Per Cent. Gain.

While many of the twelve geographic divisions into which the Federal statisticians divide foreign countries showed losses in various months in making up the total of $23,703,989 worth of cars, which, as was told in Motor World of February 13, was exported in the calendar year of 1912, the twelve divisions with but one exception surpassed their 1911 purchases of American automobiles; even the United Kingdom, which lately has decreased its takings, forged ahead by a comfortable figure, and the one loss is easily accounted for when it is stated that the loser is Mexico, which has other things to think of aside from importing motor cars.

The month of December, 1912, as a whole exceeded the same month of 1911 in export figures, although the United Kingdom and British Oceania reduced their purchases in volume and value and France cut its imports by 5, or 14 per cent., in number while increasing by $5,080, or 20 per cent., in value; the greatest gain in number of cars was in connection with South American purchases, which advanced to the extent of 135 cars, or 65 per cent., and the greatest gain per cent. in number was made by Italy, whose increase of 16 cars equals 320 per cent. Canada made the greatest monetary advance, increasing her purchases by $189,314, or 45 per cent.

The total shipments of cars in 1912, as previously stated in Motor World, gained by 7,913, or 50 per cent., in number and $7,779,628, or 48 per cent., in value, and of this gain the greatest portion, in number, was made by Canada, which exceeded its 1911 purchases by 2,433 cars, or 48 per cent., and also led in gain in value with an advance of $3,306,763, or 59 per cent.

In number and percentage gained Canada is followed by South America with 1,085, or 98 per cent.; British Oceania with 909, or 36 per cent.; Asia and Other Oceania with 837, or 103 per cent., and Other Europe with 754, or 95 per cent. Other gains are: United Kingdom, 609, or 15 per cent.; Other Countries, 514, or 184 per cent.; Germany, 335, or 230 per cent.; France, 276, or 65 per cent.; Italy, 112, or 64 per cent.; West Indies and Bermuda, 70, or 23 per cent.

The principal gains in value with the accompanying percentages were: Canada, $3,306,763, 59 per cent.; South America, $1,182,721, 87 per cent.; British Oceania, $874,204, 39 per cent.; Asia and Other Oceania, $844,793, 106 per cent.; Other Europe, $577,019, 80 per cent.; Other Countries, $457,363, 155 per cent.; Germany, $242,299, 192 per cent.; United Kingdom, $138,405, 4 per cent.; France, $81,406, 18 per cent.; Italy, $57,064, 29 per cent., and West Indies and Bermuda, $48,609, 14 per cent. Mexico, the sole loser, fell by 23, or 8 per cent., in number and $31,018, or 6 per cent., in value. The 1912 parts shipments exceeded those of 1911 by $1,350,006, or 41 per cent.

Shipments to the non-contiguous American possessions, Hawaii, Porto Rico, the Philippines and Alaska gained 541, of 54 per cent., in number of cars taken and $573,594, or 30 per cent., in value of cars and parts; gains were recorded in all instances except in the value of cars sent to Porto Rico, where the figure fell by $20,995, or 3 per cent., but the number gained 81, or 24 per cent. The grand total of exports of cars and parts increased in 1912 by $9,703,228, or 46 per cent.

As was previously stated in Motor World 9,029 engines, valued at $1,137,285, were exported in 1912, while for the last half of 1911, which is as far back as these figures are available, the statistics are 1,693 engines, valued at $201,409. December, 1912, gained over that month of 1911 by 407, or 91 per cent., in number, and $45,917, or 84 per cent., in value. The respective figures were, 1911, 447, $54,836, and 1912, 854, $100,753. The values of tires exported in 1911 and 1912 were respectively $2,458,177 and $3,222,133, a gain of $762,956, or 31 per cent. The car figures in detail are shown by the subjoined table.

	December				Twelve Months Ending December					
	1911		1912		1910		1911		1912	
	Quantities.	Values.	Quantities.	Values.	Quantities.	Values.	Quantities.	Values.	Quantities.	Values.

1912 IMPORTATION OF CARS TENTH LESS THAN IN 1911

Number Shrinks 10 Per Cent. and Total Value Is $1,999,587—France, Only Gainer, Increases Value by 45 Per Cent.

The importation of foreign-built cars into the United States, which does not equal the annual output of a small-sized American factory, decreased during 1912 to the extent of 104 cars and a valuation of $98,893, which is a loss of 10 per cent. in number and 5 per cent. in value, as compared with the calendar year 1911; 1911 also fell below 1910 in number by 52 cars, or 5 per cent., but the value for these two twelvemonths showed an increase of $17,926 for 1911, which is .8 of 1 per cent.

Of all the cars imported in 1912, 56 per cent. were from France, this country sending 469 out of 868 and being the only foreign country or geographic division to show a gain for the year; during the twelve months its shipments to America gained by 128, or 37 per cent., and the increase in value was $352,941, or 45 per cent. All other countries and divisions showed losses ranging from 17 to 60 per cent. in number and from 13 to 56 per cent. in value. The losses in number of cars, per cent., value and per cent., respectively, were: Germany, 97 cars, 60 per cent., $197,379, 56 per cent.; Other Countries, 77 cars, 46 per cent., $169,405, 46 per cent.; United Kingdom, 36 cars, 21 per cent., $55,730, 13 per cent.; Italy, 22 cars, 17 per cent., $29,321, 14 per cent. The parts loss was $61,948, or 18 per cent.

In December, 1912, all countries showed losses except the United Kingdom, the value of whose shipments increased by $700, or 1 per cent., and Other Countries, which enlarged its shipments by 71 per cent. in number and 108 per cent. in value. The statistics for December, 1912, follow, the first being the number of cars for December, 1911, next their value, third the number in December, 1912, and fourth their value:

France, 47, $108,687, 43, $100,589; Germany, 13, $28,086, 7, $19,523; Italy, 13, $21,-648, 10, $18,909; United Kingdom, 23, $50,-823, 15, $51,523; Other Countries, 7, $17,-823, 12, $37,108; total cars, 103, $227,067, 87, $227,652; parts (except tires), $50,325, $12,-694; total value of cars and parts, $227,-392, $204,346.

The details for the twelvemonth are shown by the subjoined table.

French Exports Exceed Forty Millions.

France, which always has led the rest of the world in the value of automobile exports, piled up during 1912 the prodigious total of $42,396,760, as against $32,343,860 for 1911—an increase of $10,052,900. These figures are all the more impressive for the reason that the gain made in 1911 over 1910 was practically nothing—$258,813.

Great Britain was France's best customer, buying $11,192,910 worth of cars, while Belgium took $10,276,000 worth. Algeria ranks third, though a long way behind, with an importation of French cars of a total value of $3,989,665, and Germany fourth, with $3,280,340. The United States comes only seventh on the list, having spent $943,100 for French cars—must less than Argentina and Brazil, which rank fifth and sixth with $2,601,880 and $2,208,350, respectively.

Germany's Export Gain $6,438,000.

During the year 1912 the automobile export business of Germany made a giant's stride—from $11,475,884 to $17,914,736, a gain of $6,438,852. Curiously enough, Russia bought more German cars than any other country, spending $3,798,006; Austria spent $2,330,258, Brazil $2,306,224, and Great Britain $2,242,674. The United States is far down the list, being nineteenth, the cars bought having a total valuation of only $211,582. The German exports are classified as passenger vehicles, valued at $15,-472,618; commercial vehicles, valued at $1,-849,022, motorcycles, valued at $593,096.

Remains of Owen Enterprise Disposed of.

The entire stock and equipment of the Owen Motor Car Co., formerly of Detroit, but which was absorbed by the Reo Motor Truck Co., of Lansing, which transaction later led to bitter litigation, has been sold to the M. & M. Co., of Cleveland, Ohio, which makes a specialty of such purchases. The price paid is not public property, but it is stated that the machinery and material acquired is of an approximate value of $300,000.

CHALMERS OFFERS MILLION AND HALF PREFERRED STOCK

Cash To Be Used to Supplement Working Capital—Statement Reveals Amazing Growth—Average Profits $1,391,740.

In order to increase its working capital, the Chalmers Motor Co., of Detroit, is offering for public subscription, through Spencer Trask & Co., the New York bankers, $1,500,000 of its $2,000,000 7 per cent. cumulative preferred stock. The common stock of the company amounts to $5,000,000, of which $4,000,000 has been issued.

The offer of the preferred shares serves to disclose the remarkable growth of the Chalmers company. Organized in 1908, with an original investment of $300,000, its present net tangible assets amount to $6,-712,216, all of which, excepting the proceeds from the $1,500,000 preferred stock issue, have been acquired out of the surplus earnings. The figures are made even more impressive by the fact that patents, goodwill, etc., are carried at the nominal sum of $1. The net quick assets total $4,743,550, the company's surplus being $1,212,217.

For the four years which ended July 30, 1912, the net profits, after deducting depreciation and interest on borrowed capital, averaged the handsome sum of $1,391,740. For the seven months which ended July 31, 1913, the net profits totalled $827,119 as against $538,457 for the same period of the previous year.

The company is entirely free of mortgages and bonded debt and the floating of the present stock issue will enable it to make a substantial saving in interest on borrowed money.

The stock offered for sale is preferred both as to assets and dividends and is redeemable at the option of the company on any dividend date at 115 and dividend per share. The $500,000 treasury stock remaining in the treasury will not be issued except for cash and unless net earnings applicable to dividends for the 12 months preceding date of such issue shall have been equal to at least three times the amount of the full yearly dividend on the maximum amount of the outstanding preferred stock.

The Chalmers company also binds itself to maintain a net surplus of not less than $250,000 and quick assets having a value at least equal to 275 per cent. of the total par value of the outstanding preferred stock.

Beginning March 1, 1914, and annually thereafter, the company must set aside, out of its net profits and in addition to its dividend requirements, an additional sum of

Digitized by Google

$175,000, which will be used for the purpose of retiring the preferred issue. It is estimated that this special reserve fund, as it is styled, will permit the retirement of the $1,500,000 preferred issue within nine years.

The Chalmers balance sheet, after giving effect to the new capital, is as follows:

Assets.

Cost of plant:		
Including cost of buildings, machinery, tools, equipment, real estate, etc....	$1,836,022.07

Stockholder Disturbs St. Louis Company.

Internal warfare in the Halsey Automobile Co., of St. Louis, Mo., has led to the filing of a petition for a receivership by J. D. Perry Lewis, one of the stockholders and vice-president and treasurer of the company. In his complaint, Lewis also names Halsey's wife and several relatives and two directors as defendants.

The charge is that Halsey, or some other officer of the company, has rendered false tax returns to the city, and that with other automobile agents he is engaged in a combination in restrain of trade, in violation of the anti-trust laws in that they have combined to maintain prices on both new and old cars. Lewis further alleges that in five years Halsey has increased his salary from $4,200 to $20,500.

The Halsey Automobile Co. handles the Packard car, but Lewis claims that Halsey has also organized, and is the owner of the Cadillac Automobile Co. of St. Louis, and because of the fact the Halsey company is in danger of losing the Packard agency.

PROMINENT MEN IN TRADE WHO ASSUME NEW DUTIES

Resignations and Promotions That Serve To Place Many Workers In New Places—Few Leave the Industry.

Fred T. Johnson has been appointed manager of the Ford branch in Omaha. Previously he was with the Marion Motor Car Co., of Indianapolis.

C. G. Wilson has been appointed sales manager of the Midland Motor Car Co., of East Moline, Ill. He has had ripe experience in the automobile industry.

E. R. Benson, sales manager for the Studebaker Corporation, has mounted another round on the Studebaker ladder. He has been appointed one of its vice-presidents.

Frederick E. Wilson has been appointed sales manager of the Tone Car Corporation of Indianapolis, Ind. He at one time occupied a similar position with the Henderson Motor Car Co. of that city.

Ernest C. Cox has been appointed manager of the Findeisen & Kropf Mfg. Co.'s Eastern branch, which recently was established at 1902 Broadway, New York City. Previously he was identified with the Texas Oil Co.

O. R. Wolf has been appointed district manager of the Central States for the Henderson Motor Car Co., of Indianapolis. He will make his headquarters in Chicago with the Henderson distributors, Tennant Motor, Ltd.

James Suydam, manager of the Goodyear Tire & Rubber Co.'s branch in St. Paul, has been transferred to the Milwaukee branch, of which he hereafter will be in charge. He succeeds to the vacancy caused by the death of W. W. Wallis.

O. L. Barger has been appointed sales manager of the Hazard Motor Mfg. Co., in Syracuse, N. Y. He has been identified with the engine and transmission trade for the last five years, and until February 1st was connected with the Beaver Mfg. Co. of Milwaukee.

Russ Baldwin, formerly identified with the Jiffy Curtain interests, has been appointed manager of the Stewart-Warner Speedometer Corporation's Detroit branch. Berne Nodall has assumed the duties and title of chief engineer of the Stewart-Warner company.

W. T. Norton, who has been acting as assistant engineer for the Selden Motor Vehicle Co., of Rochester, N. Y., has been promoted to the post of general superintendent. As such, he will have complete charge of the production of both Selden cars and trucks.

Edward Q. Cordner has been appointed manager of the Garford company in Chicago. Cordner previously occupied a similar position with the Garford agency in New York, but originally came from Chicago, where he first was identified with the Studebaker branch.

H. C. Barber, manager of the Krit Motor Car Co.'s New York office, has been transferred to the management of the company's branch in Indianapolis. Before becoming identified with the Krit establishment Barber had had extensive experience with the Herreshoff, Firestone-Columbus and Regal companies.

Earl W. Winans, for the past two years chief engineer for the R-C-H Corporation, of Detroit, has resigned that position to become chief engineer of the Maxwell Motor Co.'s Dayton (Ohio) plant. Before joining the R-C-H staff Winans had extensive experience in the engineering departments of the Columbia and Regal factories.

Harry S. Houpt, one of the best known tradesmen in the East, has resigned the sales management of the American Locomotive Co.'s automobile department, which grew wonderfully under his direction. It has been known that for some time he was not wholly happy, but as his contract did not expire until July 1st it was not expected that he would sooner terminate his relationship with the Alco people. He has not yet shaped his future plans.

Berg and Marshall Settle Differences.

Suit brought by the Berg Auto Trunk & Specialty Co., of New York City, in the New York City Court against Raymond W. Marshall on three different claims resulted this week in a judgment by consent for the Berg company to the amount of $565; $728.65 was asked, the claim being made up of $70.40 for goods sold to Marshall by the Berg company, $9.50 on a check given to a mechanic but which was not honored by the bank and which was turned over to the Berg company, and another check, for $647.50, which Marshall is alleged to have given a repairman and subsequently to have stopped payment upon.

Williams Becomes Castle Lamp's Head.

To fill the vacancy caused by the retirement of Fred Castle, E. A. Williams, Jr., was elected president of the Castle Lamp Co,. of Kalamazoo, Mich., at its annual meeting last week. The other officers chosen were: Walter Stewart, vice-president and treasurer, and Royal R. Scott, secretary and chairman of the board. The three officers and Rathbun Fuller and C. B. Mertz constitute the directorate.

INTERNATIONAL MOTORS EARNINGS IN 1912 $590,149

Annual Statement Shows Orders Nearly Doubled in Quantity and Value —Unfilled Orders of $712,243 at Year's End.

At the end of its first year, December 31, 1912, the International Motor Co., of New York, which controls the manufacture of the Saurer, Mack and Hewitt trucks, figured the net earnings for the twelvemonth, after deducting all expenses and depreciation, at $590,149. Its report, which has just been made public, is as follows:

Interest	$91,101
Surplus	$499,048
Preferred dividend (three dividends	185,260
Balance	$313,788
Special and extraordinary charges	117,151
Surplus	$196,637

The general alance sheet as of December 31, 1912, follows:

Assets.

Real estate, plant, investments, patents, etc.	$7,727,576
Cash	292,458
Notes and accounts receivable	1,470,807
Inventory	2,653,636
Deferred assets	204,622
Total	$12,349,099

Liabilities.

Common stock	$5,628,125
Preferred stock	3,600,000
Bonds	52,000
Mortgages	17,500
Notes payable	2,197,550
Accounts payable	501,511
Accrued accounts	56,547
Advance payments	38,163
Surplus	257,701
Total	$12,349,099

Supplementing the report, President Coleman stated to the stockholders that the International orders show an increase of 95 per cent. in quantity and 96.6 in value, there being on hand at the end of the year unfulfilled orders to the amount of $712,243 in sales value. During January, he added, the company shows sales close to $250,000, an increase of about 100 per cent. He also remarked the passing of the company's 7 per cent. dividend on its preferred shares, and added that it is not the intention to declare the scrip dividends for several months, "as it is not considered good policy to do so at present."

Defeated Once, "35%" Finally Wins.

Although the Personality Liquidating Co., as assignee of the trustee in bankruptcy of the American Pedal Co., defeated the 35% Automobile Supply Co. in December in a suit in the New York City Court over one of the "35%'s" famed advertising contracts, the victory was short-lived, for, having secured an order for a new trial, the "35 percenters" this week triumphed in the litigation, as it has in many others of a similar nature, "beat the case" and filed judgment for $98.23 costs. The Pedal company's claim was that it agreed to exchange $2,800 worth of goods for advertising in a monthly circular gotten out by the 35% company, but it alleged that part of the goods which it supplied were not to be included as payment on the contract; the "35%," however, claimed otherwise and refused to pay $965 which the Pedal company demanded, and this brought on the suit.

Detroiter Secures Site in Tennessee.

The Automobile Manufacturing & Engineering Co., of Detroit, of which R. H. Evans is secretary and treasurer and moving spirit, has acquired a factory site, comprising 108 acres, in Nashville, Tenn., where it expects actively to commence the production of the Evans truck. Evans writes that he has been assured $50,000 working capital and the active participation of prominent Nashville men as directors, and accordingly is proceeding with plans for the construction of a factory, 60 x 200 feet.

Metropolitan Engineers Re-Elect Anglada.

At the monthly meeting of the Metropolitan Section of the Society of Automobile Engineers, held in the society headquarters at 1,784 Broadway, New York City, Joseph A. Anglada was re-elected to serve as chairman for the ensuing year. Herbert Chase and N. B. Pope were elected treasurer and secretary, respectively.

Diebold Forms Another Parts Company.

Charles C. Diebold has retired from the Diebold-Peters Co., of Cleveland, Ohio, which made automobile parts, and, with others, has organized the Diebold Products Co., in the same city. The new company will operate a plant on St. Clair avenue, near 55th street, and will also specialize in automobile parts.

Goodspeed-Detroit Buys Factory Site.

The Goodspeed-Detroit Mfg. Co., which recently was organized to manufacture automobile parts, has purchased a factory site, 100 x 160 feet, in Detroit, on Harper avenue, between St. Antoine and Hastings streets. It is the company's intention to erect immediately a two-story factory.

The Stevens-Duryea Co. has established a branch in Cleveland, Ohio, at Euclid avenue and East 46th street. It is in charge of C. D. Cook, who previously was connected with the Stevens-Duryea factory in Chicopee Falls, Mass.

ELECTRIC RIVALS AGREE ON MERCURY ARC PATENTS

Interchange of Licenses Between Hewitt and General Electric Companies Clears Atmosphere—How Trouble Commenced.

After patent litigation which has extended over several years, during which time numerous interferences had tangled matters into an unusually tight knot, the Westinghouse Electric & Mfg. Co. and the Cooper Hewitt Electric Co. on the one side and the General Electric Co., of Schenectady, N. Y., on the other side, amicably agreed this week, when the troubles of all three companies over a long list of patents owned by the Cooper Hewitt company and a smaller number owned by the General company apparently were settled for all time. By the terms of the agreement, licenses have been exchanged which permit each company to freely operate under the patents of the others.

The litigation just brought to an end was inaugurated soon after April 19, 1910, under which date two patents, Nos. 955,459 and 959,400, covering a mercury arc vapor lamp, were issued to Cooper Hewitt, who forthwith formed the Cooper Hewitt Electric Co. for its exploitation. Subsequently, Hewitt discovered the applicability of the apparatus, which represented an absolutely new discovery in the art, to the rectification of alternating current and its value for such purposes in displacing heavy and cumbersome rotary converters and other apparatus. His own company, however, was concerned chiefly with the illuminating possibilities of the device. Hence, the Cooper Hewitt Electric Co. constituted the Westinghouse Electric & Mfg. Co. sole licensee under these and other patents subsequently issued, to manufacture mercury vapor arc rectifiers for battery charging, etc.

In the meantime, however, the General Electric Co., working along similar lines, had made similar discoveries and attempted to place its own apparatus on the market, the net result being that suits immediately were instituted by the Hewitt company charging infringement of the Cooper Hewitt patents. In the litigation which followed, the Cooper Hewitt company obtained the decision, but in the interim, the General Electric Co. entered counter suits charging infringements of some of its own patents on improvements in the Cooper Hewitt apparatus. Counter suit followed counter suit so fast that in a short time the litigation became difficult to follow, the last echo being a suit instituted by the Hewitt company some six months ago under patent No.

Digitized by Google

1,030,262, charging infringement by the General company.

Under the terms of the agreement just reached, the General Electric Co. is licensed under the numerous Hewitt patents, of which Nos. 955,459 and 959,460 are considered to be basic, to manufacture both mercury arc rectifiers and illuminating lamps, while the Hewitt company and the Westinghouse companies, in turn, are licensed by the General company under its own patents to make use of the patented improvements previously charged to be infringed.

Claims Deposit Check Was Protested.

Charging breach of contract in failing to purchase a car for $2,750 and for false representations in the negotiations attending the deal, the Congdon & Carpenter Co., of Boston, Mass., has filed suit in that city against Mr. and Mrs. Raymond S. Joo, Charles E. James and others, all of Brookline, in the same state; the allegation is that the defendants represented that they were stockholders in the Eliot Motor Car Co., which intended to manufacture cars, and James, it is stated, claimed he was president of the Syracuse Portrait Co. A $50 check which was given went to protest and the balance, $2,700, failed to materialize within 30 days, as the complaint alleges was to have been the case.

Reilloc Tyre Makes Demand for Royalties.

Claiming that the Consolidated Rubber Tire Co. manufactured in 1908 under patent No. 826,405, covering a process for building "elastic tires," which process is the property of the Reilloc Tyre Co., Ltd., of England, and that the Consolidated failed to pay royalties as agreed, the Reilloc company, through Henry S. Bunner as assignee, has brought suit in the Supreme Court for New York county for $5,000. The claim is that royalties were to be 5 per cent., with a minimum of $5,000 a year, and that the Consolidated was to have an option on a renewal of the contract; the two $2,500 payments which it is claimed were to have been made July 1 and December 31, 1908, are the sums for which suit is brought.

Maydwell Gets the Mayer Carburetter.

The Maydwell Co., which maintains stores in Los Angeles, San Francisco and Seattle, has been appointed Pacific Coast distributors for the Mayer carburetter. The arrangement calls for the establishment of service stations in connection with all Maydwell stores.

The Empire Tire & Rubber Co., Trenton, N. J., has established a branch in Wichita, Kan., at 127 North Market street. It is in charge of G. H. Fralick.

BUSY SESSION SCHELDULED FOR VISITING ENGINEERS

Program Outlined Provides Unusual Round of Sight-Seeing for British Delegation to S. A. E. Meeting—The Itinerary.

According to the program that has been drawn up, the party of British automobile engineers representing the Institute of Automobile Engineers and the Society of Motor Manufacturers and Traders that will sail across the sea in May to be with the Society of Automobile Engineers at its annual Summer meeting in Detroit, is going to have what in unparliamentary language may be styled a very large time indeed. For, in addition to attending the three-day floating meeting of the S. A. E., which will take the party from Detroit to the locks of the Sault Ste. Marie and back, the British engineers will take advantage of their stop on American shores to visit, among other places, the great steel works in Pittsburgh, the automobile plants in Detroit, and in Indianapolis, where they will stop over long enough to "take in" the forthcoming Sweepstakes race on the Speedway, and allied automobile industries in Cleveland, Buffalo, Providence, New Haven, Bridgeport, and Hartford.

The date of departure from London has been set for May 17th and it has been arranged that the party shall sail on the "Minnewaska," arriving in New York nine days later. Both the 26th and the 27th will be spent in New York—at the Hotel McAlpin—and on the 28th, which is Wednesday, the party will entrain for Pittsburgh, where a stop over will be made Thursday to permit of a visit to one of the famous steel plants.

From Pittsburgh, the route leads to Indianapolis, where the party will arrive in time to witness the Decoration Day contests on the Speedway. On Saturday, May 31st, visits will be made to the factories where American, Cole, Henderson, Marion, National Stutz, and Waverley cars are made.

Leaving Indianapolis Saturday night, the party will invade Detroit, and for the following four days will spend its time in making as much of the rounds of the Cadillac, Chalmers, Ford, Hudson and Packard plants as is possible. The Timken Axle Co., also will open wide its portals for the inspection of visitors, and on the evening of the 3rd of June the S. A. E. will banquet its foreign visitors. On the afternoon of the 4th, the whole party will board the steamer "Detroit III," which has been especially chartered for the occasion, and therefore will not carry any passengers except the members of the three organizations and their invited guests.

On the return trip, Detroit will be reached on Saturday evening, June 7th, when the British party and those of the American party that so incline will immediately embark on another steamer for Cleveland—under the guidance of Secretary Clarkson of the S. A. E. In Cleveland, a two days' stop over Sunday and Monday will be made to permit visits of inspection at the Peerless, Winton and Stearns plants. Thence, the party will leave by night boat, arriving in Buffalo the following morning, where the whole day will be spent in sightseeing, no inconsiderable portion of which will consist of a visit to and an inspection of the Pierce-Arrow properties. Incidentally, Niagara Falls will be "taken in" as a side excursion.

In Buffalo, the party will be split, though it will not officially be at an end. Those whose businesses call them will return to New York and eventually to England by their own routes and the remainder will repair to Providence, where the Brown & Sharpe tool-making plants will be open for inspection. This extension, by the way, is sy special invitation of ex-President Alden, who will act as personal guide. From Hartford, which offers a number of tool-making and other industries, and the following day New Haven will be reached, where the doings of the carriage makers will be inspected. In Bridgeport, which will be reached the next day, the works of the Locomobile company will be inspected and thence the party will repair to New York by steamer.

Sue in Big Court for Small Amount.

Commercial Cars, Ltd., of Luton, Eng., maker of Commer trucks, has entered suit in the United States District Court for the Southern District of New York against Chester Griswold on a note which, it is claimed, was given by Griswold August 30, 1912, and which was to have been paid three months later; the amount is $5,883.10. Griswold and the Commer interests in New York City have been more or less closely identified for several years.

Rudd Absorbs Rival Top Manufacturer.

W. H. Rudd, proprietor of the Rudd Auto Top Co., of Detroit, has purchased the business of the National Top & Curtain Co., formerly located at 865 Woodward avenue, in that city, and has consolidated it with the Rudd establishment at 46 Bagg street. The transaction carries with it local retail rights for the manufacture and sale of Jiffy patent curtains in the city of Detroit, which now will be produced in the Rudd factory.

Subscription, Per Annum (Postage Paid) $2.00
Single Copies (Postage Paid) . . . . . 10 Cents
Foreign and Canadian Subscriptions $3.00
Invariably in Advance

Postage Stamps will be accepted in payment for subscriptions. Checks, Drafts and Money Orders should be made payable to The Motor World Publishing Co.

Change of advertisements is not guaranteed unless copy therefor is in hand on SATURDAY preceding the date of publication.

Contributions concerning any subject of automobile interest are invited and, if adequate, will be paid for; or, if unavailable, will be returned provided they are accompanied by return postage.

Cable Address, "MOTORWORLD," NEW YORK

Entered as second-class matter at the New York Post Office, November, 1900

NEW YORK, MARCH 6, 1913

WHY NOT ACCEPT THE CHALLENGE?

It is well that the New York trade has been thoroughly aroused by the legislative situation in Albany; it will be better if the trade outside of the big city similarly arouses itself, and it will be still better if owners, as well as tradesmen, are awakened to the full meaning of what awaits them if the McClelland bill is enacted into law.

When the New York City trade foregathered last week to discuss the subject, the McClelland measure had not yet been introduced. The minor measures then pending were so repugnant that even a mere show of opposition should have been sufficient to defeat them. But the McClelland bill is a wholly different proposal. It is in the nature of wholesale amendment of the existing law and, having the backing of both the governor and the secretary of state, it at once over-shadows all else.

For a governor who so loudly and so frequently proclaimed his sense of justice, and for a secretary of state who professed to be so fair that he called the automobile interests into conference, the McClelland bill is a magnificent example of the emptiness of political declarations. It is a hodgepodge as pernicious as it is far-reaching. It lacks the first elements of justice. The only redeeming feature in it is the proposed reduction of the chauffeur's fee, which, as a matter of fact, has no place in any law, for there is even less equity in requiring any man to pay a fee for the privilege of engaging in legitimate employment than there is in exacting a fee for the right to use the public highways.

The manner in which the McClelland bill imposes additional fees and restrictions on users of motor vehicles betrays lack of both senses of justice and proportion. It was never better illuminated than by the manner in which the governor of the state would pile on the fees and restrictions on even commercial vehicles. Certainly they are not luxuries and as certainly they are not swift-movers. The increased tax on commercial vehicles, or any tax at all, bears further witness to the hollowness of legislators' professions and vividly illustrates the too general notion that owners of motor vehicles are fit only to be "plucked."

The fashion in which the McClelland bill, if enacted, will complicate the non-resident and reciprocal situation, and the manner in which it sets up the secretary of state as a czar, with power to revoke human rights at will and without a hearing, are unworthy of such a man as Governor Sulzer, or anyone else, claiming to be fair-minded.

The proposed McClelland bill may not pass, but whether or no, it points anew to the only effective weapon within the reach of motorists, the one means which Motor World has urged almost from the day the first automobile law was introduced—the ballot. If they understand nothing else, politicians and so-called statesmen alike understand the language of votes, and the automobile interests of the State of New York are of such magnitude that they undoubtedly could handsomely defeat not a few law-makers and thus teach all of them a lesson.

It may be regrettable that the right to free and fair use of the common highways should be made a political issue at the polls, but the McClelland bill and the other bills in Albany, and in the legislatures of other states, are in the nature of an oft-repeated challenge which automobile owners and tradesmen no longer should refuse to accept.

HORSEPOWER TAXATION HERE AND ABROAD.

In a possibly laudable attempt to emphasize the "liberality" of the existing American method of taxing horsepower, the New York Times cites the taxes imposed in Great Britain and other countries as examples of "something to kick about." But if the Times is aware that as a rule the bore of British and French engines is abnormally small and the stroke abnormally long it gives no evidence of such knowledge.

Small bores are used for the specific purpose of obtaining the minimum taxable "horsepower," but that the "horsepower" is not always what is indicated by the tax is revealed by the practice of at least one manufacturer who rates his engines "6-30 horsepower," the "6" representing the taxable "horsepower" according to the British formula, and the "30" representing the actual horsepower developed. Which goes to prove the illogic of taxation based on bore alone.

The bore of the moderate-powered British four cylinder engine probably will average three inches; the bore of the average American "four" in the same class probably is 4¼ inches. In England, the "three inch" car would be rated at 14 horsepower and would be taxed $21, while the 4¼-inch American engine would pay for 29 horsepower and be taxed $41. In New York State, for instance, the English motor would be taxed $5 and the American $10, the formula in vogue being the same in both countries.

DEALERS UP IN ARMS OVER PROPOSED NEW YORK LAWS

Condemn Oppressive Legislation Now Pending and Set to Work to Cause Its Defeat—Obnoxious Measures Outlined.

Unless at least some—the more the better—of the obnoxious bills introduced at Albany are quashed before they become the particular pride of their sponsors by enactment into law, it is altogether likely that the price of "gas" and the development of kerosene carburetters will cease to interest the individual motorist longer, for few will be able to own cars and those that are able will not care to operate them under the stringent restrictions it is proposed to adopt. At least, such is the opinion, in concrete language, of the members of the Automobile Dealers' Association of New York City, in conclave met last week to discuss such matters and to endeavor to formulate a plan to prevent the passage of the 25-odd measures now pending and which scarcely can be viewed in any other light than that of class legislation.

Charles Thaddeus Terry, who is counsel for the association, and who always has been active in the fight against unjust legislation, addressed the meeting in his usual forceful manner, and in pointing out the iniquity of the proposed laws, called attention to the seeming belief of the legislators that all motorists are criminals and must be treated accordingly.

The legislative committee of the association, consisting of Arthur M. Day, of the A. Elliot Ranney Co.; R. H. Johnston, of the White Co., and Wm. C. Poertner, of the Poertner Motor Car Co., has commenced to enlist the efforts of both users and manufacturers to kill the bills before it is too late. A hearing on the bills has been set for March 13 in Albany, when a special train will be chartered to carry the dealers' representatives. In the mean time, letters will be addressed to manufacturers and private owners pointing out the injustice of the measures and urging a united fight against them. Latterly, the Motor Truck Club has allied itself with the Dealers' Association in the fight and in a long letter to its members making plain the evils of the measures urges action, the most preferable form being intercession with their own Assemblyman or Senator.

Dyers to Aid in Gasolene Campaign.

That the automobile trade is not the only one hard hit by the rise in the price of gasolene developed this week, when representatives of the Dyers' & Cleaners' Association of New York City conferred with officers of the New York Garage Association with the object of effecting a union of the two forces in the fight for an amelioration of conditions as regards the price of this petroleum product.

The conference resulted in the issuance of a call for a meeting this evening, 6th inst., in Maennerchor Hall, 205 East 56th street, New York City, when representatives of the two trades will discuss the situation. How the garage trade has been affected is well known and the straits of the dyers and cleaners are as bad, for while gasolene has mounted steadily in price these tradesmen have not been able to boost the price of their work and losses are said to result in many instances. One dyer states that he uses 1,500 gallons of gasolene a week.

White Changes to Another Court.

When the Appellate Term of the Supreme Court for New York county ruled last month that a verdict of $4,422.70 which The White Co., of Cleveland, Ohio, secured in the New York City Court against the White Motor Car Co., its former Brooklyn dealer, must be cut to $2,000 or the case retired, the White Co. apparently was displeased with the ruling, for the same case has been filed in the Supreme Court for New York county, the complainant, however, being Theodore F. Conrad, an assignee of the White Co.

The case was tried in City Court and the reduction was ordered by the Appellate Term of the Supreme Court on the grounds that the City Court acted beyond its jurisdiction in hearing cases where more than $2,000 was involved; the claim is based on a note given by the Brooklyn dealer and endorsed by Saitta. In the refiled case the White Motor Car Co. enters a counterclaim of $22,363.50 for profits on cars which it claims the White Co. unlawfully sold in the Brooklyn territory and also for $270 which it claims was due it on a collection of $4,730 made by the White Co.

Retrial of Caffe's Suit is Ordered.

Michael P. Caffe, who is suing the now bankrupt Newark Automobile Mfg. Co., of Newark, N. J., for commissions on a stock selling deal, will have doubly earned the $5,775 which he asks if ever he succeeds in getting it, for, the case having once gone against him and the company having gone into bankruptcy since he was granted a new trial, it was only this week finally decided that the trial may go on. The second trial was under way when the filing of a petition in bankruptcy, Aug. 31, 1912, served as a stay of proceedings. Caffe is the assignee of L. R. Bonta and Charles Hallock, who claim they contracted to sell stock of the Newark company and that before the term of their agreement expired the company sold $49,500 worth of its own accord and thereby deprived the commission men of rightful earnings to the extent of $5,775.

March 3-8, Pittsburgh, Pa.—Pittsburgh Automobile Dealers' Association's show in Duquesne Garden.

March 3-8, Bridgeport, Conn.—Bridgeport Automobile Dealers' Association's annual show.

March 3-8, Sioux City, Ia.—Sioux City Automobile Dealers' Association's annual show.

March 3-15, Des Moines, Ia.—Des Moines Automobile Dealers' Association's fourth annual show in the Coliseum. First week pleasure cars; second week trucks.

March 5-8, Tiffin, Ohio—Tiffin Automobile Dealers' Association's third annual automobile show.

March 8-15, Boston, Mass.—Boston Automobile Dealers' Association's annual show in Mechanics' Hall. Pleasure cars only.

March 10-15, Dallas, Tex.—Annual show of the Dallas Automobile Dealers' Association in the Fair Grounds Coliseum.

March 12-15, Peoria, Ill.—Peoria Automobile Dealers' Association's annual show in the Coliseum.

March 17-22, Norfolk, Va.—Norfolk Automobile Trade Association's second annual show in the State Armory.

March 19-22, Springfield, Ill.—Springfield Commercial Association's show in the Armory.

March 19-25, Boston, Mass.—Boston Commercial Vehicle Association's annual show in Mechanics' Hall.

March 24-29, Indianapolis, Ind.—Indianapolis Automobile Trade Association's show.

March 24-29, Watertown, N. Y.—Annual show of the Watertown Automobile Dealers' Association in the State Armory.

MCCLELLAND BILL, BACKED BY STATE OFFICIALS, MENACES NEW YORK'S AUTOMOBILE INTERESTS

Would Double Registration Fees and Compel Owners To Be Licensed and to Wear Chauffeurs' Badges—Also Seeks to Require Them to Vouch for Drivers—Trade Tags Restricted and Reciprocity Complicated by Non-Resident Definition—Oppressive Fines.

Of the several bills pending in the New York legislature which will be attacked by the automobile interests at the public hearing in Albany on Thursday next, 13th inst., undoubtedly the one which must be taken most seriously was introduced in the Senate late last week by Senator McClelland.

It was reported to have been introduced in the assembly by Majority Leader Levy, but, on Tuesday last, Levy positively denied to a Motor World representative that he had done anything of the sort. On the contrary, he stated that he had refused to stand sponsor for the measure. It is understood, however, that Assemblyman McGrath has no scruples on the subject and will carry the burden on his shoulders in the lower house, into which he will introduce the bill some time during the present week.

Proposed Measure Is All-Superceding.

The McClelland measure is the most threatening of the several bills, as it embodies the ideas of both Governor Sulzer and Secretary of State May, and, if passed, it undoubtedly will supercede all of the minor measures which are on the legislative calendar. It is in the nature of a sweeping amendment of the present law, which it fairly cuts to ribbons and in a manner so drastic as to be astounding.

The act not only proposes a heavy increase in registration fees on both cars and trucks, but requires that owners, like chauffeurs, shall be licensed, and immensely enlarges the powers of the secretary of state. It not only authorizes him to suspend or revoke licenses at his pleasure and without hearing, but even permits him to refuse to register a vehicle if the application therefor shall not have been received prior to December 15th, the McClelland measure making the registration year begin January 1st instead of February 1st, as at present.

Fees Which the Bill Would Fix.

If enacted, the new registration fees will be as follows: For motor vehicles of 25 horsepower or less, $10 instead of $5; between 25 and 35 horsepower, $20 instead of $10; between 35 and 50 horsepower, $35 instead of $15; more than 50 horsepower, $50 instead of $25. The registration fee of commercial vehicles will be $5 for each ton, or fractional part thereof, up to and including six tons, and if above six tons $10 for each ton or fractional part thereof, of the carrying capacity of such motor vehicle as determined by the secretary of state. Cars or trucks registered after July 1st will pay one-half of the annual fees. Motorcycles, which at present are exempt, will be taxed $3 per year.

If it becomes a law, the McClelland bill will put an end to the use of trade cars for pleasure purposes by tradesmen. It provides that dealers' numbers "shall not be used for any other purpose than testing or demonstrating the vehicles to a prospective purchaser, or removing such vehicles from place to place for purposes of sale."

Doors Open to All Foreign Tourists.

Interstate touring privileges will be broadened, the amendment eliminating that section requiring that privileges shall be extended only to residents of states granting similar reciprocity to New Yorkers. The definition of non-resident, however, is made much more stringent, as follows: "'Non-resident' within the meaning of this article shall apply to residents of States or countries who have no regular place of abode or business in this State for a period of not more than thirty days in the calendar year."

This requirement would seem to deny non-resident privileges to the very many men who reside in New Jersey but who maintain offices or other commercial establishments in New York City and who cross the border daily.

Chauffeurs and Owners In Same Class.

According to the McClelland idea, owners will be licensed and "tagged" exactly as are professional chauffeurs. The license fee, however, will be reduced from $5 to $2 and the renewal fee from $2 to 50 cents. The owner, like the chauffeur, must display a badge and while any member of his family over 18 years of age may drive the family car, he also must not only obtain a license and badge but the owner of the car must stipulate that such member of the family is "constituted his duly authorized agent." The remarkable provisions of this remarkable amendment are as follows:

"License of owners and members of owner's family.—Every owner of a motor vehicle registered under the provisions of this article who desires to operate such vehicle upon the public highways of this State, and every member of the owner's immediate family who desires to so operate, shall make application, by mail or otherwise, to the secretary of state, for a license to operate such vehicle. Before such license shall be granted, the applicant shall pass such examination as to his qualifications as the secretary of state shall require, and if the secretary of state determines that the applicant is a proper person under the provisions of this article, such license shall forthwith be granted to such person without expense.

"Owners' licensed registration book.—Upon the receipt of such an application, the secretary of state shall thereupon file the same in his office and register the applicant in a book or index which shall be kept in the same manner as the book or index for the registration of motor vehicles or the licensing of chauffeurs, and when the license shall have been issued, the number or mark assigned to such applicant shall be noted in said book or index.

"Unauthorized possession or use of license or badge.—No chauffeur or owner or member of such owner's immediate family having been licensed as herein provided shall voluntarily permit any other person to possess or use his license or badge, nor shall any person while operating or driving a motor vehicle use or possess any license

(Continued on page 30.)

New Jersey Wants Conference of States.

In an effort to bring order out of the chaos created by the flood of automobile bills which are pending in the New Jersey legislature, as well as in the legislatures of so many other states, the New Jersey authorities will endeavor to bring about a conference of interested State officials with a view of shaping legislation along similar lines.

The movement took form in the adoption of a joint resolution by the house and senate "authorizing the Governor to appoint three commissioners to act with commissioners to be appointed by other States to see if they can agree upon laws regulating the use of motor vehicles and the registration of same."

This resolution was signed by Governor Wilson on Thursday last in the last few hours of his occupancy of the chief executive's chair in New Jersey prior to his advance into the White House at Washington.

It is not the first time that such a movement has been undertaken, and the outcome of the present effort is likely to be as fruitless as the previous endeavors to the same end.

EXAMINING BUSINESS METHODS

Investigation by Proprietor in His Own Establishment Often Proves Profitable—Lines of Search and Objects in View.

Once in a while it is a good thing for the automobile dealer to draw away from the pressing activities of business and ask himself some searching questions in regard to his business.

Mentally he should go over everything that can be classed as "Inside Service." Is the line of cars you are selling right? That is, is it right for your locality? Is it the line on which you can build a big future? Is your help efficient? Do your employes carry out the spirit of courtesy and willingness you know to be essential to success? Are you giving prompt service to customers? Is some one always near the door to receive callers? Does neatness and cleanliness prevail in your salesroom? Are the windows clean? Do you change display frequently? Are you getting all you can out of your window display space? Does your place of business look attractive from the outside? Is it the sort of place a transient would select as being up-to-date? How can you improve it?

Scrutinizing "Outside Service."

Then under the heading, "Outside Service," consider all those things that reflect you to the public. Is your demonstrator right up to the mark? What plan of work are your salesmen following? Are they applying systematic effort on prospects? What are you backing up salesmen with? Have you a carefully planned advertising campaign? Are you cultivating a larger field of prospects than you should cultivate, or is your list altogether too small? If you were a customer, what would you have your garage do differently? And so on.

Just as self-examination can be made a definite and positive help to character building, so an occasional rigid examination of business methods, policies and conditions cannot but prove profitable.

STORING TRANSIENT CARS BY AN EFFICIENT CARD SYSTEM.

Hyslop Brothers, who operate a high-grade garage in Toronto, Ont., are not the only garagemen who have devised a "check" system whereby a car which is left in storage may be instantly located when the owner calls for it, for S. R. Buchanan, manager of the Mack Garage, 124-26 Market street, Lima, Ohio, writes that his establishment has used a storage check for some time with excellent results. Buchanan states that the little card, of which an illustration appears herewith, never fails to permit the picking out of a car the next day or the next week after it was left by the owner.

THE MACK GARAGE
LIMA, OHIO
STORAGE CARD No. 361
Mr. _____
Car _____ No. _____
Rec'd A.M. _____ 191
Placed _____ Floor. _____ Stall _____
Rec'd by _____

THE MACK GARAGE
LIMA, OHIO
CLAIM CHECK No. 361
NOTICE:—Present this card at office when calling for your car

MACK CHECK AND STUB

The card is in three parts, two of which are shown; the third is a paper duplicate of the upper half of that illustrated. When a car is received the upper half and the paper slip are filled out with the owner's name, name or number of car, date and time received, floor and stall number and man receiving; the paper sheet is filed in the office, the upper half of the tag is attached to the car, and the stub below the perforations is given to the owner. All three bear the same serial number, and when the owner presents his stub a look in the office file reveals the location of the vehicle and a comparison of the office slip and the slip on the car permits no error.

DON LEE'S SERVICE SYSTEM THAT KEEPS THE SKIES CLEAR.

Don Lee, who sells a thousand Cadillac cars a year in California and has headquarters at Los Angeles, has built up a reputation for service that draws him business from every corner of his territory.

One feature of this service is a corps of men who do nothing but call on Cadillac owners. Every Cadillac owner is sure of being in touch with Don Lee either directly or through a representative at least once a month. It makes no difference when you bought your Cadillac; if you are a Cadillac owner, you are called on once a month by a pleasant voiced, intelligent, gentlemanly man who wants to hear your troubles.

"Quiet Kickers" Source of Worry.

Where there are so many customers some are sure to be disgruntled; but it is not the ones who come to the garage and kick that worry the dealer, but those who get sore over some unavoidable incident perhaps, and stay away, giving the dealer no chance to square the situation. This plan of systematic calling once in thirty days keeps the skies clear at all times, because it keeps the firm in close touch with every user. The result of the plan is an army of boosters who root for the Cadillac and would not be persuaded to buy from anybody but Don Lee or his representatives.

AWAKE-NDISING WORLD

SUPPLYING THE OWNER'S NEEDS

Wide Field for Dealer in Filling Small Wants of Man Who Runs a Car—Acquaintanceship with Owners Basis of Sales.

"Sell as many things as possible to the automobile owner; don't sell him unnecessary things; but of the things he must have, sell him as many as possible." This is the message of the Merchandising Spirit to the automobile dealer. The dealer who heeds it finds an era of profits that makes him wonder why he did not get busy sooner.

The really great accomplishments of business are always built upon the simplest ideas. Henry Ford has built the largest automobile business in the world upon a simple idea. The idea was to build a car for the masses instead of for the classes. That was where Ford differed fundamentally from almost every other manufacturer. He got his idea and stuck to it. And this year Ford probably will build 150,000 cars.

Cutting Overhead with Accessories.

The automobile dealer who desires to become a merchant will see in the Spirit's "message" a concrete suggestion that leads to a world of opportunities. It is a simple, practical suggestion—so simple, and so seemingly ordinary, that 99 dealers out of a hundred who read it will probably continue just as they have been doing, trying to spread overhead expense against automobile sales only, instead of thinning down the overhead by means of selling to every automobile customer every blessed thing he is likely to need.

Enter the Venture Whole-heartedly.

The hundredth man will do as the hundredth man usually does: think it over till he gets a full view of the money-making possibilities in the suggestion and then decide to test it out as quickly as possible. And the hundredth man will not try to settle such a big and important move by a stingy lay-out in a few bottles of cement and a few tire patches which are just what every one else has; he will go into the business of selling the automobile owner as many of the things he needs by having a stock that is really representative of the varied requirements of the motorist. Nor will he rest his energies on the fact that he has purchased and installed a stock of tires, supplies and accessories; he will use the newspapers and the mails to let every automobile owner in the vicinity know that he is prepared to take care of them on every count. As a result of this procedure he will have the chance to take care of them on many counts, and thus will draw to his garage or store many car owners who will later become car customers of his.

What May Be Gained by Knowing Men.

Business follows acquaintance if the acquaintance is of the business-building, confidence-creating sort, and the dealer who is continually bringing new customers to his store or garage and building confidence by giving service and full value for the money has a touch that is just as marvellous in profit-bringing as the lamp of Aladdin or the golden touch of King Midas.

"DEAD" FIRES THAT SUGGEST FORGETFUL SALESMEN.

Forget the fire and out it goes, though cheerful and full of heat it was but a short while ago. It means clean out the dead ashes and start from the beginning again to build up. Such a lot of work might have been saved ourselves if the fire only had been taken care of and kept going!

It is a parable of salesmanship. Develop the prospect to a red heat and then go away and forget him for several weeks and, lo! when you come back, he is stone cold—burned out—has forgotten everything you ever told him about your car.

Too many failures of otherwise good automobile salesmen can be traced to the fact that they forgot to pile on the fuel at regular intervals; they went away and forgot it, until one day they saw the prospect drive past in a new car of a competing make.

A definite system of reports with a tickler follow-up, set automatically, as soon as the report is in, backed up by a slip or memo of some kind placed on the salesman's desk the day before the call is due, will prove a satisfactory and efficient cure.

ILLUSTRATING THE TYPE OF MAN WHO LOVES HIS WORK.

An automobile salesman was in a small Ohio town. After seeing his prospect he had just an hour before the car would be due to take him back to Dayton, so he went up to the hotel and got into conversation with the proprietor. Of course, he talked automobiles and told about his line of cars. Before the electric car was due he had the names of several prospects in the vicinity, and among them was the name of the hotel man, who let out that he had been considering the purchase of an automobile for some time. The sequel to the story is that a week later he drove back with a machine which the hotel keeper is now driving.

Genuine Salesman Not a Machine.

A real salesman loves his work. He finds it more interesting than anything else in the world; he does nothing mechanically, but has his eyes and his ears continually on the alert to get information that will lead him to interested people. And such a man gets the help and support of those with whom he comes in contact. They know he is "on the job" and keen for business, and he stands out from the rest like a powerful headlight amidst a group of dash lamps.

Study the most successful men you know, men who are really big, and you will find that, without exception, they are men who love their work for its own sake.

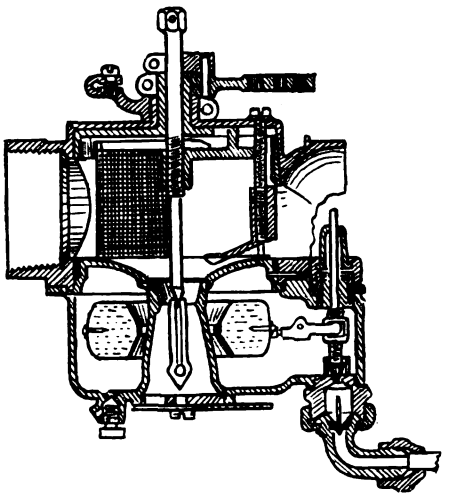
ONE TYPE OF CARBURETTER FOR MANY TYPES OF MOTORS



Gassifying Device That Is Designed to Make Any Engine Do Its Best—Has Wide Range of Adjustment.

Designing a carburetter for one particular type of motor with a view to obtaining maximum efficiency from that motor is by no means a simple task; but when it comes to producing a carburetter that will be equally efficient for all engines, regardless of their individual peculiarities, difficulties multiply. It is a task of no small magnitude, yet the Detroit Carburetter Co., of Detroit, manufacturers of the E. C. B. carburetter, shown in the accompanying illustration, claim that this is precisely what they have accomplished and that the instrument will cause any motor to work up to its maximum efficiency.

As may be seen quite clearly, the carburetter is of the central jet type, the vertical gasolene nozzle being placed in the center of a venturi tube passing through an annular float chamber. Above the venturi tube is a mixing chamber of large proportions, from which the mixture passes to the induction pipe through the usual throttle, its passage leading through a screen of wire gauze placed over the outlet. The hole in the gasolene nozzle is of large diameter, but its opening is adjustably restricted by a needle-valve, the stem of which extends downward from the top of the mixing chamber, where it passes through a threaded hole. The projecting end of the stem passes through and is clamped to the throttle lever, which swings horizontally; thus when the throttle is opened, the needle is screwed up and the nozzle aperture area increased in proportion to the throttle opening, while the closing of the throttle closes the needle valve. The throttle itself is of the apertured cylinder type and works within the mixing chamber walls. By loosening the needle-valve clamp the valve can be adjusted for any maximum area of opening and the adjustment retained by tightening the pinching screw.

There are two air intakes, both adjustable as to area and neither fitted with automatic valves; in fact, the only automatic valve in the carburetter is the float valve, which is of the usual needle type, with a novel adjusting device, however. One of the air intakes is at the bottom of the venturi tube and is provided with a shutter or plate for regulating the aperture area. The other opens directly into the mixing chamber and is arranged with a deflector which forces the air to pass horizontally over the top of the venturi tube; the area varies with the throttle opening, there being simultaneous movement of throttle and air valve. As this air inlet is opposite the outlet, the incoming air picks up and mixes with the gas rising from the venturi tube and passes straight along to the outlet without bends or turns. A screw regulates the height of the air baffles, thus governing the amount of air admitted.

One feature of the gasolene system will be appreciated by those who have taken out floats and bent the levers by guess to adjust the level of the liquid. The stem of the automatic needle valve is threaded and passes through a nut which engages with the end of the usual float lever. The stem is continued upward and passes through a guide, the stem being flattened and the hole in the guide being of corresponding shape,

E. C. B. CARBURETTER IN SECTION

so that the stem cannot turn in the hole. The guide is arranged to turn when a locking nut is loosened. Turning the guide, of course, turns the valve stem, which works through the thread in its nut and so is raised or lowered, correspondingly raising or lowering the level of gasolene in the bowl. Adjustment can be made when the motor is running if desired. The adjusting guide is fitted with lugs and notches and cannot be moved unless the lock is loosened; also, it is easy to keep track of the distance through which the stem has been turned by counting the notches.

The operation of the carburetter is clear enough, in a general way, from the illustration. Air is drawn in through the two inlets; the air from the lower inlet passes the spray nozzle whirling rapidly, the venturi tube being provided with a spiral for producing this effect. The amount of gasolene taken up is dependent upon the adjustment of the valve and the throttle opening. The secondary air current, carrying no gasolene, joins the first at the top of the venturi tube, and the violent agitation resulting from the abrupt changing of directions produces a thorough mixing of the gas and air. The secondary air current, as well as the gasolene nozzle opening, is controlled concurrently with the throttle, so that the proportions of the mixture are always correct providing the proper initial adjustments have been made.

Due to the wide range of proportional adjustment possible in the E. C. B. carburetter, it is claimed that it can be adapted to any motor, either two-cycle or four-cycle, though in a three-cylinder, two-cycle, three-port motor it is necessary to use a special distributing device if but a single carburetter is employed. The total absence of springs and automatic air controlling devices makes adjustments permanent, once effected, and it is claimed that it is impossible to improve the action of the device by the use of any of the many carburation improvers on the market, for the simple reason that the carburetter will make the engine do its best without extra attachments.

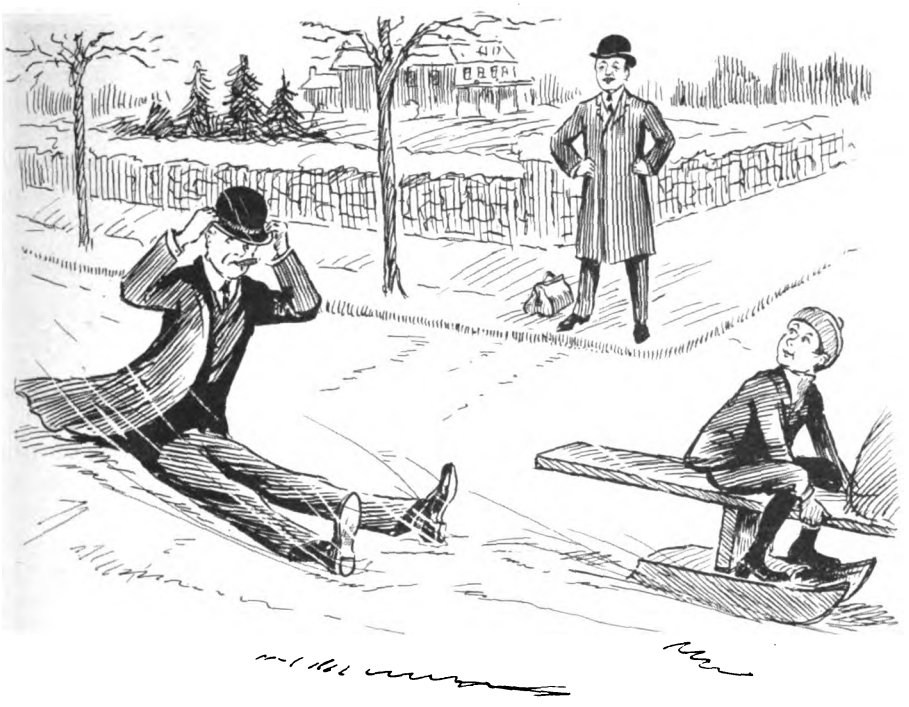
Overworking the Magneto's Safety Gap.

Although all high tension magnetos are fitted with a safety gap for the passage of the spark when the magneto is disconnected from the spark plugs or the gap in the plug has become too large for the passage of the current, it is not well to overwork the gap, as each time the current passes through it the points are burned slightly, similarly to the points of the plug. In testing the plugs for short circuit, therefore, it is much better practice to touch a screwdriver to the terminal and hold the point in proximity to the motor jacket than to remove the wire from the terminal and incur the risk of rendering the safety gap incapable of passing the spark to the detriment of the armature insulation.

Mirror for Day and Night Use.

An exceptionally handy device to carry in the tool box is a small mirror. The reflector is not only useful for directing the line of vision into places which otherwise would be invisible, but it also can be made to serve instead of a trouble lamp when something goes wrong at night. For such usage it simply is necessary to reflect a beam from a nearby street light to the point where illumination is desired.

Adjusting Valve Tappets and Stems.



Before attempting to adjust the distance between the valvet tappets and the valve stem so as to insure perfect functioning of the valve mechanism and the elimination of noise, it is well to polish the valve and its seat in the orthodox manner. This ensures the removal of all particles or carbon and perfect seating of the valve so that the final adjustment is perfect.

GIVING DEALER BENEFIT OF POSSIBLE BARGAINS

Reilly Tells Sales Manager What He Thinks of Manufacturers Who Prefer Used-Car Men to Own Dealers When Unloading at Reduced Rates—Declares Regular Dealers Should Have Choice of "Good Things."

In compliance with the shouting of a youngster who frantically waved a red flag, made from one of those garments which have been dispensed with since the entry of the hobble skirt, the Sales Manager, grip in hand, halted at the intersection of two streets as he saw the cause of the youthful flagman's demonstration—a pair of bobs with a merry load speeding down the cross street; the Sales Manager felt the thrill of boyhood days as he saw from the distance of a block that the hindermost passenger on the speeding contrivance was a full-grown man who clutched a black cigar between his teeth and evidently had forgotten that such antics are not regarded as decorous for a business man in his thirties.

WHEN REILLY CAME DOWN THE BOBS WERE HALF WAY ACROSS THE STREET

Reilly Returns to Boyhood Days.

The Sales Manager's face began to nurse a smile as the bobs drew nearer and he recognized the "man behind"; he was about to yell at him, but just then the bobs hit a hump at the crosswalk, the tail of the board flipped upward, the man flipped upward, too, his hat started to continue upward, the man relaxed his grip on the board to grasp his hat, and was successful in gripping the hat, but when the man came down the bobs were half way across the street and the absence of one passenger never was missed at all. Which is not to say that Reilly ceased to slide, for for the space of twenty feet he proceeded to demonstrate that in an emergency a pair of well-tailored trousers are fully as efficient as a pair of bobs.

"Didn't you like the company you were in?" asked the Sales Manager, as Reilly gathered himself, and the questioner put a stoppage to his mirth long enough to get breath for the question.

Youngsters Too Fast for the "Old Man."

"Too fast for the old man, I guess," replied Reilly, as he grinned like a ten-year-old boy caught walking home with his fiancee, and continued to brush off the snow and dirt which he had accumulated.

"Do you spend all your lunch hours in recreation?" bantered the Sales Manager.

"First offense," confessed the dealer, "and," he added, "the last. I thought I would walk up to the house to lunch and back to-day and the kids offered me a ride part way to the store."

"Well, you rode—part way," said the Sales Manager, "and since there aren't any more kids to play with, suppose you join me in the walk the rest of the way." Wherefore the two wended their way together toward "Automobile Row." They argued and scrapped as usual about anything and everything on which it was possible to differ in opinion, and were just about to become involved more deeply in a discussion in which an agreement was an improbability when there loomed up before them a dealer's salesroom front over which was plastered big bargain-day signs announcing "Cars at cost—Going out of business."

"What's the matter with Montrose?" asked the Sales Manager as they passed the over-displayed layout of signs.

"Going out of business," replied Reilly.

"I suppose I can't read, can I?" retorted the Sales Manager. "The sign didn't say he was going out of business, did it? What the kids did to you must have made you sore—mentally, I mean."

Dealer Aggrieved at Factory's Act.

"He gave up his dealership," explained the ex-coaster. "He got sore—mentally, I mean."

"At what?" queried the man with the grip.

"At the factory," answered Reilly, and as the little dealer saw a cloud of wrath begin to darken the Sales Manager's features at this unexplaining explanation the former hastened to add. "He claimed the factory handed him a misdeal on a little transaction, so he told them they could take their agency and select a destination if they didn't care to go where he told them to go."

"Is he right or wrong? What happened, anyway?" was the inquisitive response.

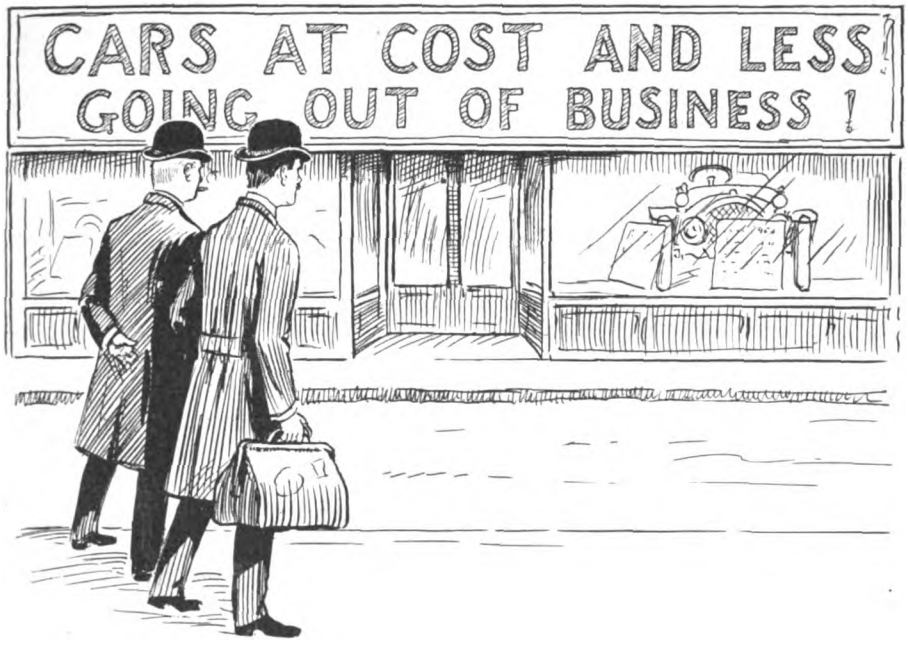
"I think he's right in his contention, but he was a little hasty when he threw up his agency," stated Reilly. "It all occurred because his factory over-produced and had to unload quite a few cars several months ago; Montrose, or Monty, rather, as he is known along the 'row,' didn't know anything about it until a few weeks ago, and when he discovered the true state of affairs he went up in the air.

"It seems that when the factory found it had made more cars than the dealers had contracted for and that there was likely to be a surplus, somebody down there made

Digitized by Google

arrangements and unloaded the whole lot onto several used car dealers in half a dozen cities at greatly reduced prices. The used car dealers got a good thing out of it, and the factory got rid of its surplus, but a lot of dealers have raised a fine row about it. Monty, for instance, found out that several new Hannon cars were running around town and he was darned sure he hadn't sold them, so he started an investigation. One of the men who has one of them told Monty he got the car from a used car dealer out of town, told him who the dealer was, and what he paid for the car.

Finds Himself Undersold by Factory.



"The price was considerably less than Monty could afford to sell for, even if he cut his prices, and the car actually was new and unused when the man bought it. Monty took the matter up with the factory and asked how it happened that so many new cars were being sold by the used car dealer; the factory seemed perfectly willing to explain and apparently thought nothing improper had been done when the lot of cars was sold to the used car men. But Monty was pretty quick to show them something was improper. He said the cars were being sold to his prospects, and he demanded to be told why he hadn't been given a chance to buy in some of the cars at a cut rate.

"The sales department told him they had not thought he would want any. He asked them why they hadn't found out, instead of merely thinking he didn't want any. Then they told him he had contracted for a certain number of cars and they didn't think he could sell any more in his territory. Monty asked them if they didn't think he could sell as many in his own territory as a used car man could who was 50 or 100 miles away. He didn't succeed in getting much satisfaction, and after the matter had dragged along for two or three weeks he went down to the Hannon factory, broke his contract and told them they could sue if they wanted to."

"Fine chance of their suing!" commented the Sales Manager.

Futile Effort to Make Reparation.

"Quite right!" agreed Reilly, "but his trip to the factory caused some of the higher-ups to learn about the rumpus; it seems they hadn't known of it before. They say that somebody lost his job, or nearly lost his job, or something like that, and they tried to get Monty to stick, but he said he was glad he had a good excuse to quit and came down the same day and had that big 'bargain sale' sign painted."

"HE CLAIMED THE FACTORY HANDED HIM A MISDEAL," EXPLAINED REILLY

"What's he going to do?" asked the factory man.

"I don't know," answered Reilly, "but he'll do something; he's a ripping good man at a lot of things. But I think he got a rather raw deal. If I——"

Another Instance of Misplaced Bargain.

"That kind of work ought to be stopped in this trade, and every other trade," asserted the Sales Manager. "It's too darned common. We ran up against an instance of it ourselves a few years ago."

"You did?" said Reilly in surprise.

"You'd be surprised, too, when I tell you who did it," stated the salesman. "It was Mason & Co., the windshield concern. You'd naturally think they were on the level, but one day we got an offer from a certain dealer in job lots of any old thing for a lot of windshields at a price that made us think something was wrong. We looked it up and found the Masons had been doing the same thing the Hannon factory did."

Giving "Good Things" Where Not Due.

"That makes a regular dealer sore," said Reilly, with a closed-fist gesture. "Here a firm has a line of regular dealers who stick through all kinds of weather and push a firm's goods, and then the minute any kind of a bargain like that shows up the firm hands the gift to some jobber or cut-rate dealer who wouldn't touch the firm's goods if he had to pay regular prices.

"I never could see why, if a firm has any bargains like that, they don't give their own regular dealers first chance at them. Monty says that one of his dealer friends was let in right on such a deal once and he cleaned up a good bunch of money; Monty says he could have made several hundred dollars and taken his regular contract of cars, as well, if he could have bought a few cars at the price the used car man paid for them. As it is, he's selling out at prices that would make a used car dealer look sick."

Weak Excuse for an Unfair Practice.

"Sometimes the argument that is advanced as an excuse for such a deal," supplemented the Sales Manager, "is that it isn't good policy to sell a dealer anything at less than his regular prices for fear he will get into the habit of expecting cut rates or will hold off on his orders in the expectation that there is going to be a bargain sale which will enable him to make a bigger profit on regular retail orders that he already has in hand. Of course, I myself don't think that is exactly fair, but it may be all right in some trades; certainly, however, it is all wrong in the automobile trade, where a small dealer doesn't sell, perhaps, more than five or ten cars a year."

Square Methods and Their Result.

"You people have been pretty square that way," was Reilly's compliment. "I like the way you handle some of the used car bargains you have, too, such as letting the dealers know you have such-and-such a car on hand at a good price. Lots of times a dealer has a prospect for just such a car, and it helps wonderfully all around."

By this time the two men had entered Reilly's office and the Sales Manager was telling Reilly's salesman a glowing tale of his employer's afternoon performance on the coasting hill, when Reilly, who had been sitting uneasily at his desk for as much as a half minute, solemnly walked out to the repair shop and in a moment returned, bearing a cushion from a repairman's working couch, mute evidence of the fact that the Sales Manager was not exaggerating.

BOSTON'S "BABYLON" SHOW PROMISES TO PROVE WORTHY OF ITS PREDECESTORS

To Open Saturday Evening With a Decorative Setting Both Striking and Original and With a Full House of Cars, Accessories and Other Things, Including Dictionaries—At Least Six Cars Not Seen at Either of the National Shows Among Those To Be Displayed.

The Boston show opens its doors on Saturday night, 8th inst. And it closes them again finally on the 25th. But between those dates there will be a blank of three days—16th, 17th and 18th—to permit the pleasure cars, shown by the Boston Automobile Dealers' Association, to be moved out, and the commercial vehicles, shown by the Boston Commercial Vehicle Association, to be moved in. Mechanics' Building, of course, is where the stage is set, and if previous Boston shows can be taken as a criterion there will be much in the way of automobiles and accessories and—er—other things within the four walls to interest the visitor.

All of which may or may not bring to mind the "other things" that served to relieve the monotony of previous years—the "honest-to-goodness - sure - enough - ivory" novelties promiscuously vended, the pink lemonade and grape juice and the dictionaries. Diligent search has failed to unearth any real reason for the presence of the dictionaries, but as their vendor has appeared regularly at the Boston exhibition, he must find it beneficial. It is understood that at one show at least two of the dictionaries were sold and that the purchasers immediately turned to the word "culture" and were so astounded at what they found that they quit Boston within the hour. They may return properly fortified this year.

However, the Boston show is first and foremost an automobile show. It always has been uncommonly well and attractively dressed and one from which several several lessons might be learned by others less successful in disguising gaunt rafters and unsightly walls into eye-pleasing backgrounds at moderate expense. For ever since the Bostonians first inaugurated the idea of uniform decorations they have been going themselves one better, so to speak, each succeeding year. And this year, with such decorative themes as the "Hanging Gardens of Babylon," "Nebuchadnezzar's Tribute to His Median Bride," "The Garden of a Century Ago" and other equally inspiring subjects the decorative scheme and scene that will be disclosed Saturday night should be just a little better than those of yesteryears.

Under all this glory there will be shown a long list of accessories, some of which are new and rarely seen outside the Boston show and some which are not so new because they already have been revealed either at the New York show or at the Chicago function, and a list of cars to which the same concrete description applies. Which is to say that nearly all the old familiar names will be there and, in addition, there will be six others which appear for the first time this year on any show signpost other than those erected in purely local exhibitions. Two of them are electrics—Bailey and Grinnell; three are gasolene—Ford, Nyberg and Moyer—and one is a steamer—Stanley. The complete list of car exhibitors is as follows:

Pleasure Cars.

Anderson Electric Car Co., of Boston, Boston, Mass.—Detroit electric.

American Locomotive Co., Providence, R. I.—Alco.

Andrews-Dykeman Co., Boston.—Moon.

Armstrong & Curtis Co., Boston—Marathon.

Bailey & Co., S. R., Boston—Bailey electric.

Borland-Grannis Co., Chicago, Ill.—Borland electric.

Bowman Co., J. W., Boston—Stevens-Duryea, S. G. V., and Waverley electric.

Buick Motor Co., Boston, Mass.—Buick.

Bergdoll Motor Co. of Boston—Bergdoll.

Binney, J. A., Boston—Henderson.

Briggs-Detroiter Co., Detroit, Mich.—Detroiter.

Cadillac Automobile Co. of Boston—Cadillac.

Connell & McKone Co., Boston—Overland.

Curtis-Hawkins Co., Boston—Speedwell.

Case Threshing Machine Co., J. I., Racine, Wis.—Case.

Cutting Motor Car Co., Boston—Cutting.

Dodge Motor Vehicle Co., Cambridge, Mass.—Buffalo electric.

Dutton Motor Co., F. A., Boston—Abbott-Detroit.

Donovan Motor Car Co., Boston—Studebaker.

Davis Carriage Co., Geo. W., Richmond, Ind.—Davis.

Fiat Motor Sales Co., Boston—Fiat.

Ford Motor Co., Boston—Ford.

Franklin Motor Car Co., Boston—Franklin.

Fuller, Alvin T., Boston—Packard.

Habich Co., G. E. & H. J., Boston—Cole.

Harrington-Thompson Motor Cars, Inc., Boston—Krit.

Hoyt Carburetter & Auto Co., Boston—Havers.

Henley-Kimball Co., Boston—Hudson.

Hollander Motor Co., Boston—Metz.

Imperial Automobile Co., Jackson, Mich.—Imperial.

Inter-State Automobile Co., Boston—Inter-State.

Jackson Motor Car Co., Boston—Jackson.

Jeffery Co., Thomas B., Boston—Rambler.

Koehler Sporting Goods Co., H. J., Boston—Hupmobile.

Lawrence & Stanley Co., Boston—Mitchell.

Lenox Motor Car Co., Boston—Lenox.

Lewis, C. B., Cambridge, Mass.—Nyberg.

Linscott Motor Co., Boston—Reo.

Locomobile Co. of America, Boston—Locomobile.

Lozier Motor Co. of New England, Boston—Lozier.

MacAlman, J. H., Boston—Stearns, Columbia.

Maguire Co., J. W., Boston—Pierce-Arrow.

Michigan Motor Car Co., Kalamazoo, Mich.—Michigan.

Middleboro Auto Exchange, Middleboro, Mass.—McFarlan.

Morse & Co., Alfred Cutler, Boston—Renault, Metallurgique.

Moyer, H. A., Syracuse, N. Y.—Moyer.

Motor Car Mfg. Co., Indianapolis, Ind.—Pathfinder.

Neale, A. F., Boston—Baker electric.

Oakland Motor Co., Boston—Oakland.

Oldsmobile Co. of Massachusetts, Boston—Oldsmobile.

Peerless Motor Car Co. of New England, Boston—Peerless.

Paige - Detroit Motor Car Co., Detroit, Mich.—Paige.

Pope Mfg. Co., Hartford, Conn.—Pope-Hartford.

Premier Motor Car Co. of New England, Boston—Premier.

R. C. H. Corp., Boston—R. C. H.

R & L Co., Boston—Garford.

Republic Motor Co. of Massachusetts, Boston—Little and Chevrolet.

Roberts-Sherburne, Inc., Boston—American.

Russell Co., W. L., Boston—Regal, Haynes.

Smith, Fred S., Boston—Mercer.

Stanley Motor Carriage Co., Newton, Mass.—Stanley.

Stevens, W. H., Boston—National.

Stutz Motor Car Co., Boston—Stutz.

Tyler Bros. Corp., Boston—Firestone-Columbus and Columbus electric.

Underhill Co., Boston—Knox, Grinnell electric.

United Motor Boston Co., Boston—Maxwell, Stoddard-Dayton.

Digitized by Google

Velie Motor Vehicle Co., Boston—Velie.
White Co., Boston—White.
Whitten-Gilmore Co., Boston—Chalmers and Woods electric.
Wing Motor Car Co., Boston—Marmon.
Winton Motor Car Co., Boston—Winton.
Westcott Motors Co., Boston—Westcott.

Accessories.

Of exhibits of accessories, the following did not appear at either the New York or Chicago shows:

Adams, John Quincy, Boston—Dictionaries.
Aetna Life Insurance Co., Boston—Insurance.
American Storage Battery Co., Cambridge, Mass.—Storage batteries.
Auto Parts Co., Providence, R. I.—Parts.
Bartlett, Edwin E., Boston—Tools.
Boston Tire & Rubber Co., Boston—Comet tires, liners, etc.
Boyd, Shirley F., Boston—R. I. V. ball bearings.
Burn Boston Battery & Mfg. Works, Boston—Sealed liquid batteries.
Cataract Rubber Co., Boston.—Tires.
Chandler & Farquhar Co., Boston, Mass.—Machine tools.
Clark Foundry Co., Rumford, Me.—Machine tools.
Columbia Tire & Top Co., Boston—Tire and tops.
Coward Auto Supply Co., Boston—Star speedometers, J-M shock absorbers and other supplies.
C. R. G. Mfg. Co., Saugus, Mass.—C. R. G. carburetters.
Crowell Chemical Co., Beverly, Mass.—Oxford polishes.
Dunn Ray Co., Boston—Specialties.
Eagle Oil & Supply Co., Boston—Eagle lubricants.
Edison Storage Battery Co., West Orange, N. J.—Edison storage batteries.
Eisner-Lenk Co., Boston—Eisemann magnetos.
Elliott Motor Engine Co., Waltham, Mass.—Motors.
Ernsdale Worcested Co., Clinton, Mass.—Fabrics.
Forbes, Walter J., Boston—K-W ignition devices.
Ford Co., Percy, Boston—Supplies.
Grady & Co., J. W., Boston—Motorcycles and supplies.
Globe Wrench Co., Ipswich, Mass.—Wrenches.
Hillman Auto Supply Mfg. Co., Boston—Brass and plated specialties.
Holtzer-Cabot Electric Co., Brookline, Mass.—H-C lighting systems and Newcomb carburetters.
Holt & Bebee Co., Boston—Lamps and electrical specialties.
Hood Rubber Co., Watertown, Mass.—Tires.
Hopewell Bros., Newton, Mass.—Tool bags, tire covers, etc.
Invader Oil Co., Boston—Invader lubricants.
Jones Speedometer, New Rochelle, N. Y.—Jones speedometers and recorders.
K-D Motor Co., Brookline, Mass.—K-D crescent valve motors.
Kelleher, J. J., Dorchester, Mass.—Typhoon signals.
Keystone Lubricating Co., Boston—Lubricants.
Kelham, J. F., Beverley, Mass.—Supplies.
Linscott Supply Co., Boston—Accessories.
Lunt Moss Co., Boston—Pumping and lighting plants.
Meyers Bros., New York City—Specialties.
Michelin Tire Co. of Massachusetts, Boston—Michelin tires.
Moore-Smith Co., Boston—Wearing apparel.
Motor Parts Co., Philadelphia, Pa.—Auto Cle wrenches.
Norton Co., Worcester, Mass.—Machine tools.
New England Motorcycle Co., Boston—Motorcycles.
Orona Mfg. Co., Boston—Specialties.
Philadelphia Grease Mfg. Co., Boston—Lubricants.
Raymond Engineering Co., Boston—R-V motors.
Reinhart, Geo. W., Boston—
Reliance Speedometer Co., Boston—Reliance speedometers.
Robinson & Sons Co., Wm. C., Boston—Lubricants.
Rose, P. R., Boston—Specialties.
Russell & Co., T. F., Boston—Leavett timers, Minerva horns, Victor lamps, etc.
Salman, John A., Boston—Monograms.
Sawyer Oil Co., John B., Boston—Lubricants.
Shannon, T. R., Hartford, Conn.—Polishes.
Standard Auto Supply Co., Boston—Rhineland, R. B. F., and Fafnir bearings, Shaler vulcanizers, etc.
Standard Tire & Rubber Co., Boston—Imperial and Standard tires.
Steel Specialties Co., Boston—Specialties.
Underhay Oil Co., Boston—Lubricants.
Walker Lithograph & Pub. Co., Boston—Maps.
Walpole Tire & Rubber Co., Boston—Walpole tires.
Ward & Sons, Edgar T., Boston—Tubing and tools.
Winship, W. W., Boston—Trunks and bags.

Garden Setting for Tennessee Show.

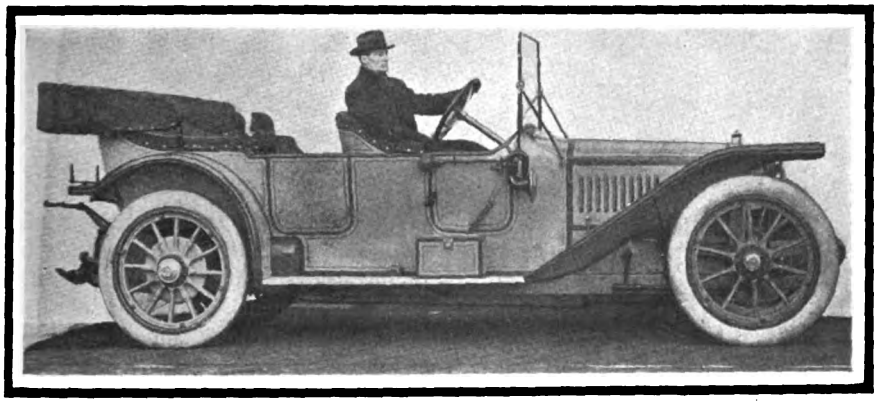
Thirty-eight different makes of automobiles of both pleasure and commercial types, displayed in a Southern garden setting improvised of trailing smilax and rambler roses disposed on lattice bowers, comprised the third annual show of the Memphis Automobile Trade Association, which closed its doors in the Memphis Auditorium on Saturday evening last, March 1st. The cars were displayed by some 31 automobile dealers, who held space throughout the week—the doors opened on Monday morning, April 24th. Accessories of all types were shown by the 15 dealers in appurtenances.

The cars displayed were: American, Alco, Buick, Case, Chalmers, Chandler, Detroit electric, Maxwell, Ford, Garford, Hudson, Hupmobile, I-H-C truck, Kelley truck, Little, Lozier, Marmon, Moon, Moline, Michigan, Overland, Palmer-Singer, Premier, Pilot, Pullman, Rambler, R. C. H., Standard electric, Stearns, Speedwell, Studebaker, Urban, Waverley electric, White, Wilcox.

Denver Discloses Three New Vehicles.

When on Saturday night next, March 8th, the curtain is rung down on the exhibit which has been housed in the Denver Auditorium since Tuesday evening, the Colorado city will have seen its "dozenth" annual automobile show. It is being held under the auspices of the Denver Automobile Dealers' Association. Thirty different makes of automobiles for both pleasure and commercial purposes are shown by the two dozen dealers who hold space; of the trucks, three are new in the sense that they have not before been on exhibit during the present show season. They are the Continental, made by the Continental Motor Truck Co.; Capitol, displayed by the Capitol Truck Mfg. Co. and the Zimmerman tractor, which is exhibited by the Auto Tractor Co., the latter of which is novel in that it combines both a pleasure car and a farm tractor. The Fritchle electric, which is the product of the Fritchle Auto & Battery Co., of Denver, is the only newcomer in the pleasure car field. Accessories are shown by some 16 dealers in motor car appurtenances. The cars exhibited are: Lozier, Reo, Ohio electric, Abbott-Detroit, Paige-Detroit, Michigan, Oldsmobile, Waverley electric, Pathfinder, Hupmobile, Inter-State, Wichita truck, R. C. H., Overland, Apperson, Kissel, Fritchle electric, Stutz, White, Marion, Cartercar, Zimmerman tractor, Continental truck, Mercury truck, Dorris, Stanley, Baker electric, Little, Selden, Locomobile, Case, Capitol truck, Blair truck.

Street Parade Precedes Elmira's Show.



Red fire, a brass band, and the usual "fixings" that accompany a street parade marked the opening on Monday evening, February 24th, of the third annual show of the Elmira (N. Y.) Automobile Club, which held forth in the State Armory until Saturday evening last, March 1st. The displays of the motor car dealers who held space embraced some 15 different makes of vehicles, as follows: Paige, Pathfinder, Ford, Cadillac, Haynes, Overland, Palmer-Singer, Chalmers, Studebaker, Hupmobile, Atterbury truck, Pierce-Arrow, Cole, Buick, Detroiter. In addition, there were 13 exhibits of accessories.

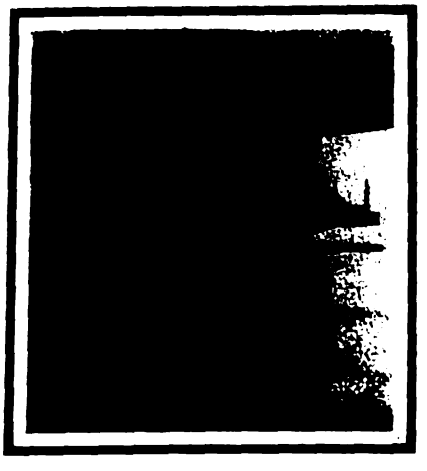
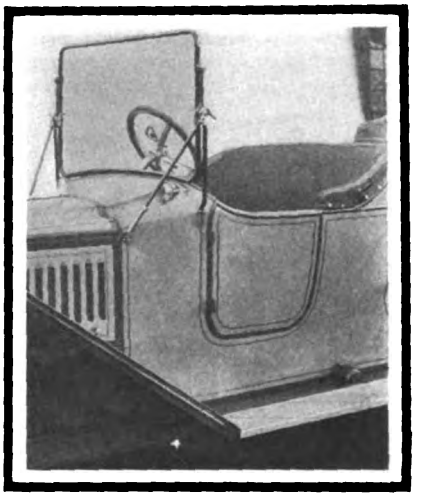
AMERICAN UNDERSLUNG ADDS FIRST SIX-CYLINDER MODEL

Employs Long-Stroke Block Motor of Unusual Compactness and Devoid of External Pipes—Traveller Features Retained.



After having permitted others to feel out the market for the six-cylinder car, and having itself successfully performed the feeling operation for underslung construction, the American Motors Co., of Indianapolis, Ind., at length and after careful preparation has launched a model combining these two features in the newest addition to a line that long has been one of the leading exponents of the principle of underslung frame construction. As might have been expected, the new car has a number of features in common with its predecessors, though it differs from them radically in a number of others, not the least significant of which is the employment of an unusually compact T-head, block-cast motor, in which even the water pipes have been eliminated by incorporating them within the casting. The car is designed to sell for $4,500, the price including complete equipment quite as a matter of course. It is styled Type 666, the figures serving to indicate that it employs a six-cylinder, 60-horsepower motor and the body accommodates six passengers.

AMERICAN UNDERSLUNG "SIX," VICE-PRESIDENT MENASCO AT THE WHEEL



Barring the compact appearance of the motor, which, by the way, measures 4½ x 6 inches and delivers 65 horsepower at 1,000 revolutions, its most conspicuous feature is the absence of water piping and the miscellaneous other odds and ends usually considered essential to proper and efficient operation. Instead of being conveyed to the cylinders through outside pipes, the circulating water is led directly into the cylinder casting from the radiator, the passages being cored integral. Full advantage is taken of this method of construction thoroughly and adequately to cool the valves and stems, which feature, it is pointed out, effectually obviates the possibility of unequal distortion and consequent sticking or breakage. Permitting more effective distribution of the cooling water through the radiator, two inlets are provided, with a branched T-shaped header. Draft through the tubes is induced by a cast aluminum fan with ample provision for taking up the slack in the driving belt.

Conforming to modern practice, both intake and exhaust passages, as well as water passages, are cored integral with the casting. Thus, it becomes a comparatively simple matter to eliminate the usual intake manifold and to substitute for it a comparatively short pipe leading directly from the carburetter to the side of the casting, the disagreeable tendency of some of the slightly heavier grades of fuel to "load up," or condense en route to the cylinders by reason of long passages, being obviated. Incidentally, the construction permits of the carburetter being placed fairly high where it is instantly accessible for adjustment. Oil pipes also are contained within the casting and the effect of "cleanness" which prevails is heightened by the use of closely fitting valve mechanism covers and webs cast between the supporting arms and the side frame members to prevent the ingress of road dirt.

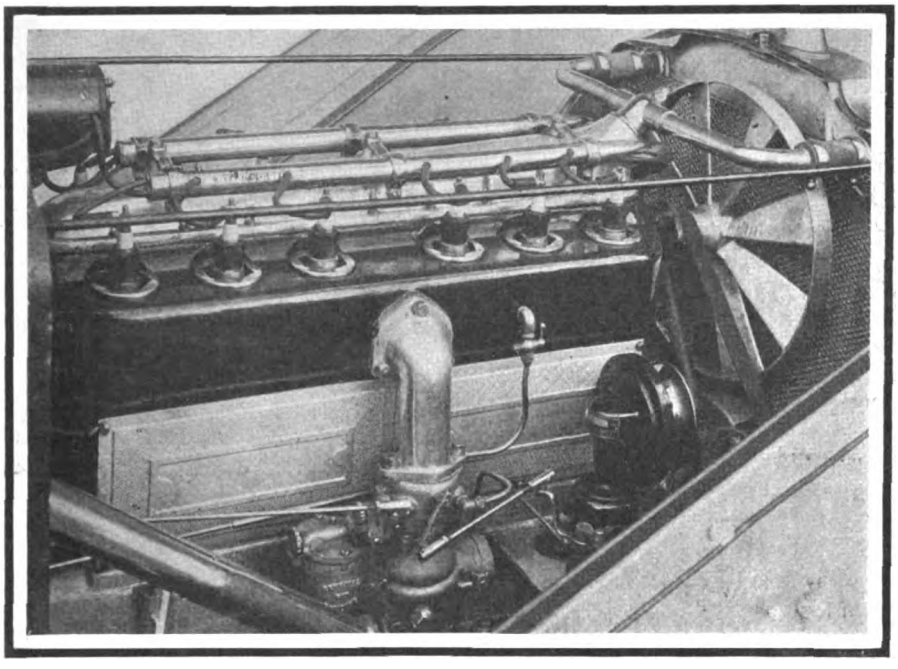
AMERICAN TANK SUPPORT

Leaving the intake side of the motor perfectly clear except for the presence of an electric horn, which forms part of the regular equipment, the high tension magneto which provides ignition energy is mounted on the left side, together with the water pump and the electric lighting and engine starting equipment. Thus, in addition to facilitating carburetter adjustments, the location of the magneto on the opposite side effectually reduces the fire hazard due to the ordinary juxtaposition of these two essentials. The lighting and starting equipment is mounted on a substantial base and is driven through the intermediary of solid shafts to the timing gear train, which has been proportionately strengthened to perform its added work. Consequently, the usual forms of flywheel gearing and "silent" chains are conspicuous by their absence.

INTEGRAL WINDSHIELD AND LAMPS

In the matter of a clutch, American engineers have found little room for improvement in the cone type that has been used for so many years in the Traveller models, and hence that type has been adopted in its entirety except that a few minor refinements have been made. Thus, for instance, the combined helical and spiral spring which holds the clutch in engagement is retained quite as it has been used in the past. It is equipped with a ball thrust bearing to take the end load and ball bearings on the clutch bushing and the yoke successfully eliminate friction at these points. Similarly, the change speed mechanism is substantially the same as that used in the Traveller models, with a few minor improvements. Gears are large of face, of high grade alloy steel and are cut to close limits to eliminate the usual growl that emanates from "down below" when running on low speed. Four speeds forward and reverse are provided, both lay and drive shafts being mounted in large diameter im-

Digitized by Google



ported ball bearings. Shifting rods are supported in exceptionally long bearings and are fitted with positive locks, making gear shifting easy and certain.

From the gear box, power is transmitted to the rear wheels in the orthodox manner through the intermediary of a propeller shaft enclosed in a drawn steel torsion tube made fast at the after end to the axle housing, which is of the built-up type in which the axle tubes are rigidly fastened to a cast steel differential housing. The top half of the housing is removable without the necessity for disturbing any other part of the axle, and the entire differential mechanism can be lifted out through the opening. The axle itself is of the full-floating type in which the weight of the car is supported on large annular ball bearings. In the case of the drive pinion and the ring gear, the bearings are mounted in adjustable cages.

Naturally, the front wheels also are mounted on large diameter annual ball bearings, though it is one of the distinctive features of the car that a double thrust bearing is provided. Both sets of brakes, service and emergency, are equalized and are mounted inside rear wheel drums which measure 16 inches in diameter; each brake band is two inches in width, thus providing sufficient braking surface to bring the car up "all standing" if necessary. The steering gear is of the irreversible worm and sector type and is mounted in special bearings to ensure easy operation.

In the design of the frame and the method of suspension, the construction differs in no whit from that already made familiar by previous Americans. The frame is carried beneath the axles, the immediate effect of which—it scarcely is necessary to point out—is materially to lower the center of gravity and thus to increase stability. Both front and rear are supported on unusually long and flexible semi-elliptic springs. One slight departure from previous practice is to be found in the method of hanging the gasolene tank at the rear, the construction, which is exceptionally solid and provides more than ordinarily complete protection for the tank being best made plain by the accompanying picture.

The chassis is fitted with a roomy six-passenger touring body in which the effort at the elimination of projecting parts is reflected by the absence of door hinges and latches and the clever manner in which the side lamps have been almost hidden in minimature tunnels. Incidentally, the windshield is no more an accessory than is any other part; it is built in place without the use of the usual filler board and the struts are so placed as to offer the least possible obstruction to the driver's vision.

INTAKE SIDE AMERICAN "SIX," SHOWING ABSENCE OF PIPING

The standard equipment of the car, all of which is included in the price, embraces a specially designed crayenetted mohair top with the usual slip cover and side curtains, electric lighting and engine starting system, 100-mile electrically lighted speedometer-clock combination, adjustable windshield, electric horn, shock absorbers, demountable rims with two spares, robe and foot rests, and the usual complement of tools, tire repair kit, pump, jack and spare parts.

Read Makes Ready an $850 Model.

Having finally perfected its organization by the election of R. J. Read as president, Roy Herald as secretary and J. E. Beatty as treasurer, the Read Motor Car Co., of 541 Woodward avenue, Detroit, Mich., which for some time has been in process of formation, at length is ready to market its first product, an orthodox five-passenger touring car styled the Read "30," which lists with complete equipment at $850. The car mounts a four-cylinder unit power plant in which the cylinders are pair-cast and measure 3¾ x 4½ inches; ignition is effected by means of a high tension Briggs magneto and mixture is furnished by a Holly carburetter. The other essential elements of the car include a three-speed selectively operated gearst with the control lever in the center of the footboard, leather-faced cone clutch and semi-floating rear axle. Rear springs are full-elliptic, with the lower halves hung beneath the axle and the front members are semi-elliptic. The wheelbase is 115 inches on 32 x 3½ Goodyear tires carried on demountable rims. Equipment includes top, windshield, speedometer, gas head lamps and tank, and the usual horn and tool complement.

Kelly Truck's Branches Reorganized.

Since Charles B. Shanks assumed charge of the Kelly-Springfield Motor Truck Co.'s sales department, its system of branches and service stations, among other things, has been considerably reorganized, a number of new men having entered the service. As reorganized, the branches and their managers are as follows: New York City, N. Y., A. S. Holly; Cambridge A, Boston, Mass., P. S. Aultman; Philadelphia, Pa., James Joyce; Kansas City, Mo., Charles B. Packham; Chicago, Ill., L. R. Garrison; Seattle, Wash., Henry E. Schmidt; San Francisco, Cal., Frank G. Miner; Los Angeles, Cal., J. L. Stone (assistant branch manager in charge); Dallas, Tex., A. R. Hayden; Cleveland, Ohio, D. C. Hathaway; Birmingham, Ala.

A. C. A. Decides to Retain Laboratory.

It has been decided by the Board of Governors of the Automobile Club of America that the club's fine testing laboratory, the discontinuance of which was practically decided upon because of the expense involved in its maintenance, is to be retained. The work will even be carried further than the laboratory itself permits, for it is planned to make road tests of cars and accessories—carburetters, tires, ignition apparatus, cooling systems and so on. In making road tests the A. C. A. is following the example of foreign organizations, which have done work of this character for dealers and manufacturers.

The Firestone Tire & Rubber Co. has opened a branch in Milwaukee, Wis., at 456 Milwaukee street. It will be managed by J. E. McGinnis.

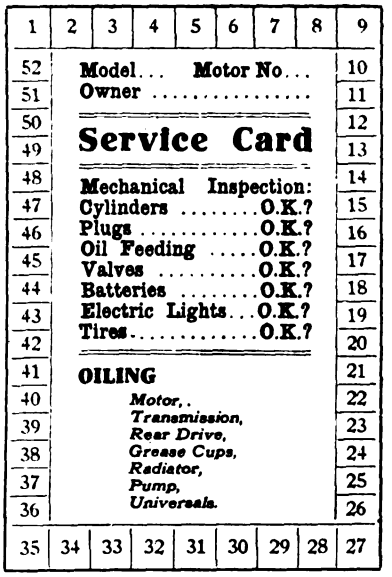
WEEKLY SERVICE SYSTEM THAT HOLDS TRADE

How a Southern Dealer Takes Care of His Customers With the Aid of a Card and a Punch—Simple Method of Keeping Track of Adjustments, Repairs and Replacements—Thoroughness the Keynote of Success.



Just how far-reaching should be the service accorded the purchaser of a motor car by the dealer is a subject regarding which there probably always will be divergent opinions. All, or very nearly all, are agreed, however, that service in one form or another pays. There are those who believe that, like everything else, as a profit yielding medium it has its limitations; and though this class is in the majority, there is none within its scope who is prepared to say exactly where lies the dividing line between profitable and non-profitable varieties of service, or, in other words, between judicious advertising and pure philanthropy. A second class believes that the dealer never can accord the purchaser service that in the long run will not net the party of the first part a profit.

Fifty-two Weekly Inspections.

To this second class belongs the firm of Joseph Schwartz Co., Ltd., which handles Premier and Buick pleasure cars and G. M. C. commercial vehicles in New Orleans, La. The word "service" pronounced with the Schwartz accent designates a thorough and periodic inspection of each of the cars sold by the establishment. To this end, the card shown by the accompanying illustration is issued to each purchaser of either make of vehicle, and each time an inspection is made a hole is punched in one of the numbered squares which fringe the edge of the card; since the inspection is scheduled to take place weekly, there are in all 52 squares, making the card good for a year's free service, although if at the end of a year from the date of purchase of the car, owing to inability of the owner to take the car to the service station, all of the numbers have not been punched, the service is continued until the car has undergone a total of 52 inspections.

Examinations That Mean Something.

The inspection is reasonably thorough, too. A wrench is put on each nut and bolt and the slack taken up by way of preventing chance loss at an inopportune time; the cylinders are carefully examined and all traces of carbon removed against the possibility of an overheated motor, pitted exhaust valves, and general sluggish functioning. Also, the lubricating system receives its due share of examination at each inspection; in cases where the formation of carbon is excessive or persistent, special care is taken in noting the flow of oil with a view toward determining the cause or causes of the malady and, once determined, correction is made to prevent recurrence of the trouble. Sometimes it is but a readjustment of the means for controlling the supply of oil, and occasionally induces the suggestion to the owner that the grade of oil be changed for one that, with his particular motor, will give better results.

SCHWARTZ'S CHECKING CARD

The motor is turned over slowly and the compression in each cylinder tested; where found to be lacking or faulty, either the valves are ground in or the piston rings are freed in their slots to effect a cure. Valve tappets are adjusted so that the timing always is perfect.

The ignition system does not escape the close scrutiny which is accorded the other parts of the motor and each plug is examined, cleaned, if need be, or repacked in case of leakage or breakage of the insulating medium, and the gap is readjusted to a nicety, compensating for the slight amount of burning which is bound to result from the use of a magneto ignition. Cables and wires which have to do with the high and low tension systems are thoroughly "looked into" by way of eliminating derangements either in the insulation or in the conducting medium itself which are liable to assert themselves when the owner is "twenty miles out," as Joseph Schwartz puts it, with the well-known effect of causing delay and inconvenience; the terminals are readjusted and scraped to insure perfect contact, if need be. The magneto circuit breaker contacts are put in proper adjustment and the bearings given their allotted drop of oil of the proper weight.

Little Things That Are Not Slighted.

Nor is the cooling system neglected; after it has been determined that all joints are perfect and that there are no leaks in the radiator, that the pump is functioning properly and that passages are free from obstruction, the system is well flushed out to eliminate all of the insoluble precipitates which are calculated to cause "furring" of the radiator, and the latter is filled with fresh water.

The "modern" fixings which add luxury to the car are not overlooked. The electric lighting system is gone over and the component parts adjusted, if need be. The commutotor of the generator is "rubbed up" in the proper manner by the proper man, and where the battery voltage is low, the reason for its "lowness" is ascertained and the corrections called for are instituted.

A Sharp Lookout for Tire Troubles.

So much for the motor. The remainder of the car is given the same attention, to the end that the transmission is filled to the proper level with the right sort of grease; the differential case is opened, wear in the bevel gears is compensated for, to eliminate all hum, and the proper lubricant applied. The universal joints do not escape attention and are properly cleaned and greased, and each and every grease cup or oil hole in and about the car which has to do with the lubrication of the running gear comes in for its due share of attention. And what probably appeals to the owner as strongly as the attention given the mechanism of the car is the care with which the tires are inspected and the small cuts and stone bruises cleaned and filled, and the larger bruises, which are liable quickly to develop into seats of tire trouble, vulcanized. Naturally, when much time and ma-

Digitized by Google

terial are used, a charge is made, but the constant care of the smaller bad spots does so much toward keeping down tire expenses that the average owner does not mind paying these legitimate bills. Of course, the tires always are inflated to the proper degree.

Just what this sort of service means to the owner is a matter too fully understood by all those who are interested directly or indirectly with motor cars to need very much in the way of explanation. It means that the car always is in the pink of condition; practically all the driver has to do is to drive, all there is to watch is the road ahead. The thoroughness of the inspection and the frequency with which it is made eliminates all work save that which is occasioned by a puncture or a possible more serious rupture of some part of the mechanism which arises from some unavoidable accident.

From the trade standpoint, however, the real consideration is what the service means to the dealer. In inelegant vernacular, it suggests the question, "Where does he get off?" which question is best answered by the fact that the Schwartz people are exploiting their service system to the furthermost degree. That it should attract trade and hold it, once it is secured, is logical, for after the consummation of a sale the service is so complete that each buyer of necessity becomes a "booster" in a double meaning. In the first place, so little trouble is experienced with the car that the brand is boosted; secondly, in appreciation of the service, the establishment is boosted. And if a car owner is kept satisfied with his first car, and with the dealer's methods of handling his trade, both the dealer and the brand receive the first consideration when the purchase of a new car is being contemplated.

That the system also opens avenues for the exploitation of a very great many accessories and for the sale of gasolene and oil is readily apparent, and it would seem that extra profits accruing from such sales should go far toward paying for the services rendered.

Tool for Clearing Cuts in Tire.

Even if a cut in a tire cannot be mended immediately, it will be to its advantage to scrape it out, keeping it clear of bits of gravel and the like that may tend to spread it. An excellent tool for the purpose can be made by flattening the end of a piece of quarter-inch steel wire to a spear-like point and turning it over at right angles, making a scraper that will penetrate to the bottom of a cut. Such a tool is useful for cleaning cuts previous to filling, as well as helping to prevent their spreading until the repair can be made.

LIGHTS GLOW AMID VINES AT PITTSBURGH'S "EXPO"

Show Is First of Two Rival Exhibitions Held in "Smoky City"—Car, Truck and Accessory Exhibitors Total 102.

Exposition Hall—the one in Pittsburgh, Pa.—is aglow with the many lights and bedecked with the vine-entwined trellis work, not to mention the mural paintings that obscure bare walls, all of which go to make an attractive decorative setting for an automobile show. The show now in progress—which is the third "Expo" show, as the Smoky City men call it, and which is managed by T. I. Cochran—is the first of Pittsburgh's rival shows and will be in progress until Saturday evening next, March 8th, the doors having swung wide on Monday evening last, 3rd inst. Both pleasure cars and commercial vehicles are on view, the former to the number of 25, and an even score of the latter shown by 35 dealers. Accessories are more than ordinarily numerous, and are shown by 42 dealers.

Four pleasure cars not previously exhibited during the present show season cropped out. They are the Enger, shown by Aupke Bros.; the Duquesne, by the Aaron Deroy Motor Car Co.; the G. J. G., by Martin & Coulter, and the Alpena, displayed by the Penn Motor Co. The commercial vehicle display likewise brought to light four vehicles not previously shown. They are the E. P. E. electric, which is the product of the Elwell Parker Electric Co.; the Lange, offered by the Lange Motor Car Co.; the Shelton, shown by Martin & Coulter, and the Curtis, made by the Pittsburgh Machine Tool Co.

The cars shown are: Alco, Abbott-Detroit, Enger, Regal, Cole, Studebaker, Duquesne, Stutz, Henderson, Knox, American, Kline, Locomobile, Staver, G. J. G., Michigan, Haynes, Pierce-Arrow, Hupmobile, National, Paige, Ohio, Alpena, Marathon, Pullman, Marion, Schacht, Mitchell, Empire.

The commercial vehicles on view are: Alco, Stewart, Indiana, Little Giant, Studebaker, B. A. Gramm, Bessemer, E. P. E. Co., Knox, I-H-C, Lange, Locomobile, Dart, Shelton, Pierce-Arrow, Hupmobile, Ohio, Curtis, Schacht, Lippard-Stewart, Vulcan, Service, Kelly, Chase.

Thirty-one Cars at Bridgeport's Show.

"Dressed up" for the occasion, the Park City skating rink, which is in Bridgeport, Conn., forms the housing for the automobile show which was inaugurated on Monday evening last, March 24th, under the auspices of the Bridgeport Automobile Dealers' Association. The show comprises 31 products of different automobile factories, displayed by 25 dealers. It will be in progress for the remainder of the week. The cars on view are: Studebaker, White, Pope-Hartford, National, Mitchell, Waverley electric, Rauch & Lang electric, Regal, Ford, Little Giant truck, Henderson, Moon, R. C. H., Cadillac, Selden, Pierce-Arrow, Federal truck, Moyer, Oakland, Abbott-Detroit, Chalmers, Gramm truck, Lozier, Paige, Paterson, Krit, G. M. C. truck, Franklin, Buick,

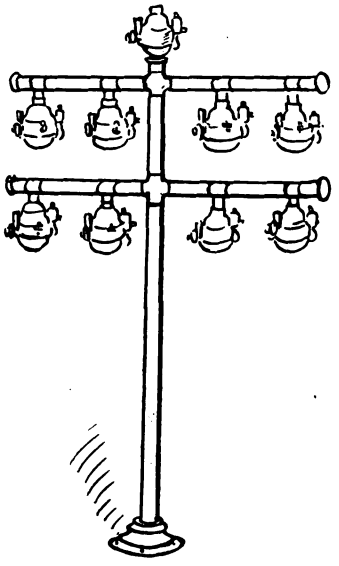
Trucks that Formed Cinci's Part II.

Saturday evening last, March 1st, saw the close of Part I of the motor show which was staged in the Cincinnati Music Hall by the Cincinnati Automobile Dealers' Association from Monday, 24th ult., until last evening, Wednesday, March 5th. When the doors opened on Monday evening last, in place of the pleasure cars which had held forth during the week previous, were disclosed some 22 makes of commercial venicles, both large and small, shown by an even score of dealers. They were as follows: Packard, Federal, Pope-Hartford, United States, Pierce-Arrow, Avery, International, Armleder, Schacht, Peerless, White, Lippard-Stewart, Empire, Smith-Milwaukee, Alco, Reo, Service, Detroit electric, Universal, Indiana, Kelley, Glow electric.

Full Score of Cars at Topeka's Show.

Topeka, Kan., has successfully brought to a close its first annual show. The opening occurred Monday evening, 24th ult., in the Topeka Auditorium, under the auspices of the Topeka Motor Car Dealers' Association, and the exhibit held the boards for the remainder of the week. Two dozen different makes of motor cars were in evidence, displayed by 16 dealers; accessories were shown by half a dozen of those who deal in motor car appurtenances. The cars on view were; Chalmers, Cadillac, Hudson, Stafford, Stoddard-Dayton, Oakland, Buick, Interstate, Paige-Detroit, Overland, Mitchell, Cole, Hupmobile, Jackson, Rambler, Auburn, Studebaker, Maxwell, Ford, Glide, Reo, Marion, International and Detroit electric.

Cork that Assists Polishing Jobs.



A large cork with its end dipped first in oil and then in emery makes a first-class polisher for metal surfaces that have been filed up smooth. Various grades of emery can be used to bring the surface down to the required finish, but a thin slice should be cut off the cork after using a coarse grade so that there will be no coarse particles sticking in the surface to spoil the work of the finer powder.

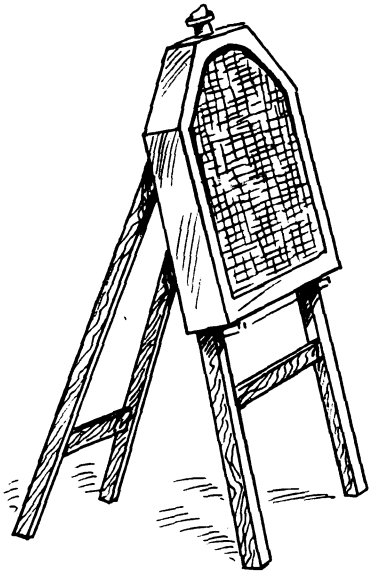
CLIMBING TO SUCCESS ON ACCESSORY FIXTURES

Value of Placing Wares Where They May Be Seen to Best Advantage—Only Slight Expenditure Often Makes Manifold Return Possible—Story of "The Man Who Stood Still."

Whenever a man goes to the theater it is nearly always with the idea of being amused; problem plays are strenuously avoided by that individual whose object in expeditions of this sort is mental recreation, but, despite the attempt to amuse the "tired business man," now and then a play teaches a lesson which, however, is not always recognized in the cover of hilarity or pathos which prevails; many may not recognize it until it is brought to their attention that when Louis Mann portrayed "The Man Who Stood Still" some time ago his role carried a message which is doubly applicable to the accessory trade because, while it has progressed, it has not reached that plane of merchandizing which is attained,



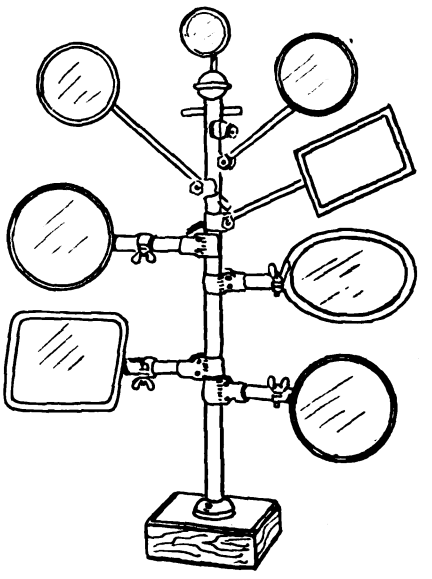
A. B. C. CARBURETTER FIXTURE

generally, only after years of experience on the part of tradesmen.

Whether it really is because the accessory trade is a young trade or whether it is because so many accessory dealers are new in the merchandizing field, is a matter which may be set down as extraneous, so far as the present matter is concerned, but certain it is that with some accessory dealers progressing rapidly there are others who align only too closely with "The Man Who Stood Still."

There is one difference between the two, however, in that while "The Man Who Stood Still" was a past generation product who was unable to awaken to the necessities of the newer sort of salesmanship the accessory man is of the present generation, but he nevertheless is in need of assistance or an awakening in many particulars and, once given the slightest impetus in the right direction, has an unbounded field of endeavor before him. "The Man Who Stood Still" was a jeweler, and in other days the Man had been possessed of an ex-

McCORD RADIATOR RACK



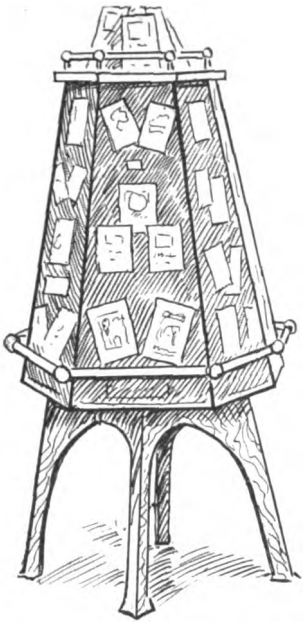
cellent trade, but as the years rolled by it drifted to other more up-to-date shops.

Making a Radiator Attractive.

If "The Man Who Stood Still" could wander along almost any "Automobile Row" and visit a few stores where automobile adjuncts are sold and could view things through his old-time eyes, he would marvel at many things, and he probably would stop in a store where McCord radiators are sold and, in dismay at such useless expenditure of effort, say. "Why such foolishness as to build a stand just to set that radiator on? Wasn't there room on the floor for the radiator?" And the Man never would be able to comprehend the statement that the radiator looks better on a neat rack than it does on the floor and that a great many other fixtures and display devices which he would see would be valuable to him if he were running an accessory store to-day.

The rack in question is much like an easel, designed to hold a picture, and its construction is simple and inexpensive, but the difference it makes in the appearance of the radiator cannot be estimated. A radiator standing on a store floor might look much as if one of the clerks had started to put it somewhere and set it down to wait on a customer, but on the rack it possesses more character and can be more easily inspected by a prospective purchaser. Many other accessories are almost within the hardware class, but may be effectively shown up with proper mounting.

Carburetters are not handsome pieces of work, but the International Accessories Mfg. Co., of New York City, is responsible

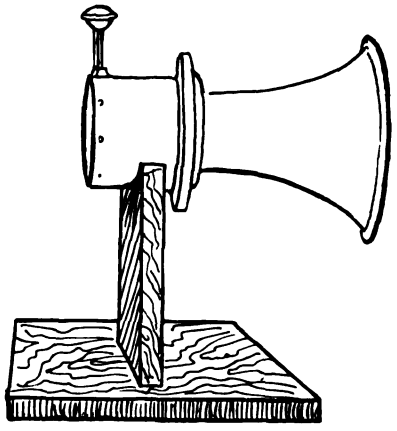


SIMPLE MIRROR DISPLAY

for an attractive method of featuring its A. B. C. carburetters, utilizing a device which is not extremely difficult of manufacture; it consists of several sections of brass tubing, with joints, fitted to form a cross with two cross pieces, while evenly spaced on each side of the upright standard are T-fittings inserted in the cross arm and means for attachment of the carburetters. The carburetters and T-fittings are connected by close nipples and the instruments are much more attractive than when heaped on a counter. As an accompanying illustration shows, this device may be used to advantage for the display of different types or makes of carburetters.

Digitized by Google

Possessing considerable attractiveness in themselves, mirrorscopes, like a great many other wares, might be said to be on display when piled up in a showcase, but their value is made more plain to the prospective



GOODRICH REVOLVING STAND

buyer when the glittering glass affairs are attached to arms of some sort, much as they are mounted when in service on a car, and when a group of these pretty little accessories is displayed on a polished brass standard the effect is striking and merits attention, if for no other reason, because a mirror is seldom passed up by the average human being. An excellent method of mounting, as is illustrated, is upon a single upright tube, inserted in a wood block base, and possessing simple means of attachment.

Mounting Windshields and Bumpers.

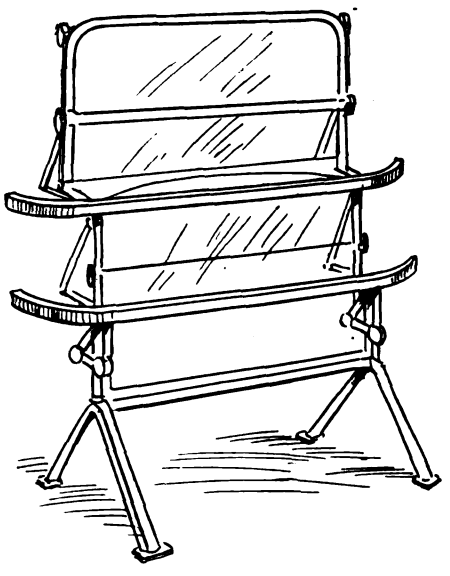
Probably as much ingenuity as is required in devising a means of showing off any ware is needed in fitting up a device which will afford a display for windshields and also for bumpers without the result being an angular and unsightly aggregation of rods and bars in which there is no semblance of beauty but in which the effect is such as to repell rather than attract; ingenious mechanics in the employ of various concerns, however, have applied their ability to advantage, and a common means of mounting bumpers is to arrange a number of them on two upright tubular standards, which is well enough but which is not capable of the effect produced by a design worked out by the Cox Brass Mfg. Co., of Albany, N. Y., wherein windshields and bumpers are combined advantageously. The base, as an accompanying illustration makes plain, consists of four legs and a rod connecting them, while above the base windshields and bumpers are arranged alternately.

This last described device necessarily involves considerable labor, which, however, is not wasted effort, yet many an accessory dealer might decry this extensive venture into the fixture field because of its complicated nature; but that he need not be without fixtures is almost certainly indicated by numerous horn mounting standards which place an alarm sounding mechanism in a position much more realistic than mere repose on a showcase cover, and while the majority consists of some form of wooden standard, some with iron mounting arms, the acme of simplicity in the whole fixture line is found in a product which originated with the makers of Long

SIMPLE LONG HORN BRACKET

horns. A glance at the accompanying illustration is better than any description, for the fixture is nothing more than an upright board with hollowed end and fixed to a square base, yet the effectiveness is greatly in excess of the ease of construction.

Enhancing the Value of Literature.



"The Man Who Stood Still" would have marveled at all this expenditure of effort and money which he would have said might better be turned into other directions, and he probably would have been utterly dumbfounded when he saw the B. F. Goodrich Co. pouring good coin into the building of revolving octagonal display fixtures for advertising literature; to start off with, he probably could not comprehend the use of so much expensive literature and that a man should go to so much trouble to build something to hold it when it could just as well be piled up on a showcase would be beyond him. Incidentally, the Goodrich people employ the same stand for displaying their varied line of tire accessories—patches, inner sleeves, and the like.

But the advantage of such a piece of machinery in an accessory store, or any other store, for that matter, when a varying line of wares is sold, is only too apparent; every dealer, it is assumed, is anxious to get his literature into the hands of his trade, and booklets and folders, piled up on a counter, are not always attractive—they look too much like "advertising," which for some unknown reason is something many individuals seek to avoid. But in the fixture in question each piece of literature is shown by itself and in attractive form; the device consists of an eight-sided truncated pyramid so set upon a base that the pyramid will revolve, while neat brass hand rails at the top and bottom serve both as an ornament and a means of turning.

How a Fixture May Pay Heavily.

Anyone knows that the natural impulse when a man sees such an affair is to take hold of the handle and turn the thing, just as visitors at automobile shows always give mounted wheels a whirl and poke every other device which looks as if it were made to be poked, and the man who turns the literature pyramid cannot fail to look at what is on it; in fact, having turned the pyramid he sort of feels that he must excuse his act by looking at the booklets, and if the booklets are properly gotten up he may take one, and if they contain good sales talk he may read it, and if he reads it it may be the stepping stone to a sale. And if because of the booklet one man buys a tire, a radiator or some ware on which there is a substantial profit, is not the fixture paid for?

Even with all these apparent advantages, "The Man Who Stood Still" never could "see the use of it." It looks like putting

COX COMBINED DISPLAY STAND

money into a hole with a chance that it never will come out. What did the Man do? Oh, he came out all right. Of course, he lost his business, but his son-in-law gave him a job, so he managed to get along quite well after all.

ENGINEERS TALK KEROSENE BUT LET IN LITTLE LIGHT

Fear of Telling "State Secrets" Curtails Carburetter Talk at S. A. E. Metropolitan Section Meeting —Conclusions Reached.

Although it was hoped, in view of the increasing importance of the subject, that much of an enlightening nature would be forthcoming at the monthly meeting of the Metropolitan Section of the Society of Automobile Engineers, held Thursday last, 27th inst., at the headquarters of the society in New York City, in the discussion of an advertised paper entitled "Kerosene Carburetters for Motor Car Use," the meeting was, to those who went prepared for enlightenment, a disappointment, to say the least. As it transpired, the paper was no paper at all, the pseudo title serving merely as a subject for discussion, and the discussion itself was of a rambling nature which consisted essentially of the exploitation of a single device more suitable for heavy stationary engines than for automobile motors.

Despite this fact, however, a few rays of light crept into the smoke-surcharged atmosphere of the meeting room, and some of the considerations of A. C. Bennett, of the Wilcox-Bennett Carburetter Co., who did most of the talking, with regard to vaporization and the admixture of fuel and air contents, were interesting. All told, some 97 manufacturers of carburetters—kerosene and gasolene—had been invited to attend the meeting, but though a number of them were represented, the representatives were singularly adverse to taking part in the discussion, most of them requesting to be excused on the plea that they had attended to listen and learn and not to talk.

Taking exception to the generally accepted theory that to increase the size of the intake manifold and valves, within certain limits, is to increase efficiency, Bennett's most startling dissidence was to the effect that the size of such parts might better be decreased instead of increased, the theory being in line with his own opinion and experience that too little attention is paid to the pulverization of kerosene fuel in the design of a successful heavy fuel carburetter.

Vaporization, he pointed out, is unsatisfactory because of the heat needed and the consequent loss of efficiency through loss of expansion on explosion and the most logical means of attacking the problem is through careful pulverization of the fuel. In his opinion, the only feasible way to employ kerosene is to break it up; the more finely it is broken, the better will be the results.

Hence, Bennett advocates intake passages of the minimum diameter in order to take advantage of the disrupting influence of the air under high velocity, the effect being heightened by holding the intake valve closed until the piston has descended approximately 25 degrees, thus causing a partial vacuum which assists rapid flow of the gases. Incidentally, Bennett opines that the use of intakes as free as possible of short bends is a mistaken idea on the theory that the abrupt change in direction of the mixture tends towards homogeneity. The latter consideration would seem to be borne out by the experience of a British carburetter manufacturer who has obtained noted success with the use of a T-shaped manifold of comparatively small area; gasolene is employed, however.

Despite his considerations against the use of heat, Bennett does use it, though not in the generally accepted manner. Instead of heating either the mixture or the air, Bennett heats the kerosene itself, the heating apparatus taking the form of an exhaust gas jacket around the bowl of the carburetter; gasolene must be used for starting, of course. Also, to obviate knocking, which in his opinion is caused by the expansion and sticking of the upper end of the pistons, he injects small quantities of water into the mixture. It has been found that the smaller the quantity of water employed the higher is the efficiency of the engine.

Another interesting characteristic brought out by Bennett in the course of his talk was that with the use of heavier gravity fuels there is difficulty in ensuring equal charges in the several cylinders of a multicylinder engine. To obviate this difficulty it has been the practice of his company to place small fins in the intake passage.

In discussing Bennett's talk, one engineer delved into a not altogether unknown line of thought by suggesting a solution of the problem by mixing kerosene and gasolene. The idea, however, was not heralded with enthusiasm, the majority opposing it.

It was the general concensus of opinion of those in attendance, as expressed by Chairman Anglada, that the most logical and most proper manner of attacking the kerosene carburation problem is for the engine makers and those who make carburetters to work hand in glove, or, in other words, to make engines and carburetters "fit" each other, rather than attempt the designing of a kerosene carburetter that presumably will work successfully on any engine. That there are a great many carburetter makers vitally interested in the perfection of a device that will handle kerosene was manifest by the attendance, and it could only have been their unwillingness to make known exactly what they are doing that prevented many of those present taking advantage of the opportunity afforded by the meeting for a mutually advantageous exchange of ideas.

Ray Harroun Goes into Carburetters.

Ray Harroun, famous as a racing man and of undoubted ability as an inventor and engineer, who in January last formed the Harroun Carburetter Co., capitalized at $50,000, has acquired manufacturing facilities in the Industrial Building in Indianapolis, and matters have progressed to a point where the Harroun carburetter has been adopted as stock equipment for Marmon cars. The device, which is designed specially for the heavier grades of fuel, employs a single jet and the conventional air valve, the distinctive feature being the method of leading heated air from the exhaust first through a jacket around the carburetter and then through the carburetter, the effect being to assist vaporization of the fuel. It is otherwise distinctive by reason of its fine finish, which is described as being equal to that of a "fine watch." A single adjustment, to be made from the dash, is provided.

Electric System Put to Stopping Test.

No one likes to think of operating a piece of machinery brutally, continually, without any rest and at its top capacity for work, but that is exactly what the Apple Electric Co., of Dayton, Ohio, did a few days ago, and the demonstration served to bring to light that long charging periods are not particularly necessary with the Aplco system. An Inter-State stock car, equipped with the Aplco electric lighting and engine starting system, was used, and the car was stopped in front of every numbered business house in the downtown section and started again immediately—for just 3 hours and 45 minutes. Approximately 1,200 starts were made, the average figuring out at something like six a minute. Despite the frequent starts and the short space of time allowed for recharging the battery, the dynamo proved itself more than equal to the emergency, for it actually put back into the battery more "juice" than the starter drew out of it in the demonstration.

Acetic Acid for Cleaning Spark Plugs.

Better than the use of gasolene for the removal of carbon from the insulating media of spark plugs is a ten per cent. solution of acetic acid. Applied with a stiff brush, this solution will quickly remove the formation, after which the core should be placed in alcohol before being inserted in the shell to the elimination of the last trace of moisture. In the absence of acetic acid, it should be remembered that it is practically vinegar in diluted form.

McCLELLAND BILL MENACES AUTOMOBILE INTERESTS

(Continued from page 15.)

or badge belonging to another person, or a fictitious license or badge.

"No person shall operate or drive a motor vehicle upon the public highways of this state, after the first day of January, 1914, unless such person shall have complied with the requirements of this section; provided, however, that a non-resident chauffeur or owner, who has been licensed or registered under the provisions of law of the foreign country, state, territory or federal district of his residence, substantially equivalent to the provisions of this article, shall be exempt from license under this section; and provided, further, that any member of the owner's immediate family, not under eighteen years of age, may obtain a license to operate a motor vehicle upon the highways of this state, if the owner shall stipulate upon the application for such license that such person is thereby constituted his duly authorized agent to operate such owner's car. No person shall allow a motor vehicle owned by him or under his control to be operated by any person who has no legal right to do so or in violation of any of the provisions of this article.

"Every owner of a motor vehicle registered under the provisions of this article, who shall engage any person to operate a motor vehicle as a chauffeur, shall cause to be filed with the secretary of state the name of such chauffeur, his address and license number together with a certificate of character of said chaunffeur."

Chauffeur's "Character" Must Be Filed.

In addition to reporting the sale of his car to the secretary of state, as at present, the McClelland bill also would require any owner employing a chauffeur to file with the same official a certificate giving the name of any chauffeur he may employ, and not merely such chauffeur's address and license number but "a certificate of character of said chauffeur."

The present provision applying to the speed of motor vehicles has been almost entirely rewritten. If the McClelland act is incorporated, not even cities of the first class can fix their own speed limits, nor will any city or village be required to display signs as at present. Neither will they be required to file copies of their local ordinances with the secretary of state, as is now the case. Instead of being required to drive "in a careful and prudent manner," and instead of a rate of speed of 30 miles an hour for a distance of a quarter of a mile being presumptive of careless or imprudent driving, Senator McClelland makes 25 miles an hour for a distance of an eighth of a mile the extreme limit of speed on open highways, 15 miles being the limit in built-up sections. He would also require that the speed of motor vehicles passing a street car that is "stationary or about to stop" shall be reduced to five miles an hour. The full clause is as follows:

How the Speed Law Is Renovated.

"No person shall operate a motor vehicle on the highways of this state recklessly or at a rate of speed greater than is reasonable and proper, having regard for the width, traffic and use of the highway, or so as to endanger the property or the life and limb of any person; provided, that if the rate of speed, within the limits of a closely built-up territory of a city, village or town, contiguous to a public highway, where for not less than one-quarter of a mile the dwelling-houses on such highway average less than 100 feet apart, exceeds 15 miles per hour for a distance of one-quarter of a mile, such rate of speed shall be prima facie evidence that the person operating such motor vehicle is operating the same at a rate of speed greater than is reasonable and proper, and in violation of the provisions of this section; provided further, that if the rate of speed without the limits above named exceeds 25 miles an hour for a distance of one-eighth of a mile, such rate of speed shall be prima facie evidence that the person operating such motor vehicle is operating the same at a rate of speed greater than is reasonable and proper, and in violation of the provisions of this section; provided further, that if the rate of speed of a motor vehicle operated on the public highways of this State where the operator's view of the road and traffic is obstructed, when approaching a crossing or intersecting public highway, or when traversing a bridge or a sharp turn or a steep ascent or a curve in the highway, exceeds ten miles an hour such rate of speed shall be prima facie evidence that the person operating such motor vehicle is operating the same at a rate of speed greater than is reasonable and proper, and in violation of the provisions of this section; provided further, that if the rate of speed of a motor vehicle in passing any street railway car that is stationary or about to stop, on the same side of the car on which passengers are ordinarily received and discharged, exceeds five miles an hour, such rate of speed shall be prima facie evidence that the person operating such motor vehicle is operating the same at a rate of speed greater than is reasonable and proper, and in violation of this section."

Cut-Outs, Noise and Smoke Forbidden.

Among the few praiseworthy features of the McClelland act are provisions prohibiting unnecessary noise and forbidding not only the use of harsh or objectionable signalling devices, but cut-outs and also the emission of an "unreasonable amount of smoke."

As might be expected, the McClelland bill provides for an increase in the penalties for violations. Infringement of any of the provisions pertaining to registration, licensing, signalling and speed are made punishable by a fine of not more than $100 or imprisonment for 10 days, or both, for a first offense, and a fine of not more than $500 or imprisonment for six months, or both, for any subsequent offense. At present, the violations of these sections are punishable by fines not exceeding $50, imprisonment not being permitted.

Fine and Jail for "Boozy" Drivers.

Operating a motor vehicle while under the influence of liquor or drugs, or upon a wager or in a race, will entail a fine of not more than $200 or six months' imprisonment, or both, for the first offense, or not more than $500 or imprisonment for one year, or both, for any subsequent offense. The drunk who is arrested the second time, without option on the part of the court, will be imprisoned not less than six months and not more than two years.

Any person concerned in an accident who goes away without stopping and making himself known will be fined $100 for the first offense and $250 for a subsequent offense.

$100 or 30 Days for "Crossing" Police.

Any motorist who refuses to give his name and address to any officer, or to exhibit his license or registration certificate, or who refuses practically any other request made by police officials, will be fined not more than $100 or imprisoned for 30 days, or both.

Any person operating an unregistered motor vehicle will be punished by a fine of $500 or imprisonment for not more than one year, or both.

For violation of any other provision of the law the fine limit is $100 and the imprisonment limit 30 days.

License Revoking Pastime for Secretary.

The McClelland bill authorizes the secretary of state to suspend or revoke licenses practically whenever he feels like it, and requires him to suspend them whenever the operator of a car is involved in an accident resulting in the death of any person. In such cases, the operator's license will not be renewed within one year after the date of its revocation, unless he happens to have a pull with the secretary of state, which pull is described as "discretion."

In the RETAIL WORLD

W. J. Inman and Conrad Prasse have entered the trade in Lena, Ill. They have the Cole agency.

Lewis Skinner, formerly of Morrice, Mich., is about to open a garage in Wilmington, N. D.

The G. H. Williams Rubber Co. will open a new supply house in Phoenix, Ariz., at 310 North Central avenue.

J. P. Maguire has opened a repair and service station in Springfield, Ill. It is at 130 West Carpenter street.

O. E. Olson has bought the Pekin Auto Co., of Pekin, N. D., of Oscar Price; Olson will operate the company alone.

Roy Carnright contemplates the erection of a garage in Newburgh, N. Y. The site considered is on Du Boist street.

The Adirondack Motor Co., of Albany, N. Y., is about to erect a new garage on Central avenue; W. R. Rose is manager.

Frank W. Downs has opened a garage in Bettendorf, Ia. His business will include an agency and a garage and taxicab service.

The Coleman & Bentel Co., of Los Angeles, Cal., has changed its name to Bentel & Mackey Co. A new building will be erected.

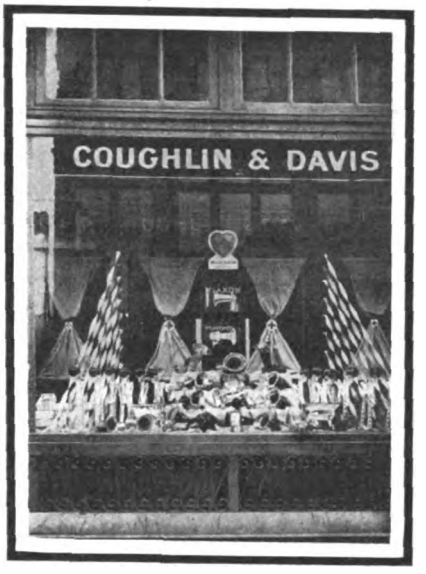
Frank Mackinson has purchased a half-interest in the Sigley (Ia.) Auto Co. The company handles Paige-Detroit and Chalmers cars.

Harry B. Hartley has opened a tire and supply house in Boston, Mass., at 243 Columbus avenue. The style is Automobile Tire & Supply Co.

S. C. Fowler has sold his interest in Ye Auto Shop, in Jacksonville, Fla., to C. W. Fawcett. C. R. Rowlson, Fowler's former partner, remains in the firm.

Samuel Ullman has purchased Gabriel Heineman's garage in Antigo, Wis. To place it in a more advantageous location it was moved by means of sleighs.

The Decorah Auto Car Co. has been formed in Ossian, Ia., by C. S. Marshall and others; a location in the M. J. Marsh building has been secured.



New quarters are being erected for the Overland Auto Co., of Phoenix, Ariz. The location is on North Central avenue and the building will be 75 x 137½ feet.

Karl Winter, formerly a mechanic, has branched out for himself in Salt Lake City, Utah. He has opened a repair shop at Eighth, South and State streets.

Charles Ungs has purchased the interest of Grover Bass in the Hawkeye Garage in Dyersville, Ia. Ungs and the other partner, S. G. Durant, will continue the business.

A. A. McLeod, for a number of years with the Pope Mfg. Co., in Hartford, Conn., has entered the garage trade in that city.

SIGNAL DEVICES WELL DISPLAYED

Coughlin & Davis's window arrangement of Klaxon horns in their Cincinnati store.

He has opened the Aetna Garage at 1227-29 Main street.

Charles L. Young, manager of the Young Aeroplane Co., of 304-6 East 15tn street, Kansas City, Mo., has "come down to earth"; he has supplemented the company's business with the Pathfinder agency.

Swenson Bros. have purchased a half interest in the garage business of T. A. Austin, in Iola, Wis., and a new garage and repair shop will be erected in the spring. The company represents the Case and Ford lines.

A. I. Thayer & Sons, operators of a garage and machine shop in San Rafael, Cal., are enlarging their business; they have purchased the Herzog Garage property at 4th and Cijos streets and will erect thereon a new building for their occupancy.

The General Motors Service & Truck Co., of which W. E. Norris is the proprietor, has leased Miller's Garage, in Bridgeport, Conn., at 554-58 Fairfield avenue, and has changed the name to G. M. C. Garage. The company is dealer in G. M. C. trucks.

B. Four, an accessory dealer in Los Angeles, Cal., has purchased the stock and business of the Pacific Auto & Supply Co., of San Diego, in the same State, which recently went into bankruptcy. Four will continue the business under the old name.

Trevor & Snider have just completed a $35,000 garage, containing 9,000 square feet of floor, on Third avenue, between 20th and 21st streets, Rock Island, Ill. The firm has the agency for Stearns-Knight, Cole and Chicago Electric cars. The firm members are Alexander W. Trevor and Walter E. Snider.

Two Philadelphia (Pa.) companies, the M-S-M Sales & Rubber Co., of 669 North Broad street, and the Meeley Tire House, of 1335 Mount Vernon street, and with branches in Washington, D. C., have been merged. The new company is styled Meeley Rubber Co. and is located at 600 North Broad street.

Anderson, Ltd., recently incorporated in Toronto, Ont., has secured salesrooms and a service station at 559½ Yonge street, recently occupied by the Diamond Tire Co., and is handling Reo cars; the manager and secretary of the company, Frank G. Anderson, has been in the trade for some time, having been connected with the Royal Oil Co.

A. C. Brady and A. T. Murray, both formerly connected with the factory of the International Motor Co., at Allentown, Pa., have formed the Brady-Murray Motors Co. in New York City; they have arranged to represent the new Chandler Motor Car Co. in New York City, Long Island and a part of New Jersey. A location on Broadway will be secured.

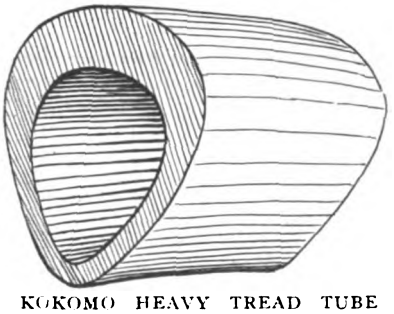
Fred Riley, C. B. Morse and Burke Bowes have formed the United Motors Co. in Battle Creek, Mich. They have secured a location on River street and will handle Reo, Little, Everitt and Michigan cars and operate a garage. Their building has a storage capacity of 300 cars. Before the formation of the new company Riley was R. C. H. dealer, Bowes sold Everitts and Morse was

Digitized by Google

Des Moines (Ia.) manager for the M. Rumely Co.

The Simplex Automobile Sales Co., of St. Louis, Mo., has reincorporated as The Motors Corporation. The officers are: President, Wooster Lambert; vice-president, Drummond Jones; secretary and treasurer, Knox Taussig; manager, H. H. K. Schwerdtmann; directors, the above and E. A. Faust. Headquarters are retained at 3214 Locust street and Simplex, King and Garford cars are stocked, the latter being a recent addition.

The Studebaker Corporation, which heretofore has maintained a branch for the transaction of wholesale and retail business in Seattle, Wash., has transferred the retail end to Frank Waterhouse & Co., Inc., who also are dealers in Garford trucks. The Studebaker wholesale business in that territory will continue to be handled by the branch. The Waterhouse company has opened a new garage and salesrooms at Broadway and Pike street.



Frank G. Carrie, who has been connected with the trade for nearly a decade, has purchased an interest in the Cutting-Larson Co., Oldsmobile dealer in New York City. Charles H. Larson, of the latter company, and Carrie have been personal friends for years. Some of Carrie's principal trade connections have been manager of the Haynes New York branch, with Wyckoff, Church & Partridge, manager of the Rainier New York branch and, lately, manager of the Marquette (Mich.) branch for the General Motors Co.

The Oakland-Wisconsin Motor Co., of Milwaukee, heretofore distributer in that State of Oakland, Detroiter and Empire cars, has been reorganized and incorporated with a capital stock of $50,000; also its territory has been augmented by the addition of Upper Michigan. The officers of the new company are: President and general manager, R. A. Creek; vice-president, Allen H. Small; secretary and treasurer, N. M. Creek. Headquarters will continue temporarily at 228-32 Wisconsin street, but a $50,000 garage is being erected at another location.

The Standard Auto Co. has been formed in Louisville, Ky., by George Dunham, formerly of the Dunham Auto Co., and C. L. Anderson, for several years manager of the Miles Auto Co., both of that city; the new company has taken over the old Dunham salesrooms and garage at 212 East Broadway and will improve the premises. Anderson will act as manager and J. A. Dugan, until recently with the Louisville Oldsmobile branch, will be sales manager. Cole and Regal cars and Woods electrics will be distributed. The Cole Motor Co., State distributer of Coles, has taken offices with the Standard company and E. H. Chase, former manager of the local Oldsmobile branch, will act as manager, with Dr. W. F. Blackford as his assistant. The latter formerly was head of the Southern Motor Sales Co. L. L. Miles, formerly of the Miles Auto Co., who recently withdrew from the trade, has returned as president of the Southern Motor company, which recently took over the Miles company and will handle Packards, Hudsons and Detroit Electrics.

Kokomo Brings Out a Heavy Tread Tube.

It is an engineering rule that the materials composing any structure should be placed under the least possible initial stress, or stress that is not due to work performed or load carried. The inner tube shown in the accompanying illustration is built according to this principle; it is moulded in the shape in which it will be used, so that

KOKOMO HEAVY TREAD TUBE

when in position in the shoe and inflated the initial stress will be low because the tube does not have to be forced into a shape differing from its normal form.

The new tube is manufactured by the Kokomo Rubber Co., of Kokomo, Ind., an old and reputable concern that is known for the excellence of the goods it has turned out. Like the shoe, the Kokomo heavy tread tube, as it is styled, is made heaviest where the work is heaviest—at the tread; the illustration shows clearly the generous increase in thickness of the rubber at this point. It is claimed that liability to puncture is considerably decreased not only on account of the depth of rubber to be penetrated before air can escape, but also because the tread is not stretched, thus avoiding the tendency to open up punctures, while in case of puncture, the thick tube has a degree of self-healing qualities. Pinching, it is further stated, is eliminated, because there are no loose folds of rubber to catch and make trouble.

Recent Losses by Fire.

Rehobeth, Del.—L. J. Carmine, garage damaged. Loss not given.

Pittsburgh, Pa.—Vanadium Co., Forbes street, garage damaged. Loss, $7,400.

Omaha, Neb.—Metz Garage, garage damaged and several cars destroyed. Loss, $6,000.

Sioux City, Ia.—Pioneer Motor Co., Douglas street, repair shops damaged. Loss, $15,000.

Natchez, Miss.—Jules W. Wexler, dealer, garage damaged and several cars destroyed. Loss, $2,464.

Fall River, Mass.—Charles Belcher, Baylies street, garage and twelve cars destroyed. Loss, $10,000.

St. Louis, Mo.—William E. Bowman, West End Garage, 5018 Page boulevard, damaged. Loss not given.

Buffalo, N. Y.—Jacob Steinman, 110 Grant street, garage damaged and several cars destroyed. Loss, $8,000.

Hickman Mills, Mo.—Kansas City Automobile Club's clubhouse, 14 miles south of Kansas City, destroyed. Loss not given.

Minneapolis, Minn.—Motor Car & Equipment Co., F. R. Corcoran, proprietor, 206-10 Washington avenue, north, garage, 13 cars and accessories stock damaged. Loss, $10,000.

Renault Agency Drops the "Freres."

Although one of the Renault brothers, who were the builders of that car in France, died some time ago, the selling agency in New York City has continued until this week to be known as the Renault Freres Branch, but the Supreme Court for New York county this week authorized the changing of the name to Renault Selling Branch, the "Freres" being dropped. Also the sales end of the business has been removed from 1890 Broadway to 719 Fifth avenue; the garage and service department, however, will be continued at 214 West 65th street.

Paid Slow Account, Must Now Pay Costs.

Failure on the part of the Mexico Motor Car & Supply Co., of Mexico, N. Y., to pay an account to the Thermoid Rubber Co., of Trenton, N. J., when due resulted in a suit the outcome of which is that the supply company not only has had to pay the bill but must pay $24.41 costs; the bill, itself, has been paid and judgment for the costs was filed this week in the New York county clerk's office.

Federal Rubber Opens up in Cleveland.

The Federal Rubber Mfg. Co., of Milwaukee, Wis., has opened a branch in Cleveland, Ohio, at 1833-35 East 13th street. It is in charge of G. Couturier, who previously was in the service of the Beckley-Rahlston Co., of Chicago, and who also had considerable experience with the Hartford Rubber Works Co., with which he was once identified for about four years.

The Week's Incorporations

Lansing, Mich.—R. & R. Garage Co., under Michigan laws; authorized capital, $5,000; to operate a garage.

Pineyville, Ky.—Cumberland Motor Co., under Kentucky laws; authorized capital, $50,000; to deal in motor cars.

Wilmington, Del.—Monarch Rim & Tire Co., under Delaware laws; authorized capital, $5,000; to manufacture rims and tires.

Dover, Del.—D. & H. Auto Co., under Delaware laws; authorized capital, $25,000; to deal in motor cars. Corporators—J. M. Deatrich, J. G. Harris, L. Harris.

Columbus, Ohio—Automobile Protective Association Co., under Ohio laws; authorized capital, $5,000. Corporators—William Lester, Mary A. Caputo, R. M. Switzer.

Peru, Ind.—Peru Tire & Rubber Co., under Indiana laws; authorized capital, $25,000; to deal in motor cars. Corporators—C. E. Miller, O. J. Tillett, Ira H. Stanter.

Chicago, Ill.—Bryn Mawr Garage, under Illinois laws; authorized capital, $2,500; to operate a garage. Corporators—George C. Bour, George R. Bennett, Joseph A. Wall.

Detroit, Mich.—Packard Motor Sales Co., under Michigan laws; authorized capital, $10,000, to deal in motor cars. Corporators—Henry B. Joy, Alvan Macauley, Sidney B. Waldon.

Shelbyville, Ky.—Farmers' Supply Co., under Kentucky laws; authorized capital, $5,000; to deal in motor cars. Corporators—L. G. Baskett, A. S. Frazier, J. C. Johnson.

Boston, Mass.—Arco Rubber Co., under Massachusetts laws; authorized capital, $15,000; to deal in rubber goods. Corporators—H. G. Cressinger, F. E. Black, William B. Hill.

San Benito, Cal.—Whittlesey Garage & Machine Co., under California laws; authorized capital, $25,000; to operate a garage and machine shop. Corporators—G. W. Whittlesey, James T. Valentine, J. P. Valentine.

Dover, Del.—Accessories Sales Co., under Delaware laws; authorized capital, $50,000; to deal in motor car accessories. Corporators—C. Heymann, J. R. Howe, Jr., F. A. Linn.

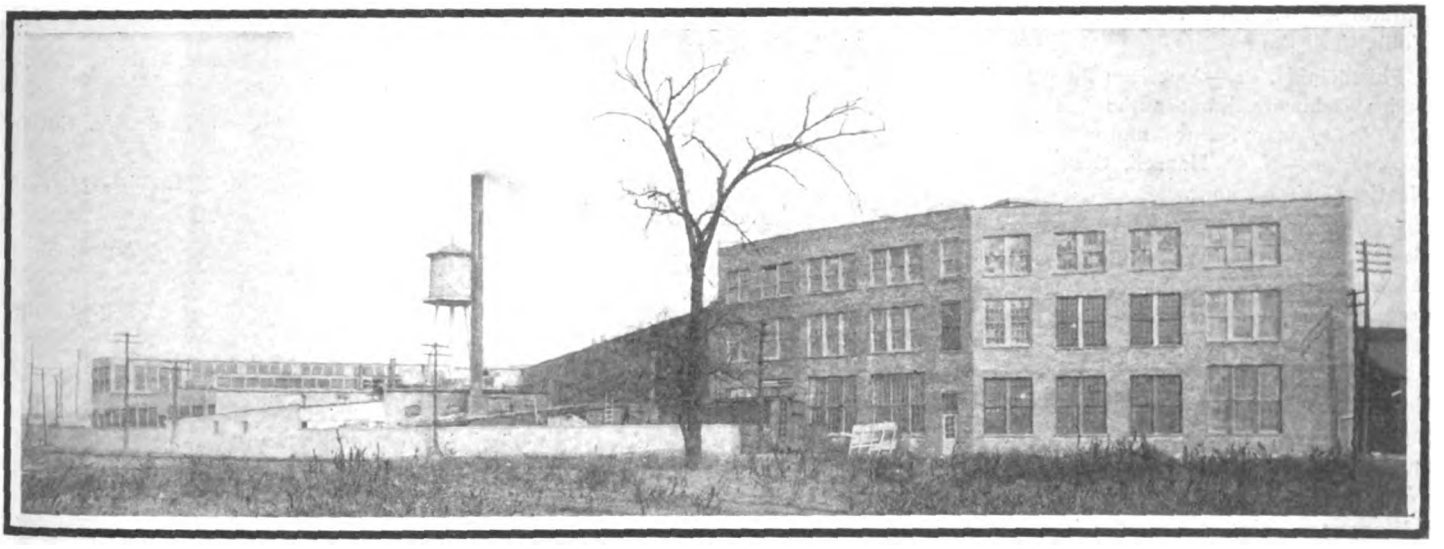
Wheeling, W. Va.—Lavender Auto Supply Co., under West Virginia laws; authorized capital, $25,000; to deal in motor car supplies. Corporators—Annie Kennard and others.

Indianapolis, Ind.—Northern Auto Co., under Indiana laws; authorized capital, $10,000; to deal in motor cars. Corporators—J. J. Clements, R. M. Fleming, L. H. Van Briggle.

Cleveland, Ohio—National Garage Co., under Ohio laws; authorized capital, $20,000; to operate a garage. Corporators—John A. Nally, C. A. Gardner, George L. Williams.

St. Louis, Mo.—Hudson-Phillips Motor Car Co., under Missouri laws; authorized capital, $10,000; to deal in motor cars. Corporators—C. F. Phillips, J. H. Phillips, J. E. Stewart.

Seattle, Wash.—Washington Cartercar Co., under Washington laws; authorized capital, $10,000; to deal in motor cars. Corporators—George C. Jenkins, L. V. Peek and others.



Boston, Mass.—W. C. Bates Co., under Massachusetts laws; authorized capital, $10,000; to deal in motor cars. Corporators—William C. Bates, William J. Munday, Geo. A. Kersley.

El Paso, Tex.—Longwell Auto Truck & Sale Co., under Texas laws; authorized capital, $10,000; to deal in motor vehicles. Corporators—J. J. Longwell, H. M. Andreas, J. A. Tays.

Chicago, Ill.—Logan Square Auto Supply Co., under Illinois laws; authorized capital, $10,000; to deal in motor cars. Corporators—Otto E. Schmidt, August J. Schmidt, Martha Perl.

Chicago, Ill.—Lacy Motor Livery Co., under Illinois laws; authorized capital, $10,-

NATIONAL MOTOR VEHICLE CO.'S PLANT IN INDIANAPOLIS, IND., MADE LARGER

This new building, which is three stories in height and is constructed of brick and cement, provides 20,000 additional feet of floor space. It is at the rear of the 22nd street plant and will permit much-needed expansion.

000; to operate a motor livery. Corporators —Herbert Decker, Franklin H. Lacy, Samuel J. Richman.

Nashville, Tenn.—State Motor Car Co., under Tennessee laws; authorized capital, $25,000; to deal in motor cars.

Bowling Green, Ky.—Century Auto & Garage Co., under Kentucky laws; authorized capital, $15,000; to deal in motor cars and operate a garage.

Rockaway Beach, N. Y.—Seaside Garage, Inc., under New York laws; authorized capital, $500; to operate a garage. Corporators —Patrick H. Morrison, Anthony Hauser, Jennie Morrison.

New Castle, Va.—Craig Transfer & Motor Car Co., under Virginia laws; authorized capital, $5,000; to operate a motor delivery and deal in motor cars. Corporators—J. P. Jones and others.

Chicago, Ill.—Rayfield Motor Sales Co. of Illinois, under Illinois laws; authorized capital, $41,000; to deal in motor cars. Corporators—Robert C. Wheeler, Charles L. Cobb, Cecil Barnes.

Philadelphia, Pa.—American Silencer Co., under Delaware laws; authorized capital, $50,000; to manufacture motor car parts. Corporators—F. R. Hansell, George H. B. Martin, S. C. Seymour.

Seattle, Wash. — National Automobile Fender Co., under Washington laws; authorized capital, $350,000; to manufacture motor car fenders. Corporators—A. L. Patterson, A. M. Ferguson.

Indianapolis, Ind. — Simplex Appliance Co., under Indiana laws; authorized capital, $10,000; to manufacture motor car appliances. Corporators—William C. Hamilton, W. Lee Bird, Isaac Born.

Worcester, Mass. — Overland - Winton Sales Co., under Massachusetts laws; authorized capital, $10,000; to deal in motor cars. Corporators—George F. Fuller, Harlan T. Pierpont, Jay Clark, Jr.

St. Louis, Mo.—George C. Brinkman Motor Car Co., under Missouri laws; authorized capital, $5,000; to deal in motor cars. Corporators—George C. Brinkman, Phyllus M. Brinkman, Benjamin G. Brinkman.

Hartford, Conn.—Hartford Auto Pump & Supply Co., under Connecticut laws; authorized capital, $50,000; to manufacture motor car supplies. Corporators—H. F. Schrabe, Edward E. Tryon, Thomas Lockwood.

Lockport, N. Y.—Ampere Electric Co., Inc., under New York laws; authorized capital, $25,000; to manufacture motor car devices. Corporators—Theodore B. Robinson, Ernest W. Jones, Charles L. Nichols.

Newcastle, Ind. — Lawter Tractor Co., under Indiana laws; authorized capital, $10,000; to manufacture tractors. Corporators —Benjamin H. Lawter, Orville O. Carpenter, John C. Goodwin, William H. Goodwin.

Toledo, Ohio—Parsons Mfg. Co., under Ohio laws; authorized capital, $10,000; to manufacture motor car parts. Corporators —George E. Seney, Charles W. Parsons, Irving E. Austin, Harry Parsons, H. B. Kier.

Rochester, N. Y.—Central Motor Supply Co., Inc., under New York laws; authorized capital, $20,000; to deal in motor car supplies. Corporators—Percy B. Barager, Robert F. Close, William Hood, 17 Hanna Place.

West Orange, N. J.—Edison Storage Battery Co., under New Jersey laws; authorized capital, $10,000; to manufacture storage batteries. Corporators—Harry F. Miller, William H. Meadowcraft, William G. Boe.

New York, N. Y.—Commercial Lubricating Co., under New York laws; authorized capital, $2,500; to manufacture lubricating devices. Corporators — Agnes R. Mayfield, Louis Preau, John J. Crawford, World Building.

Columbus, Ohio—New Columbus Automobile Co., under Ohio laws; authorized capital, $30,000; to deal in motor cars. Corporators — Jessie J. Brown, Lilliam M. Brown, William E. McConnon, Charles E. Dennis and others.

New York, N. Y.—K. C. Pardee, Inc., under New York laws; authorized capital, $65,000; to deal in motor cars. Corporators —Karl T. Frederick, Chester R. Dewey, 49 Wall street; Leander F. Sniffen, 3411 Fort Independence street.

Brooklyn, N. Y.—Caton Garage, Inc., under New York laws; authorized capital, $10,000; to operate a garage. Corporators —S. O. W. Hoagland, 746 58th street; Frank Lemmer, 95 East 10th street; John Carlson, 944 74th street.

Chicago, Ill.—Stafford Illuminated Auto Lamp & Number Co., under Illinois laws; authorized capital, $50,000; to manufacture motor car accessories. Corporators—Wm. Doran, E. H. Pollard, M. M. Parks, Frederick S. Stafford, F. W. Schaub.

New York, N. Y.—No Shock Wheel Co., under New York laws; authorized capital, $400,000; to manufacture motor car parts. Corporators—J. W. Ebbs, Englewood Cliffs, N. J.; R. H. Waddell, 220 Broadway, New York City; A. A. Kelley, Montclair, N. J.

New York, N. Y.—K-E-W Mfg. Co., under New York laws; authorized capital, $5,000; to manufacture motor car accessories. Corporators—John Jacobs, 663 East 165th street; Warren W. Ward, 15 West 96th street; John A. Bednarik, 508 East 86th street.

Brooklyn, N. Y.—Newkirk Avenue Automobile Co., Inc., under New York laws; authorized capital, $5,000; to deal in motor cars. Corporators—William Backus, 1163 New York avenue; Jennie Hunton, 299 Broadway; W. D. Maxwell, 6907 Ridge Boulevard.

New York, N. Y.—Willets Service Co., Inc., under New York laws; authorized capital, $50,000; to deal in motor vehicles. Corportors—William C. Willets, 106 7th avenue; Marius Jurgensen, 962 72nd street, Brooklyn; Estelle M. Naylor, 4 So. Oxford street, Brooklyn.

New York, N. Y.—Star Taxicab Co., Inc., under New York laws; authorized capital, $2,500; to operate a taxicab service. Corporators—H. T. Silverman, 149 Guernsey street, Brooklyn; Nathan Waxman, 346 Broadway, New York City; James B. Vaughey, 165 East 66th street.

Changes of Capitalization.

Detroit, Mich.—Trio Mfg. Co., from $10,000 to $250,000.

Akron, Ohio—Motor Starting Co., from $25,000 to $50,000.

Ashland, Ohio—Ashland Mfg. Co., from $10,000 to $30,000.

Poughkeepsie, N. Y.—Ryder Motor Co., from $8,500 to $75,000.

Lorain, Ohio—Electric & Automobile Co., from $10,000 to $20,000.

Hartford, Conn. — Universal Auto Co., from $10,000 to $30,000.

East Moline, Ill.—Midland Motor Co., from $100,000 to $300,000.

LETTING IN LIGHT ON ELECTRICAL EQUIPMENT

Dangers That Lurk in "Smut" on the Commutator and Brushes and How They May Be Avoided—Simple Methods of Clearing Away Undesirable Accumulations—Elyria-Dean Lighting and Starting System Dissected.

(This is the twenty-first of a series of articles designed to make clear the electric lighting and engine starting systems in use and to render easier their care and repair by the dealer and owner alike.)

Statisticians have gathered information more or less useful in almost every field of human endeavor—"figures strange and sweet," to paraphrase Coleridge a bit. But has any one ever computed the number of electric lighting and engine starting systems temporarily out of service because of gummed up commutators? It is not likely. In the first place, the systems of themselves are not old enough to have warranted attention and statistics of the kind. In the second place, the trouble is not as prevalent as the preceding sentences might lead one to suppose, though there can be no doubt that if all the troubles that beset the owner were set down in tabular form and traced to their respective roots the amount of trouble emanating from smut on the commutator and brushes in proportion to the troubles caused by other things would surprise more than one person.

ELYRIA-DEAN DYNAMO, SHOWING BRUSHES, CUT-OUT AND TIMER

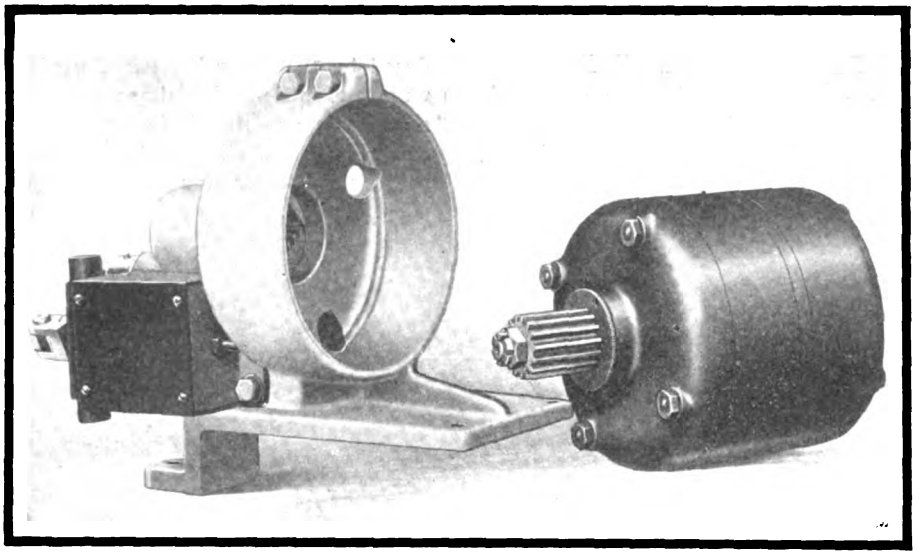
It is surprising, also, that such a condition of affairs should be permitted to exist, for, of all things about the average lighting and starting system, the brushes and the commutator are by all odds the very parts that the manufacturer makes the most accessible—the most amenable to amateur treatment, so to speak. They are not quite in plain sight, though their location is not hidden. They are covered, as they should be, to protect them from dirt and moisture, in every case, but they are accessible. It is easy to get at them. Their accessibility, in fact, may be taken as an expression of the manufacturer's hope that they will be "gotten at" occasionally.

A knowledge of how to go about the job is needed, of course, but that is easily acquired, as has been pointed out in the preceding twenty articles on the subject that have appeared in Motor World. It is so easy, for instance, to slip the dynamo brushes out of their little sockets every once in so often, provided the appearance of the commutator warrants it, and to apply a cloth dampened with gasolene to its rotating surface, afterward following it up with an application of fine sandpaper to remove scratches. More than a grain of truth is contained in the statement "Even a child can do it." The operation is so simple, so apparent in all its aspects, that the owner making his own repairs and adjustments can do no wrong (damage) and the dealer "fixing up" the owner need have no fear of incurring wrath by bungling the job. It can be done in about 15 minutes on the average equipment.

Take the new Elyria-Dean dynamo for an example—it forms part of the Elyria-Dean lighting and engine starting system produced by the Dean Electric Co. of Elyria, Ohio, and made its initial appearance such a short time ago that it is virtually a newcomer in the field, though it has been in course of construction and perfection for many months. It is possible to get into its commutator in a jiffy and, what is even more to the point, the "getting in" operation reveals also the cut-out mechanism, which is of vital importance, and makes the dynamo inoperative. That is to say, it can be run at any speed for any length of time, without harming itself or any other part of the equipment, including the battery.

Power and Compactness Combined.

In its essential elements, the Elyria-Dean system consists of three units—namely, the dynamo, the starting motor and the battery—and they are quite separate. The dynamo and the starting motor are not combined, as they are in some systems. Both are comparatively small, considering their allotted tasks, and are completely enclosed and waterproof; the battery is rated at 120 ampere hours capacity and consists of three cells, the voltage therefore being six. The starting motor measures six inches by six inches over all, though despite its small size it has plenty of power to rotate the average 4 x 5 four-cylinder motor at 80 revolutions a minute drawing from 80 to 100 amperes of current; the gear ratio is 34 to 1. A larger size measuring approximately 6 x 8½ inches and geared 25 to 1 is estimated to have 100 per cent. greater turning power at the same engine speed. The weight of the former motor is 20 pounds and of the latter 28 pounds. Needless to add, both are of the series wound type.



The dynamo also is very small in size, considering the fact that it is designed to operate at magneto shaft speed and that it contains within its own housing both regulating and circuit-breaking mechanism; it measures approximately 5½ x 9 inches over

Digitized by Google

all. Its capacity in terms of car speed and engine revolutions is as follows:

5 amps. at 320 r.p.m., or 10 miles per hour
8 amps. at 425 r.p.m., or 13.2 miles per hour
10 amps. at 540 r.p.m., or 16.3 miles per hour
12 amps. at 650 r.p.m., or 20.3 miles per hour
15 amps. at 900 r.p.m., or 28.1 miles per hour

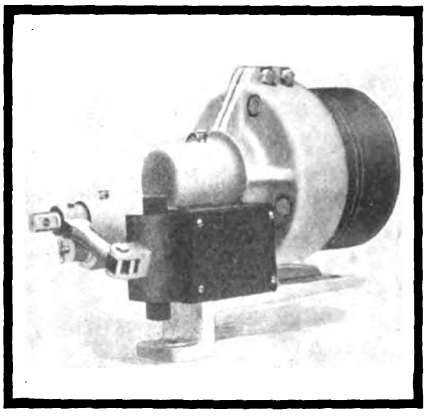
Actually, the dynamo commences to charge a six-volt battery at 190 revolutions a minute, which corresponds, with the average rear axle gear ratio and size of wheels, to about six miles an hour. By reason of the regulation of the dynamo, which is an inherent characteristic, and is not obtained with the aid of any kind of mechanical devices, the current output rises very little, if at all, at speeds above 28 miles an hour. Regulation is effected by means of a differentially connected series winding which permits what is styled "magnetic leakage" by causing the field to weaken when the speed increases above the critical point represented by 28 miles an hour car speed. Obviously, there are no moving parts in the regulating mechanism, and hence it never will require attention. As a matter of fact, none but a factory expert could give it attention, for it is securely hidden within the very vitals of the machine.

ELYRIA-DEAN MOTOR, SHOWING METHOD OF MOUNTING AND ITS GEARING

Circuit Breaker Accessibility.

It is not so with the circuit breaking mechanism, however. As already mentioned, it may be removed bodily for examination in better light or for cleaning or adjustment. Just how simple is the operation is revealed by the fact that but three screws in the top of its casing need be removed. In either taking it off or replacing it, there is not the slightest possibility of the veriest novice harming its mechanism. And when it is in place, the vital parts of the machine, which means, briefly, the commutator and the brushes, are fully protected against accidental damage.

In construction and operation, the cut-out mechanism, or the circuit breaker, or the relay, the terms being synonymous, is orthodox. Which is to say, it is a magnetic device in which there are two coils so arranged that immediately the voltage of the dynamo exceeds the battery voltage, dynamo and battery are connected together through the intermediary of two large surface contacts. The arrangement of the coils is such that the pull of one supplements the pull of the other as the dynamo output increases. Instantly the dynamo output drops below that of the battery, however, the passage of current in the reverse direction through one of the coils causes it to neutralize the pull of the other, the immediate result being that connection between the battery and the dynamo is broken.



Care and Repair of the Cut-Out.

As has many times been pointed out, the small use the cut-out mechanism gets, due to the fact that it operates only when the engine is stopped and started, and possibly when the car is driven very slowly on high gear, can result in very little wear in any case. Hence, there will be little cause for adjusting it, though it will do more good than harm occasionally to inspect it and make certain that it is living up to its reputation as a safety valve.

There are two ways in which the operation of the device can be ascertained. The first of them is to watch it while the engine is started, speeded up and then stopped, and the second is to note fluctuations of the needle of the ammeter during the same proceeding. The latter method is the best. Judging speed solely by the speedometer, the contacts in the cut-out should come together at six miles an hour and should remain together at all higher speeds. Immediately the speed drops below six miles an hour, the contacts should separate. Both of these operations will be indicated by the ammeter needle. When the contacts come together, the needle will swing over to the charge side and when the contacts open the needle will swing over to the discharge side, provided the lights are burning, or to neutral if no lights are turned on.

How to Clean Contact Points.

If inspection proves that the cut-out is not operating properly, or the condition of the battery indicates it, it is a simple matter to alter the adjustments or to clean the contacts. Probably cleaning is all that will be required, for though the housing is constructed to be dirt-proof, a certain amount of fine dust is very likely to work in during the course of a dusty tour. To clean the contacts, glue two pieces of fine emery cloth to opposite sides of a strip of thin Bristol board and place the improvised "file" between the contacts. Gentle pressure and a few rubs will suffice to clear away accumulations of grease or oxide.

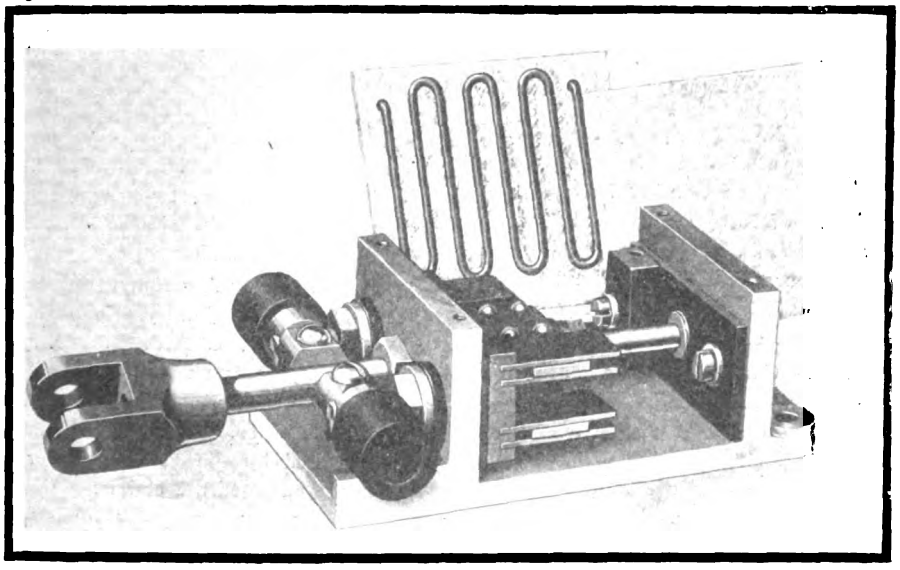
MOTOR AND SWITCH COMPLETE

In adjusting the apparatus it must be remembered that a quarter turn of the screw which brings them closer together may correspond to several miles an hour car speed. Consequently, it always should be a case of "measure twice and cut once." That is to say, turn the screw only a very slight amount and then try the adjustment, and if it is proper tighten the lock nut. It should be remembered, also, that if the apparatus "goes bad" on the road, which is unlikely, and cannot be repaired, the removal of the cut-out mechanism obviates the possibility of damage to the rest of the system. This feature, by the way, is exclusive in the Elyria-Dean apparatus.

The dynamo itself is scarcely more difficult to care for than is the cut-out mechanism which forms part of it. Both ends of its armature shaft are mounted in liberal-sized ball bearings and, though these are packed with grease before leaving the factory, it is better, to be on the safe side, to place a couple of drops of fine machine oil—

Digitized by Google

typewriter oil preferably—in the oil holes once every two weeks.



Importance of Dynamo Inspection.

Otherwise, the care of the dynamo resolves itself into frequent inspection of the brushes and the commutator. These are the only parts that will require attention, and they will not need to be touched as long as the commutator appears glossy and brown. The brownish sheen indicates that it is in the best of condition. If it is very dirty and the accumulation cannot be removed with a small piece of cloth dampened with gasolene, recourse must be had to the sandpaper cure, which consists, briefly, of applying No. 00 sandpaper to the commutator while the armature is running and after the brushes have been removed.

The ignition timer apparatus, which may or may not find a place on the equipment according to the specifications of the car maker, though it is shown by the accompanying picture, need never be touched for it is designed to operate indefinitely without any attention whatsoever.

The Elyria-Dean starting motor is of the plain series wound type and is distinctive by reason of its method of attachment, which permits of its almost instant removal intact and without the necessity for disturbing any other part of the mechanism, including the gearing. It is arranged to drive the gasolene engine through the intermediary of gearing cut in the periphery of the flywheel, the gear case and the starting switch being integral and mounted on a base which serves to hold the motor in position.

As may be seen by the accompanying illustrations, the motor is quite small and fits into the end of the gear case housing, where it is clamped by means of two screws. Loosening the screws permits the removal of the motor complete with its armature shaft gear, as shown by the picture. There are several important advantages in this method of construction, not the least important of which is that it permits the motor to be removed easily for repair, inspection or adjustment without disturbing the lighting equipment. Incidentally, as it is necessary properly to clean the commutator to apply sandpaper while the armature is rotating, this can be done with the use of the minimum amount of current with the motor removed. Similarly, it is quite feasible, while repairs are made, to substitute another motor for the one in the shop.

ELYRIA-DEAN STARTING SWITCH WITH COVER REMOVED, SHOWING RESISTANCE

As the starting motor is used only at comparatively long intervals and then only for a moment at a time, its commutator and brushes will not require as much attention as will the same parts of the dynamo. Consequently, it has not been found necessary to make them so readily "get-at-able." The job is not a difficult one, however, and merely requires a few screws to be taken out, when the end cap may be removed, exposing the commutator and the brushes.

The care that has been outlined for the same parts of the dynamo applies also in the case of the motor. The gearing between the motor and the gasolene engine is simple and the gear wheels are of ample surface to ensure against undue wear. An over-running roller clutch having four contact surfaces effectually prevents the gasolene engine driving the motor when the former is running under its own power.

The gearing is lubricated with grease, there being one grease cup to feed the intermediate gear and the pinion that engages the flywheel gearing. Elsewhere, there are two small oil holes which should receive a couple of drops of oil whenever other parts of the car are oiled. The armature shaft of the motor is carried in large annular ball bearings, and as these are packed in grease they will not require to be touched from one season's end to the next. When it becomes necessary to replenish the grease the operation can be simplified by removing the motor from its frame and opening the end caps. In the event that the starter refuses to operate with its customary vigor, the battery always should be examined first to make sure that it i properly charged.

Operation of the Starting Switch.

The switch which connects the battery and the starting motor is of the knife-blade type and is enclosed in its own housing attached directly to the starter base. As already has been made plain, a single lever serves in one operation to enmesh the gears and to turn on the current. The first movement of the switch connects the battery to the motor through a heavy resistance, which, as is shown by the accompanying picture, is contained in the switch housing. The effect of this connection is to cause the armature of the motor to rotate slowly, thus facilitating the engagement of the gears. Further movement of the lever enmeshes the gears and short-circuits the resistance, throwing the battery directly on the motor, "full speed ahead," so to speak.

Obviously, there is absolutely nothing in the switch that could get out of order except in the case of dire catastrophe to the car. The contacts are large and there is only the one moving part. Access to the switch, by the way, may be had by removing the side plate by taking out four small screws. Though the casing presumably is tight both against dirt and water, it is not unlikely that at the end of a season a certain amount of road dirt will have found its way inside and though the amount may not be great enough to cause trouble, it nevertheless is better out than in.

As there are only two wires in the Elyria-Dean system between the battery and the dynamo and the battery and the starting motor, there should be no particular difficulty in tracing short circuits or breaks, though neither is likely, because of the heavy insulation provided. Still, either is a possibility that must be guarded against by properly taping the wire when it appears likely likely to chafe and allowing small loops where body movement might cause breaks. It is important, of course, that the wires between the battery and the dynamo be properly connected—that the positive side of the battery be connected to the positive side of the dynamo. It makes no difference how the starting motor is connected.

NEW DEPARTURE BALL BEARINGS

Standard on 80% of 1913 Cars.

American Made for American Trade

The increasing use of ball bearings in motor cars is easily explained.

Manufacturers are not now required to buy ball bearings abroad. The New Departure has proved satisfactory in service, possesses all of the quality essentials and in every respect is an American masterpiece.

It is more completely anti-friction than any other type —the cost to operate the car mounted on these bearings is consequently less.

It is ten times as efficient as a roller bearing under same load conditions.

At the Boston Show, Space No. 430, Balcony, each of the three types of New Departure ball bearings will be shown, in slow action, with sections cut away for demonstrating anti-friction and other qualities.

Ask for copy of "Friction and Its Elimination"—a treatise on comparative efficiency of all types of bearings —just from the press.

REXO HORN

The Rexo Always Acts When Needed

The Rexo single-tone horn protects your own safety and that of other people because it always works—it never refuses to act just when it is most needed.

It gives out a strong warning note **every time** the button on the wheel is pressed, and commands **immediate** attention from pedestrians and drivers of other cars.

The Rexo horn is reliable because it is simple and free from complications. It has no parts to get out of order—it is substantial and well-built to stand the jarring and vibration of the car's motion—and it is finished so that the weather has no effect on its appearance or its operation.

Because the Rexo is so reliable and so trouble-proof we guarantee it for life.

The Rexo costs little for upkeep, as it operates with a small amount of current and can be connected to any 6-volt battery, an advantage in both cost and space saving.

This splendid horn takes none of your time or money for frequent overhauling or attention to lubrication or repairs. A slight adjustment once a year, made with a screw driver, is sufficient to overcome a season's wear.

The popularity of the Rexo is shown by the fact that more than 75,000 of these horns were sold for use on 1913 cars as **regular equipment.** Enormous sales to owners of cars make this the most widely used, low-priced horn made.

In addition to the Rexo, which sells for $8, complete, we make the Tuto, a high grade two-tone horn for $25, and the Tutoette, a smaller two-tone horn for $17.50.

TUTO HORN

The TUTO—The Horn for Careful Drivers

The careful driver who guards the safety not only of himself and the occupants of his car, but the safety of pedestrians and those in other cars as well, knows he must use a quickly responsive, attention-getting signal of warning.

The Tuto two-tone horn is the best safeguard that can be put on any automobile.

It is a complete signaling system. It electrically transmits two different and distinct sounds through a horn—one low and mild for ordinary usage, the other loud and penetrating for critical situations and emergencies. The degree of sound is regulated by the degree of pressure given the button located upon the steering wheel.

The Tuto is very reliable and absolute confidence can be placed on its perfect operation at all times. It is free from trouble-making parts and requires no care or attention except perhaps a slight adjustment once a year to overcome the season's wear.

It operates by any 6-volt battery and costs little to maintain, as the low tone, which uses little current, is sufficient for most of the signaling done.

The Tuto horn is substantially and carefully built of the highest grade material and lasts for many years. Its satisfactory service and long life are insured by a liberal guarantee, in fact, a guarantee for "Life."

Finished in polished brass or nickel, plain black enamel, and black enamel with brass or nickel. Price, $25.00, complete with button and cord.

We also make the Rexo, a single-tone horn for $8, and the Tutoette, a small two-tone horn for $17.50.

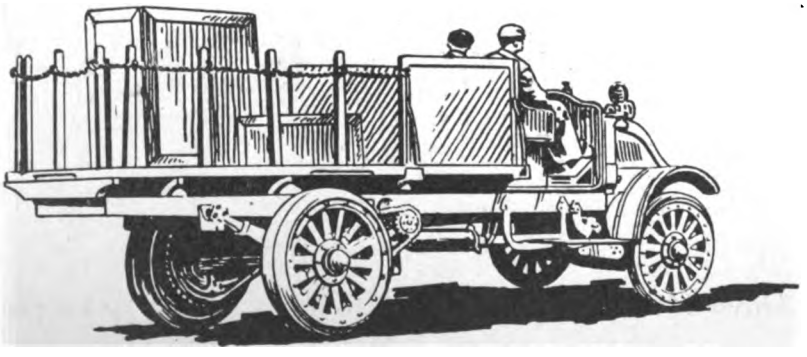
GOOD TRUCKS TO SELL

Kelly

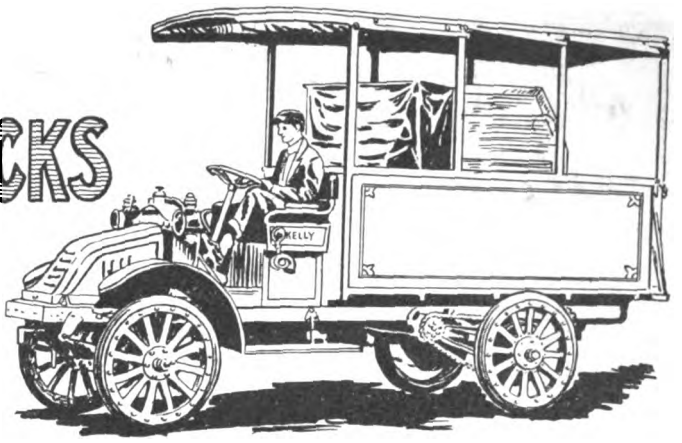


That's what Kelly Trucks mean to *you.*

There are three big reasons why Kelly Trucks are good trucks for you to sell:

1. Kelly Trucks are made right.
2. Kelly service is behind them.
3. Kelly will sell them for you.

Our new water-cooled models were the sensation of the New York, Chicago, Philadelphia, Omaha, Kansas City and other big shows. In fact they led the procession wherever they were shown.



WHY?

Because Kelly Trucks embody every feature which makes for truck efficiency. There is not an experiment

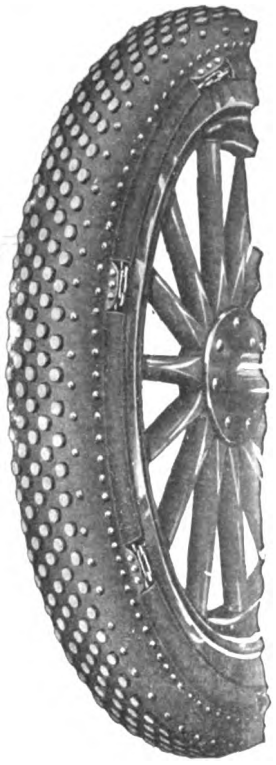
Digitized by Google

FIRST AND GOOD SELLING TRUCKS

anywhere. Every part of the truck is technically and fundamentally correct.

The new Kelly is the result of years of the hardest kind of work and investigation by our competent engineering staff. Every lesson that we have learned in our seven years of exclusive truck making shows in our new models.

If you want to make money in selling trucks, get the Kelly agency in your community.



Wire or write us immediately.

Kelly

It takes more than the name to make a real Tire Protector!

And the average dealer knows this as well as anyone.

Any tire "protector" will prevent punctures and skidding; but it is worthless unless is does this **without** chafing and damaging the tires, and **without** appreciably reducing resiliency.

Very likely you have looked upon all "protectors" as alike; all plausible to the novice, but few good enough to make a second sale.

We don't blame you! But we want you to know that

Woodworth Treads

are different from all others. The patented construction of WOODWORTH TREADS eliminates absolutely any tendency to chafe the tires; and it does this without adding undue thickness to the Tread itself.

WOODWORTH TREADS are not fastened to the rims, but are drawn constantly snug by stiff coil springs around their edges. All stretch is taken up by this elastic tension, and the Tread hugs the tire as if a part of it. Yet the Tread is thin, soft, glove-like. Dirt does not enter, because the constant pressure of the Tread against the tire squeezes it out.

Complete Your Line at Once

by selling these tire trouble eliminators to doctors, real estate men, contractors, suburban business men, users of pneumatic-tired delivery wagons, women drivers, and all others among your patrons who want tire service without the work, delays and risk involved in using bare tires! One sale brings others, for users who try the genuine WOODWORTH TREADS soon become enthusiasts.

We Make It Easy

for you to start. Our guarantees protect both you—the dealer—and your patrons absolutely against loss. Our Dealers' Order-Taking Outfit enables you to show the goods without even laying in a stock.

And if you wish to try the Treads for your own satisfaction (as we hope you will, although we do not require it) we shall be glad to furnish you a trial pair with the understanding that if they are not perfectly satisfactory they may be returned in 30 days and the price refunded. You will find them an invaluable trouble-saver on your renting or emergency car.

Write today for our complete Dealers' Proposition—it is to your interest to know it at once.

Bosch Plugs

THE ability of Bosch Plugs to serve you satisfactorily, irrespective of motor conditions, is assured. Their exclusive features have been adopted only after deep study and wide experience in ignition requirements proved them correct. They produce results where others fail—they keep in condition long after others are thrown away.

Automobile racing is by far the most severe test of spark plugs. During these contests they are constantly flooded with oil, exposed to extreme heat and severe vibration. Only plugs of the sturdiest construction can withstand the shocks, the smashing rebounds, the terrific strain of high compression, the intense blue flame of the burning gases which surrounds them for hours at a time. The plugs that can survive such abuse must be strong, tough, heat proof—the highest degree of perfection. They must be Bosch Plugs.

As Good as Bosch Magnetos

BOSCH Plugs have stood these strains, stood them so well, so wonderfully, that practically every race of importance during 1911 and 1912 was won by cars employing Bosch Plugs—the "also rans" used them too. The drivers who know—the manufacturers whose experience has taught them to provide the best they can procure for their racing cars—have universally adopted Bosch Plugs.

Bosch Plugs are furnished as standard equipment by the leading car builders of America and Europe. Some manufacturers consider the plug equipment a small item on their cars, but such makers as Peerless, Pierce-Arrow, Hudson, Garford, Mercer and many others think it important enough to provide the best—and consequently use Bosch Plugs exclusively. This same attention to minor details explains the thorough superiority of their cars.

The success of the Bosch Spark Plug is not thru chance; if you could see one, test one, try to break it down, you would understand why Bosch results are inevitable. The price, **1.00 Each** does not measure the value, in comparison with other plugs; it represents manufacturing cost plus a fair profit on the best spark plug that can be made.

Don't be satisfied with "enough" power—use Bosch Plugs and enjoy the maximum. Let us send you our booklet "Locating the Spark Plug," it tells you what you ought to know about plugs.

McCUE WIRE WHEELS

WIRE WHEELS---the last and most important wood replacement, making the car what it should be---a creation of metal throughout!

Europe grasped the wire wheel idea and adopted it before it had secured even a foothold in America, and European car builders make mighty few mistakes.

Now the wire wheel has captured this country and its adoption by American car manufacturers is increasing with marvelous rapidity.

The reasons are obvious.

McCue wire wheels acknowledged leaders in the American industry are strong. They are practically indestructible, surviving shocks that would prove instantly fatal to wooden wheels.

Sudden changes of heat, cold and moisture cannot warp, crack or otherwise depreciate them. Steel is steel when wood has outlived its usefulness.

As tire economizers they offer the owner a value too great to be overlooked, and in this, Mr. Dealer, lies the most powerful sales appeal you can make---the appeal to the buyer's sense of economy.

Digitized by Google

AND AXLES

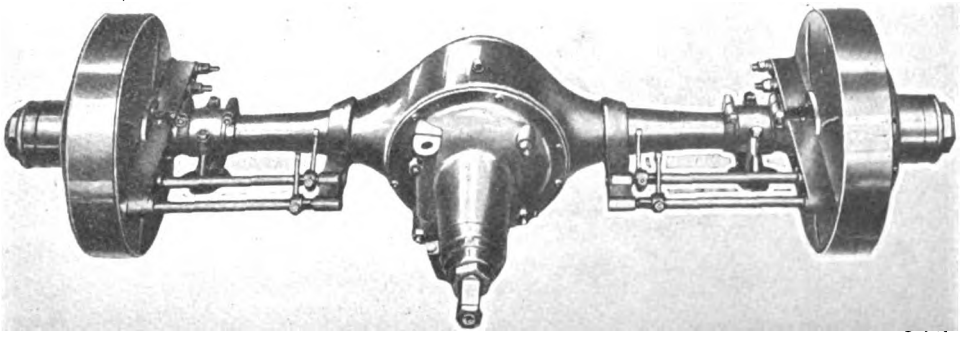
McCUE design gives extreme lightness at the rim---the greatest weight at the hub. This reduces the "pound" or hammering effect on the tire to a minimum.--

And it is the heavy blow of the wooden periphery, or the wire wheel with detachable rim that pounds the life out of the tire in short order, decreasing its life as high as fifty per cent.

When you specify McCUE WIRE WHEELS on the cars you sell, then you specify strength, lightness, indestructibility and most important *tire economy*.

It is clearly up to you to get into the wire wheel class---*right now*. Your trade wants wire wheels. Put it up to the men who make the cars.

Standard Conpany Spokes



Are used exclusively in the construction of McCUE WIRE WHEELS. Made from wire of the same standard set by the Coventry, (England) Swaging Concern. They offer tremendous torsional and tensional strength, combined with extreme bending quality made possible only by the special drawn carbon steel used in their construction.

McCue Axles

Represent the best in axle making, material, design and workmanship. All combine to give maximum service under all conditions of road shock, side thrust and load.

If your customers want wire wheels you write to the manufacturer for inner hubs and wire wheels to go on the particular model to be so equipped. We are situated so that we can meet this demand for the manufacturer.

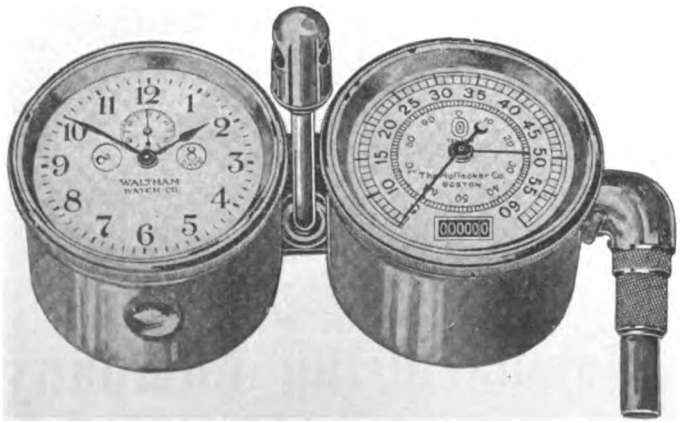
HOFFECKER'S SPEEDOMETERS



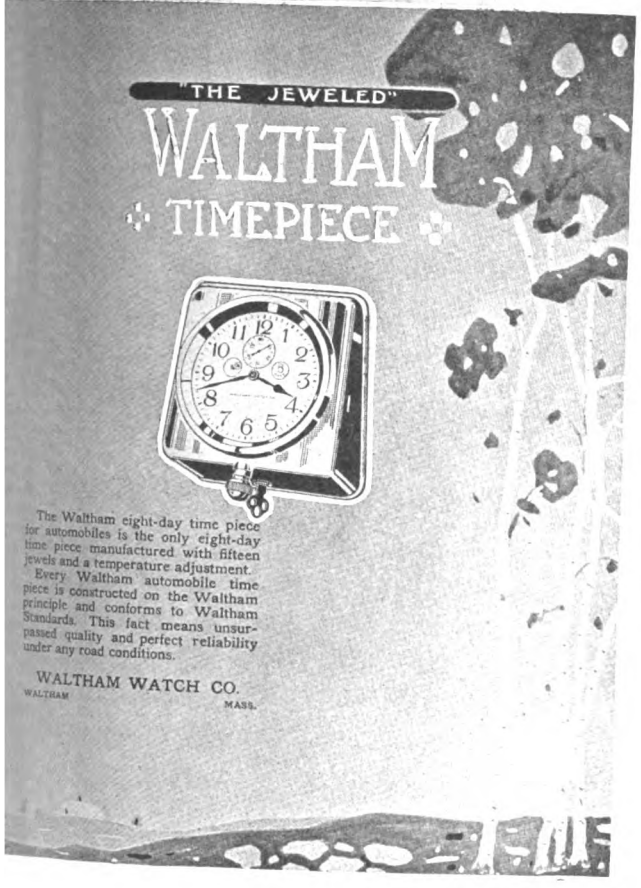
THE QUALITY THAT [illegible]

DEALERS-MANUFACTURERS

The name "Hoffecker" on a speedometer and "Waltham" on a timepiece stand sponsor for quality that is standard and of world-wide reputation. Car owners who read and reason before they buy, ***know*** this quality and ***demand*** it.

No enlargement on the prestige of the Hoffecker and Waltham products is necessary here. This has been established through years of consistent service. It is rather the present intent to ***show how*** it is commercially possible to produce these instruments of precision and durability at prices within reason.

Hoffecker speedometers and Waltham timepieces have never been extravagantly exploited. They have never had quality sacrificed to meet tremendous advertising overhead expense. They embody sterling worth in material, fine workmanship and finish, ***made possible only by the money that goes right into the instrument—not into indiscriminate waste publicity.***



Digitized by Google

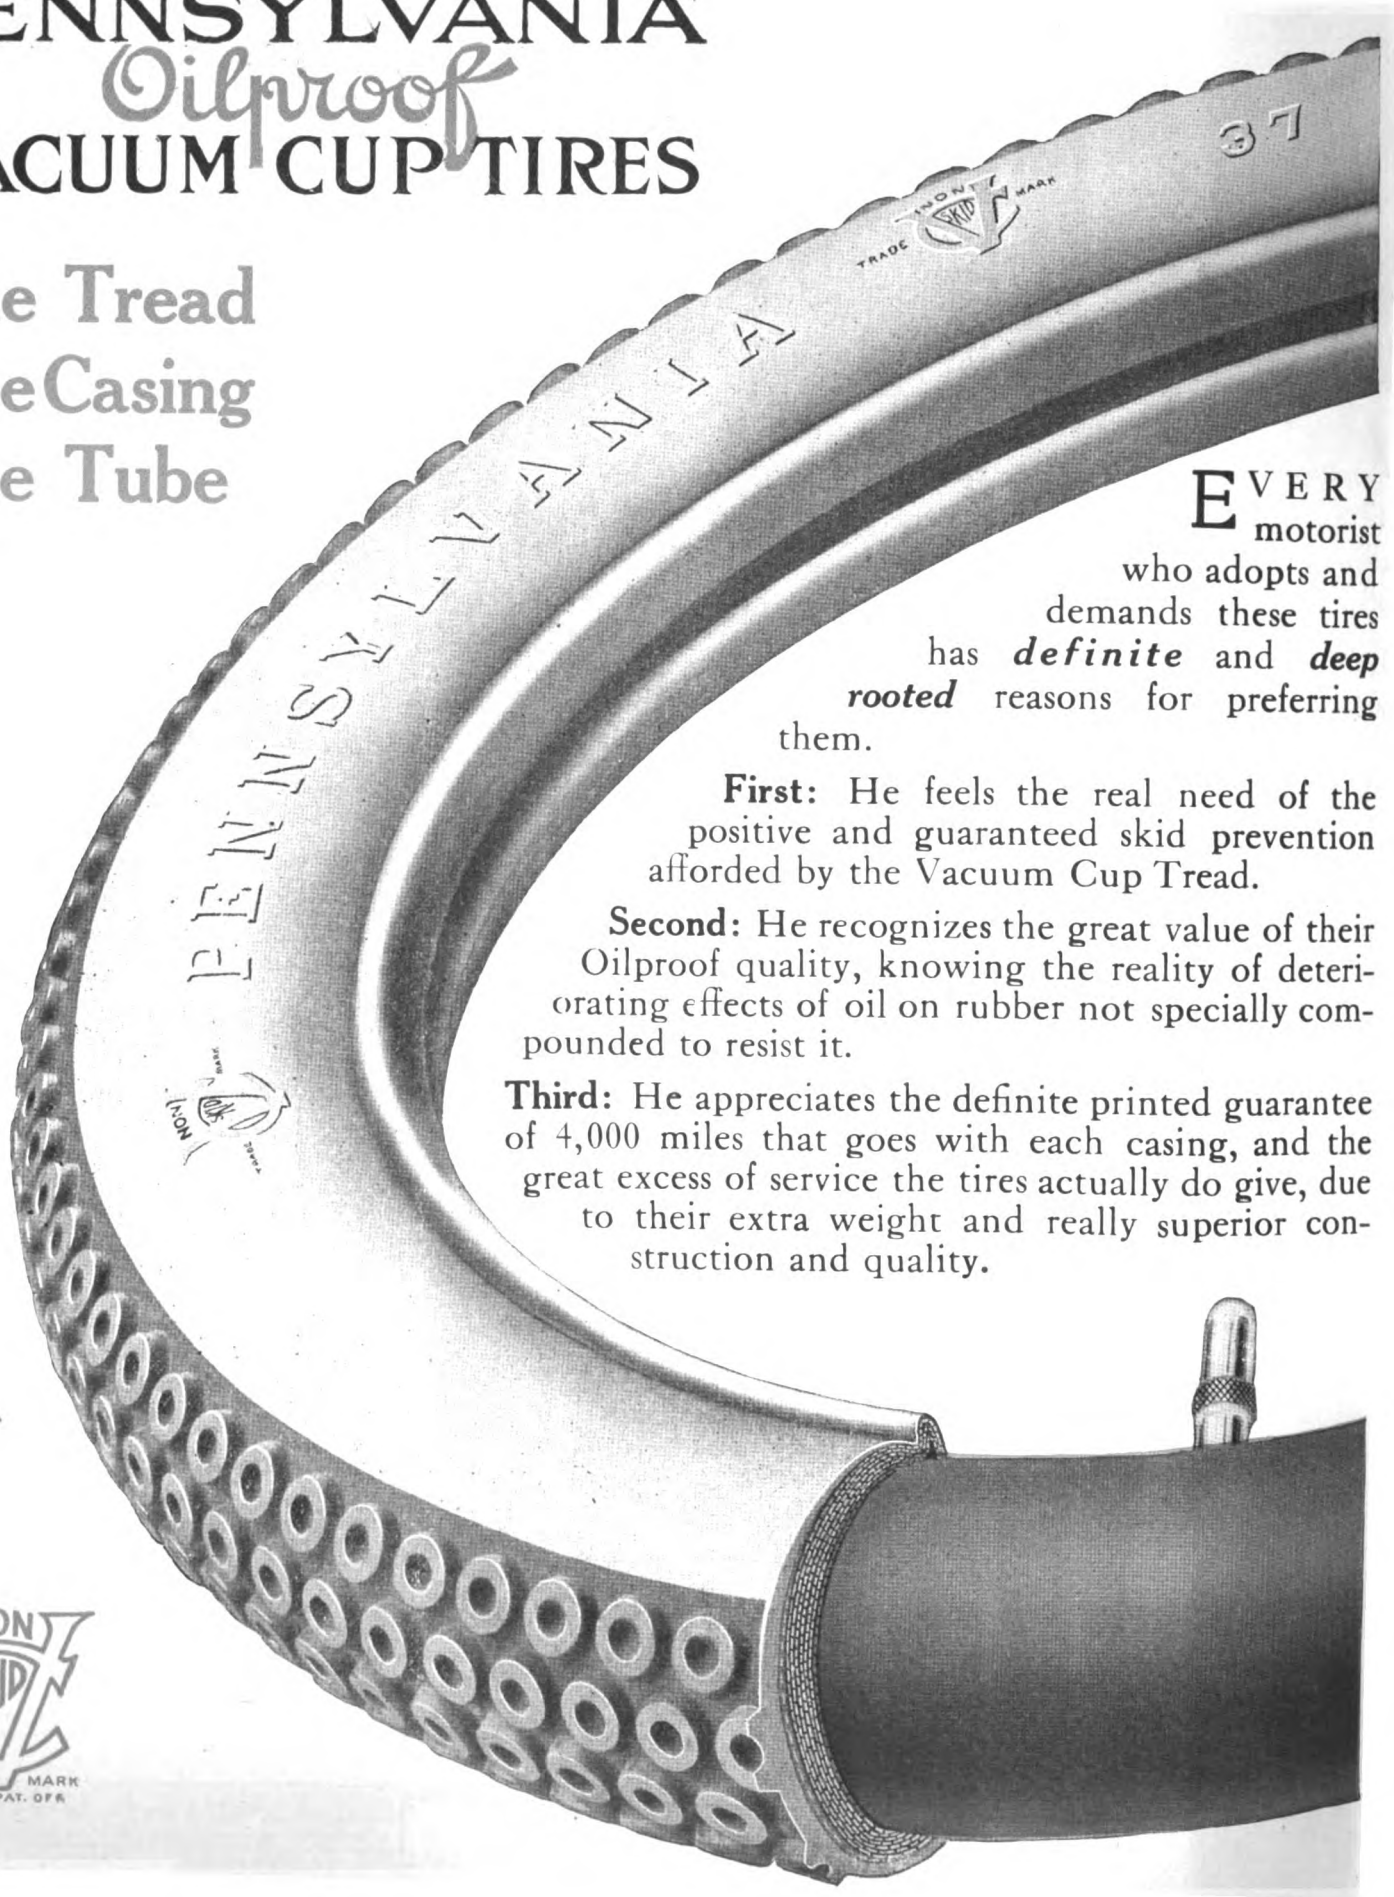
COMBINATION OWNERS DEMAND WALTHAM TIME PIECES

READ THE MESSAGE

Of course, they ***are*** advertised, but ***always*** on the "bull's eye" basis, and with no "scattering fire" effort. This publicity has value plus—for the car manufacturer, the dealer and ourselves.

Read why. The double-page reduced advertisement shown here, is typical of Hoffecker-Waltham advertising, current in ***Motor, The Automobile*** and ***Motor Age***—three papers that practically cover the cream of car owners who, as readers of these publications, are qualified to recommend and buy intelligently. In brief, this group constitutes a buying and selling force in the field. Through reading and observation, they recommend the best to others and demand the best for themselves.

"Hoffecker-Waltham" is a combination that ***your*** trade wants. It is a combination that will make a good car better, lessen resistance and increase your prestige in your community as a dealer who is known as a believer in standard, dependable merchandise.



In all probability the cars you sell ***are*** so equipped—if not then get all the facts from us—you may be able to help your customers to more and better service.

PENNSYLVANIA Oilproof VACUUM CUP TIRES

The Tread
The Casing
The Tube

EVERY motorist who adopts and demands these tires has ***definite*** and ***deep rooted*** reasons for preferring them.

First: He feels the real need of the positive and guaranteed skid prevention afforded by the Vacuum Cup Tread.

Second: He recognizes the great value of their Oilproof quality, knowing the reality of deteriorating effects of oil on rubber not specially compounded to resist it.

Third: He appreciates the definite printed guarantee of 4,000 miles that goes with each casing, and the great excess of service the tires actually do give, due to their extra weight and really superior construction and quality.

NON SKID
TRADE MARK
REG. U.S. PAT. OFF.

Digitized by Google

AND because these definite advantages can be had only in Vacuum Cup Tires, those who demand them are far more in earnest about it than those who buy "just tires" with perhaps a leaning for "this tire" or "that tire."

Dealers in making up their tire stocks for the coming season should have regard not only for the ***compelling volume*** of the demand for Vacuum Cup Tires, but also for the even ***more compelling character*** of that demand. For it's a de***mand*** with the accent strong on the last syllable.

And Finally This Tube—The Pennsylvania "Puregum" Red Inner Tube—the finest grade and quality ever manufactured anywhere. So good that it is a distinct credit to the dealer who sells it, and a new satisfaction to the motorist who buys and uses it.

A Good Lamp Is a Lamp that Makes Good

We put a name plate on every Guide Lamp and after the owner has used that lamp for a year, the name plate becomes a valuable advertisement for us. The reason for this is that the reflectors are protected from dust and moisture and therefore do not "go foggy" after a little real service.

Another thing, the lamp is so reinforced that it stands vibration and don't get loose-jointed and start to rattle.

Further—and very important—the electric fittings are big enough and substantial enough to stand the hardest kind of service.

These are some of the reasons why Guide Lamps stand ace high with owners and get the name

THE LAMP OF THE GREAT WHITE RAY

Our dealers are making money. They sell Guide Lamps that won't come back to customers who will come back bringing their friends along to get Guide Lamps.

We co-operate with our dealers and help them get business.

Better write today for Guide Book No. 6 and our dealer proposition.

SPRINGFIELD CONVERTIBLE BODIES

Springfield Metal Bodies are standard on the majority of America's leading cars for the very good reason that they embody all the quality made possible by years of experience in the art of aluminum and steel body construction. This illustration shows one of the many body designs turned out by our factory.

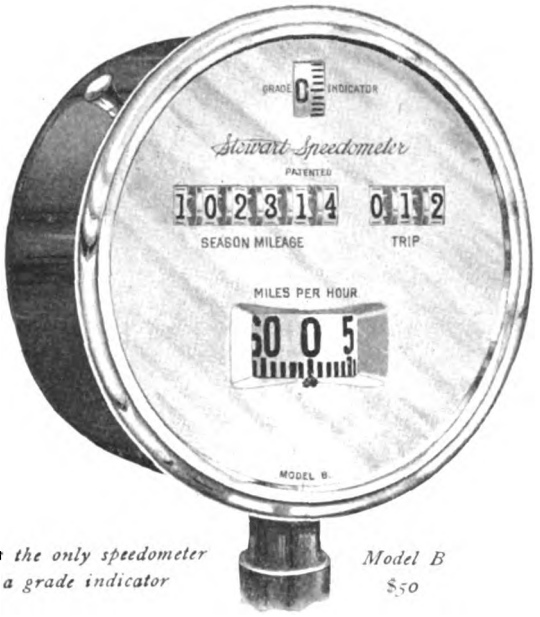
With a Springfield Convertible Body it is actually possible to convert an open car into a glass enclosed car, luxurious in appointments and beautiful both inside and out.

The operation takes but a few moments—the result should be actually seen to be appreciated.

Weight is important in considering the ordinary closed body. Excessive weight of such a body reduces speed and adds to tire weight. Springfield Convertible Bodies, as compared with the common type, increase the weight of the open car only 50 or 75 pounds.

Springfield Convertible Bodies are noiseless. There is no rattle or squeak, and owing to the absence of a solid roof there are no reverberations so noticeable in limousines and landaulets.

There is much more to be said. Your inquiry will bring the details.



SPRINGFIELD METAL BODY CO.
Springfield, Mass.

Stewart Speedometer

MAGNETIC PRINCIPLE

The Stewart is the only speedometer made with a grade indicator

Model B
$50

95% of All The Speedometers Made Are Built on The Magnetic Principle

¶ The Stewart Speedometer is built on the magnetic principle.

¶ Ninety-five per cent of all the speedometers to be made during 1913 will be built on the magnetic principle—the other five per cent will be odds and ends built on the centrifugal principle.

¶ Two hundred and eight out of two hundred and fourteen automobile manufacturers have chosen the proven and practical magnetic speedometer in preference to the obsolete and inaccurate centrifugal type.

¶ Over 92 per cent of the largest producers of popular priced cars have selected the magnetic for 1913.

¶ Over 97 per cent of the largest producers of medium priced cars have selected the magnetic for 1913.

¶ Over 98 per cent of the largest producers of high priced cars have selected the magnetic for 1913.

¶ Why argue?

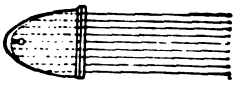
Which Lights Show up The Road Best?

Do you want a powerful glare for your lights to blind and confuse an approaching car or team?

Or do you want lights to search out the ruts and inequalities of the road? The illustrations of the lamps here show the difference.

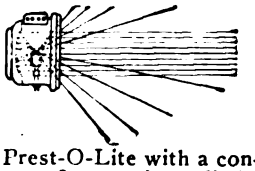
Any experienced driver will tell you that with Prest-O-Lite at night, he sees the inequalities of the road even better than by sunlight. This effect is impossible with lamps that concentrate the rays into one blinding glare.



This is but one of the many questions you must consider before you accept any lighting system.

Convenience may appeal to you strongly. With the Prest-O-Liter or any other good automatic lighter, gas lighting affords you every convenience. You can easily light or extinguish gas head, dash or tail lights from the seat.

But the big feature in your choice of a lighting system for your car should be reliability. Over five hundred thousand experienced drivers will testify to the absolute reliability of Prest-O-Lite. Its exchange service extends everywhere. There are no repairs to make. And considering the cost of power consumed, replacements and repairs on other systems, Prest-O-Lite is by far the most economical.



No matter what self-starter you have on your car insist on gas lighting. Self-starter convenience is safe-guarded by the use of the crank in emergencies. It is even more important that lighting convenience be safe-guarded by the use of a match to insure light in emergencies. Almost any manfuacturer will equip your new car with Prest-O-Lite and an automatic lighter if you insist. If your car is now equipped with Prest-O-Lite any dealer or any of our service stations can instal an automatic lighter at small expense.

1-4 Mile Ahead

The lamp with a parabolic reflector directs its blinding rays far ahead, but cannot diffuse the light to show the ruts in the road directly before the car.

40 Feet Ahead

Prest-O-Lite with a concave reflector gives all the light you need far ahead but also concentrates light on the road in front of the car where you need it most.

By all means, before you decide on any lighting system, send for the vital facts on automobile lighting. The coupon attached will bring you a free book on this subject by return mail. Send for it NOW and know the facts.

To Dealers:

It is just as important from your standpoint that the lighting system on the car you sell is thoroughly reliable, efficient and trouble-proof as that the motor and transmission will stand up under every day use.

You are blamed, first of all, when the lighting system goes wrong. Remember that when you specify Prest-O-Lite Equipment you protect yourself as well as your patron.

The Prest-O-Liter, or any other efficient automatic lighter for gas lamps, enables you to offer every convenience of the most complicated and expensive lighting systems, without sacrificing reliability and safety. Should the convenience ever fail—the user still has light. Remember this when selling a car.

It is to your interest to keep in touch with our campaign for reliable and safe automobile lighting. The coupon will bring full information.

HAYES MFG. CO. HAYES DETROIT, MICH.

How the Hayes Organization Aids Motor Car Manufacturers to Larger Output and Greater Economy

The New Edwards-Knight Car, Designed by the Edwards Motor Car Co.

SPECIALIZATION is the order of the day. It means a better product at a lower price, for those who specialize in one line alone become experts. "This one thing I do well" is the specialist's motto.

Nine Years' Experience

¶ For nine years the Hayes Manufacturing Company have been building sheet metal parts for automobiles. During this short period they have become the largest users of sheet metal in the world and supply the majority of motor car manufacturers with all or part of their sheet metal parts.

¶ There are twenty different sheet metal parts (see diagram above) which the Hayes Organization turn out for motor car manufacturers.

¶ Experience, immense facilities, special machinery, tremendous buying power, specialized workmen, all contribute toward high quality and low price of the Hayes products.

They Buy at Lowest Price

¶ Being the largest users of sheet metal in the world, the Hayes Manufacturing Company naturally has an immense advantage in buying sheet metal in the open market. The enormous quantity compels the lowest price and is a big factor in enabling the Hayes Company to under-bid the motor car manufacturer himself in building sheet metal parts.

Can Speed Up Output

¶ There is a big advantage to the car manufacturer in having his sheet metal parts delivered to him by the Hayes Manufacturing Company. It enables the car manufacturer to forget his sheet metal problems and devote a larger share of his factory to assembling. It speeds up the output. It increases dividends at the end of the year.

Handsome Bodies Sell Cars

¶ First impressions count a great deal in selling cars. The curve of the body, the sweep of the fender, the lines of the running board—all contribute toward the sale. The eye sees only the sheet metal parts at the first glance. The chassis is hidden under them. The Hayes organization have specialized in beauty of line and curve.

Sample Sets Prove Claims

¶ Have a sample set of sheet metal parts made up by the Hayes organization. They will add distinction to any automobile.

Hayes Engineers Show Short Cuts

¶ Send in your blue prints to the Hayes organization. Let the Hayes engineers go over them and point out the short cuts and money-saving ideas which our extensive experience points out. We are always at your service. Ask the Hayes organization about your sheet metal problems.

HAYES MANUFACTURING COMPANY, Detroit, Mich.

EISEMANN

SIMPLE, accessible, durable and foolproof, the new Type EB Eisemann high tension system with separate transformer coil is making good with a vengeance.

Not only are the patented features of all Eisemann products present throughout the Type EB system but the specially designed breaker box used on the magneto has much to do with the splendid results credited to this instrument. It is the personification of simplicity and efficiency and is tested out at the enormous speed of 4,500 r. p. m.

An exclusive Eisemann feature which adds also to the value of this system is the coil and ratchet starter device which is used to create a shower of sparks from the battery while the motor is at rest, thereby enabling the starting of the motor "on the spark."

We should like to tell you more of this Eisemann product.

You Need This New Product—

It Heals Tire Cuts

The Motorist's Self-Vulcanizer

Unlike ordinary tire repair mastic

Fills the cuts and holes, solidifies quickly and becomes like a part of the tire. No car owner can afford to be without it. Reduce tire expense fifty per cent.

Use

Requires no Kneading

NARCO TIRE CUT FILLER

Very large tube one dollar.

a non-shrinking, rubber compound, heavy in rubber; a combination cement, cut filler and mastic. Refills and unites the torn place in the tire with a permanent plug of rubber more resilient than the tire itself. Welds the loosened tread to the canvas body. Supplied only in patent, collapsible tubes, with tapering spout.

Easy to Use

All you have to do is to clean the cut out thoroughly with gasoline—remove all oil, sand and other foreign matter; insert the tapering spout into the cut and compress the tube, smooth off the cut filler and the repair is completed. Allow it to heal over night; in the morning it will have become *like a part of the tire.* Rivets itself to the walls of the cut, forming a union so perfect no road abuse can remove it

This is the logical manner of tire repair. Every automobile owner in America should make Tire Cut Filler a part of his repair outfit and begin saving in tire cost *now.* Very large tube, $1.00. Money refunded if not satisfied.

TRADE MARK

TIRENEW

waterproofs the outer rubber casing of the tires and penetrates down to the inner fabric, protecting it from oil air and moisture. Preserves the tires and prevents decay Spread it over the surface of your tires after mending with Tire Cut Filler. *Makes tires look like new.*

There are imitations which paint but don't protect—insist on Tirenew.

Narco Rubber Reviver add Refinisher

a reviver, refinisher and waterproofer for anything rubber or fabric. Make your auto tops like new.

Narco Triple-Strength, Non-Inflammable Rubber Cement

A rubber cement three times as strong as ordinary cement, and costs no more.

ALL GOOD DEALERS CARRY NARCO PRODUCTS OR WILL GET THEM FOR YOU

To Dealers—Write for the Narco catalog telling all about the complete line of Narco products and don't fail to ask for our trade proposition. We will give you complete information together with our catalog if you will write us mentioning your jobber's name.

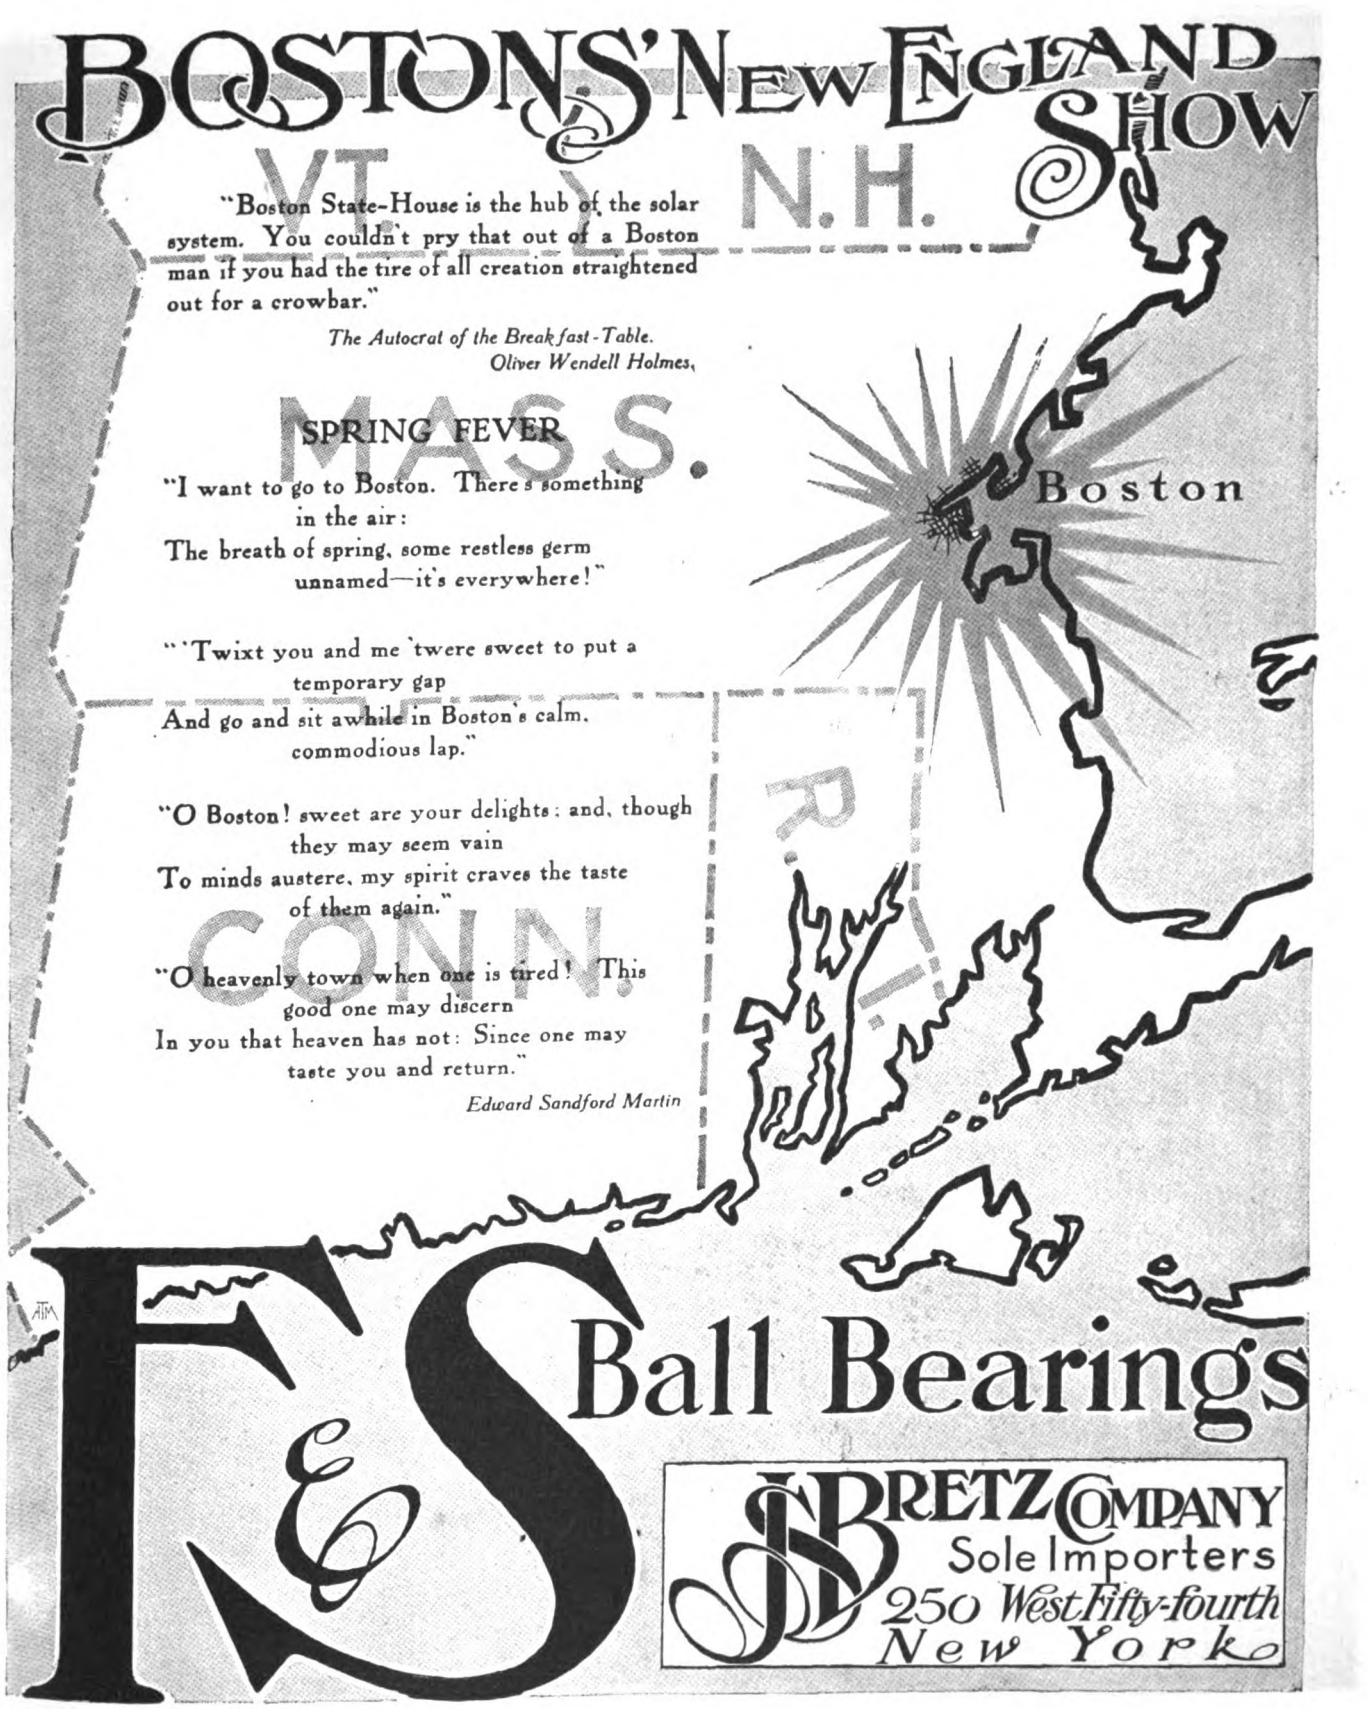
BOSTONS' NEW ENGLAND SHOW

"Boston State-House is the hub of the solar system. You couldn't pry that out of a Boston man if you had the tire of all creation straightened out for a crowbar."

The Autocrat of the Breakfast-Table.
Oliver Wendell Holmes.

SPRING FEVER



"I want to go to Boston. There's something in the air:
The breath of spring, some restless germ unnamed—it's everywhere!"

"'Twixt you and me 'twere sweet to put a temporary gap
And go and sit awhile in Boston's calm, commodious lap."

"O Boston! sweet are your delights: and, though they may seem vain
To minds austere, my spirit craves the taste of them again."

"O heavenly town when one is tired! This good one may discern
In you that heaven has not: Since one may taste you and return."

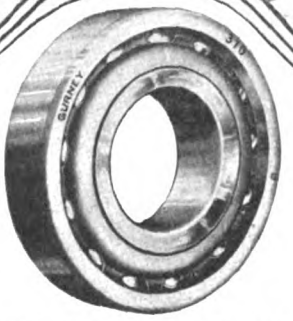
SHELDON
STEEL WHEELS

The Sheldon Steel Wheel performs a double function in truckdom. It positively eliminates the necessity of wheel replacement and it reduces tire wear to the minimum.

Destruction tests carried out in our factory showed conclusively that a pendulum blow which demolished a wooden wheel had little or no effect on the Sheldon Steel Wheel.

The Sheldon Steel Wheel is resilient. Its weight at the periphery is negligible. All frictional heat radiates quickly from the metal. These three points contain a message of vital importance to truck owners or manufacturers because they mean greater tire economy.



All the quality of design and workmanship that have made our springs and axles famous for their indestructibility will be found in this latest addition to the Sheldon line.

CAPACITY
GURNEY
ENDURANCE

First---Race Contour

Look first to the contour of your ball bearing raceways—for the raceways are about the most important single feature of ball bearing construction. First must come the raceway of right contour, for just so far as you fall short of right contour by just so much do you fail to realize the full efficiency to which you are entitled.

It is the truth of this statement primarily, coupled with the fact that we are able to guarantee correct race contour, that accounts for the unequalled capacity and endurance of

Gurney Ball Bearings

This fact, while not obvious at a glance, can easily be shown, and we urge you to give us an opportunity to demonstrate our point by actual test.

However, there are four essentials to high ball bearing efficiency that are obvious as well as apparent at first sight—namely:

Full Complement of Balls
Solid One-Piece Separator
Uninterrupted Raceways
Full Depth of Raceways to Resist Thrust

Now, mark this well—every bearing to give the fullest efficiency must combine all four of these essentials. The absence of any one means a sacrifice of either capacity or endurance—and yet Gurney Ball Bearings are the only bearings made which combine all of these obvious essentials—the only bearings made that, besides inherently possessing these four essentials, also possess raceways of the right contour.

WARD LEONARD

The WARD LEONARD SYSTEM has exerted a world-wide influence for good in electrical engineering as applied to motor cars.

Twenty-three years ago WARD LEONARD LIGHTING SYSTEMS were used as pioneer installations in the line of dynamo lighting systems for moving vehicles. In these systems the batteries were "floated on the line" and were "automatically controlled" just as is necessary in the case of motor cars.

A patent on the WARD LEONARD DYNAMO LIGHTING SYSTEM was filed in the United States patent office in 1905 and granted to H. Ward Leonard on November 5, 1912.

We were in the game early. We base our design on fundamental truths, and our system is unique in that it is particularly adapted to meet the working requirements imposed on electric lighting systems on motor cars.

The WARD LEONARD LIGHTING AND STARTING SYSTEMS of today are so made that they stand unchallenged upon their merits and meet unconditionally the most scientific criticism and the most severe service.

These systems lift electric lighting and starting out of the realm of experiment and make it a commercial reality.

Manufacturers who install WARD LEONARD LIGHTING AND STARTING SYSTEMS on their cars are making a wonderful service investment. They don't simply install apparatus. They add as selling arguments to their products, the best possible combination of the most desirable electric designs in permanent form.

The WARD LEONARD LIGHTING AND STARTING SYSTEM will be doing satisfactory service years after the names of many of the present makeshift systems have been forgotten.

The New Jones Speedometer

A Non-Magnetic Speed Gauge of Modern Construction, the Accuracy of Which is Unaffected by Dynamos, Climate, Heat or Cold

What We Are Telling to 15,000,000 People

About Joseph W. Jones' Master Instrument—the New Jones Speedometer—in Double-Page Space in the World's Greatest Weekly Magazines.

Every owner of a motor car, sooner or later, will want to see the New Jones Speedometer before he equips his car. Don't you want to learn of this new instrument now.

The New Jones, being non-magnetic, is unaffected in any manner by the dynamos on modern cars, and is absolutely unimpaired by climate, heat or cold.

It is the latest, and **finest**, production of Mr. Joseph W. Jones—the inventor of the **first speedometer** ever used on an automobile, the **Disc Record** in use on most talking machines, the **Taximeter**, the **Autolog** (the **Recording** Speedometer), the Electric Horn for motor cars, and **forty-five other patented articles.**

Mr. Jones is the "Edison" of motor cars. And the New Jones is his greatest achievement, the finest instrument produced in the accessory line.

Some of the Other Features

Rigid Steadiness, an Unbreakable Shaft with the Jones Ball-Bearing Swivel Joint, Larger Speed and Mileage Figures, the Most Legible Speed Scale—a handsomer, easier Dial to read—are some of its other points of supremacy.

We Are Telling This, Too

We are telling of the award of first prize to the Jones in a list of fifteen American and foreign makes by the Royal Automobile Club of Great Britain and Ireland, the World's final authority on motor car matters.

We are telling of tests at Columbia University, Armour Institute and by the United States Bureau of Standards, where several rival speedometers showed inaccuracies at different temperatures of from 20 to 35 per cent—or 13 to 17 miles per hour. And how, in the same test, the Jones variations were almost imperceptible. These are facts we must tell because they're the truth as obtained by these **disinterested authorities.**

See The Saturday Evening Post, March 22nd, and Collier's, March 15th

See these double pages. We will insert one each month, for a year to come, in each of these great magazines, as well as other advertising. Every owner and maker of motor cars must feel this enormous influence—these reasonable arguments based on the facts. Every motor car user must know, in time, what the New Jones Speedometer means. We expect a demand for this instrument that was never before equaled by any speedometer. Its features and quality made known in this way, will force it into favor. That must be the inevitable result.

Learn, Too, of Jones Branch and Agency Service

Ask us about the Jones Organization and its ability to insure satisfaction to manufacturer and user. Ask about our Branch Houses and Agencies in all the principal cities of the World, in charge of the highest type of men, men with whom you will like to deal.

Ask about our few uncovered territories and the Jones Proposition for closing them up. See what it means to Join the Jones Family and handle the New Jones Speedometer—the finest thing of its kind ever made, the Last Word in speedometers. Don't contract for any speedometer until you see the New Jones. You cannot afford not to know about it.

What We Pay for You

By R. E. Olds, Designer

Note what we do to save cost of upkeep with users of Reo the Fifth. To save repairs and troubles. To insure you an honest car.

Cost Us $200

These extra precautions, which some call extremes, cost us about $200 per car. I employ them because, in years to come, they save $500 per car.

I have proved this fact a myriad times in my 26 years of car building.

To merely sell cars, these things are unnecessary. But to hold users' good will—hold it year after year—these things must be done.

Our Extremes

Our steel is all made to formula. It is analyzed twice before using. That saves us countless mistakes.

Our gears are tested in a crushing machine to stand 75,000 pounds per tooth. Our springs are tested for 100,000 vibrations.

Each engine is tested for 48 hours. There are five long-continued tests.

There are fully one thousand tests and inspections applied to every car.

Overcapacity

I require in each driving part an overcapacity of not less than 50 per cent.

I use oversize tires—34 x 4—to cut your tire upkeep in two.

I use 15 roller bearings, which cost five times what the usual ball bearings cost. And, to avoid all flaws, we use 190 drop forgings, at twice the cost of steel castings.

I use a $75 magneto—

A doubly heated carburetor—

An expensive centrifugal pump—

14-inch brake drums—2-inch, seven-leaf springs—a 17-coated body.

And we limit out output to 50 cars daily, to insure accurate fitting, abundant tests. To make sure that each car is right.

Does It Pay

You know that it pays to get a car built like this if you've owned a car that wasn't. All the difference won't show at the start, of course, but in after years you'll see it.

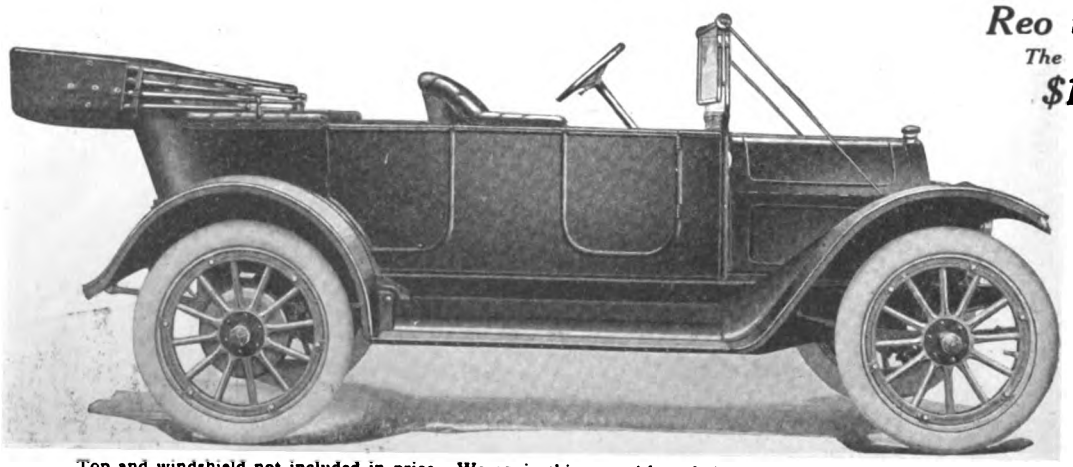
Every dollar I spend in these extremes saves users from two to four dollars. That's why Reo the Fifth stands at the top of its class, after 60,000 of my cars have been used.

See in this car our new center control. Note the absence of levers. Both front doors are clear. Note that it has the left side drive, like the leading cars today.

Note the flush electric dash lights. Note the splendid finish. Let our dealer point out to you the countless small perfections. This is the climax of a lifetime of effort. See what it means to you.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.



Canadian Factory, St. Catharines, Ont.

Reo the Fifth

The 1913 Series

$1,095

- 30-35 Horsepower
- Wheel Base—112 inches
- Tires—34 x 4 inches
- Center Control
- 15 Roller Bearings
- Demountable Rims
- Three Electric Lights
- 190 Drop Forgings
- Made with 5 an 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).

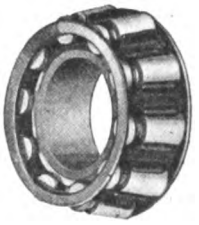
Hunting the Quarter Thousandth of an Inch



No. 2 Setting the Sixteen Traps

¶ A quarter thousandth of an inch! A space but one-eighth the thickness of a human hair;

¶ Yet no one roller in a Timken Bearing can vary in size from its neighbors more than the quarter thousandth of an inch (.00025")

¶ Because, if that roller were 'high' it would stand extra strain and get extra wear; if it were 'low' it would loaf and throw its share of burden on its neighbors.

Timken Tapered

Roller Bearing

¶ The Timken automatic gauging machine—the machine of the sixteen traps—sorts the tapered rollers into a series of lots that vary by quarter thousandths of an inch. A machine for every size roller.

Traps Must Be Set Right

¶ Master rollers are used to set the traps. When each trap springs to its master roller—and to no other—the machine is set right.

¶ The hardened and ground rollers now roll around the disc of the gauging machine and each size springs the trap for which it was set.

¶ All day long the machine sorts the rollers and places them in canisters ready to be sealed until used in the Timken Bearing.

Traps Must Stay Right

¶ Perhaps after the traps were set some little thing has happened to disturb the fine adjustment of some one trap. Some one canister may contain a few rollers that are not just right. Timken accuracy demands the elimination of that chance.

¶ So every two hours each machine is stopped and each trap again tested by its master roller.

¶ If one trap is found wrong every roller that has passed through it must come out of its canister and again run the gauntlet of the sixteen traps.

Reason for the Quarter Thousandth

¶ The Timken Bearing has always been right in the principles of its design. In the earliest motor cars its unique principles enabled it to give a service that no other bearing could give. This it did without the present day accuracy in manufacture.

¶ Year after year the hunt for the quarter-thousandth of an inch has added still longer life, smoother running, lower friction and the transmission of greater power.

The Timken Roller Bearing Company

Canton, Ohio, U. S. A.

The only axle manufacturer licensed to make automobile axles equipped with Timken Roller Bearings is the Timken-Detroit Axle Company

SOOT-

Our Message to Dealers

Mezger Soot Proof Spark Plugs, made by one of the oldest spark plug makers in the country, give positive and lasting insurance against plug troubles.

We have been making these plugs for ten years over protected patented design, from the best materials obtainable and through factory processes that must produce uniformly good plugs.

These plugs are Soot Proof—meaning that the commonest source of short circuit is absolutely eliminated through the peculiar arrangement of the chamber, and because the plug actually burns its carbon as fast as formed.

Mezger Soot Proof Spark Plugs are gas-tight—a feature which again qualifies them to maintain their stand as leaders in the field.

The material used in their construction renders them indestructible through the action of violent heat and sudden change.

C. A. Mezger
"SOOT SPARK

Dealers who sell Mezger Soot Proof Spark Plugs have back of them our guarantee that these plugs must be permanently troubleless—permanently good and lasting—in fact, under all ordinary working conditions they will equal the life of the engine itself.

Now, this is the plug we ask you to sell, not only from a profitable standpoint but also through its ability to hold the good will of your trade and to make new customers—those who realize that in helping themselves out of their spark plug troubles, you are giving them service.

SPARK

Digitized by Google

PROOF

Do not miss It's Import

The message on the preceding page is in itself enough to justify you to carry Mezger Soot Proof Spark Plugs in stock. Now consider our co-operative efforts in your behalf.

We are advertising Mezger Soot Proof Spark Plugs through the leading automobile publications to a group of car owners running into hundreds of thousands—many of them in your territory. This advertising tells at length the story we have told you briefly here. It is advertising that will lead customers to your counter.

C. A. Mezger
"PROOF" PLUGS

We realize that the best product in the world will not move easily and readily, unless the manufacturer backs his selling agents with conservative, strong, and helpful advertising.

We are doing this for you, and we are doing it so effectively, that you can ill afford to neglect this opportunity of handling the Mezger line.

We are creating the demand. We want you to be prepared to meet it. We want you to sell Mezger Soot Proof Spark Plugs. A pleased customer is your best advertisement, and every set of plugs you sell, bearing our trade mark, will go out and sell more of their kind.

Get into communication with us today, and we will send you full technical description of the Mezger Soot Proof Spark Plugs and quote you prices and commissions that will interest you to the point of action.

Every Reliable Accessory Dealer should have our attractive proposition on

The FEPS CARBURETOR

You've heard so much about wonderful carburetors that you're probably case-hardened in skepticism. We submit, however, these two series of facts for your consideration.

FIRST. The Carburetor is today the most imperfect part of the automobile, and far behind, in efficiency, every other accessory. There's real need of a real carburetor.

SECOND. The Feps Carburetor splendidly meets that need. It involves an entirely new principle of auxiliary air supply, producing a marvelous increase in flexibility; an absolutely perfect mixture at all speeds, with an increase of 25% to 50% in miles per gallon of fuel on any car. It contains no springs, no balls, no cams, no reeds, and all adjustments once made are permanent. It gives a perfect mixture with any grade of gasoline and is unaffected by altitude, weather conditions or change of temperature. It also embodies a never-failing quick-starting device.

The first fact you cannot dispute, the second you probably will, until you test out the Feps at *our* risk. Get in line with the Feps now for increased business and profit.

See the Feps at the Boston Show, Mechanics Bldg.—Space E-426

THE ATWATER KENT SYSTEM

has been silently advertised from coast to coast by the best advertising anybody can have—the personal endorsement of over 100,000 satisfied users.

The Atwater Kent Ignition System has no rival—no competitor. We do not use this term metaphorically, but in a literal sense.

You may think this is the use of a trite advertising term, but in this case it is nothing of the kind. That the Atwater Kent has no rival in the opinions of thousands of users has been demonstrated to us many-many times, when in ordering their new cars they have specified that they should be "Atwater Kent equipped."

There are a number of other good reasons for the superiority of the Atwater Kent System over the magneto and it is worth your while as a jobber, dealer or prospective buyer, to weigh and consider them carefully.

Space forbids our mentioning these reasons even briefly, but if you will write for our booklet "D," we will give you some of them. Then ask the motorist who drives a car "Atwater Kent equipped" and he will tell you the others, and the best reasons why the Atwater Kent Ignition System has no real rival.

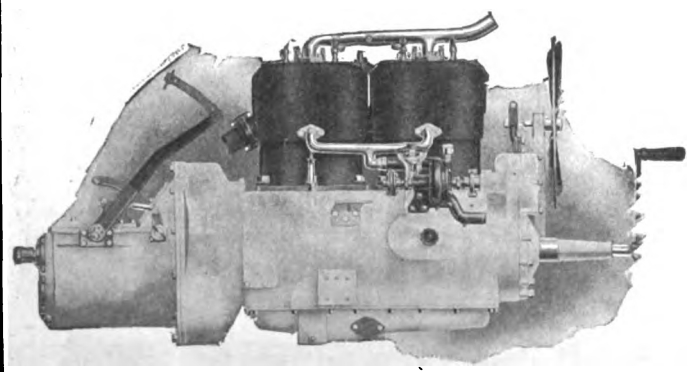
The crank shafts and connecting rods in ERGON MOTORS are made by the Driggs-Seabury Ordnance Corporation of Sharon, Pa. who have one of the largest and most finely equipped forging plants and machine shops in the United States.

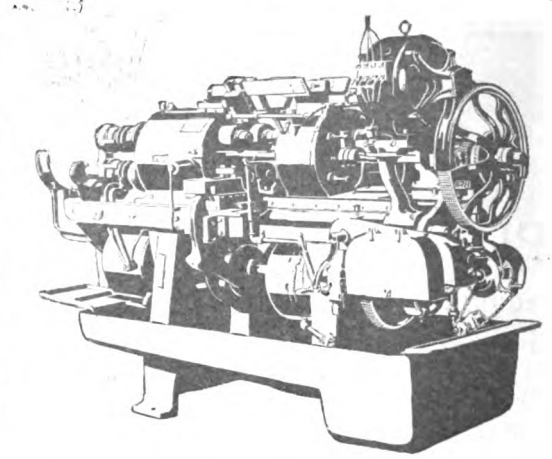
The crank shafts have three bearings of genuine die cast babbitt. All bearings are adjustable and exceedingly accessible.

The connecting rods are made from a tough high grade alloy steel and the big end is provided with a genuine babbitt die cast bearing dowelled into the rod and cap.

The cup is so constructed and held in place that it is impossible for it to become loosened.



Brass shims take care of adjustments of these bearings.



We stand ready and willing to demonstrate by a test that there is no superior to this new line of four cylinder, four cycle, long stroke, water cooled motor.

Please let us hear from you today with a definite statement of your wants.

HAZARD MOTOR MANUFACTURING CO.

Rochester, N. Y.

REHANDLING screw machine work often causes delays and congestion in your finishing room. A machine doing away with this condition will profit you greatly.

THE Acme Automatic in most cases turns out completed parts. The method of tooling enables you to perform as many as eight or ten operations at once. Comparatively few parts require more operations than this. Frequently it is cross-drilling or milling which necessitates rehandling when ordinary methods are used. The Acme Way is to do these operations on the machine while the other cuts are being made.

LET us tell you from our samples what the Acme will save you in rehandling. Send them in now.

The name of our booklet "Acme Method" explains its purpose. Ask us to send it.

Rust eats tires; rusty rims increase tire trouble and expense

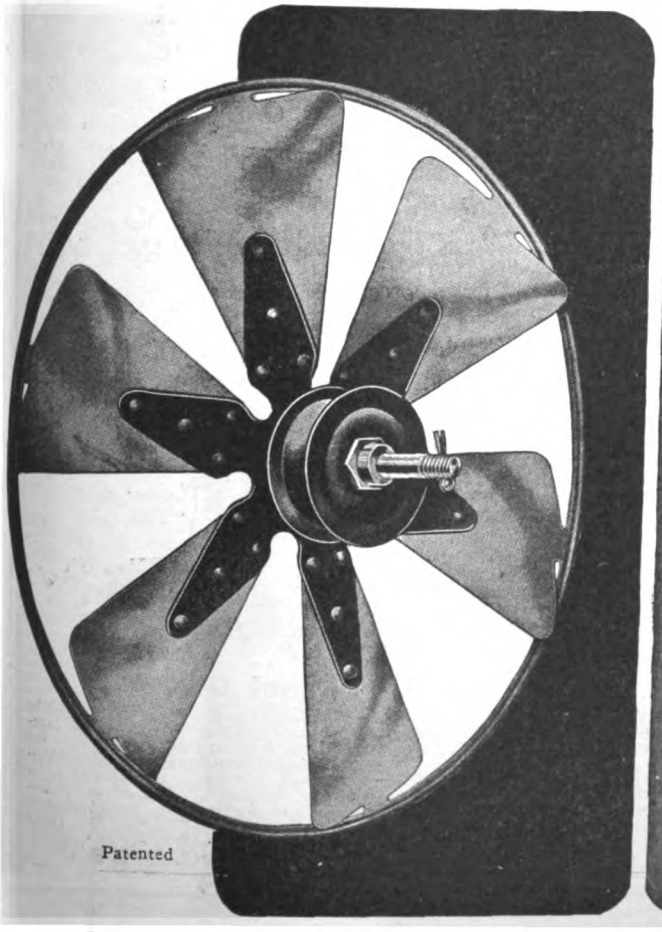
Outside tire protectors save you from most tire troubles; not from one of the worst: iron rust.

You can see for yourself how these destructive rust flakes on your rims have rotted the rubber in your casings. That's not all they do. They "freeze" the tire to rim or to the bolts of your demountable; make tire changes much harder work.

You can prevent all this; you can keep the rims from rusting; make tire changes easier, save money, and trouble by painting your rims twice a season with

THOMAS' ANTI-RIM-RUST PAINT

This is a scientifically-compounded metallic paint, containing para rubber and graphite. Besides its wonderful usefulness in preventing destructive iron rust and making tire changes easier (especially when used on the rim bolts and lugs of motor trucks), it makes a lasting and efficient lubricant for spring leaves.



Get a can today from your dealer; if he is out of it, send one dollar to us; brings you full-sized can—enough for eight rims.

To Dealers

Thomas' Anti-Rim-Rust-Paint will be a fast-moving item in your stock; all car owners will ask for it. Discounts are extremely liberal. Drop us a line if your jobber can't supply you.

The Anti-Rust Paint Company

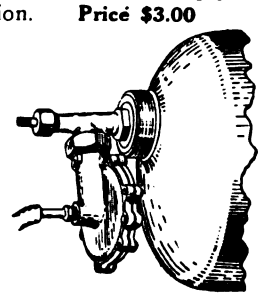
The Prest-O-Lite
Automatic Reducing Valve

With this device attached to your Prest-O-Lite, you do not have to turn the tank valve up or down to get the correct flame in the lamps.



Turn on the gas, light your lamps, and the flame is bound to be just right, without any adjusting.

It pays for itself in gas saved, so its convenience costs you nothing.

Unlike other reducing valves, the Prest-O-Lite Automatic gives the correct gas pressure at all times, whether the tank is full, half full, or nearly empty. It is truly automatic in its action. **Price $3.00**

Anyone can attach it in less than five minutes.

Your dealer has it or will quickly get it for you. If not, we'll send it to you on receipt of price. Try your dealer first. Every Prest-O-Lite Branch Office has this Automatic Reducing Valve in stock.

The Prest-O-Lite Co.
287 E. South St. Indianapolis, Ind.
Canadian Office and Factory, Merritton, Ont.

Price in Canada, $3.50

Our departments of engineering and design co-operate with the men who build the car—combining their weight of experience in radiator making with the particular requirements of the designer of the automobile.

We will not, however, endanger the reputation we have made by making radical changes from established design. In standing by this resolve, we have, on rare occasions been obliged to lose business—something to be regretted, but none the less necessary.

Mayo Radiators are built to hold the engine at an even temperature—not too hot to endanger its usefulness, nor too cool to lose its efficiency. "Tolerance" in change of design is therefore liberal—but it has its limits.

If you, as the man who has sold the car, find yourself in "hot water" so to speak, with a leaky, inefficient radiator and a "superheated" customer, then be sure this car was not equipped with a Mayo Radiator. Dealers who sell cars Mayo equipped know that the radiators will stand up under any unfavorable condition short of a blow with a hammer or a bad collision.

The Motor Lamps with Distinctive Features

There are no other motor lamps on the market with the advantages of Solar Lamps. Solars are always exclusive in style and in quality. They are the strongest lamps as well as the most effective.

In no other lamps can you obtain the Solar Special Short Focus Lead Glass Lens Mirror Reflector—the patented system of double ray light projection which gives two distinct fields of light for town and country use—or the new and exclusive black finish with a metallic lustre which is unaffected by heat or moisture. All of these features are exclusively "Solar."

Do not equip your car or specify equipment to the maker until you have seen all of the Solar advantages. See Solars at any live dealer's or write for the catalog.

Solars are made in all styles for oil, electricity, gas and in combinations.

All Acknowledge the Necessity of

Weed Chains

In one of those friendly after-luncheon; get-together parties at a well known city club, eleven men drifted on to *the subject of the dangers of skidding.* With a single exception each of the eleven owned an automobile, and each had a *skidding experience* to relate, and each felt that *his particular predicament* was the most sensational and startling.

While nearly all had experimented with the various so-called anti-skid tires, and acknowledged their possible advantages when new—yet when it came right down to "Brass Tacks," there wasn't a single one in the crowd but admitted that for *sure results,* for the **absolute elimination** of every possibility of skidding, **nothing even approximated Weed Chains,** and nothing took their place. Every one of the ten owners carried at least one pair of Weed Chains in his car.

Go where you will, put the question to any assembly of automobile owners you like and the verdict will always be the same—"*We can't get along without them.*"

Weed Chains are universally acknowledged to be the only anti-skid device that can be absolutely relied upon at all times and under all road conditions.

Weed Anti-Skid Chains

Insure perfect control and safe, comfortable driving

Don't foolishly pride yourself on taking chances in order to prove your bravery, or to demonstrate your ability as a driver.

Weed Chains are an absolute necessity on both rear tires and to doubly guard yourself against accidents and to make steering comfortable and easy, put them *on the front wheels too.* They cannot injure tires because "they creep"—occupy very little space when not in use—applied in a moment without the use of a jack or other tool.

Take precaution now When you know the folly, the danger, the peril there is in driving your car over icy, slippery, snow covered roads and pavements, why not fully equip your car today with **Weed Chains** for your own protection and for the safety of other road users.

Recommended and sold by all reputable dealers

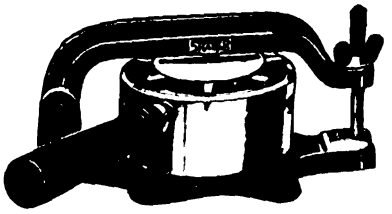
DIAMOND TRUCK CHAINS

The life of a chain is largely dependent on the strength and durability of its rivets; for the rivets receive more wear than any other individual part of the chain.

For this reason Diamond Truck Chains have Nickel Steel Rivets exclusively, and all holes in side bars are Reamed to exact size and pitch. This gives rivet shoulders an even bearing throughout the entire thickness of side bars—a result not possible with the customary punched hole.



If you want chains that have the ability to withstand hard, continuous, day after day service, have your trucks equipped with Diamond Chains.

Our treatise "Power Chains and Sprockets" is a valuable book of reference on chain drives. Write today for a copy.

DIAMOND CHAIN AND MFG. CO.
150 West Georgia St. Indianapolis, Ind.

Capacity 8,000,000 Feet Per Year

DEALERS: A million motorists will have tire trouble in 1913. There is a demand for a **reliable,** inexpensive vulcanizer that can be used by anyone, anywhere—a vulcanizer that will mend tube punctures as perfectly as the most elaborate plant.

VUL CANIZER REPAIR KIT $2

The only inexpensive vulcanizer that actually **vulcanizes** a repair clear through because it is the only one in which the vulcanizing temperature is maintained long enough to cure the raw rubber. Its ever-present fuel, gasoline, is converted into a gas by the patent generator which distributes the flame over the vulcanizing surface at just the right intensity.

Other exclusive Shaler features are a handle that is cool enough to permit moving the vulcanizer the moment the repair is finished, asbestos plate inlaid in tube shelf to retain heat and prevent pinching tube, and universal clamp insuring even pressure to all parts of a repair.

A real SHALER Vulcanizer

Not an experiment, but the product of the largest exclusive vulcanizer manufacturers in the world. Sold under the Shaler guarantee which has made the Shaler line of vulcanizers for motorists and repairmen the standard throughout the auto industry.

Get our trade proposition

Write today and get full details and trade prices on this indispensable accessory. Sooner or later every motorist will get a VUL-KIT from someone.

THIS LIST of 49 cars represents the aristocracy of motordom. Read it over. How many high-grade cars do you fail to find?

Select any one and you buy a car Klaxon-equipped;—one that the maker intends shall be *completely ready*—for your comfort, safety, satisfaction.

You buy a car equipped with a signal that is the out-and-out choice of over 150,000 motorists; that is *necessary* to public safety; and that fully meets the measure of efficiency laid down by all signal laws and ordinances.

The concerted action of the high-grade car manufacturers of this country and Europe is the final stamp of disapproval upon the out-of-date, inadequate bulb-horn.

Studebaker

Saleability Is Built Right Into the Studebaker "35"

What makes for saleability in a car?

Many things—but first in importance in a buyer's mind—is its Value.

The Studebaker "35" is the most remarkable value ever offered at $1290.

It's an epoch-making car—marking the arrival of the period when $1290 will buy every feature of comfort, luxury, reliability and endurance.

Not in one single detail does the "35" suffer by comparison with cars costing $2000 and more.

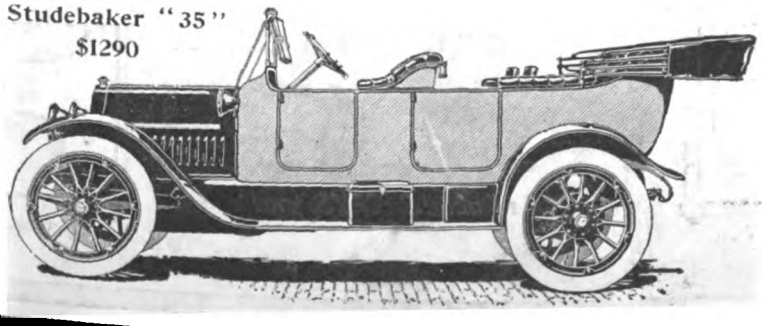
It's electrically started by simply pulling a handle on the steering column and electrically lighted by pressing a button.

It's a car of long, rakish lines—an aristocrat in beauty as well as in performance.

It's a car of comfort with resilient, easy riding springs, deep sumptuous upholstery and a wheel base of 116 inches.

It's a car of adaptability—seating four or six, as the occasion demands, and riding with luxurious ease, whatever the load.

It's a car of strength—of sturdiness—of reliability—a car for long, hard, unrelenting service every day in the year, for years.



It's a car built by Studebaker, and that means it's a good car "clear through." It's the utmost car value for $1290—and a big business builder for Studebaker dealers.

MOTOR WORLD

A Trade Paper Giving the World's Motor News

Vol. XXXIV
No. 12

New York, March 13, 1913

Ten cents a copy
Two dollars a year

The ELECTRIC DISCO System
STARTING—LIGHTING

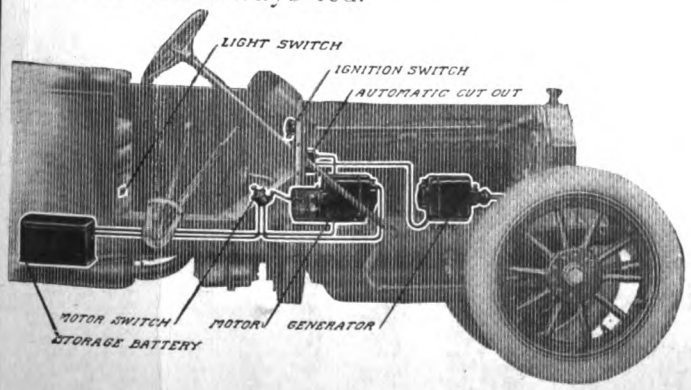
A *Sure* Start; a *Quick* Start
No Waiting

If your car is **Electric Disco** equipped, you won't have to **wait** and **wonder** how long you'll be getting started. Just press the button and away you go—**at ONCE.**

That's because the **Electric Disco SPINS** the motor.

It doesn't merely **turn over** your engine or crank it. It sets it spinning at 120 to 150 revolutions per minute.

Simplicity Itself



Yet the **Electric Disco** is marvelously simple.

No instructions are sent save these:

"To Start Car, Press the Button;
To Light Car, Turn the Switch."

Our Long Experience

From the beginning of Starters, the Disco has always led.

GAS Starters were in vogue. We have equipped over 150,000 cars with Gas Starters alone.

And, with the coming of the **Electric Starter**, motorists knew that the **Electric Disco** would lead.

The Price

The initial cost is somewhat above other Electric Starters. But who could expect to buy the most durable and dependable product in **any** line at a **ridiculously low price?**

And what reputable automobile maker, in order to save $50 or $100, would deny you your choice of Electric Starters?

Send for Book—FREE

Our new Book is proving a revelation to motorists who thought all Electric Systems complicated. On the contrary, the Electric Disco is quite simple. With the Book before you, it is easy to understand the basic principle of Electric Systems. In 6 minutes you have it all.

Send for this **terse, non-technical, instructive book.** Get posted. Send Letter or Postal, whichever is the more convenient.

THE DISCO COMPANY
715 Dodge Building **Detroit, U. S. A.**

Truffault-Hartford SHOCK ABSORBER

An Easy Riding Car Needs Few Repairs

If it were not for the jolting and jarring a car receives on rough, uneven roads, its usefulness would be extended indefinitely. Excessive wear and tear are arrested comfort is assured—and tire mileage increased by the use of the Truffault-Hartford Shock Absorber.

These absorbers are now included as regular equipment on 25 leading cars, after a thorough laboratory test by their factory engineers. No car can render the best service without them and their inclusion on any car means the betterment of its riding qualities and endurance, as well as the reduction of its up-keep cost.

Five models—the New Automatic, $60; Standard $50; Intermediate, $40; Junior, $25; Juniorette, $15 per set of four. See your dealer and write for our catalogue.

Vol. XXXIV New York, U. S. A., Thursday, March 13, 1913 No. 12

SALE TO DETERMINE FUTURE OF EMBARRASSED MATHESON

Property of Company, Which Failed, to Be Sold by Receiver-president Next Month—Assets Are Appraised at $680,000.

Whether or not the Matheson Automobile Co., of Wilkes-Barre, Pa., will recover from the embarrassment which overtook it on December 20th last will become known soon after April 21st next. For on that day, by order of the court, the property will be offered for sale by William C. Shepherd, the receiver, who was president of the company at the time of the failure. The identity of the purchaser of the plant probably will indicate the future of the Matheson establishment.

The property which will be offered for sale has been appraised at $628,708.45, of which $226,410.15 is subject to first and second mortgage bonds, totalling $257,222.11. The certified "appraised sound values" are as follows: Land, $32,000; buildings, $80,201.67; machinery and equipment, $181,720.64; patterns, $20,196.25; inventory of stock, $363,352.05; New York City branch, $5,237.84; total, $682,708.45.

The company's own schedule placed its assets at $706,137.87, the property covered by mortgages being: Land, $32,000; buildings, $80,201.67; machinery and equipment, $181,720.64.

Among the accounts receivable appear the items, "Automobile Board of Trade, $642.71," and "New York show, $750."

In addition to the first mortgage bonds, of which $183,200 are outstanding, and second mortgage bonds, of which $68,500 are outstanding, it appears that the Matheson company, on January 27, 1912, effected a loan of $75,000 from those identified with it, giving as collateral a 50 per cent. interest in the list value of 49 Matheson cars, the numbers of which were specified in the trust agreement which was executed.

At the time of sale on April 21st, the property will be offered in separate parcels, after which bidders will be permitted to bid for all or any separate portion of the property.

Nonpareil to Produce Cubit Horns.

The Nonpareil Horn Co., of New York, has acquired an exclusive American license from the Kosmak Electrical Co., of Jersey City, to manufacture and market the Cubit $3 horn, the Kosmak company itself becoming chiefly a licensing company. It will, however, continue to handle the foreign business, securing the horns from the Nonpareil factory.

The transaction was brought about primarily by the unexpected demand for the Cubit horn, which reached such proportions that the Kosmak manufacturing facilities could not cope with it. On the other hand, the Nonpareil Horn Co., which previously had devoted itself exclusively to the production of bulb horns, possesses such facilities that the manufacture of the Cubit signalling device fits nicely into its scheme of things and will permit the demand to be properly cared for.

Incidentally, Morris Kind, of a wealthy Philadelphia family, has acquired a substantial interest in the Nonpareil Horn Co., of which he has become general manager.

Mason Personally Purchases Flint Plant.

A. C. Mason, president of the Mason Motor Co., of Flint, Mich., personally has purchased the plant in that city formerly occupied by the Randolph Motor Co., which several months ago was sold over its head to the Sterling Motor Co. Mason, it is stated, will lease the property to the company bearing his name, and when it takes possession, the present Mason plant will be occupied by the Little Motor Car Co., which thereby will obtain much needed space. The Little and the Mason companies are closely affiliated, the former making the engines for the latter and both being under the immediate influence of W. C. Durant of the Republic Motor Co.

STATE OFFICIALS' QUARREL HOLDS UP DEALER'S MONEY

Governor of Arizona Appropriates Car Bought for Jail and State Refuses to Pay—Dealer Waits Long and Then Sues.

If a Commonwealth buys an automobile for use in a State prison, and if the governor takes the new car and sends his old car, which also is owned by the State, to the prison, has the State auditor any right to refuse to audit the automobile dealer's bill? Lest any quick-witted tradesman attempt to solve the riddle, it may be said that his effort may be wasted, for the problem has kept the auditor, the board of control, the governor and a considerable portion of the trade in Arizona in a turmoil for weeks, and now the Arizona Motor Co., which sold the car, is suing for its money. The amount asked is $2,343.

The trouble started when a salesman of the Arizona Motor Co. learned in the peculiar way in which salesmen learn things, that the State was in the market for a car to be used in the penitentiary, and he utilized his merchandizing talents to such good effect that the sale was arranged and a warrant was drawn upon the State treasury for the price of the car and some extra equipment, the warrant, however, specifying that the car was for penitentiary use.

When the brightly shining car, an Abbott-Detroit, arrived last November it sparkled in the bright Arizona sunshine, and when the governor, who was driving an old Locomobile which had been purchased by a preceding administration, saw the new car he fell in love with it at once. He was told that the car was for use at the penitentiary, but the governor's desire was so great that he nevertheless backed the new car into his garage and considered the matter settled when he kindly dispatched his old Locomobile to the jail. He thought he had settled the matter, but he hadn't. It is

Digitized by Google

quite likely that the superintendent of the penitentiary, having expected a new car for a long time, was somewhat disappointed when he saw the battle-scarred Locomobile presented to him as "his new car."

Whatever his feelings, there evidently were others who disapproved of the chief executive's act, for the auditor at once announced that inasmuch as the new car never went to the penitentiary, as the warrant specified, he could not O. K. the bill —and he did not O. K. it. The board of control and the auditor have had several heated sessions, and it began to look to the Arizona Motor Co. as if the only way it could ever get its money was to sue the State and let the courts settle the squabble in which the State officials have become embroiled; therefore the suit was instituted. Meantime the governor continues to enjoy the new Abbott-Detroit.

Weed Finally Enjoins E-Z-On Grip Makers.

After having had its preliminary injunction dismissed in the United States District Court in New York City, on the grounds that being an exhibitor at the New York Automobile Show did not give the E-Z-On Chain Tire Protector Co., of Washington, D. C., a place of business in New York City, the Weed Chain Tire Grip Co. proceeded to bring an action in Chicago for alleged infringement of the Parsons patent, No. 723,299, and this week was granted a preliminary injunction against the E-Z concern. The E-Z grip had links of a peculiar construction, they being longer than the Weed links and those at the end of the cross chains having a V shape; this, the defendants contended, would cause the cross chains to bind and not creep when a stress was applied, but the court held that there was a liability of creeping. Other defendants were Edward D. Lewis, Thomas V. Garvin and Matthew J. Frambach, who recently formed the company but who hardly had launched into business before litigation resulted, the suit in New York City being the first.

No Motor Palace in San Francisco.

There will be no "automobile palace" at the Pacific-Panama Exposition in San Francisco after all. After canvassing the trade, the National Association of Automobile Manufacturers, which provisionally had passed on the elaborate plans for such a building, has found that the prospective exhibitors at the San Francisco fair will not be sufficiently numerous to justify the erection of a special structure of any sort. Accordingly the automobile exhibits will be located in the Transportation Building, in which the Exposition authorities will set aside 60,000 square feet for the exhibition of automobiles.

RETAIL PRICE AGREEMENTS UPHELD BY BRITISH COURT

Declares It Would Be a Scandal Were It Not Possible to Enforce Them —Decision Contrary to American Law.

Whatever may be the judicial or other opinions in this country regarding price maintenance contracts, the King's Bench Division of the British court has ruled that while "agreements for the maintenance of price are of modern growth and might be unfamiliar to those who had been educated on older notions, nevertheless such agreements are almost universal in commerce and it would be a scandal if they could not be duly enforced."

The strong language and direct approval of what has been adjudicated as illegal in the United States was rendered by the court last month in deciding in favor of the Dunlop Pneumatic Tyre Co., Ltd., which sought an injunction against and damages from a London department store which broke its agreement to maintain the list price of Dunlop tires. The price cutting in question was not the violation of a conditional license clause such as is employed by many American manufacturers but was a fracture of what was undisputedly a price agreement. Almost the identical thing was only recently declared a violation of the Sherman anti-trust law by Judge Ray in the United States District Court for the Southern District of New York when he condemned a dealership price contract of the Waltham Watch Co.

The principals in the litigation were the Dunlop company, A. J. Dew & Co., tire jobbers, and Selfridge & Co., of London, a large American-managed department store which bought tires from Dew, the price agreement being in effect throughout the course of the travel of the tires from Dunlop to Selfridge. The specific charge was that Selfridge & Co. has sold two tires at cut prices and therefore had become liable to a penalty of £5 for each violation, which sum the contract specified should be paid for each case of price cutting.

As usually is the case in this country, the defense argued that the agreement was in restraint of trade and contrary to public policy. The Dunlop attorneys, however, introduced evidence to the effect that such agreements were necessary for the protection of the small dealer in the country who, without some protection in the way of price maintenance, could not afford to carry a stock of tires; and should he not carry them, it was argued, the entire touring population would be put to an immeasurable inconvenience by being unable to purchase tires outside of the large cities. A. J. Dew, for the plaintiff, testified that so far as he knew there was no "ring" of manufacturers, formed for the purpose of keeping prices up generally, and that there was free competition between manufacturers in the sale of tires.

The defendants also contended that even if everything were proven against them, the action properly could be for damages only and not for an injunction, and they further contended that there was lack of mutuality in the price contract in that it was one-sided, there being no consideration on the part of the tire makers. The court, however, held that since the Dunlop company permitted the store to trade in Dunlop tires and to exact a commission upon sales there was a consideration sufficient to make the contract valid.

Relative to the defense that there was restraint of trade the court, as stated, declared it would be a scandal if such contracts could not be maintained, and not only directed damages of £10 but granted an injunction preventing further price-cutting by the department store.

California Sees "Chain of Factories."

"With millions of dollars of Eastern capital behind them," according to a San Francisco report, "Louis B. Jennings and Allen Sheldon, both automobile manufacturers of New York, together with James Scott, a capitalist of Manila and Honolulu, and W. D. Yeager, a banker of Washington, D. C., arrived in San Francisco yesterday preparatory to establishing in California a chain of factories for the production of high grade automobiles."

While Jennings, Sheldon, et al., frankly admit that they are merely "investigating industrial conditions," they naturally think well of California as a location for their "chain of factories." But as, despite San Francisco reports, neither Jennings nor Sheldon are so prominently identified with the automobile trade in New York as to make their identity certain, and as it is not made plain just how far behind them are the "millions of dollars of Eastern capital," it is not possible at this time to distinguish even the weakest link in the projected "chain of factories."

Lozier to Increase to $5,000,000.

The Lozier Motor Co., of Detroit, is preparing to increase its capital stock from $3,000,000 to $5,000,000. For the purpose, a special meeting of the stockholders will be held on the 19th inst. The present capital is made up of $2,500,000 common and $500,000 7 per cent. preferred shares. The new stock will add $1,000,000 to each class of stock.

OPENING MONTH OF EXPORT YEAR SHOWS BIG INCREASE

Total Valuation of Cars, Parts, Engines and Tires Is More Than $3,000,000—Car Imports Lose, Parts Imports Gain.

Although the 1913 export year opened with no such rush as ushered in 1912, when the increase was more than 100 per cent., January of the present year gained 20 per cent. in value of automobiles and automobile products shipped to foreign countries, which increase amounts to $533,592, according to advance information furnished by the Federal government; the total valuation of cars, parts, tires and engines for January, 1913, is $3,226,848, as compared with $2,693,256 for the same month of the year before.

While statistics as to the countries to which the goods were sent are not yet available, the preliminary report shows that the shipments of cars last January were 2,157 in number and $2,234,077 in value while twelve months before the figures were 2,047 and $1,955,290, gains of 110 in number and $278,787 in value. Of the cars shipped the first month of 1913, 87 were commercial vehicles with a value of $182,271 and 2,070 were pleasure cars with a value of $2,051,806, an average value of $2,095 for trucks and $991 for cars.

Of the products other than completed cars, parts showed a loss when the two Januaries are compared, 1912 with $472,601 being $38,665 greater than 1913 with $433,936. Tires showed a goodly increase, the $161,337 worth exported in January, 1912, growing to $273,519 by the last January, a gain of $112,182. The number and value of automobile engines exported in January of the present year was more than twice those figures for the initial month of the preceding year; the 1912 figures were 837 engines, valued at $102,028, while those for 1913 were 1,705 engines, with a valuation of $285,316, a numerical gain of 868 and a monetary increase of $183,298.

Import figures may appear a trifle inconsistent in that, while car imports fell off considerably, the inward shipment of parts gained by nearly one-half; in January, 1912, 84 cars valued at $199,197 were imported and the cost of the parts was $25,145, while in January, 1913, the figures were: Cars, 71; value, $174,689; parts, $37,688. The cars lost 13 in number and $24,508 in value, while parts gained $12,543.

"35%"-Rubly Case Not Ended Yet.

Although the 35% Automobile Supply Co. of New York City has twice beaten William Rubly, a grease gun manufacturer of Tuckahoe, N. Y., in a suit over one of the "35%'s" now famous advertising contracts, in the Supreme Court for New York County, Rubly is to have another try at the matter; two weeks ago, when Rubly's attorney failed to appear to try the case when it was called, an inquest, or one-sided trial, was held and judgment taken by the "35%," but now that Rubly's attorney alleges that he was engaged on other cases and could not attend, the court has decided to permit him to open the default. Holmes Jones, the attorney, was, however, roundly scored by the court, which at the inquest said: "The court is of the impression that this particular attorney has been trifling with the court and has been seeking by unworthy methods to obstruct justice."

Long's Bond Offer Discloses Earnings.

The Long Mfg. Co., of Detroit, which manufactures the radiator of that name, is offering for public subscription $75,000 of its first mortgage 6 per cent. bonds in denominations of $1,000. The interest is payable semi-annually and the bonds are redeemable at 102½. They mature in amounts varying from $5,000 to $12,000 on the first of February for the next ten years.

The Long company itself has capital stock of $255,000 and a surplus of $62,154. The first mortgage bonds which are offered for sale are a part of an authorized issue of $100,000. According to the Long report, its earnings for the years from 1905 to 1912 averaged $20,208, which, from present indications, are likely to be greatly exceeded during 1913, as for the first six months of the company's fiscal year the earnings amounted to $18,424.

Chandler Quits Detroit for Cleveland.

The Chandler Motor Car Co., which recently was organized by former department heads of the Lozier Motor Co. for the purpose of manufacturing a light "six," has removed its offices from Detroit to the Swetland Building in Cleveland, Ohio. The offices will be maintained at that address until the factory in Detroit is completed.

Evans Forming Detroit Parts Company.

William F. Evans, of Milwaukee, who formerly resided in Detroit, has purchased the factory property in the latter city previously occupied by the Michigan Twist Drill Co. and is preparing to utilize it for the manufacture of automobile parts. Evans now is organizing a company for the purpose.

Couzens Heads Detroit's Chamber.

James Couzens, secretary of the Ford Motor Co., has been elected president of the Detroit Board of Commerce. He is the third successive member of the automobile trade to be chosen to fill that office.

ON SECOND ATTEMPT WEED ENJOINS WHITTAKER GRIP

Manufacture of Latter Continued Despite Adverse Ruling in Willis Action—Massachusetts Court Admits It's Convinced.

Despite the fact that the Weed Chain Tire Grip Co. was successful when it brought suit in the United States District Court for the Southern District of New York against the E. J. Willis Co. for infringing the Parsons patent, No. 723,299, by selling the Whittaker tread, the manufacturer, the Whittaker Chain Tread Co., which is located in Boston and is outside the jurisdiction of the New York Federal court, declined to recognize this verdict as of any effect in the District of Massachusetts and continued to make and market its grips until last week, when the Weed company, in a suit in the Federal court in Boston, was granted a preliminary injunction restraining operations of the Whittaker concern.

The Willis suit, after it entered into the accounting stage, was appealed by the Willis company, but according to statements of the Weed interests the appeal has not been actively prosecuted and this information was incorporated in the Boston action, there also being made the statement that whereas the Whittaker company had borne the expense of the Willis suit it refused to come in as a party to the defense, and thereby secure a final adjudication through the one lawsuit; this refusal is said to have been the reason for the bringing of the suit in Boston, for the purpose of reaching the manufacturing company.

The Whittaker company manufactured Whittaker, Besdam and Empire grips, which are said to be similar to the Weed, with the exception of the mechanical difference that the side chains are connected at their free ends with harness snaps and the cross chain hooks differ slightly at their terminals; in rendering decision on the motion for a preliminary injunction, Judge Frederic E. Dodge went into the history of the Parsons patent insofar as litigation in his court was concerned and likewise commented upon statements made by the Weed company as to the financial responsibility of the Whittaker company, which, it is stated, has incurred heavy mortgage liabilities. After enumerating various cases and decisions and expressing his belief that the patent has been sufficiently adjudicated, the court turned to the Weed-Willis suit and said:

"The alleged infringing device in the suit last referred to is not claimed to differ materially from the device which the defendants now before me are making and

Digitized by Google

selling. The defence and appeal in that case have been, indeed, as is undisputed, at their expense and under their direction, though they were not actually parties. They contend here that, notwithstanding Judge Lacombe's decision, the question whether their device infringes or not ought still to be regarded by this court as so far an open and doubtful question that no preliminary injunction shall be ordered at this stage.

"I am unable to take this view of the matter. I must agree with what has been said by the Court of Appeals for the Second Circuit in the suit against the Atlas Chain Co. above mentioned:

"'The history of the protracted litigation shows that, with few exceptions, the courts have regarded the Parsons invention as a meritorious one and have given it a construction sufficiently liberal to include all changes of form which accomplish the same result in substantially the same way.'

"Regarding the Parsons patent as valid and as having the broad scope thus described, I must also regard the defendant's device now before me as a device infringing the patent. In view of what has been decided since the injunction against the Standard Traction Co. was refused as above, I am unable to believe that there is now any such room for doubt upon the question of infringement by this defendant as ought to forbid the issue of a preliminary injunction against it.

"From the plaintiff's affidavits it appears that the defendant is a Massachusetts corporation, having an authorized capital of $5,000, and that it owns no real estate; that on August 13, 1909, it mortgaged all its personal property and all that it might thereafter acquire and use in its business for $5,000; that subsequently, on March 21, 1910, it gave a similar mortgage to secure an issue of 6 per cent. bonds not to exceed $100,000 in total amount, and that both mortgages are on record and undischarged of record. The defendant offers nothing by way of affidavit which tends to modify the inference to be drawn from these facts regarding its financial responsibility.

"The defendant moves to suspend all proceedings in this case pending the final determination of the plaintiff's suit in New York against the E. J. Willis Co. on appeal from Judge Lacombe's decision above mentioned. It also contends that the plaintiff's delay in bringing this suit should bar it from summary relief. The delay complained of is during the period beginning with Judge Lacombe's interlocutory decree, on September 22, 1911, and ending with the filing of the bill in this case of January 27, 1913.

"One affidavit only is presented by the defendant. It is presented by its solicitor, who had also represented the Willis Co. in the New York suit. Its allegations relate almost entirely to what has been done in Court in that suit or what has passed between the parties out of Court during its progress. Its allegations are not controverted by the plaintiff. But so far as the matters alleged have any claim to consideration by this Court in dealing with the present case. I cannot find in them any sufficient grounds for suspending the proceedings here. If it be true that the Willis Co. has been proceeding with its appeal in New York, at the defendant's instance, 'upon the assumption that it would not be sued in Boston, at least, until after the Willis appeal had been settled,' I do not see how the plaintiff can be held responsible for the assumption. If the expenses incurred by the appellant in New York have been large, or if any difficulty in providing for them has delayed a hearing upon the appeal, and if the plaintiff knew of this and might, by active co-operation to that end, have brought about an earlier hearing, or if it might, by bringing suit in Massachusetts earlier, have obtained a decision here in advance of the result in New York and at less expense to the appellant—none of these circumstances, in my opinion, give the defendant any claim to delay in these proceedings, or afford it any defence to the plaintiff's application. It is not disputed that the plaintiff has urged the defendant to become an actual party defendant of record in the proceedings against the E. J. Willis Co. in order that their result might settle the questions raised in the present suit; and that the defendant has refused to do so. And if I cannot hold that the defendant has been prejudiced, in any sense recognizable for the purposes of this case, by the plaintiff's failure to begin this suit earlier, I find still less reason to believe that it has been misled.

"A preliminary injunction may issue as prayed for. Motion to suspend is denied."

Hoover Ball Factory Ready in June.

L. J. Hoover, the former manager of the Flanders Mfg. Co.'s ball department, who, as stated in Motor World last week, purchased the ball machinery and finished and unfinished stock from the Flanders receiver, and who organized the Hoover Steel Ball Co. in Ann Arbor, Mich., will not remove his purchases to the latter city until about June 1st. At that time the Hoover factory, a brick and concrete structure, will be completed and practically ready for business.

Associated with Hoover in the enterprise are Frank Smith and C. E. Bowling, who have been in the ball making business for some 15 years. Hoover himself has been engaged in that industry for 19 years, having at one time been superintendent of the Standard Roller Bearing Co., and later one of the organizers of the Grant-Hoover Co.

Brass Goods to be Made in Peru.

The Crum-Wiley Mfg. Co., now located in Decatur, Ill., has secured a factory site in Peru, Ind., residents of the latter city, including a number of those identified with the Brown Commercial Car Co., having acquired an interest in it. The necessary factory building will be erected immediately and will be devoted to the production of all automobile accessories made in brass, particularly grease cups and other small parts. The officers of the reorganized company are: E. L. Crum, president; Max Kraus, vice-president; S. A. Shesler, secretary-treasurer. These officers with W. H. Brown, president of the Brown Commercial Car Co., and J. R. Woodring are directors.

Williams Gets Atlas Parts and Repairs.

The Auto Parts and Repair Co., of which P. A. Williams, Jr., is the moving spirit, has leased a portion of the former Atlas Motor Car Co.'s factory in Springfield, Mass., where it will carry a full stock of Atlas parts and not only repair Atlas cars but all other makes as well. Williams formerly was connected with the Atlas company and has with him a number of former Atlas employes. He states that it is even possible that the Auto Parts and Repair Co. ultimately may take up the production of commercial cars of the Atlas type.

Akron Strike Gradually Petering Out.

The strike of the Akron rubber workers is gradually petering out. Some of the professional labor agitators who caused the trouble are still on the ground, but they are being hard put to prove their worth. One day this week, after one of them had harrangued a gathering of strikers, urging that they appear in force the following morning and make a demonstration at the Goodrich plant, he was rewarded by an assemblage of almost 50 men, who quickly dispersed at the order of the police.

Lexington Denies Having Been Absorbed.

Despite printed statements that the Lexington Motor Car Co., of Connersville, Ind., had been taken over by the Howard Motor Car Co., which was organized in that city several months since, the Lexington company denies that any such transaction has been consummated. "Nothing in such reports," is the Lexington reply to an inquiry.

Grabowsky Creditors Get 20 per Cent.

The trustee of the bankrupt Grabowsky Power Wagon Co., in Detroit, has declared a first dividend of 20 per cent., which is being paid. It is believed that remaining assets will net about 15 per cent. more.

The Week's Incorporations

Portland, Ore.—Beaver Automobile Co., under Oregon laws; authorized capital, $150,000; to deal in motor cars.

St. Louis, Mich.—Admiral Motor Car Co., under Michigan laws; authorized capital, $50,000; to manufacture motor cars.

Thomasville, N. C.—Thomasville Motor Co., under North Carolina laws; authorized capital, $5,000; to deal in motor cars.

Painesville, Ohio—Vulcan Mfg. Co., under Pennsylvania laws; authorized capital, $200,000; to manufacture motor cars.

Jonesville, Mich.—Emery Whitmore Co., under Michigan laws; authorized capital, $5,000; to manufacture motor car supplies.

Richmond, Cal.—Richmond Motor Trucking Co., under California laws; authorized capital, $25,000; to operate a motor delivery.

Bangor, Me.—Penobscot Garage Co., under Maine laws; authorized capital, $10,000; to operate a garage. Corporators—Charles H. Storey, and others.

Amesbury, Mass.—Walker-Wells Co., under Massachusetts laws; authorized capital, $25,000; to deal in motor cars. Corporators—J. H. Walker, and others.

New Orleans, La.—La Croix Automobile Co., under Louisiana laws; authorized capital, $7,500; to deal in motor cars. Corporators—J. J. Wolf and others.

Lackney, Tex.—Piaca Tractor Co., under Delaware laws; authorized capital, $100,000; to manufacture tractors. Corporators—W. E. Palmer, M. P. Glazo, and others.

Huntington, W. Va.—Jarvis-Huntington Automobile Co., under West Virginia laws; authorized capital, $100,000; to manufacture motor trucks and operate a garage.

Bangor, Me.—Spencer & Parsons Co., under Maine laws; authorized capital, $10,000; to deal in motor cars. Corporators—H. C. Spencer, C. W. Parsons, M. C. Parsons.

Camden, N. J.—Par-Kul Wheel Co., under New Jersey laws; authorized capital, $100,000; to manufacture wheels. Corporators—E. S. Muzzey, F. S. Sauerman, F. A. Kuntz.

Springfield, Mo.—Always Air Mfg. Co., under Missouri laws; authorized capital, $1,600,000; to manufacture tire sealing fluid. Corporators—R. P. Dickerson, and others.

Indianapolis, Ind.—Northern Auto Co., under Indiana laws; authorized capital, $10,000; to deal in motor cars. Corporators—J. J. Clements, R. M. Fleming, L. H. Vanbriggle.

West Allis, Wis.—Auto Transfer Co., under Wisconsin laws; authorized capital, $5,000; to operate a motor delivery. Corporators—O. M. Carter, John M. Carter, Emma S. Carter.

Chicago, Ill.—Atkins Carburetter Co., under Illinois laws; authorized capital, $2,500; to manufacture motor car devices. Corporators—Ila Olmsted, Cora Burch, E. G. Atkins.

Decatur, Ill.—Dawson Automobile Co., under Illinois laws; authorized capital, $10,000; to deal in motor cars. Corporators—Earle M. Dawson, Charles E. Dawson, Florence L. Dawson.

Layton Park, Wis.—Gas Tank Re-Charging Co., under Wisconsin laws; authorized capital, $25,000; to recharge acetylene gas tanks. Corporators—J. J. McJeskey, W. R. Ebert, Fred J. Pagel.

Rochester, N. Y.—Durno Mfg. Co., Inc., under New York laws; authorized capital, $100,000; to manufacture motor car appliances. Corporators—John H. Durno, John F. Turk, Milton Noyes.

Richmond, Ind.—Sedgwick Mfg. Co., under Indiana laws; authorized capital, $10,000; to manufacture motor car devices. Corporators—Richard Sedgwick, J. R. Sedgwick, James M. Judson.

Marion, Ohio—Automatic Puncture Stop Co., under Ohio laws; authorized capital, $10,000; to manufacture tire sealers. Corporators—C. E. Merkel, M. M. McKinstry, F. C. Smith, A. C. Queen.

Detroit, Mich.—King Motor Car Co., under Michigan laws; authorized capital, $200,000; to manufacture motor cars. Corporators—Artemas Ward, J. C. Bayerline, Artemas Ward, Jr., T. P. Case.

Trenton, N. J.—Taxi Service Co. of Trenton, N. J., under New Jersey laws; authorized capital, $25,000; to conduct an automobile business. Corporators—H. W. Snook, F. J. Rutter, C. H. Naylor.

Lima, Ohio — Gladwell - Crossley Motor Co., under Ohio laws; authorized capital, $10,000; to deal in motor cars. Corporators—A. J. Gladwell, C. C. Crossley, F. A. Holland, H. I. Bland, J. W. Roby.

Indianapolis, Ind.—Motor Starter Mfg. Co., under Indiana laws; authorized capital, $40,000; to manufacture motor car devices. Corporators—Samuel M. Brundage, William J. Sylvesta, Harry J. Herff.

Cleveland, Ohio—National Garage Co., under Ohio laws; authorized capital, $20,000; to operate a garage. Corporators—John Nally, C. A. Gardner, George L. Williams, R. D. Morgan, E. C. Nally.

Chicago, Ill.—Chicago Original Auto Polo Co., under Illinois laws; authorized capital, $20,000; to conduct amusement enterprises. Corporators—Joseph R. Deahl, Frederick W. Moore, Marie C. Suhr.

Buffalo, N. Y.—Willard Commercial Car Co., Inc., under New York laws; authorized capital, $50,000; to manufacture motor vehicles. Corporators—Robert A. Willard, John F. Schamel, Reginald F. Penton.

Billings, Mont.—Billings Auto & Machinery Co., under Montana laws; authorized capital, $15,000; to deal in motor cars and operate a machine shop. Corporators—Paul Behrendt, Frieda Behrendt, M. C. Holt.

Indianapolis, Ind.—Floatless Carburetter Co., under Indiana laws; authorized capital, $50,000; to manufacture carburetters. Corporators—M. M. Mahoney, E. S. Cornell, I. E. Rodgers, George D. Sisson, A. H. Cornell.

Dayton, Ohio—L. C. R. Storage Battery Co., under Ohio laws; authorized capital, $30,000; to manufacture storage batteries. Corporators—Samuel Loucks, Arthur Christy, Frank D. Reeder, Frank P. Brown, David I. Prugh.

Cleveland, Ohio—Diebold Products Co., under Ohio laws; authorized capital, $25,000; to manufacture motor cars. Corporators—Charles R. Diebold, Max Friedman, Louis P. Diebold, Martin W. Sanders, Mabel M. Hummel.

New York, N. Y.—Continental Rubber Works Selling Agent, Inc., under New York laws; authorized capital, $3,000; to deal in rubber goods. Corporators—Clarence E. Thornall, 50 Church street; Willis A. Darling, Walter S. Tullis, 35 Murray street.

New York, N. Y.—H. M. S. Motor Co., under New York laws; authorized capital, $22,500; to deal in motor cars. Corporators—Joseph J. Meyers, 66 West 85th street;

Charles K. Starr, George P. Harvey, 134 West 49th street.

Far Rockaway, N. Y.—Far Rockaway Motor Vehicle & Cab Owners' Association, Inc., under New York laws; authorized capital, $500; to conduct a protective association. Corporators—James Harris, Edward T. C. Kelley, Harry Traver.

Buffalo, N. Y.—Conover Limousine Top Co., Inc., under New York laws; authorized capital, $125,000; to manufacture motor car fittings. Corporators—Rowland J. Conover, 180 Herkimer street; Charles E. Anglim, James T. Gilbert, Mutual Building.

New York, N. Y.—Robert Thedford Garage Co., Inc., under New York laws; authorized capital, $25,000; to operate a garage. Corporators—Robert Thedford, 1411 Union street, Brooklyn; George Glynn, Paul R. Gordon, 106 East 116th street, New York City.

Columbus, Ohio—Automobile Protective Association, under Ohio laws; authorized capital, $5,000; to guard owners against theft of motor cars and accessories. Corporators—William Lester, Mark A. Caputo, R. M. Switzer, E. L. Richards, A. M. O'Harra.

New York, N. Y.—Inter-State Motor Express Co., under New York laws; authorized capital, $3,000; to operate a motor delivery. Corporators—George D. Roedels, 22 Anderson avenue, Palisade, N. J.; Joseph L. McGee, Abbott Boulevard, Palisade, N. J.; Mary F. Fynes, 61 West 71st street, New York City.

New York, N. Y.—Norwalk Motor Car Co. of New York, Inc., under New York laws; authorized capital, $25,000; to deal in motor cars. Corporators—P. Lyndon Bryce, 121 Washington avenue, Newark, N. J.; Alfred L. Kirby, 49 Pennsylvania avenue, Newark, N. J.; Edward S. Murphy, 1205 Park avenue, New York City.

Boston, Mass.—G. L. M. Vulcanizing Co., under Massachusetts laws; authorized capital, $25,000; to operate a tire repair depot. Corporators—G. L. Matthew, and others.

New York, N. Y.—M. & S. Distributing Co., of New York, Inc., under New York laws; authorized capital, $3,000; to deal in motor cars. Corporators—Oliver P. Carpenter, Albert D. Bean, George A. Williams, all of 154 Nassau street.

Changes of Capitalization.

Detroit, Mich.—General Motors Truck Co. from $10,000 to $25,000.

Columbus, Ohio—Rogers Supply & Tire Co., from $10,000 to $25,000.

Downington, Pa.—Downington Motor Car Co. from $10,800 to $20,000.

Chicago, Ill.—South Park Automobile Garage Co. from $25,000 to $13,200.

SALESMAN AND CAR MAKER CARRY TROUBLE TO COURT

Walter Truck Manufacturer Demands Price of Demonstrating Car—Salesman Denies Debt and Demands Commissions.

The experience of Charles Wirth, of New York City, as a prospect hunter for the Walter Motor Truck Co., also of New York City, in 1910 appears not to have been satisfactory, for, in an action which the Walter company has brought against him in the New York City Court for the price of a demonstrating car and repairs, Wirth has entered a counterclaim for more than $1,000, and the court has upon its hands the problem of deciding who owes whom and how much.

Wirth entered into an agreement with the Walter company, he states, May 2, 1910, whereby he was to seek prospects for the Walter company on a 5 per cent. commission basis and the Walter people claim that he so acted for them for just two weeks; they charge that on the day he entered into the agreement he bought a demonstrating car, a Walter "24-30," the company making pleasures vehicles at that time, but that he paid only $1,602 of the $2,080 purchase price. Between September 30, 1910, and July 31, 1912, he is charged with having incurred a repair bill amounting to $345.60, which brings the total asked up to $823.60.

When Wirth entered his answer he said he brought about sales to the amount of $20,500 on the 5 per cent. basis, secured one other customer on a 10 per cent. basis, did other work aggregating $1,000 and sold the Walter company a Knox touring body for $500, for all of which he never received his pay. Just how he arrives at his result is a bit mystifying mathematically, but he totals his grievance as worth $1,004 and asks that the complaint be dismissed and his claim allowed. In replying to his contention the company states that his commissions amounted to but $200 and have been paid, denies his other allegations, and this week secured a court order directing Wirth to file a bill of particulars itemizing his claims.

Changes Among Prominent Tradesmen.

Ward P. Haines has been appointed advertising manager for the Anderson Electric Car Co., of Detroit. He succeeds W. J. St. Onge, resigned.

R. E. Fries has been appointed chief engineer of the R. C. H. Corporation, of Detroit. He succeeds E. W. Winans, who resigned to become chief engineer of the Maxwell Motor Co.'s Dayton plant.

Robert Mott, manager of the United States Tire Co.'s Cincinnati branch, has been transferred to the management of the New Orleans establishment. The vacancy in Cincinnati has been filled by the appointment of E. W. Bailey.

W. S. Jewell, former district manager of the R. C. H. Co., of New York, has been appointed sales manager of the Boston branch of the Kelly-Springfield Motor Truck Co. P. S. Aultman, however, remains in charge of the branch as manager.

W. W. Garabrant, who has been connected with the service department of the Franklin Automobile Co. for the past four years, has been appointed district sales manager for the States of Nebraska, Kansas, Missouri and Oklahoma. He will make his headquarters in Kansas City, Mo.

Fred L. Morgan, former manager of the Standard Electric Car Co.'s branch in Cleveland, has been elevated to the post of factory sales manager, which means, of course, that his headquarters hereafter will be in Jackson, Mich. The vacancy in Cleveland has been filled by the promotion of George Dufranne, formerly assistant manager.

Louis Schwitzer has been appointed chief engineer for the Columbia Motor Car Co., of Hartford, Conn. He has had experience with several well-known automobile concerns in the West, latterly as chief engineer with the Empire Automobile Co., of Indianapolis. Previous thereto he was connected with the Atlas Engine Works, where he had much to do with the development of the Atlas-Knight engine.

Minor Business Troubles.

J. H. Kirkwood, proprietor of Kirkwood's Garage, 8500 Lake avenue, Cleveland, Ohio, has filed a voluntary petition in bankruptcy; he places his liabilities at $8,983 and his assets at $619.

The Schildwachter Carriage Co., manufacturer of carriages and automobile bodies at 1885 Park avenue, New York City, has filed a petition in bankruptcy; liabilities are $36,486 and assets $23,583.

A petition has been filed in the Federal court in Chicago asking that Sanford C. McKnight, a dealer in tires at 59 East Garfield boulevard, be adjudicated a bankrupt; the petitioning creditors are the Michelin Tire Co., which claims an indebtedness of $659; the Fisk Rubber Co., claiming $305.64, and L. R. Kerley.

Frank J. Boutell, of Flint, Mich., who gives his occupation as a laborer but who until recently was the proprietor of a garage in Bad Axe, Mich., has filed a petition in bankruptcy in the Federal court in Bay City, in the same State; his liabilities amount to $1,038 and his assets consist only of personal effects and household goods.

In the RETAIL WORLD

Frank Beebe has opened a garage in Paullina, Ia.

George W. Van Syckle is erecting a new garage in Santa Ana, Cal.

George Gohring will open a garage and repair shop in Iowa Falls, Ia.

The Three Rivers (Mich.) Garage Co. is having a new garage erected.

L. A. Motte has opened a garage in Cambridge, Ohio. He will specialize in car painting.

S. E. Stomer has leased the Weigle Garage in Montpelier, Ohio. He will operate it.

R. L. Van Valkenburg, of Lewis, Kan., has purchased James Shannon's garage and livery.

The American Welding Co., of St. Louis, Mo., has opened a garage at 21st and Olive streets.

C. R. Tucker is about to erect a garage in Brookline, Mass. The location is on Pleasant street.

Webb Clark, of Calumet, Ia., has purchased the Weeks Garage, in Primghar, in the same State.

Jay A. Stephens will open an accessory store in Pontiac, Mich. He will locate at 16 East Lawrence street.

The Haynes Auto Sales Co., of San Francisco, has opened a branch in Oakland, Cal., at Broadway and 25th street.

The Horst & Strieter Co. has established a garage business in Rock Island, Ill. The location is 1516 Fourth avenue.

The Tuxedo Tire Co., Inc., has taken over the business of the Tuxedo Tire Exchange, of 558 Mott avenue, New York City.

The Parmelee Motor Livery & Garage Co., of Chicago, Ill., has changed its name to Cottage Grove Livery & Garage Co.

Peter Larson is about to enter the garage field in Toronto, S. D. He has rented a garage building of the Toronto Land Co.

Cylde H. Smith has succeeded C. B. Lewis as Nyberg dealer in Boston, Mass. He will trade as the Clyde H. Smith Motor Co.

Alba and Roy Newton, formerly in the trade in De Kalb, Ill., are about to open a tire repair shop in Kirkland, in the same State.

Richards & Loeffelholz are about to open a garage in Cuba, Wis. They will locate in the C. K. Hall building, which they have leased.

J. F. Griese and G. M. Wilson have formed the Crescent Garage in Evansville, Ind. They also have secured the Empire agency.

George T. Jackson and his son, Edward, have formed the Jackson Auto Garage in Montezuma, Ia. They will handle the Paige-Detroit.

Landis & Co. is the style of a new entrant to the trade in Salt Lake City. It will be managed by H. D. Landis and will stock Avery trucks.

W. E. Robinson of Terre Haute, Ind., has purchased the garage of the Central Auto Co. The deal includes the Ford and Studebaker agencies.

Charles Wirtz, a garage proprietor, and Joseph Saum have formed a partnership in St. Mary's, Ohio, for the operation of a taxicab service.

F. H. Burnham & Son, hardware dealers in Watseka, Ill., and J. I. Body, a retired farmer, have entered the selling field. They have the Cole agency.

L. M. Larson has purchased an interest in the Lead City Garage Co., in Lead, S. D. He has been a branch manager in that city for McCord, Brady & Co.

Byerley, Hoole & Throckmorton have opened salesrooms in Kansas City, Mo., at 1909 Grand avenue. They have the agency for Kelly-Springfield tires.

Abner McCoy has purchased the interest of his partner, H. L. Koch, in the Palace Livery & Garage, in Pekin, Ill. He will continue the business alone.

J. C. Stevens, of Rock Island, Ill., has entered the garage trade. He is selling, not running, garages, having taken the agency for Ruby portable steel garages.

W. H. Galligan, Jr., and Edward Priebe plan to open a garage in Rhinelander, Wis. Gilligan has been employed by the Morgan Garage & Supply Co. in that town.

Raymond Manchia has entered the trade in St. Louis, Mo. He has secured the Century Electric agency and will open salesrooms at 4700 Washington boulevard.

The Lenox Auto Tire Works has opened up in New York City at 113 West 116th street; Charles Bergstein is manager. Supplies and repairs constitute the business.

Shanley Bros., dealers in Ottawa and Seneca, Ill., have arranged to open a third salesroom in La Salle, in the same State; they are Studebaker and Apperson dealers.

The Kay-Kuhn Co., an accessory company in Toledo, Ohio, whose Madison avenue location was destroyed by fire recently, has secured other quarters at 220 Erie street.

Peter Donner has acquired the interests of Joseph Baker and F. S. Larison in a building in Whiting, Ind., heretofore occupied by the El Paso Auto Co. Donner will open a garage.

The H. W. Neuman Machine Co., of 308 East Second street, Davenport, Ia., is building a new garage at Third and Ripley streets. It will be completed May 1. The Machine company is dealer in Auburn cars and Modern trucks.

Walter Leach and Harry Marienthal have purchased the repair business of Ranus & Taylor, in Saginaw, Mich. It is located on North Hamilton street. A line of accessories will be stocked.

The Sims Automobile Co., of Crookston, Minn., is about to establish a branch in Grand Forks, N. D., with Normal Bennington as manager. A branch recently was opened in Park River, N. D.

The Premier Waverley Sales Co. of Tennessee has taken possession of a new garage and salesrooms in Memphis, at 265-69 Monroe avenue; the company handles Premiers and Waverley electrics.

Three new salesrooms will be opened this spring in Nauvoo, Ill. The dealers and their lines are: Ochsner & Weber, Buick; A. McAllister, Cadillac and Oldsmobile, and Fisher & Hobbs, Ford.

The Butler County Tire Co. has entered the trade in Hamilton, Ohio, at 105 Main street; the business will consist of vulcanizing, repairing and selling tires. W. S. Lentz, of Indianapolis, is the proprietor.

George M. Height and Theodore Bennett of Spring Lake, N. J., have sold a half interest in the Clayton Garage to Timothy Hurley. The price paid was $17,500. Clark Clayton still retains a half interest in the business.

J. L. Allen and Roy Meeker have opened

Digitized by Google

salesrooms in Bloomington, Ill., both located in the building occupied by the Bloomington Buggy Co., at 405 South Center street. Allen is State distributer of Enger cars, while Meeker represents the Patterson line.

Raymond Conkwright and James Brash have left the employ of the Illinois Motor Car Sales Co., in Urbana, Ill., and will branch out for themselves; they will open a vulcanizing plant and salesrooms at Railroad and Broad streets.

J. Colyer & Co., for several years carriage dealers in Newark, N. J., at 500 Central avenue, have entered the automobile trade; they have taken the Maxwell and Moon agencies and will devote their entire ground floor to cars. The company has been depleting its carriage stock for some time.

The Osen & McFarland Automobile Co., of San Francisco, has re-established a service station for Mitchell owners in Oakland, Cal. The station was discontinued some time ago, when the Osen & McFarland company succeeded the Osen & Hunter company. E. L. Peacock, who formerly managed the station, is again in charge.

H. W. Jones has purchased the interest of his partner, Frank Vana, in the Montrose Garage in Cedar Rapids, Ia., and will have erected a new building, 80 x 140 feet, on 1st street, between 1st and 2nd avenues. Jones is regarded as the pioneer repairman of that town, having been employed as repairman by the owner of the first car, a steamer, that was purchased in that city.

Recent Losses by Fire.

Columbia, Mo.—Columbia Automobile Co., garage and 14 cars destroyed. Loss, $20.000.

West Peabody, Mass.—Elder's Turnpike Garage and six cars destroyed. Loss, $20.000.

Chicago, Ill.—Tennant Motor Co., 2447 South Michigan avenue, building damaged. Loss, $7.000.

Detroit, Mich.—Aluminum Castings Co., molding plant and sand sheds destroyed. Loss, $10.000.

Syracuse, N. Y.—Abbott Garage, 1050 South Clinton street, garage and cars damaged. Loss, $2,200.

New York, N. Y.—Locke & Co., body builders, 218-20 West 84th street, plant damaged. Loss, $25,000.

Cambridge, Mass.—Myer Abrams Co., 159 Vassar street, garage and 45 cars destroyed. Loss, $100,000.

Los Angeles, Cal.—Crowe Auto Co., 1228-30 South Flower street, four cars destroyed and building damaged. Loss, $7,000.

HOLD "SANE" SHOWS OR NONE AT ALL, URGES ANDERSON

Detroit Manufacturer, Rich in Carriage Experience, Gives Voice to Radical Views—Would Not Mix Cars and Accessories.

Admitting that he does not believe that his views will serve to put an end to automobile shows, W. C. Anderson, president of the Anderson Electric Car Co., of Detroit, has placed himself on record as willing to co-operate in any way to bring about what he terms "sane shows."

His opinions on the subject were expressed in a letter to Alfred L. Pope, in response to the latter's communication urging that the National shows in New York and Chicago be discontinued, and the Anderson opinions are sufficiently radical to "stand by themselves in any company."

Originally one of the largest carriage makers in this country, Anderson for years had to do with the national carriage shows, and he ventures the prediction that sooner or later the automobile interests will arrive at the same destination.

For five years the carriage shows were quite successful, and the exhibitors obtained satisfactory results, but, unlike the automobile displays, there were no extravagant decorations or no money spent for wasteful purposes. When the shows lost their force, Anderson took the lead in an effort to bring about their discontinuance.

When the subject was broached, it was found that, while the larger manufacturers were practically of one mind, the smaller makers desired the continuance of the shows. As a compromise, Anderson suggested that the carriage manufacturers themselves take over the promotion and management of the shows and participate in the profits, which proposal, however, was set at naught by the show promoters, who leased and thereby tied up all the available halls in Cincinnati and Chicago where the shows had been held in alternate years.

Several of the larger makers, including Anderson, remained aloof, however, and by notifying dealers everywhere that they would not exhibit they at least partly accomplished their purpose, and in due course the show promoters cried "enough" and quit.

Before they did so, however, the carriage makers took a stand against the display of accessories and had them barred from all shows of finished vehicles, and "this is precisely what should be done today if automobile shows are to continue," says Mr. Anderson in amplifying his beliefs. "No automobile accessory man should be permitted to show his wares among the finished automobiles. Let them hold their show collectively in some other building. They are now occupying much of the best exhibit space, and on account of that have forced the New York people to divide their show and hire an extra hall, and hundreds of people take in the one show and do not go to the other. If the members of the National Association of Automobile Manufacturers are unsuccessful in stopping these shows, they certainly should be successful in making it an exhibition for finished vehicles only.

"The principle underlying automobile shows is wrong. Such a proposition was never heard of until the automobile came on the market. I consider it a crime to waste money in such a manner, and it is that very same thing that disgusts people. The average business man in other lines reasons this thing out and he says to himself (and justly so): 'Are these men cray? Is this business run by men of sane business minds? What other business could be run along the same lines—pay to enter to buy something?' He naturally asks himself who is paying for this.

"It is true there is an entrance fee to the automobile show, but there was not to the carriage show, but the larger part of the expense is borne by the exhibitors and we all well know how to locate this expense. It is not newspaper advertising alone, but hotels, railroads and the extraordinary entertainments permitted, extra expense on exhibition cars, and the per square foot paid the promoters, running into thousands and thousands of dollars. Where does this land? In your overhead and mine, and the public getting wise.

"I question very seriously whether your efforts or mine would have such an influence as to put an end to these shows, but I am willing to co-operate in any way to bring about either no shows at all or what I might term 'sane' shows. Have them put on economically and at the lowest cost possible for exhibitors. I am of the opinion, if we must have a show, that not more than one should be held each year, and that at some central point in the Middle West. No place, of course, looks so good to me as Detroit, held at such a time of the year as people can find comfort in traveling. I would suggest the months of September or October—finished cars to be in one department by themselves and the accessories shown by themselves."

Goodrich Acquires a Canadian Site.

The B. F. Goodrich Co., of Akron, Ohio, is planning the establishment of a tire factory in Canada. The necessary site, 17 acres, already has been acquired in St. Catherines, Ont.

Entered as second-class matter at the New York Post Office, November, 1900

NEW YORK, MARCH 13, 1913

KEROSENE FOR TWO-CYCLE MOTORS.

If the use of kerosene as fuel for motor propulsion ever does become general, as often has been predicted, it will mean a slight loss of prestige for the two-cycle motor, now chiefly confined to commercial vehicles.

The main idea advanced by its adherents in support of the two-cycle principle for vehicle propulsion, is its simplicity, which not only means the elimination of valves but of the usual lubricating system as well, for it has been fully proven that the simplest means of lubricating the two-cycle motor is to combine the lubricant in correct proportions with the fuel, whence it passes through the carburetter jet, and being so much less volatile than the gasolene, is precipitated for the greater part in the motor base. The fuel, if it be gasolene, has little or no effect in "cutting" the lubricant or destroying its properties which fit it for the work in hand, for it evaporates, or is readily taken up in the mixture.

With kerosene as fuel, however, such is not the case. Heat is necessary to effect vaporization of this fuel and heat also is effective in causing the vaporization of part of the lubricant, so that it is readily apparent that part at least never comes in contact with the surfaces to be protected. Admitted into the comparatively cold base, the mixture is precipitated as a whole and does not separate, as is the case with the gasolene and oil; thus are the lubricating qualities of the oil nullified by the lighter kerosene. From which it appears that at least one complication in the shape of a lubricating system which is distinct from the fuel system, must be added if two-cycle practice is to continue with kerosene as fuel.

TAXATION THAT SUGGESTS EXTERMINATION.

If New York City was not so thoroughly debt-ridden it would not be so easy to understand Borough President McAneny's proposal that the city emulate the State in piling taxation on motor vehicles. Mr. McAneny is not a "hack politician" and because of the fact, the city's prodigious and growing debt may truly worry him. His proposal therefore probably springs from sincere motives, but if Mr. McAneny has fully realized all of the probable effects of his effort to raise more money, there is no evidence of it.

An analysis of the proposed scale of license fees indicates that the effect of such a measure, if passed, will be to legislate heavy vehicles out of existence, so far as New York City is concerned. A comparatively light machine, weighing 3,500 or 4,000 pounds, will carry something like 1,000 pounds on each rear wheel, and therefore will come within the class paying a tax og $50 annually. Many pleasure cars and most of the light delivery cars will come under this rating. A 5-ton truck carrying, loaded, 6,000 pounds on each rear wheel, is taxed $75 a year, and from this point upward the rate increases so rapidly that a 10-ton truck, the rear wheels of which will carry close to 10,000 pounds each, stands to cost its owner the huge sum of $1,000, to say nothing of the State tax and a possible further tax on width.

When men like Borough President McAneny stand sponsor for such movements, tax-ridden automobilists well may ask, What next?

IS AN ACCESSORY SHOW POSSIBLE?

Although the show situation has been settled for at least another twelvemonth, the radical opinions on the subject expressed by Mr. W. C. Anderson, president of the Anderson Electric Car Co., which are reproduced in another column, cannot fail to attract attention.

His belief that cars and accessories should be exhibited separately will, perhaps, provoke greatest diversity of opinion, in which the question, Can an accessory show stand alone? will be paramount.

It was given point this week by an accessory exhibitor who stated that the Boston show netted him more real profit than his exhibits at either New York or Chicago. He attributes it to the fact that the Boston show falls on the eve of the outdoor season and at a time when dealers are most inclined to stock up.

While there is no doubt that the assertion of this particular exhibitor will be disputed, the point, taken in connection with Mr. Anderson's belief that cars and accessories should be displayed separately, is whether an accessory show in a more central point than Boston, and not held in mid-winter but on the threshold of spring, would not bring more than the indirect results which now are too generally the rule, assuming, of course, that an accessory show of any sort is desirable or possible.

It is a thought which the accessory manufacturers themselves well may turn over in their minds.

NEW YORK CITY MAY TAX TO POINT OF EXTERMINATION

Fees of Almost Unlimited Amounts Suggested for Local Licenses—Vehicles of All Kinds Included in Proposed Measure.

Not content with seeing the State "pile on the agony" and expense, New York City, or, at any rate, Borough President George McAneny, is seeking to add to the agony by having the municipality itself draw more blood and money from owners of motor vehicles, particularly, and incidentally—and more equitably—from the owners of all other vehicles.

McAneny would institute special city licenses costing from $1 to $2 for light cars and practically legislating heavy trucks out of existence; he has drafted an ordinance with that end in view, and while it is cold comfort to the burdened car or truck owner, it is an interesting example of the extension of a principle that the ordinance goes further and embraces in its scope everything that goes on wheels. The measure sets forth that "no vehicle shall be allowed to use or pass over the pavements of any streets of the City of New York after the passage of this ordinance without a license from the bureau of licenses of said city." Which, apparently, would also tend to increase the burdens of those who propel push-carts, wheelbarrows, baby-carriages and other "vehicles."

Even more startling is the proposition to exact license fees of large, not to say disconcerting, proportions from both horse and motor vehicles, such fees to range from $75 to $1,000 per vehicle, according to the load carried and the tire width. The reason given in all cases is that the pavements are rapidly deteriorated by heavy loads, and that the vehicle owners ought to go down into their respective jeans for the wherewithal to pay the piper.

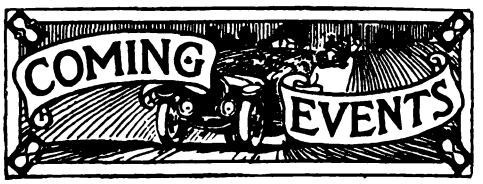
In the proposed ordinance cognizance is taken of the capacity of narrow tires, heavily loaded, for damaging asphalt pavements in the setting of a maximum limit of 1,000 pounds load per inch of tire width, except in special cases where exceptionally heavy loads must be transported, when individual trip permits will be issued. It goes without saying that there will be well-proportioned special rates for these special permits.

It is proposed that the scale of wheel-weight fees shall range from $1 per year for a load of 750 pounds per wheel to $50 for 1,000 pounds per wheel. For weights in excess of 1,000 pounds per wheel the suggested scale of fees is as follows:

6,000	to 6,500 pounds	$75
6,500	to 7,000 pounds	110
7,000	to 7,500 pounds	150
7,500	to 8,000 pounds	200
8,000	to 8,500 pounds	300
8,500	to 9,000 pounds	500
9,000	to 9,500 pounds	750
9,500	to 10,000 pounds	1,000

For loads in excess of 10,000 pounds per wheel the rates are to jump $500 for each 1,000 pounds or portion thereof, so that a vehicle carrying 11,100 pounds per wheel would net the city the modest sum of $2,000 per year.

Ingenuity has gone even further, however. Heretofore no one has thought of taxing a vehicle for its width; but that is just what is proposed by McAneny's ordinance, which lays down a scale of fees for width, varying from $1 for a width of from 6.6 feet to 7 feet, to $25 for a width of from 8.6 to 9.6 feet.



It has been pointed out that the imposition of a special city tax would be in conflict with subdivision 7, section 282 of the State law, which states, with reference to the State tax: "These fees are in lieu of all other taxes, general or local."

Horseless Age Salary Suits Settled.

Just as they were about to come to trial last week in the Supreme Court for New York County, the suits of Samuel B. Stevens and John Lurie against the Horseless Age Co., of New York, were amicably settled. Stevens and Lurie, who were stockholders in the company, brought suit to recover money which they claimed Frederick J. Wagner, Charles B. Ames and T. B. Van Alstyne, as officers of the company, had voted and paid to themselves in the form of excessive salaries. Stevens and Lurie were two of four automobile tradesmen who were credited with being the financial "godfathers" of the Horseless Age officials and who made their ownership possible, and had it come to trial the action therefore would have exposed the sharp and broken ends of a one-time unusually friendly relationship. According to the terms of settlement, Ames and Van Alstyne will purchase the minority stock on time payments and have agreed to certain limitations as to their salaries. Wagner retired from the Horseless Age Co. about a year ago.

Caffe's Long-Fought Suit Settled.

Just at the time when it appeared as if the stock-selling suit of Michael P. Caffe against the Newark (N. J.) Automobile Mfg. Co., now bankrupt, would be threshed out in the New York City Court this week, the defendant and the plaintiff consented to a judgment for $875, which is about 15 per cent. of the $5,775 which Caffe asked. He sued as assignee of L. R. Bonta and Charles Hallock, who claimed that while they were under contract to sell stock in the company the concern itself disposed of $39,500 worth of stock and that they therefore were entitled to a commission on this amount. The case was tried, appealed, reversed and was about to be retried when settled.

March 3-15, Des Moines, Ia.—Des Moines Automobile Dealers' Association's fourth annual show in the Coliseum. First week pleasure cars; second week trucks.

March 8-15, Boston, Mass.—Boston Automobile Dealers' Association's annual show in Mechanics' Hall. Pleasure cars only.

March 10-15, Dallas, Tex.—Annual show of the Dallas Automobile Dealers' Association in the Fair Grounds Coliseum.

March 12-15, Peoria, Ill.—Peoria Automobile Dealers' Association's annual show in the Coliseum.

March 15, San Antonio, Tex.—Start of the second annual endurance run under the auspices of the San Antonio Light.

March 17-22, Norfolk, Va.—Norfolk Automobile Trade Association's second annual show in the State Armory.

March 19-22, Springfield, Ill.—Springfield Commercial Association's show in the Armory.

March 19-26, Boston, Mass.—Boston Commercial Vehicle Association's annual show in Mechanics' Hall.

March 24-29, Indianapolis, Ind.—Indianapolis Automobile Trade Association's show.

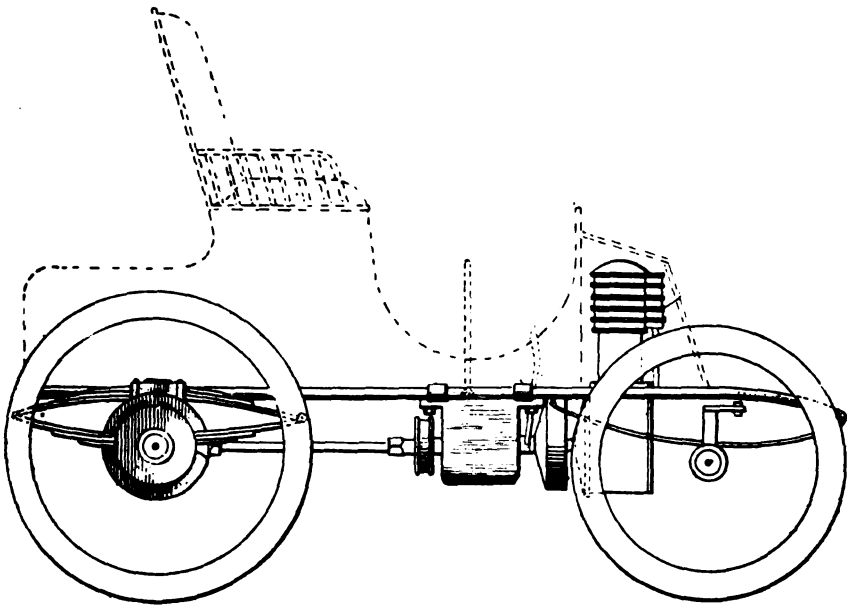
March 24-29, Watertown, N. Y.—Annual show of the Watertown Automobile Dealers' Association in the State Armory.

March 29-April 5, St. John, N. B.—New Brunswick Automobile Trade Association's show in Queen's Rink.

April 1-6, San Francisco, Cal.—San Francisco Automobile Dealers' Association's motor truck show.

April 5-12, Pittsburgh, Pa.—Pittsburgh Automobile Dealers' Association's seventh annual show in the East Liberty Market building.

May 5, Washington, D. C.—Start of the reliability-economy run for commercial vehicles under the auspices of the Washington Post.



July 1, Indianapolis, Ind.—Start of the Indiana Automobile Manufacturers' Association's cross continental tour to Los Angeles, Cal.

COMPLETE AUTOMOBILE IS PART OF DYER'S PATENTS

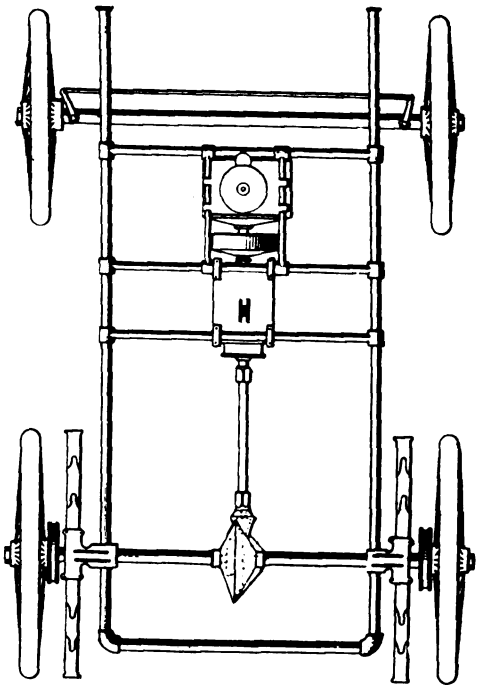
That He Is Inventor of Transmission Only a Wrong Impression of Long Standing—Grants Cover Many Modern Cars.

That the Automobile Board of Trade, which is soon to join the National Association of Automobile Manufacturers in the new and greater Automobile Chamber of Commerce, has acquired rights under the Leonard H. Dyer patents is well known in the automobile trade, and when the name Dyer is mentioned tradesmen almost without exception are quick to say, "Oh, yes! Dyer transmission patents." When the tradesman makes that remark he, in the street lad's vocabulary, "has said something," but the tradesman doubtless will be somewhat surprised when told that he "has not said enough," for Dyer's patents, which only about three years ago attained real prominence, not only cover the transmission used in most cars to-day but also include within their claims practically every entire car that is manufactured at the present time—not a part of a car, but a whole automobile.

THE CAR DEPICTED IN DYER'S AUTOMOBILE PATENT.

Dyer himself remarked the fact to a Motor World man only a few days ago.

Just how the popular misconception that the patents apply only to a transmission arose is a matter of dispute, but those who claim to know state that when the patents first loomed up in the courts a trade paper writer mistook the transmission element for the vital part of the patent on the automobile and furnished a false lead which has been followed ever since.



Dyer, whose patents are held by the Enterprize Automobile Co., was the originator of seven, of which five are of early date and cover transmissions, change gear gate and a completed car, but those which are regarded as vital to-day are No. 885,986, for a transmission, issued April 28, 1908, and No. 921,963, issued May 18, 1909, and covering an entire car. As their legal life is seventeen years, the first does not expire until April 28, 1925, and the automobile grant not until May 18, 1926, 12 and 13 years from now, which means much to both Dyer and the trade. The application for the automobile patent remained pending for nine years, having been filed February 3, 1900, and renewed September 22, 1908, while the transmission patent was applied for January 22, 1906; thus, it is seen, the whole transaction regarding the transmission came between the dates when the automobile patent was applied for and was granted.

Whether Dyer had accurate foreknowledge of the trend of events in the industry or whether he just happened to take out patent No. 921,963 because he thought it looked good to him is immaterial, but suffice to say, at a time when designers were putting motors under the seat and over the back axle and had not settled down to Dyer's idea he patented a combination of a motor in front under a hood, and then the successive elements in the power chain to the rear axle, including the chassis frame, springs and other now essential parts.

Introductorily the patent specifications state, "My present invention relates to automobile vehicles wherein an engine of the explosive or internal combustion type is used. The objects of my invention consist in improvements in the frame of the vehicle, in the driving gear therefor and in the speed changing and reversing mechanism."

Thereafter it is stated that the grant is to cover "direct driving connections between the motor and differential with such reduction as is necessary, owing to the relatively different speeds of such parts," and the "reduction" is covered by the transmission which is described in No. 885,986, the transmission patent.

Preferably the motor is located at the forward end of a steel frame under a hood and on a sub-frame and the power chain, consisting of transmission, friction clutch and the necessary shafts, terminates, of course, in a differential which may be located upon the rear axle or may be located upon a jackshaft, as is the case with chain-driven cars; it is also specified that universal, or knuckle, joints shall be used if necessary to allow oscillation of the frame without interference with the transmission of power. The patent states that the transmission, which is of the selective sliding type, is covered in patent No. 885,986.

PLAN VIEW OF DYER CHASSIS

Other things included in the combination are: Driving and steering wheels, the arrangement of the driving shaft longitudinally between the wheels, either midway between the wheels or not midway, a differential, and a reversing gear.

As is apparent, the claims read very much like a general description of almost any up-to-date car, and whether the use of a friction drive or a planetary transmission would relieve a manufacturer from a clash with the claims as a whole is a matter which has not been adjudicated; also the patent prefers a forwardly located motor which indicates an exemption from infringement, to an extent, at least, of cars otherwise constructed.

UNSEEN PROFITS OF GARAGES

The Big Field of Extra Profits Which So Often Is Neglected—Striking Illustration of Trade Which Was Turned Away.

The man who drives a car just naturally thinks that the garage or store in which he bought the car is the place to buy the supplies he wants, and it takes the new car owner some time to be educated to the fact that while the average dealer sells gasolene and oil he overlooks entirely the opportunity to cash in on the necessary accessories.

A certain motorist in Cleveland wanted new batteries. He went to the place where he bought his car. He was going to stop there anyway for his gasolene, so why not get the new dry cells at the same time? Happy thought! So he stopped on his way home and, while his tank was being filled, asked for some new dry cells.

Garage the Natural Accessory Store.

"We don't keep them for sale," said the man who waited on him. "You will have to get those down town at such-and-such a place."

Disappointment No. 1. Query: Why didn't the dealer have them? No answer.

Two weeks later, on a Saturday night, he wanted his car washed and polished for Sunday. Getting to the garage at 10 P. M., he found that one man was sick and there were so many cars in hand that it would be out of the question to promise him his car before noon on Sunday. Too late. Happy thought: Why not buy some metal polish and wash the car at home early Sunday morning? Whereupon he asked the garage man for a gallon of metal polish, but "We don't keep it for sale, sir; just have it in bulk for our own use. I could let ye have a little in a bottle, sir."

Disappointment No. 2. Confidence in garage facilities gradually weakening.

Sunday morning, after his hard work, the owner planned a run into the country to visit relatives some 28 miles distant. He knew the county had been repairing roads and he was rather afraid of the outcome should one of the sharp stones come in contact with a weak casing on his right front wheel. Happy thought! Will stop at the garage and get a blow-out patch and an inside patch, in case of accident.

Loses Profit and Disappoints Owner.

Family all ready. Into the car everybody climbed. Just one thing to do before driving into the country. Stop at the garage for gasolene fill-up and some extra oil and—oh, yes! the blow-out patches.

Five minutes later the garage man was explaining that they didn't have blow-out patches; you would have to go to some tire dealer, etc.

Disappointment No. 3. Confidence turned to disgust.

Ample Stock Would Cost But Little.

Here was business that would pay a profit being turned away for no reason except that the garage man did not see the countless daily opportunities for making money. Did not realize that the sale of each car was creating a business for him that he had only to take care of to hold. Why not meet the demand? The price of a single car would enable most dealers to carry a stock of supplies sufficient for ordinary needs. And is there any objection to keeping customers and making all possible profit on them.

"GREEN" SALESMAN'S SYSTEM OF SEEKING PROSPECTS.

One of the simplest and most direct methods of getting in touch with prospects was originated by a green salesman. He had made good in other lines, but when it came to selling machines he did not know exactly where to start. He thought the matter over for some time and then made a hurried visit to the printer's, where he had a thousand cards struck off bearing the name and address of his firm.

Armed with these, he went downtown to the business section, and whenever he saw a car of the make he was selling waiting at the curb he stuck around till the owner appeared. His first question was "Is your car giving satisfactory service?" If not, this question was followed by an invitation to bring the car up to the service station and have it looked over. Almost every one admitted he was satisfied. At the conclusion of the conversation each time the salesman asked the motorist if he would kindly give him the names of any friends who might be interested in the purchase of a similar car. It was surprising how many names were secured in this way, and it was further interesting to note also that the business cards he handed out to each man interviewed kept turning up at the salesroom with amazing frequency.

The car represented sold for considerably less than $1,000, and yet this new salesman's commissions after a month or two of this kind of work ran from $350 to $400 a month.

PRICE CARDS FOR THE SALESROOM.

A neatly lettered price card on the running board of a car, or leaning "gracefully" against the wheels where it does not interfere with the flowing lines of the body, is a good investment for any salesroom.

Price is not the whole thing; indeed, in the minds of many salesmen it is the matter of least importance; nevertheless, people are interested in price, and when good values are apparent it is strictly good business to indicate the price of the car.

But a word of caution is necessary: Do not let the sign writer work off those fancy, high-colored, "instalment house" effects on you. Stick to plain black lettering on a white background. If you must have a second color use red, orange or a dark green.

AWAKE-N DISING WORLD

"TEAMWORK" IN SALESROOM

Dealer Who Believes in "Get Together" Methods and Results He Achieves—Salesmen Like Commendation as Well as Compensation.

An automobile dealer who has been remarkably successful in building an efficient organization—and also in keeping it intact—always makes a point of having his salesmen meet any prominent factory officials who come to call on him. Instead of allowing the factory man to take him out to lunch he makes a point of inviting him to lunch with himself and his men. This has two distinct effects. It makes the salesmen feel that the "family" idea which is talked about is real; and it gives the salesmen an opportunity for getting further first-hand information of the sort that helps to consummate sales.

Monthly Dinner Fruitful of Ideas.

This dealer believes that one of the prime requisites for a successful organization is to "get together." Once a month, at least, he and his men gather round the board at some good hotel or restaurant and spend the evening in earnest business talk that is invariably fruitful of new ideas. An effort is made to get exchange of experiences that have come up during the past month and the successful methods employed by one salesman in handling a difficult case are thus capitalized by his associates while the salesman is moved to greater effort.

Commendation Appreciated by Employes.

When one of his men consummates a good sale this dealer is the first that makes the salesman eager to put over another. In a word, this dealer recognizes that salesmen are just like other men, keen for the money, of course, but wonderfully appreciative of an encouraging word and amazingly loyal to a man who gives them a square deal. In the business of selling automobiles as in the business of baseball, team-work counts.

ONE DEALER'S WAY OF HANDLING PAINTING JOBS.

One dealer in a Western city who has no facilities for painting and refinishing cars manages nevertheless to earn a tidy sum of money each season on this work. He has a commission arrangement with a local carriage painter and personally guarantees the quality of each piece of work. Those who have purchased cars from him and found him square and trustworthy in other matters naturally prefer to do business with him rather than rely on an entire stranger. Thus he has developed quite a business without an investment of any sort.

One point in which his work has made a hit with his patrons is the fact that he will not accept a job that is not perfect. Paint covered over the greasy running gear never gets past him, and he is onto all the tricks of the lazy, careless painter who trusts entirely to having the general effect please the customer. It means better service for each man who gives him a job.

Enforcing High-Class Workmanship.

In the course of several years' experience this dealer had noticed that the average painter rarely pays attention to the brass work on the car but lets it go out of his shop spotted and dirty; thus the car looked new all but the brasses. He invested in a small electric buffing wheel and before the car gets to his customers it looks new all over. He even polishes the insides of the lamps. It costs a few dollars extra to have this dealer handle a painting job, but the real service he gives makes it easy for him to get the money.

SUGGESTED BY ACCESSORY SALES.

Nearly everybody seems to be reaching out after the automobile trade. Pretty good evidence that most everybody considers the automobile trade worth having, is it not? Department stores are selling accessories, hardware stores are selling spark plugs, wrenches, oil cans, oils and whatever else they can market. This business properly belongs to the automobile dealer, but he will never get it or control it until he really wants it and is willing to expend energy to serve the class whose wants seemed to have appealed to men of other trades while it has not appealed to him.

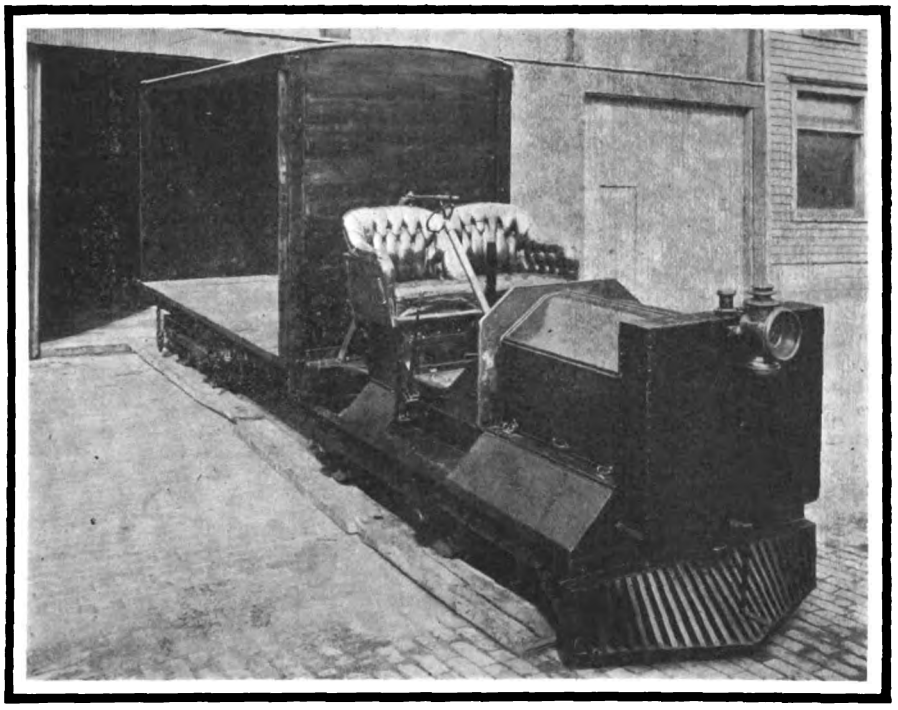
TIRE TROUBLE DISCLOSES LACK OF MERCHANDISING SPIRIT.

A cold winter's night; seven punctures in a four and a half mile drive; not a tire or accessory store open; not a garage within two miles that carried tires in stock; three garages visited and three 'phoned to; the sixth one had the much wanted tire. Such is a story of a recent experience in a typical Western city.

Garage Motorist's Only Night Haven.

After six o'clock at night the only place the motorist can look to for any help is the garage. There, at least, someone is on the job; but, as it appears from the story, many dealers are sadly lacking in the "merchandising spirit" and do not carry in stock those things which are needed by each and every car owner and which to be sold need only be carried.

Change in Dealer-Garageman Necessary.



There will be a startling change in this respect before very long. Dealers will awaken to the fact that "profits are profits" and that "it pays to sell as many things as possible to your automobile customers." Many feel that this business rightfully belongs to them, but—unless a stock is carried and pushed so that car owners are brought to realize the dealer's claims, there is little chance of making money in a big way.

USED CAR THAT FORMED BASIS OF A LOCOMOTIVE

Provided With Substantial Frame and "Regulation" Wheels, It Is Utilized in Paper Factory—Drive System Unique.

That a great many motor cars of vintage more or less remote and which, because of that fact, have become too uncertain in their functioning or, what is equally condemning, too noisy in it for use as motor cars, finally are shipped to rural districts and are disassembled and the component parts used for a variety of different purposes, there seems to be no doubt. Probably that is the end of nearly all that are not so warped out of shape by fire or smashed up in accidents to make them absolutely unfit for anything save sale as junk, but that there are a few which escape the "chores" of the farm is attested by the accompanying illustration, which is of an industrial locomotive improvised from a model 17 Buick, which is giving a good account of itself in the service of the A. P. W. Paper Co., of Albany, N. Y.

NEW YORK PAPER COMPANY'S CONVERTED BUICK "LOCOMOTIVE"

The original frame of the car was "clipped" off, so to speak, immediately behind the front seat and at the front so that the side members were flush with the front of the motor hood. New cross-members were riveted in place, so that the motor and transmission elements were not disturbed in their relation to that portion of the frame that was preserved. This frame then served as a sort of sub-frame and was rigidly mounted by means of angle braces to a very heavy main frame which was built up of six-inch channel iron girders riveted together and braced at the corners by means of web plates, to the elimination of weaving. The axle journals, which quite naturally are of the railroad type, are supported upon a pair of sills placed under the side members of the frame. The wheels are 20 inches in diameter and are forced in place on the two-inch axles by means of a hydraulic press in the orthodox manner of mounting car wheels.

Naturally the shortening of the wheel base necessitated an alteration in the final drive arrangement, and power now is transmitted to a countershaft, bevel wheel driven from the shortened propellor shaft and thence to the rear axle by means of a pair of chains of the silent type; of course, the differential mechanism has been eliminated, for it is obvious that its use would be superfluous when the rear wheels and axle are integral. It is quite readily apparent that the effect of replacing the regulation artillery wheels with the car wheels of so much smaller diameter is the same as if the gear ratio were lowered, so that when the gears are meshed to give the highest ratio—direct drive through the gearset—the motor is quite capable of starting the locomotive without undue laboring and without injury to the clutch. Naturally, when the trailer which is formed as part of the locomotive, as is clearly shown in the photograph, is heavily loaded with paper stock, or when the locomotive is hauling a train, starting is accomplished in the orthodox manner with the usual gear shifting. One very curious feature of the drive mechanism is the fact that the counter shaft can be shifted slightly in the direction of its axis, so that either one of two bevel gears which are mounted on it is brought into engagement with the bevel pinion on the end of the foreshortened propellor shaft; thus the motion of the countershaft is reversed and the three speeds provided in the gearset and originally intended for forward motion only, become effective in either direction. The gearset reverse is eliminated.

One more or less unusual departure was the removal of the radiator and the substitution of a sheet metal water container of large capacity. The reason for the change, however, is quite clear, since the locomotive operates in parts of the plant where a considerable quantity of dust floats continually on the air and, were the motor not fully enclosed, it would be littered beyond recognition after a few hours of service, even if the fan which functions to draw the air through the radiator were disconnected. Naturally, with the fan disconnected the radiator is but little better than the tank as a water cooler, since the speed of the locomotive is not sufficiently great to cause a large amount of draught through the radiator even when it is going forward, and it must be remembered that it operates in the other direction quite as much as ahead.

Very much of the "locomotive effect" which is disclosed by a glance at the photograph is imparted by the genuine "cowcatcher" or pilot which attaches to the front cross-member of the frame and serves to prevent persons of parts from falling under the wheels. The headlight, too, makes for a businesslike appearance.

Seattle Defines Adequate Warning Signal.

Seattle, Wash., finally has come to its senses. Some time since, that city passed an ordinance specifically prohibiting the use of Klaxon horns except on motor vehicles used by the fire and police departments and, despite its manifest discrimination, the ordinance was literally interpreted, drivers of automobiles having been stopped by the police to prove that they were not using Klaxon horns, all others being exempt. Seattle, however, has realized the absurdity of its ways and has enacted a new law requiring only a "bell, gong, horn or other signal device capable of producing an abrupt sound sufficiently loud to be heard above the noise of traffic." It is unusual, however, in that it also provides that except on public vehicles it shall be unlawful to sound such signal devices "more than three sharp, abrupt blasts in succession as a warning in any one emergency, or to sound such signal device at all except as a warning of danger."

BRANCH MANAGERS COME UNDER DISCUSSION

Reilly and the Sales Manager Pay a Visit to One of Them and an Interchange of Opinions Results—Good Salesman Not Necessarily a Good Manager, Maintains the Factory Man.

"Hello, Jim!" greeted Reilly by long distance from his salesrooms some thirty miles from the factory which he represented. "Did you say you were going to New York to look over your branch there?"

"Yes; next week," replied the Sales Manager through the telephone on his office desk at the factory.

THE YOUTH STARED HARD AT THE CARD AND THEN AT THE RETREATING PAIR

"Well, I've got to go down the day after to-morrow," answered Reilly. Come down with me—can't you go this week just as well as next week?"

Inspection Trip on "Rawr" Morning.

To this request the Sales Manager finally assented, which accounts for the presence of the factory man and his dealer, each rubbing his sleepy eyes and sitting on the edge of a berth as their train sped along the Hudson above the city on a morning somewhat cold and very "rawr"; a few miles up the river the morning had been "raw," but now, according to the interpretation of the indigenous population, it was "rawr."

After the two had followed signs in the new Grand Central Station for what seemed like a goodly portion of a mile, they recognized the rumble of the Subway and started for the hotel colony about Times Square, first, of course, having to be yelled at by a ticket chopper for going through the wrong gate and without dropping in their tickets. When they had registered and had been relieved of their baggage, breakfast resolved itself into a debate which ended in Reilly agreeing to accompany the Sales Manager to the factory's Broadway branch with the understanding that the latter individual was to go with Reilly on the latter's business expedition later in the day.

Despite the "rawrness" of the morning the inland inhabitants decided that to walk was as expeditious as any other way of getting to the desired section of "Automobile Row," so, with after-breakfast cigars aglow, they moved up Broadway, past the offices of Motor World, and shortly entered a capacious showroom which bore the factory name; the two having entered, Reilly casually inspected the cars upon the floor, waiting for the Sales Manager to see the branch manager, and the Sales Manager also began an inspection, but of the mural decorations and nothing in particular, as he waited for some one to emerge from somewhere. Finally from a remote portion of the office someone did emerge, but it was not Bolton, the branch manager.

"Where's Bolton?" asked the Sales Manager.

"Not down yet," replied the stenographer.

"What time does he get down?" came the question, as the Sales Manager glanced at the wall timepiece; it showed 9:40 o'clock.

"He ought to be in soon," apologized the youth. "Won't you wait?"

"No; tell him I'll be back at 11 o'clock," replied the Sales Manager, as he handed the young man a card and walked out. And as the factory man and Reilly passed to the street the youth stared hard at the card and then at the retreating pair. When Bolton came in at 10.20 o'clock he, too, took several perplexed looks at the card and at the clock.

"Just what I was afraid of!" exclaimed the Sales Manager, as he and Reilly stepped outdoors again.

"What?" questioned Reilly.

"I didn't tell you before we came why I was coming," explained the Sales Manager, "but there has been something the matter with the branch lately and I'm anxious to find out where the trouble lies. I was afraid Bolton was the seat of the trouble and I believe I'm right."

"What's the matter with Bolton, and what's the matter with the branch?" was the dealer's query.

Efficiency Lacking in Factory Branch.

"It's only the old story of trouble we've had with branches before," went on the Sales Manager. "We never had very good luck with branches. Our dealers have been very satisfactory, as a rule, but we never seemed to be able to pull the branches up to the plane of efficiency we would like to have them on."

"Why not?" demanded the dealer.

"Now you've said something!" asserted the factory man. "Why not? That's what I want to know, and it will be a wrinkle-preventive if I can answer the question. This is a typical case; Bolton was a ripping salesman and did so well on the road that

Digitized by Google

we put him down here to handle the branch, but for some reason results have been lacking. It's exactly the same thing that happened in our St. Louis branch, when we put McVickar down there as manager; he was a corking good salesman and is drawing good money for us now as a road man, but he didn't last long as a road manager.

"What happened?" questioned Reilly.

Inability to Analyze the Business.

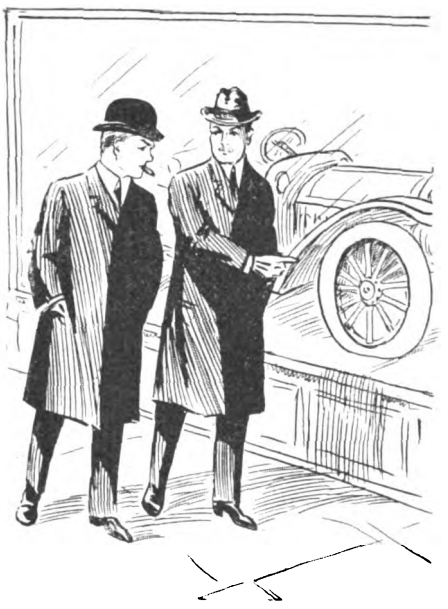
"To start with, the efficiency of the place wasn't our idea of efficiency. It was bad enough before, but then it got worse. McVickar didn't have the faculty of sitting down and analyzing his business; he couldn't see where he could improve things, he didn't know how to manage either the men or the business. He never told his force how things should be done, and he had no discipline whatever; he got into the same habit Bolton has—that of thinking that a manager of a branch, seeing that he is paid a good salary for being manager, doesn't have to get down somewhere near beginning time in the morning and should not concern himself with small things.

"Just as in this case, complaints began to come to the office about the branch; our owners said they weren't getting the attention to which they were entitled. One man said he had gone to the branch several times and had stood around the floor for minutes at a time before he could find anyone to ask him what he wanted. When he did find someone, on one occasion, and it was one of McVickar's salesmen, the salesman seemed sadly in ignorance about the car he was selling. McVickar apparently never had put any of his salesmen through a catechism or seen to it that they knew the car as well as their manager knew it. One man told us confidentially that Mac himself didn't seem to know what was going on in his own business; that he expressed surprise when told of things that had happened and even hadn't heard of some goods that had been pictured or described in most of the automobile papers that are published.

"Who's in St. Louis now?" questioned the Sales Manager's listener.

Good Manager But Not a Salesman.

"We've got a man there now who never pretended to be much of a salesman," responded the Sales Manager, "and I wouldn't wonder but that he'll make good. I don't mean to say a salesman won't make a good branch manager, but the man in St. Louis now is a manager and not so much of a salesman; he can manage the place, he says, and make it pay if we'll hire men to do the actual selling. He says he doesn't want to be a salesman, for he's always held managerial positions."



"Why, I know lots of salesman who have made red hot branch managers," interrupted Reilly. "Do you mean to say a salesman isn't a good manager?"

"No, no! Far from it!" exclaimed the Sales Manager. "A good salesman has qualifications which ought to make him the best of managers if he would only shake himself up and decide that he's really going to be a manager. I think I can wake Bolton up; it may be quite a task, but I believe it can be done."

"For instance?"

Lofty Attitude Is Not Effective.

"Well, to open up with, he's got to be made to see that he's got to get right down

"DIDN'T YOU SEE THE SOFT TIRES ON THAT CAR?" WAS THE ANSWER

into the thick of the business and not imagine that dictating letters to the factory is his chief mission in life, nor sit so high up that he's above all the details, and he's got to be the punch and mainspring behind every move that is made in his establishment," emphasized the factory man. "If he isn't going to be on hand when the branch opens in the morning he ought to have someone there to take proper care of anyone who may come in. He ought to make every salesman on his staff know the car thoroughly and be not only over-anxious to please anyone who walks into the place but competent to go out and seek prospects with an intelligent tale. A manager not only ought to know what to do and when and how to do it, but more than all else he must be able to tell the men under him the how and the why of it and, having told them, it is up to him to know why they fail to do things when they don't do them and to distinguish between explanations and mere excuses. That's the essence of executive ability. A salesman may make a good manager, but a manager doesn't necessarily need to be as good a salesman as he is a manager; if a man is onto his job and can put efficiency into an organization he can make the organization possess all the salesmanship that is required.

"Look there!" exclaimed the Sales Manager, as he pointed to a car in the window of another factory branch which they were passing. "I'll bet that branch, too, is far from one hundred per cent. efficient."

Soft Tires as a Caliber Indicator.

"Why do you say so?" asked Reilly, who stared long and hard at the front, window signs, car and other details, but who could not detect the clue which had prompted his companion's assertion.

"Didn't you see the soft tires on that car?" was the answer. "Do you know, Reilly, if I were a proverb maker I would say, 'Show me the tires on a salesroom car and I'll tell you how the salesroom is managed.' It's both a little thing and a mighty big thing; it isn't a half-bad index of the caliber of an automobile establishment and the way it's conducted.

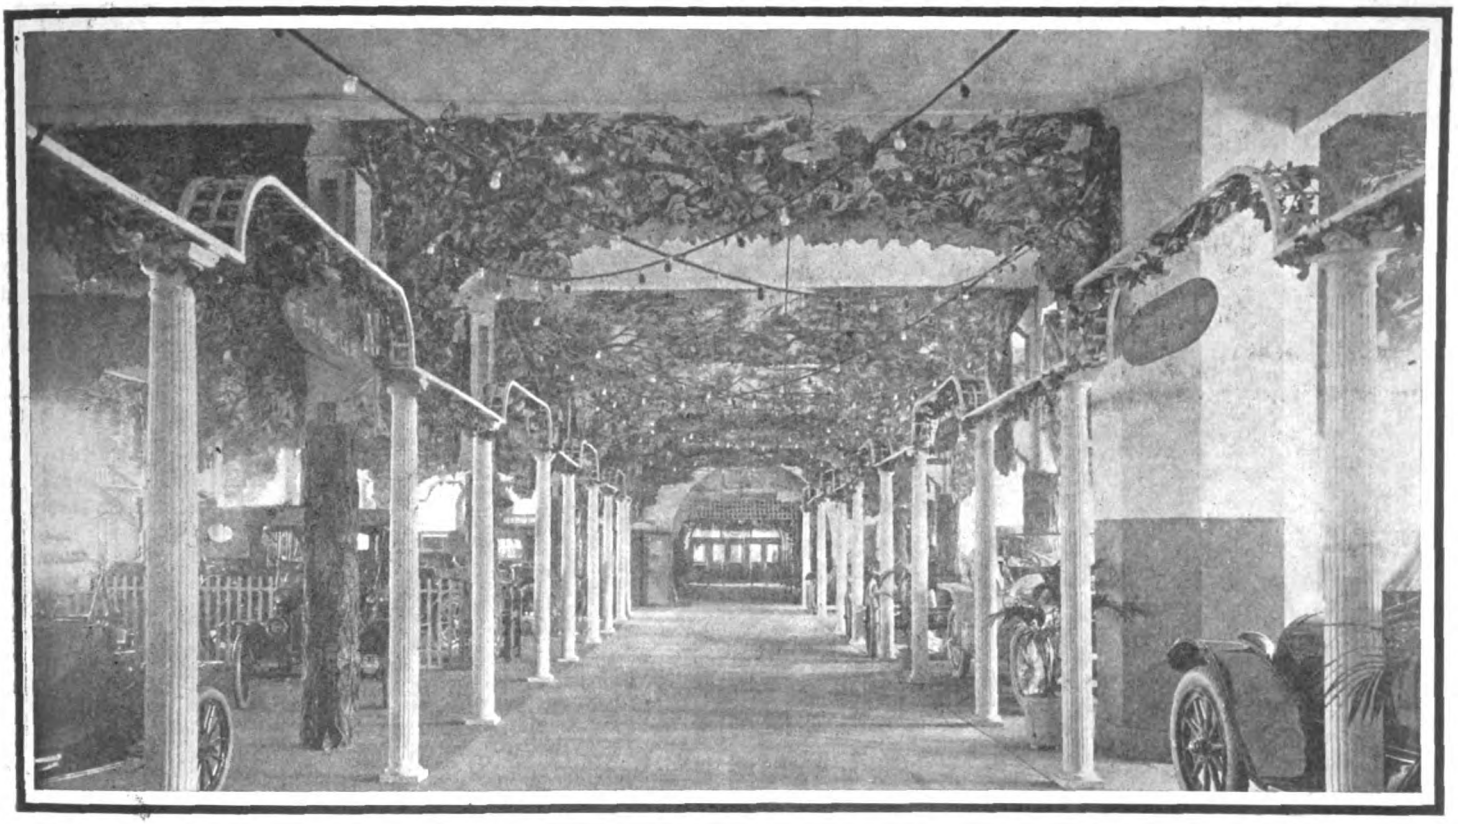
"When I see Bolton I'm going to sit down with him and ask him to hold the branch up for his own inspection and ask him to see if he can't discover a few things that are lacking; if I can get him on the hunt for things that need remedying I'm positive he will go the limit in that line, for he's a thorough man when he once gets on the right track. The principal trouble with him, I imagine, is that he doesn't know where or how to begin."

Advice and Chance Possible Solution.

"I can't conceive of Bolton not making good," commented Reilly; "he always appealed to me as a man who would win out almost anywhere if he had a fair show."

"That's the way I size him up, too," declared the Sales Manager, "and I want to give him every chance."

For several minutes the two had been standing beside the little park at the uptown end of Times Square, and a glance at his watch told the Sales Manager he would have just about time if he started then to reach the branch for his 11 o'clock engagement. They crossed to the west side of the street, which a delayed morning sun had made a sort of springtime basking place, and the Sales Manager started uptown.



"What are you going to do until I come back?" he asked Reilly.

"Oh," hesitatingly replied the dealer, "just stick around, I guess—watch the styles and so forth." And as the Sales Manager began his second trip toward "Automobile Row" Reilly began an aimless but enjoyable ramble in the sunshine where the many-hued population of the chorus colony was just emerging for breakfast.

BOSTON MIXES BABYLON AND MOTOR CARS

And Does So in a Manner That Pleases the Eye and Compels Admiration —Little That Is New Develops But the Picturesque Settings Cause All Else to Be Forgotten.

MAIN AISLE IN EXHIBITION HALL LOOKING TOWARD THE ENTRANCE

If Sam Miles, who runs those automobile shows in Chicago, can spare the time, he ought to run up to Boston before the 22nd of this month and seek out Chester Campbell. If he asks for it in the proper tone of voice, Campbell undoubtedly will provide him with a pass permitting him to enter Mechanics' Building, in which the Boston show will be housed until that date, and the show is worth the risking of even a Milesian eye.

Chester Campbell runs the Boston show for the Boston Automobile Dealers' Association, and while Miles has given the world some mighty spectacular show dressings, Campbell has done the same thing at very much less expense. He did it last year, and the year before, and the year before that, and he has done it again this year. In fact, this time he has simply exceeded himself, which is why Miles should go to Boston.

If he looks over the Babylonian garden which Campbell has hung or spread or planted in Grand Hall, which is the "show place" in Mechanics' Building, Miles is likely to blink at least one eye and to feel a very delicate green suffuse his countenance; and when the green gives way to red he is as likely to call together his Chicago artists and day-dreamers and order that the 1914 show in Chicago be laid out under Niagara Falls, or in the Grand Canyon of Arizona, or both. For Campbell has drawn not only from Egypt but from Bermuda for his "stage properties," and his brother, E. W. Campbell, who did the actual drawing, has made of it what the boy in the street probably would describe as "a swell job." It is by far the most spectacular automobile show ever staged in the New England metropolis and, as always, it is pleasing to look upon.

Still speaking of Grand Hall, which directly adjoins Exhibition Hall—all under the same roof—the show is set at the base of the Hanging Gardens of Babylon, the "hanging gardens" themselves being constituted by an immense painting which completely conceals one end of the hall. Terrace upon terrace of the "garden" stretch upward into the distance, a suggestion of a kingly palace and a waterfall, which was to have been wet but which isn't, forming a portion of the "garden" painting. At the opposite end of the hall, and over the elevated stage, is another heroic Egyptian painting, depicting the portals of Nebuchadnezzar's palace. It is of Egyptian architecture, of course, and if anyone doubts it, the winged and bearded lions of the Assyrian period, which guard the approach to the palace, are there to prove it.

The roof of the "hall" is concealed by a canopy of Egyptian tapestry, with open-work centers, from which are hung garlands of flowers and strings of green and white electric bulbs. Also pendant from the canopy are 10 large floral chandeliers, the flowers—chiefly red and yellow—being illuminated from within. Likewise hanging directly from the canopy are cross-sections of painted foliage. The balcony fronts are hidden with foliage in which, at regular intervals, are panels of bearded lions and other Egyptian characters, with here and there a plaster cast of an Egyptian mummy.

On the floor, where the cars are staged, 10 giant palm trees uprear themselves.

Digitized by Google

Digitized by Google

There are smaller palms on the gallery and, take it from Mr. Campbell, they were imported directly from Bermuda especially for the occasion. Mr. Miles, it will be recalled, once imported genuine English walnut trees from Kankakee, Ill., for a show which he held in Chicago. But Campbell has "put it all over" Miles in at least one other respect. He has not only painted a wonderful waterfall in the Babylonian garden but actually has fashioned eight other waterfalls which extend almost from the roof to the main floor, where gilded fountains have been placed to catch the water which rarely flowed. There are four on each side of the hall and, truth to tell, they suggest toboggan slides as much as anything else. Advance notices stated that the water would "tumble down from the second balcony level over illuminated plate glass into fountains at the floor level." The glass is there—a bluish glass illuminated from underneath—but if ever the water "tumbled" no one saw it. On several occasions it dripped downward, and then it ceased to flow at all.

"Exotic Magnificence" Exemplified.

On the main floor, where the waterless fountains are located, the exhibitors' spaces are marked by corner posts or "turrets" of Egyptian architecture, the name of the exhibitor being illuminated from within. From the top of each "turret" sprout smaller palm trees, and with the life-size palms which grow from the floor and from the gallery, the foliage is impressively heavy. In fact, viewed from either end of the hall, the scene is truly imposing. The big paintings blend well with the other decorative effects and the picture is complete. Green and yellow are the prevailing tints, the burned brick of Nebuchadnezzar's time being carried, of course, into the paintings and into the "turrets," while the gallery rail and the walls of the hall are of similar hue, trimmed with green.

"Passing from the exotic magnificence of Grand Hall," to quote official language, and into Exhibition Hall the show-goer finds himself in what is officially described as "A garden of a century ago," when it appears that not merely white picket fences constituted "garden walls," but when it was the fashion to mark each corner of the garden by white colonial posts connected by light arched trellises.

Exhibition Hall, an immense triangular room with bare posts and equally bare girders, is not easily embellished, but each year the deft hands of the Campbells have dressed the nakedness in inspiring fashion. On this occasion, each post is made to represent the trunk of an apple tree, while the girders are hid, or half hid, by painted foliage which stretches out over the aisles and forms an umbrageous canopy for the exhibition spaces.

What They Did to the Basement.

The lower half of the walls is covered with painted landscapes which overlook white picket fences, to which fences, as is the case with the fences which separate the individual exhibits, are tacked sprays of hollyhocks and other old-fashioned flowers which are supposed to be nodding their heads over the pickets. Vines creep over the arched trellises and over the three pergolas which distinguish the main aisle, the monotony of the green being softened by strings of electric bulbs. It is a simple and comparatively inexpensive dressing, but somehow or other it is so deftly carried out that no description of it can do it more than scant justice.

The same skilled hands and artistic eye also have accomplished wonders in the basement, where tires and accessories and other things mingle. There the posts are covered with alabaster cardboard of a bluish tint, while the rafters are hung with blue and with red and white bunting and a profusion of red and white and green bulbs. Nothing could be simpler, and yet the effect obtained is more than passing pleasing to the eye.

The Bubble Blower of Boston.

It is in the basement where, as stated, cars and accessories and other things mingle; it is there that the machinery and machine tools—always a feature of Boston shows—are found in motion. It is there that the vendors of red lemonade and grape juice, and fountain pens, and magnifying glasses, and souvenirs, without which no Boston show is complete, also are located, and John Quincy Adams, with his dictionaries, is among those present, as usual, and, write it not in Babylonian hieroglyphics, there was at least one newcomer in the basement. He had a patented bubble blower for sale and, fat and apparently good-natured, he blew bubbles for the edification of young and old alike. There are those who maintain that it is not such a far cry from bubble-blowing to certain phases of the automobile industry, and possibly bubble blowers have as much place in an automobile show as automobiles have a place in the "garden" of a long defunct, and extinct and otherwise dead Egyptian king. Whether the Boston bubble-blower will find his exhibit profitable is of minor moment. He was there Saturday evening last when the show opened, and he probably will be there until Saturday next, when the doors close for three days in order that pleasure cars may be moved out and trucks moved in. They perform no Sunday work in Bosting.

If the cars that are exhibited could speak right out and voice their innermost feelings after the manner of some of Kipling's inanimate heroes, it is altogether likely that a few of them would boast of the mileage to their credit—made in box cars—and some of them might protest at the very nearly ceaseless round of show-going that started with the New York exhibition and has continued right up to date. Also, they might boast of the number of pairs of curious eyes that have gazed at them and the number of equally curious fingers that have prodded their yielding upholstery. At least one of the cars on view, a luxurious Locomobile limousine done in two tones of maroon and finished in crimson silk and gold-plated trimmings, has done quite a little traveling since first the show season opened in New York. It was exhibited in Madison Square Garden, when it dropped out of sight for a time, only to reappear in the Coliseum in Chicago. From Chicago, it was shipped back to New York and helped beautify the Brooklyn (N. Y.) dealers' exhibition; now it is in Boston and it attracts just as much attention as ever it did. Incidentally, it is flanked by a pale green Locomobile limousine, tricked out with silver trimmings, that has been its companion on at least a part of its travels.

Glimpses of Things Worth Seeing.

These are only two of the transplanted exhibits, of course. Almost everywhere others greet the eye. Under the signs that blazon forth the names of old and well-known cars there is very little that has not already been seen, though among some of the exhibits of transplanted cars, new ones, or, rather, differently finished ones, have been planted, and though nearly all of them are pretty to look at the hues of some of them and the comparative delicacy of their "trimmin's" suggests that sunshine was in the mind of the designer, or the painter, or whoever is responsible for the coloring, when the scheme was laid down on paper.

That cars of the kind appeal to the esthetic in the fair sex there can be no doubt, and as a rule the feminine chorus of "Oh-h-h's!" and "Ah-h-h's!" is echoed by the more masculine, though none the less appreciative, "Ain't it a peach?" There is one Oakland car in particular that always compels attention. It forms a veritable picture, for the good and sufficient reason that it is supposed to do so. The car itself is finished in a canary yellow with white striping and the "warmth" of coloring is further enhanced by pigskin upholstery and dull-finished metal parts. So much for the car, which, needless to add, is of the very latest vintage. Its surroundings consist of a large box-like structure completely lined with black velvet, having the front open and finished off in imitation of an im-

Digitized by Google

mense gilt picture frame. The lights, of course, are inside the "cabinet" and are so placed and shaded that from a little distance the illusion is perfect. But by the way the crowds flocked up close to the picture frame — one impulsive youngster stepped within the magic square and was promptly and forcibly ejected—it would seem that illusions, no matter how perfect or how beautiful, are not appreciated by the show-going public.

Cars Displayed in Unusual Settings.

The Oakland, by the way, is one of the few that was not transplanted from a previous show. Evidently it was gotten up for the occasion, as were two Buicks—one finished completely in lavender and the other a chaste white—that are displayed in a manner a little more effective in keeping spectators out of the light provided to set them off. They are behind substantial brass rails.

Scarcely less conspicuous, though no special lighting or other display methods are employed to bring it to the attention of visitors, is a white Mercedes, which, with three or four Renaults, serves to give the show just a wee little bit of foreign flavor. One of the distinctive features of the Mercedes is the way the leather upholstery has been carried outside of its rightful domain clear down to the running boards between the bottom of the doors and the step, presumably to protect the paintwork from carelessly wielded feet.

Such newness as there is in the line of body building and painting, however, is very nearly submerged beneath the colors and the shapes that made both the New York and the Chicago shows. Thus, for instance, the speedy looking red Fiat roadster that occupied a prominent place in Grand Central Palace is very much in evidence. As was the case last year, the Fiat exhibit is the first one the visitor sees after passing the main gate. Following down the line, the eye lights first on a white Pope-Hartford roadster and quickly is drawn to an orange and black roadster exhibited beside it. Both of them are new among the other transplanted Pope-Hartford cars. Across the aisle, Columbia-Knights hold forth beside the newer Maxwells. And, of course, the sectioned Knight cylinder draws the crowd it always draws—until some one or other presses the starter button on the Maxwell engine and, with characteristic fickleness, it deserts the old new Knight engine for the new new electric starting system.

Motion Exhibits Not So Numerous.

Moving exhibits—cut away chassis and engines that run under the persuasion of electric motors—are scarcer at the Boston show than they were at either of the others, and it does not require very keen discernment to discover the influence of the electric starter in causing their demise. It is so easy to depress a button and cause the motor to whir—the gears whir quite loudly in some cases, too, and if the noise serves no other useful purpose it causes visitors to turn their heads — and the demonstration kills two birds with one stone, so to speak: It shows the engine in action and it demonstrates the starter. There are plenty of chassis, of course, though only one of them is shown with its parts in operation, and almost any one would be warranted in hazarding a guess at its name. It is the Cartercar which, with the exception of the little Metz, is the sole exponent of friction transmission on exhibition. Apparently, the salesman never tires of demonstrating the infinite variety of speeds that can be obtained with the simple apparatus.

The Chalmers "factory exhibit" has been moved in toto, even to the attendant in overalls, the only difference in its make-up being that a little more prominence is given to the table of parts and the testing methods employed in perfecting Chalmers parts. Also, the Rambler lecturer is there in all his glory, industriously pointing out the "high spots" of Rambler cars with a wary eye for chance acquaintances in the crowd that always gathers around him. Occasionally he varies his stereotyped remarks, but his wit seems to go even higher over the heads of the Bostonians than it did over the heads of natives of the Windy City, where last he held forth.

Cars That Have Made the Rounds.

Through the doors that join Grand Hall and Exhibition Hall there gleam two "eyes," one red and the other green, the "eyes" being the side lights on a brown Winton. They are properly mounted, too, as far as the nautical significance of their coloring goes, the green light being on the right side, which is starboard, and the red light being on the left side, which is port. Needless to add, they create an effect that is just a little different from anything else. Otherwise, the Winton exhibit is almost exactly as it was for the previous shows, and the like can be said for nearly every other exhibit in the hall. The great yellow Peerless double limousine with its peculiarly flared body is very much in evidence; the sedate and luxurious-appearing Pierce-Arrows, with their arched doorways, are just across the aisle; the newer crop of left-driven Loziers faces the Knoxes, and up at the end of the main aisle, almost in the shadow of the stage where, as usual, Packard and Cadillac hold forth supreme, there is the only limousine in the show in which there is apparent any real attempt at obtaining adequate ventilation of the body; it is the Alco that first made its appearance a year ago and it scarcely has changed a bit in the interim.

Familiar Names on Babylonian Turrets.

Looking down the hall through the tropical foliage from a vantage point on the stage, nothing but familiar names are in evidence. The White is nearest, with the Stevens-Duryea and the S. G. V. hard by. Two of the S. G. V. cars, by the way, are equipped with the U. S. L. electric lighting and engine starting system for the first time. A little further along there is the Mercer and the National and the Locomobile and the Haynes. Just outside the door there are the American, the Pullman, the Krit, Overland, the Speedwell, with its six-cylinder Mead engine, the Case, and with very few exceptions every other name familiar to the motoring pubilc and to a great percentage of it that does not motor. In the spacious basements that have been so well disguised that they do not look like basements at all, the names are just as familiar. The Studebaker cars, for instance, occupy a corner all to themselves on a raised platform; not far distant there is the Edwards-Knight, which is making its premier Boston appearance, and the Henderson and the Little and Chevrolet "sixes," the Michigans and the Imperials.. the Jacksons and the Hupmobiles, one of them being high up on a raised dais. One of the most striking exhibits of all, however, is an underslung Regal which is tipped up so far that it has made more than one person gasp and wonder at its stability.

Among all this dimmed glamour, if such it may be termed, there are just nine cars that are making their initial appearance of the season, and among the nine there is at least one that is a real surprise. It is the K-D—the first product of the K-D Motor Co. It is built around a very much revised edition of Miss Margaret Knight's crescent valve engine, which made its first appearance at the last Boston show. Of the other eight, two are electrics, the Bailey and the Grinnell, one is a steamer, the Stanley, and the rest are gasolene cars —namely, Ford, Nyberg, Moyer, Packard and the little three-wheeled Kelsey motorette.

K-D Motor Displayed On a Car.

There is nothing of severity in the lines of the K-D car. It departs further from the accepted straight-line effect than any other car in the show, though the lines are pleasing withal and suggest not at all the multitudinous curves that help give the typical foreign car its outre appearance to American eyes. Yet the body has a decidedly foreign appearance that is heightened to a degree by its wire wheels and its unusual fender lines. The hood is long, to accommo-

Digitized by Google

date its six-cylinder motor, and after the manner that apparently is coming into greater vogue, slopes gradually upward from the front to meet a slightly convex skuttle that is fairly deep. Thence back, the top body line has a distinct "deadrise," to employ a nautical term, which is to say that there is very flat but continuous curve with the higher points at the skuttle and the back of the rear seat. A single entrance on

front fenders fit very closely to the wheels and the rear fenders are continued further around the circle of the wheels than is usual.

K-D Motor, at First "Four," Now a "Six."

The motor is a K-D, of course, though it is a K-D that has very little in common with the predecessor that made its first appearance a year ago. In the first place it is

cylinder head permitting a circulation of water between the cylinders and the liner against which the valves press.

Lubrication, as heretofore, is entirely by splash, and ignition is effected with the aid of a Mea high-tension magneto. In appearance, the revised K-D motor is only slightly less compact than the Knight engine, due to small extensions to permit movement of the valve-actuating crankshafts, and sug-

LOOKING TOWARDS THE STAGE AND THE "PORTALS" OF NEBUCHADNEZZAR'S PALACE

either side, with the hinges and the latches artfuly concealed, suffices.

Individual Adjustable Front Seats.

The seating arrangement provides accommodations for five passengers, three on the rear seat and two in individual adjustable chairs in front with a narrow passage between them. The steering wheel is at the right with the control levers placed within the body but not in the center. Tool storage space is provided beneath the deep skuttle and just at the front end of the rear cushion there are two small lockers, one on each side, for trinkets or goggles or gloves or anything else the passengers may see fit to put in them. They are provided with locks. An integral windshield is fitted and the close-fitting top, supported by only two bows placed at the rear, attaches to it. The

a "six," whereas the other was a "four"; the bore and stroke remain the same, however, and are four inches and six inches, respectively. In the second place, the piston rods of the original motor have been eliminated, as has the method of leading the exhaust products back into the crankcase and beneath the pistons to assist them in the scavenging stroke. Hence, the internal economy of the motor, with the exception of the valves, of course, is not far removed in construction from that of the orthodox poppet-valve motor. The crescent-shaped valves and their method of actuation by means of individual crankshafts remain the same, though the method of mounting them has been altered slightly to permit of larger port area and better cooling facilities. The sleeves now receiprocate between two water-cooled surfaces, a deep recess in the

gests it not a little. The single engine on view is not in the chassis but is shown in operation under the persuasion of an electric motor, and there were any number of those who viewed it when first set up who were loud in their regrets that at least one cylinder head had not been left off the better to show the valve action.

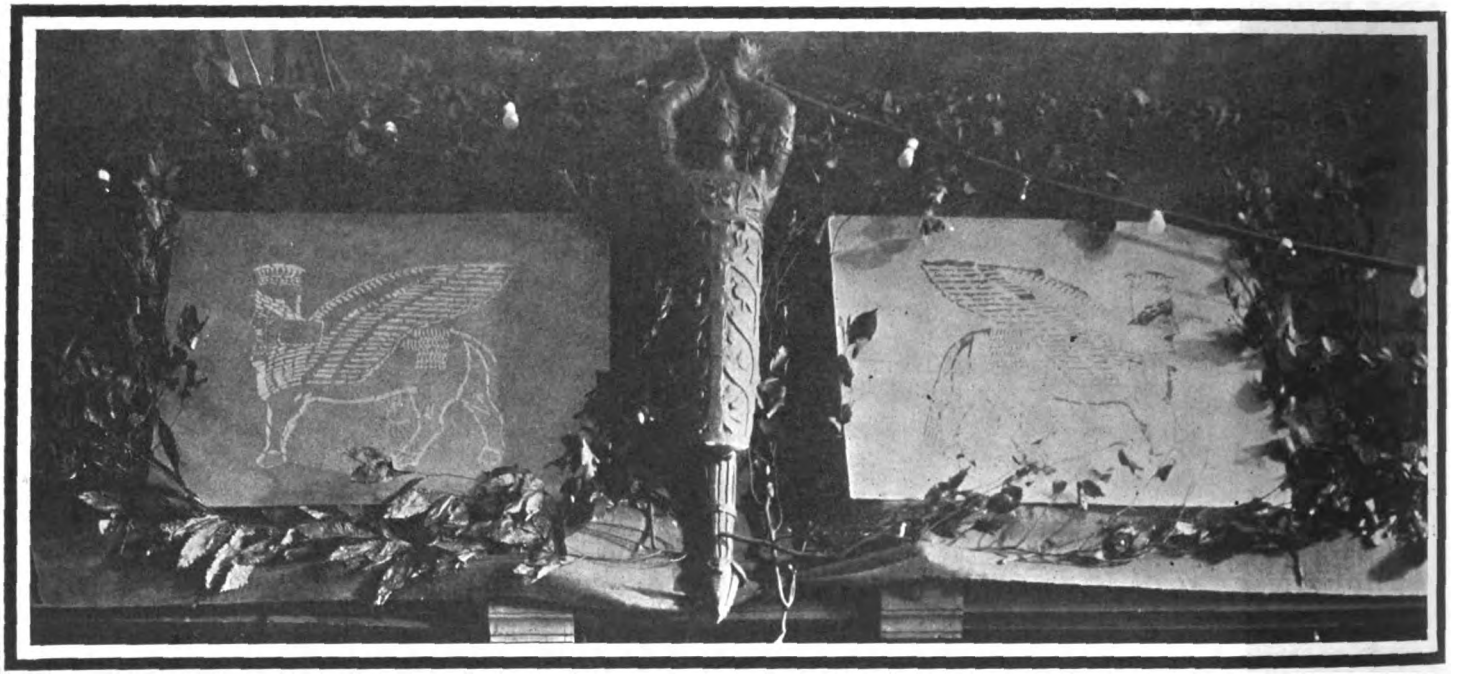
But One Six That Is Strictly New.

Of the other cars that appear for the first time this year, three are "sixes," though only one of them—the Moyer—is, strictly speaking, a new product. The others, the Packard and the Nyberg, both are refinements and improvements on previously existing models, though they are none the less interesting for that reason. The Moyer, however, is new all the way through, though it incorporates many of the features that

Digitized by Google

always have served to distinguish the products of the old-line carriage making firm that produces it. In the older Moyer models there is a new steering gear, new body designs and the U. S. L. electric lighting and engine starting system has been added as standard equipment without increase in price.

The motor in the new "six" is of the more or less conventional T-head type, with the cylinders cast in pairs, but with the valve mechanism left open and uncovered to facilitate adjusting and grinding operations. The bore and stroke measure 4½ and 5 inches, respectively, and the power plant is supported at three points on the chassis frame. Among the other essential elements of the car are its large diameter cone clutch, its three-speed selectively operated gearset and its full-floating rear axle. The spring suspension includes semi-elliptic members both front and rear and, of course, the rear members are mounted and connected in the distinctive Moyer manner. Which is to say, the front and rear ends of the two rear springs are connected to solid transverse shafts which act as equalizers, causing the strain to be equally distributed over both and eliminating much of the disagreeable side sway. The new steering gear is of the well-known worm and full gear type and is irreversible. To obviate the annoying rattles which sometimes emanate from such parts, the control tubes are made with a brass tube between the inner and the other steel tubes telescoped together with a close fit.



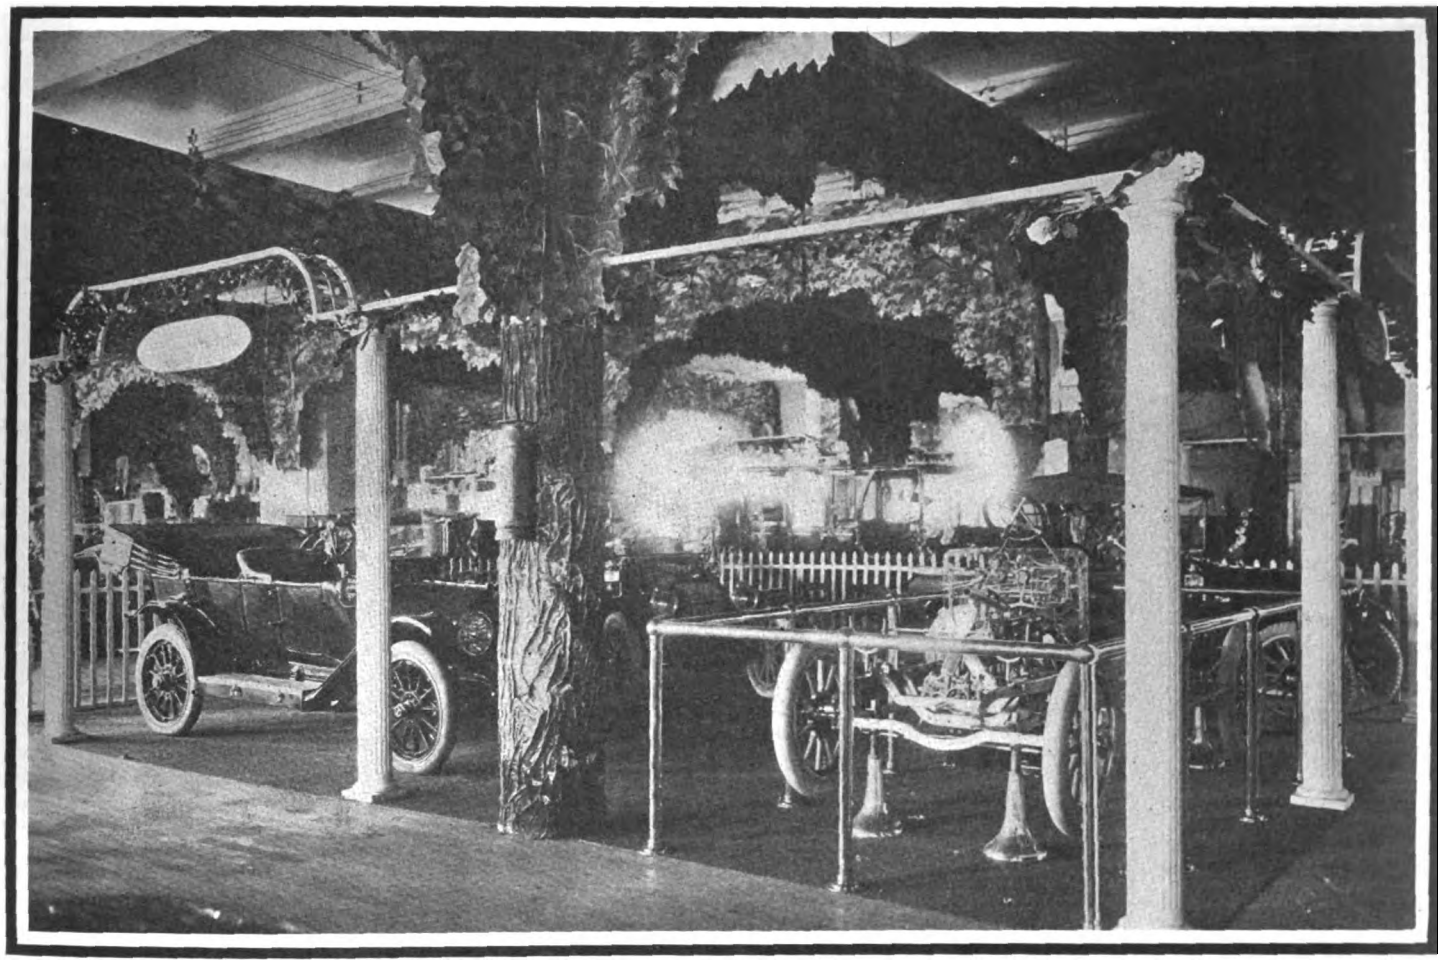
The new body styles that have been adopted differ from their predecessors primarily in that many of the unsightly angles and projecting parts have been eliminated. From a short skuttle, the top body line runs straight back without a break to the back of the rear seat and is approximately at the same level as the top line of the engine hood. In common with modern practice, the windshield is mounted without the use of a filler board and the struts are so placed as to obstruct the driver's vision as little as possible. Complete equipment is included in the selling price, quite as a matter of course.

Nyberg Adds Complete Electric Equipment.

The Nyberg, which, though last year exhibited nearer to its home town in Indiana, its annual appearance having been made at the Chicago show, this year was reserved for the Hub exhibition. Its engineers, too, have seen the light of the times—electric light, be it added—and have materially increased equipment by the adoption of a complete lighting and starting system. Which, briefly, is the only substantial alteration, if such it may be termed, that has been made since last the line was displayed. In both of the models displayed, a "six-45" five-passenger car and a "four-42," there is apparent a slight lengthening of wheelbases, a little lower hung frame to augment stability and a very considerable deepening of the upholstery by way of increasing the comfort of passengers. Incidentally, both of the bodies, or for that matter all of them, the rest of the line including a "six-60" and a "four-37," have taken on broad lighter-colored bands at the top body line, thus materially enhancing appearance.

As heretofore, all the motors are Rutenbers, the mere mention of the name serving as sufficient introduction to their qualities. In the larger "six" the cylinders are separately cast after the original Rutenber manner and in the little "six" they are pair cast. Similarly, in the larger of the "fours" the cylinders are separately cast, and in the other they are in pairs. In all of them cooling is by pump-circulated water and ignition is by the usual type of high-tension magneto.

In the design of the new bodies with which all the models have been fitted the straight-line effect is even more pronounced than it has been in the past, due, no doubt, to the addition of the encircling band. Strictly speaking, however, the band does not encircle the bodies; it ends at the front flush with the dashboard line and is at once a little different and a little more distinctive than the usual band which continues around the skuttle in an unbroken line. Another of the noteworthy features of the Nyberg line is that, though right-hand steering and control is standard and is supplied unless otherwise specified, left-hand steering with centrally located control levers may be had at the option of the purchaser.



WINGED LIONS AND MUMMY THAT INCREASE THE EGYPTIAN FLAVOR

"Big Six" Packard Now Left Steered.

For the first time, left steering exclusively is a feature of all the cars in the Packard line, the newer "48," which appears for the first time, being the first of the revised Packard "big sixes" to be revealed to the general public. When the Packard company first brought out its "little six"—the "38"—it incorporated in it several radical departures from previous practice and incidentally let it be known that the im-

Digitized by Google

provements over older designs which it represented soon would be incorporated in the larger "six" as well. Hence, it is no surprise that the "48" now has its steering column at the left side instead of the right, where it always has been in the past, and that the centralized control which is a feature of the "38" has been made a feature of the "48" as well. Though these two cars always have been as nearly alike in appearance as two peas in the same pod, the likeness is even more striking now than it ever has been, and it extends a great deal deeper in the construction.

CLOSE RANGE VIEW OF "A GARDEN OF A CENTURY AGO"—OVERLAND EXHIBIT IN FOREGROUND

Packard Adopts Lubrication Improvement.

Thus, for instance, though the motor remains substantially the same as it has been in the past, with its six cylinders cast in pairs with the valves on opposite sides, no little increase in efficiency has been obtained by adapting to it the supplementary forced feed lubrication system that first made its appearance on the "38." For ordinary running, all the internal parts are lubricated by splash and a gear driven pump, but directly the throttle is opened for a burst of speed, or for hard work on hills, the force feed system comes into action through interconnection with the throttle control; consequently, the amount of oil fed is in proportion to the size of the throttle opening and has no relation to the speed of the motor.

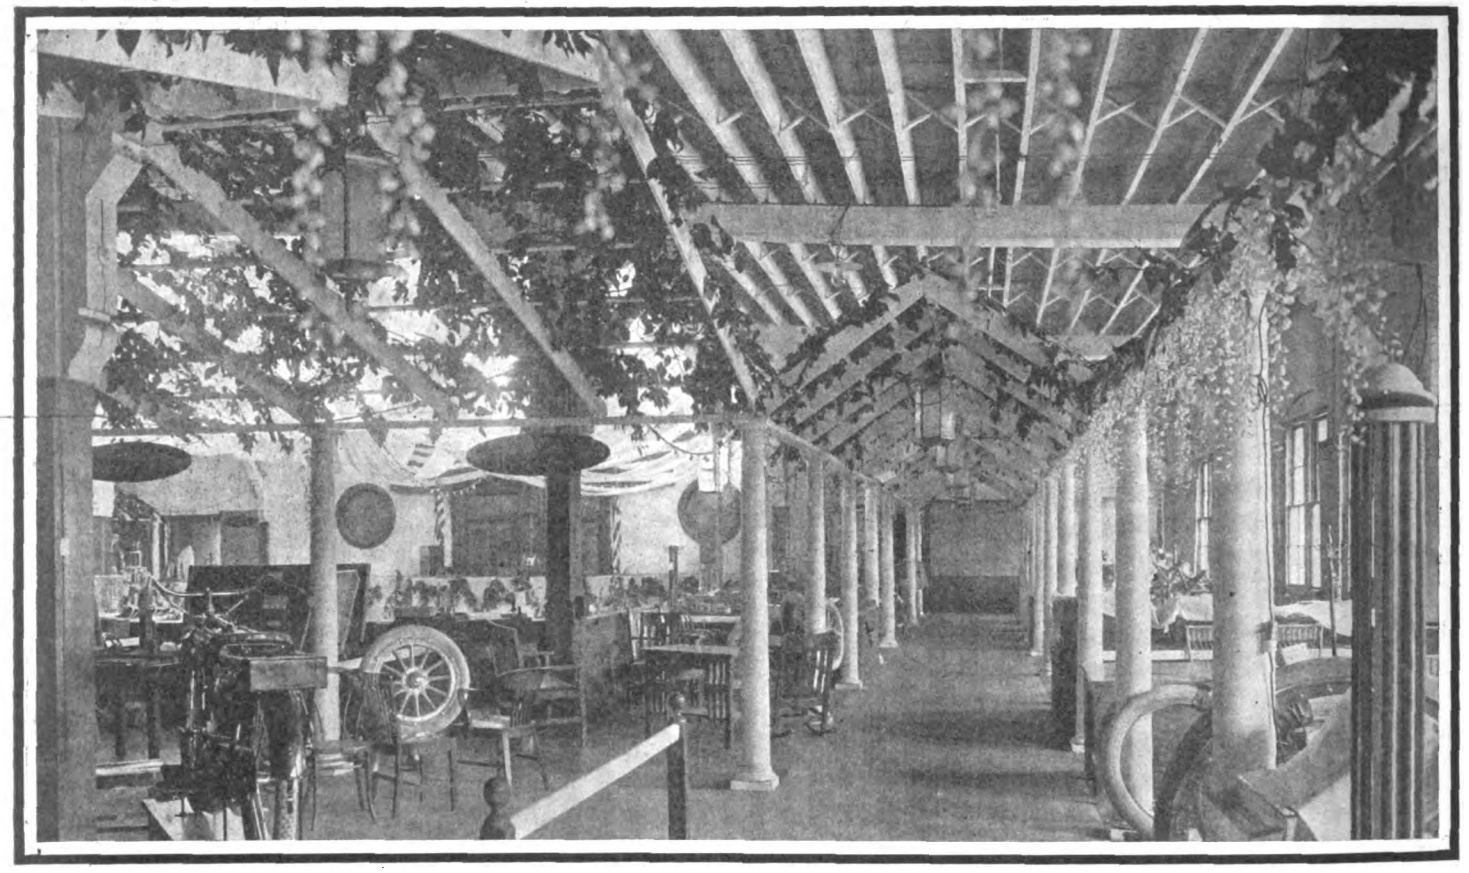
The centralized control also is familiar, and its advantages in permitting control and starting and stopping of the motor and the lighting of the lamps and carburetter adjustments, etc., without the necessity for the driver leaving his seat, are apparent. It has been adapted practically without change from the construction familiarized by the "38." The Delco electric lighting and engine starting system is retained, though ignition is furnished by a high tension Bosch magneto operating a dual system in conjunction with a storage battery.

Many New Body Styles Added.

Filling out an already extensive line, several new body styles have been added. The phaeton-roadster is one of them; it has been designed primarily as a roadster body to fit the standard phaeton chassis which has a slightly longer wheelbase than the roadster chassis. The added space behind the seats is occupied by a liberal sized luggage compartment with large doors on either side. Extra tires are carried on the deck above the compartment. By a slight alteration in existing designs, either the brougham or the imperial limousine now may be had in either the double compartment type, providing a separate space for the driver, or in the "salon" type, in which the driver and the passengers are not separated. All of the open bodies are equipped with tonneau lamps arranged to illuminate the step, the location of the switch permitting the light to be turned on from the curb.

Of the three other brands of engine-propelled cars that have been reserved for the Boston exhibition—namely, the Ford, the Kelsey Motorette and the Stanley steamer—it is impossible to say anything in the same breath, so to speak; they are widely divergent types of vehicles. The Ford, as everyone knows, employs a compact four cylinder motor, the Motorette has a twin cylinder opposed motor, and the Stanley, of course, represents one of the last of the disappearing makes of vehicles propelled by the oldest known prime mover—the steam engine.

It is the same steam engine it always has been, too, though it now is made in one additional size which is rated at 10 horsepower. It is exactly like the larger engines, however—the "20" and the "30"—



Digitized by Google

and employs two simple cylinders with link reversing mechanism. Making for extreme lightness and strength, the body is constructed entirely of aluminum and a further reduction of weight is permitted by the use of laminated wood sills instead of the usual metal members. Inasmuch as the steam engine is the only one of the prime movers that rightfully may be said to be self-starting, no other starting medium than the steam itself is necessary, though the equipment has been increased by the addition of a complete electric lighting system. One very

It is water cooled by the thermo-siphon system. Like the orthodox four-cylinder automobile motor, the crankcase is made to do duty also as an oil reservoir, the lubricant being pumped over the main bearings, whence it drains down through a screen into a sump to re-commence its journey. Ignition is effected with the aid of a high-tension Bosch magneto. Steering, as heretofore, is accomplished with a lever, and the planetary gearset is retained intact, as are all the other esential elements of the car, with the exception of the motor. The driv-

and, though slight refinements have been made from time to time as occasion warranted, there never has been any radical change in design. Which is just one reason why no one ever has any trouble in identifying a Ford on the road.

The alterations that have been made have to do only with the bodies and, though they are slight in extent, scarcely more than half an eye is needed to see that appearance has been materially benefited. In the touring body, for instance, the back has been slightly rounded out and given fuller

WISTARIA-HUNG PERGOLAS THAT EMBELLISHED THE ACCESSORY GALLERY IN EXHIBITION HALL

important improvement in the boiler, which is of the fire tube type, has been made in the addition of a feed water heater which materially increases efficiency and permits greater mileage per tank of water than that obtained in the past.

The little Kelsey Motorette, which enjoys the distinction of being the only three-wheeler in the show, not counting the motorcycles, of course, looks just the same as it always has looked—provided the inspection is made from a distance. Closer examination, however, reveals one all-important and radical alteration from previous construction: it has a brand new 11-horsepower motor or the four-cycle type, though despite the evident improvement the price has been reduced to $300. The new motor is of the opposed type, with mechanically operated valves and the valve parts completely enclosed to make them dirt-proof

ing wheel is at the rear, power being transmitted through the intermediary of a roller chain.

Ford Shows Body Refinements Only.

In the strict sense, the Boston show is not a National show, of course, and has nothing whatsoever to do with the preceding National shows in New York and Chicago, which accounts in a measure for the presence of the Ford, for Ford cars never are shown at the National shows. Still, the Boston show approaches the National shows in point of size at least, and the Ford exhibit in Boston is just as important there as it would be anywhere else. Altogether, there are four cars in the exhibit and, as might have been expected, they differ only in minor particulars from those that went before them, for in years gone by Ford cars have become pretty well standardized

curves that make for greater harmony of outline. Also the rear panel now is carried clear down to the fenders in an unbroken line and at the same time door latches have been relegated to less conspicuous places inside the body and very nearly all the brass work finished in black enamel. The most striking change is in the roadster model, however. Instead of being mounted at the back of the seats, together with a large tool box, the gasolene tank now is located beneath the seats and the space at the back has been decked over with a slanting deck which is hinged and covers a liberal sized tool and spare tube locker. One other change which has been made in both models is in the method of bracing the windshield. Instead of passing forward to the ends of the frame, the struts are very short and lead back to the top edge of the body. Incidentally, the windshield now

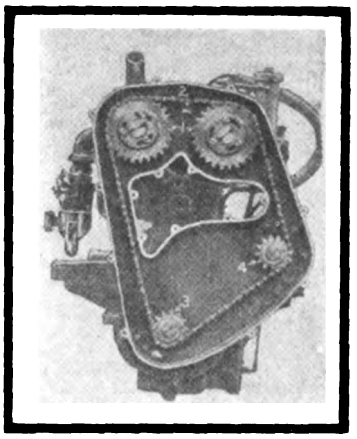
Digitized by Google

rakes aft instead of being perpendicular, as it has been in the past. Together with the top and the horn and the acetylene generator and the speedometer it is included in the regular equipment just as it always has been.

In the matter of electric cars, the Boston show is a little more complete than was the New York exhibition, but not so complete as the Chicago show. Nearly all the well-known brands are there—the Waverly and the Detroit, the Rauch & Lang, and the Wood, the Borland and the Standard and others—and in addition there are two—the Grinnell and the Bailey—that were not shown at either of the previous big shows. Also, these two makes of car are about as far apart in the matter of construction and appearance as is possible.

The Grinnell, for instance, which is produced by the Grinnell Electric Car Co., of Detroit, Mich., is primarily a pleasure vehicle and it looks the part. Mechanical changes are few and far between, though one new model has been added to the line since last it was exhibited. The new model is styled a clear vision brougham, and its seating arrangement provides accommodations for five persons, all facing forward; the rear seat accommodates three persons and one other is seated at the side of the driver. The fifth seat beside the driver is a swiveling and folding chair which, when not in use, is completely out of the way, leaving the entrance to the driver's seat quite unobstructed. The drive, of course, is direct by shaft to the rear axle, with a single reduction, and the battery equipment is calculated to permit from 70 to 100 miles to be covered on a single charge.

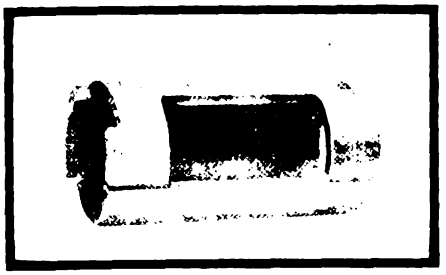
Though the Bailey line also includes vehicles designed especially for pleasure service, one of which is a brand new model that just has been added, interest naturally centers around the fast, rakish appearing roadster which was designed as a sort of combined business and pleasure vehicle. To fill the demand for a more luxurious vehicle built along the same general lines but of better finish and better suited for pleasure, a new model almost exactly like it has been added.



The most conspicuous point of difference between the old and the new is that in the latter the front battery hood lines extend right to the dash proper, to which the hood is attached firmly. The dash, mounting the doors, is hinged at the lower edge, permitting the hood to be raised for battery inspection, washing, etc. As heretofore, Edison batteries are used exclusively in all the models and the drive to the rear wheels by means of side chains from a countershaft is retained without change. With the usual equipment of 60 cells of A6 Edison battery, the new model lists at $2,900.

New Things That Cropped Up in the Accessory Department in Boston

Contrary to expectations, the Boston show does not live up to its reputation, gained in previous years, as a producer of much that is new in accessories. Only about 10 or a dozen really new devices are in evidence, and only one of them is designed to "put the pneumatic tire out of business," which may or may not be significant. Of the others, none is startling in either conception or construction, and in very few of them is there missing at least a hint of something else that has gone before and that borders dangerously near to being the very device that is on view.



Among a whole lot of other things which very freely are said to be brand new, for instance, there is the Elliott "Flexible Rotary Valve" engine. Actually, the engine is brand new, for it represents the very first product of the Elliott Motor Engine Co. of Waltham, Mass. However, it does not operate on a new principle, being a four-cycle machine of the four-cylinder type, nor is the arrangement of its rotary valves new, as any one can testify who has seen the Mead engine or the Henriod. What actual newness there is in the engine is in the form of its valves, their construction and their method of actuation.

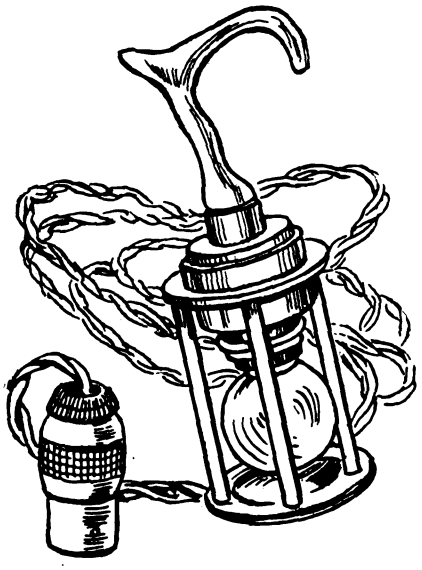
Like the Mead engine, the usual poppet valves are replaced by longitudinal rotary members contained in pockets cast at the sides of the cylinders, exhaust on one side and intake on the other. Unlike the Mead engine, however, each of the longitudinal members is divided into four parts—one for each cylinder—and all are driven, each from its mate, by means of a single continuous roller chain which extends around the crankshaft and the magneto shaft and the valve driving sprockets which are located at and attached to the end member of each group of four valves. The valves themselves differ from the Mead engine valves

ELLIOTT ROTARY VALVE DRIVE

in that they are hollow and are split longitudinally in a line with the end of the port area, the object of the construction being

ELLIOTT FLEXIBLE ROTARY VALVE

to permit of a fairly tight fit while at the same time allowing for the necessary amount of expansion and contraction due to varying temperatures. Thus the valves are flexible to a certain extent, from which the reason for the name of the motor may be judged. Among the interesting claims that are made for the engine is that it can be constructed much more cheaply than any other form of engine, that it has fewer parts "than any other engine in the world," that it "will give 50 per cent. more power," and that it "uses but one-half the amount of gasolene of any of the standard makes of engines."



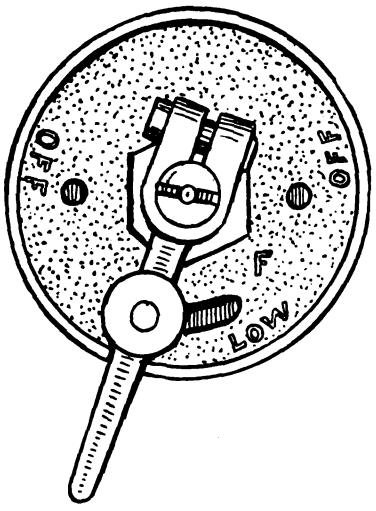
In the realm of lamps and signalling devices, one new rear signal, designed to permit the driver of a car to indicate to following drivers his intention to stop or to turn to the right or the left, appears. It is styled the Reliance Stop Signal and consists essentially of a small oblong box with a ground glass rear panel in which there are painted two arrows and the word "Stop." Three small buttons serve to switch on either of three lights to illuminate the right arrow or the left one or to illuminate both of them and the word "Stop." T. F. Russell & Co. exhibit an ingenious trouble lamp designed either to be held in the hand or attached to the hat or the clothing or to any part of the car by means of a projecting handle provided for the purpose. Except for the handle, it is the usual trouble lamp contained in a tiny cage to protect it from injury and equipped with a long, flexible cord and a plug; it is styled the "Pomo" lamp.

Though there are almost any number of attachments for converting acetylene head lamps so that they may be used as electric lamps, there are comparatively few devices of the kind for the conversion of side lamps. In view of this fact, and to supply the demand for small, low-cost electric side lamps

Digitized by Google

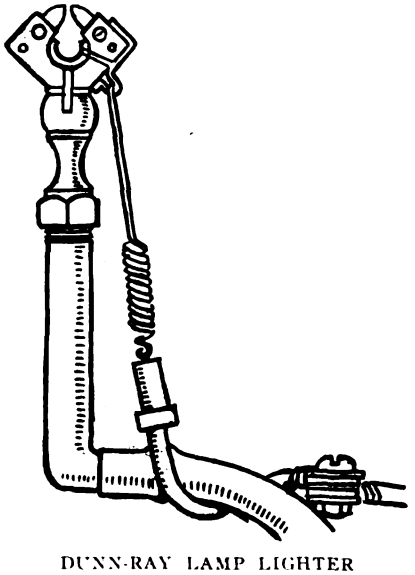
that can be attached by any one, the Standard Auto Supply Co. has developed and exhibits several systems of the kind designed to be operated by dry cells. The lamps are small and light and their attachment requires merely the driving of a couple of screws and the running of the necessary wires. "Driver" lamps, they are styled, and they come in a variety of styles and at a variety of prices that in no case are high. The lamps are fitted with tungsten bulbs, parabolic reflectors and imported lenses.

One of the few real novelties of the show is exhibited by Donal N. Macdonald, in the form of leaded glass panels in colors to take the place of the usual front or side glasses in lamps. A variety of designs are shown, including initials and conventional designs, and it is pointed out that in addi-



POMO TROUBLE LAMP

tion to adding a touch of individuality and providing a more certain mark of identification than the usual monogram on the sides of the doors, the leaded glass panels may be made to serve as head lamp dimmers on occasion. Otherwise they can be so designed that they interfere but slightly with the required brilliancy. Any design can be built into a panel, whether it be monogram, crest or just plain initials.

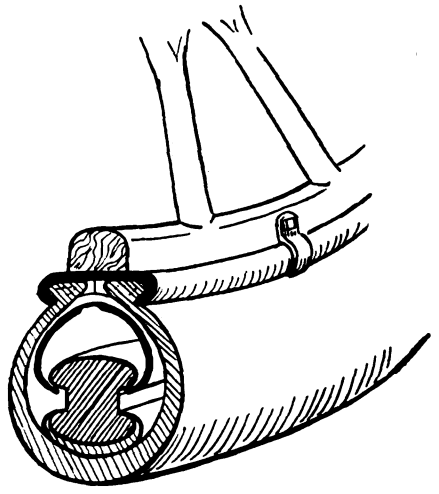


The Dunn-Ray lighter is exhibited for the first time and is, as its name suggests, a device for lighting acetylene head lamps from the driver's seat. It differs from the usual device of the kind, however, in that it employs no high tension current. Instead of a spark, the Dunn-Ray lighter relies upon a tiny incandescent wire, suitably attached to the burner, to ignite the gas; two dry cells furnish sufficient current to heat the wire. The rest of the apparatus consists of a combined switch and valve to be mounted on the dash, rotation of a small handle serving to turn the flame up or down, according to the requirements of the driver.

Among the various signalling devices that are exhibited—the Klaxons and the Long horns and the Tutos and Rexos and others—two new ones are on view, one of them being an electrical device which is claimed

DUNN-RAY ACETYLENE VALVE

to be one of the few that has a really "gentlemanly" tone, and the other is an exhaust horn that has been developed primarily for Ford cars. The former is the Reacto horn, produced by the Holtzer-Cabot Electric Co., and the latter is the Tremo, shown by the D. Henry Bonner Co. of Cambridge. The Reacto horn is of the usual vibrating type, the armature of



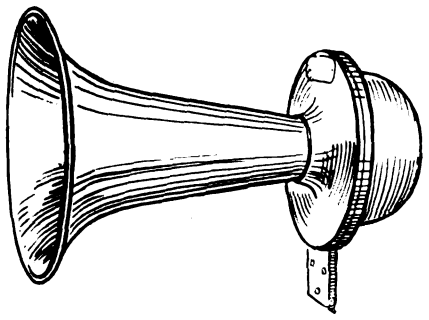
DUNN-RAY LAMP LIGHTER

an electro-magnet striking against the diaphragm. Its "gentlemanly" tone, it is pointed out, is due almost entirely to the care with which the materials entering into its make-up have been selected and the proper proportioning of weight of the parts. It is designed to operate on a six-volt battery, though it will sound effectively through the range from 4½ to 8 volts; its price is $10.

The Tremo exhaust horn also is of the usual pattern, though it has been designed to permit of a perfectly clear exhaust when the horn is inoperative. It is attached by merely slipping its shank over the end of the exhaust type and tightening a single clamping screw. It is made in a variety of sizes.

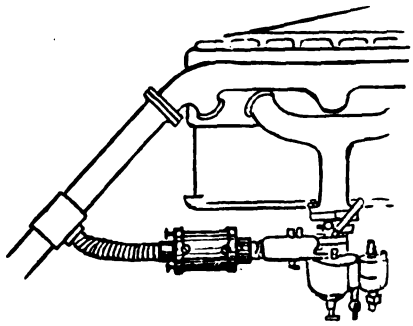
To help spark the motor, two new devices are exhibited, one of them being the J & B Junior master vibrator, exhibited by the J & B Mfg. Co., and the other being the Benton spark plug, which is produced and exhibited by the L. F. Benton Co. of Vergennes, Vt. The J & B Junior master vibrator is essentially a smaller and lower-priced version of the standard size J & B vibrator that has been on the market for some time. It is designed to be "floated on the line" between the ordinary low-tension magneto and the usual dash coil, thus enabling the existing ignition switch to be

EXPANSION TIRE IN SECTION



retained. It is ruggedly constructed and is water- and dirt-proof. The Benton spark plug is unusual in that it employs both mica and porcelain insulation and the metal parts are case hardened—in fact, the case hardening is made a strong talking point, its makers dubbing the Benton "the case hardened plug." The insulator is composed of sheet mica, spirally wound by a special process and forced under great pressure into a taper hole in the case hardened bushing; outside the mica, between the body of the plug and the terminal, German porcelain is baked on. The electrodes are of extra heavy wire drawn from an alloy of platinum and nickel, the shell member being continuous and passing from one side to the other around the center member.

The removal of carbon deposit from the pistons and combustion spaces of motors long has constituted a problem, though the Ozo Co., which exhibits the Ozo carbon destroying outfit, makes light of it; it makes light of both the carbon and the work,

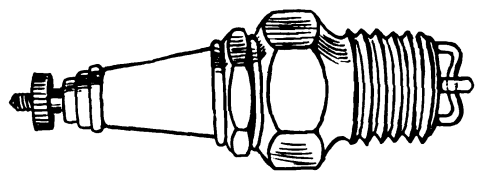


Digitized by Google

which is to say, it consumes the carbon by burning it. Briefly, the apparatus consists of nothing more complicated than a cylinder of oxygen, a second cylinder containing a purifying chemical through which the oxygen is passed, a suitable controlling valve and a length of flexible metal tubing. The modus operandi is to insert the flexible tube in the cylinder, preferably through a valve cap opening, and permit the purified oxygen to come in contact with the glowing particles of carbon, which burn up and disappear. It is claimed that the average four-cylinder motor can be cleaned of carbon in from 20 to 30 minutes and at a surprisingly low cost.

The single device designed to cause pneumatic tire makers to worry is an ingenious arrangement of alternate segments of rubber and a non-compressible material in a continuous band fastened within the usual outer casing by means of a metal clamp which serves to prevent the beads of the tire from coming out of their grooves in the wheel rim. Resiliency is imparted both by the rubber in the band and by the metal spring. Vertical shocks are partly absorbed by the rubber an dpartly transferred circumferentially to the hub. The device is styled the Expansion Tire and is produced by the Expansion Spring Rim & Tire Co. of Boston.

REACTO ELECTRIC HORN



ARNOLD AIR HEATER APPLIED

By way of assisting cold motors to start, the Arnold Electric Co. has developed and exhibits a small electric heater designed to be attached to the air intake of the carburetter, the idea being to preheat the air and thus to assist in the vaporization of the fuel.

In its simplest aspect it consists of a series of coils of high resistance wire enclosed in a casing in such a way that the entering air is forced to pass over them. The coils are heated by the current from a six-volt storage battery, and as the device is in use only for a very short time and at comparatively long intervals the current consumption is slight.

Celfix is the name of a preparation exhibited by the Woodman Sales Co. that has been produced for the purpose of permitting quick and easy repairs in the celluloid windows in side curtains and in windshields. It is a fluid and is applied with a brush; virtually, it is liquid celluloid, or such it appears, for breaks mended on the spot scarcely could be determined, so close was the union.

No inconsiderable number of tools for the motorist's kit put in an appearance, though of them all none is more ingenious than a monkey wrench exhibited by the Globe Wrench Co. After the manner of all monkey wrenches, the jaw is adjustable though the method of moving it is different from any other method. The actuating mechanism is contained within the handle of the wrench; merely turning the handle suffices to bring the jaws closer together or to separate them.

BENTON "CASE-HARDENED" PLUG

Summary of the Pleasure Cars on View and Their Exhibitors

Anderson Electric Car Co., Detroit, Mich.—Two Detroit electric cars: one each coupe and collapsible coupe.

American Locomotive Co., Providence, R. I.—Two six-cylinder Alco cars: one each double limousine and touring car and one chassis.

Andrews-Dykeman Co., Boston—Two four-cylinder Moon touring cars and one each four-cylinder Detroiter touring car, roadster and chassis.

American Motor Car Co., Boston—Two four-cylinder Marion touring cars, two four-cylinder American touring cars and one four-cylinder American roadster.

Bailey & Co., Inc., S. R., Boston—Three Bailey electric cars: two roadsters and one coupe.

Borland-Grannis Co., Chicago, Ill.—One Borland electric brougham; one chassis.

Bowman Co., J. W., Boston—Four six-cylinder Stevens-Duryea cars: two touring cars, one roadster, one limousine and one chassis; two four-cylinder S. G. V. cars: one each limousine and roadster and one chassis; one Waverley electric brougham.

Buick Motor Co., Flint, Mich.—Five four-cylinder Buick cars: four touring cars, one roadster and one chassis.

Binney, J. A., Boston—Two four-cylinder Henderson cars: one each touring car and roadster.

Cadillac Automobile Co., Boston—Five four-cylinder Cadillac touring cars: three touring cars, one each coupe and limousine and one chassis.

Clark-Carter Automobile Co., Jackson, Mich.—Two four-cylinder Carter cars: one each touring car and roadster; one chassis.

Connell & McKone Co., Boston—Three four-cylinder Overland cars: two touring cars, one roadster and one chassis.

Curtis-Hawkins Co., Boston—Four Speedwell cars: two four-cylinder touring cars, two six-cylinder touring cars and one six-cylinder Mead engine chassis.

Case T. M. Co., J. I., Racine, Wis.—Three four-cylinder Case cars: two touring cars and one roadster.

Cutting Motor Car Co., Boston—Three four-cylinder Cutting cars: one each touring car, roadster and racing car.

Dutton Motor Car Co., F. A., Boston—Four four-cylinder Abbott-Detroit cars: three touring cars and one roadster.

Dodge Motor Vehicle Co., Boston—Two Buffalo electric cars: one each brougham and roadster.

Donovan Motor Car Co., Boston—Five Studebaker cars: two four-cylinder touring cars and one four-cylinder coupe; one each six-cylinder touring car and limousine; one four-cylinder chassis.

Davis Carriage Co., Geo. W., Richmond, Ind.—One four-cylinder Davis touring car.

Edwards Motor Car Co., New York City—One four-cylinder Edwards-Knight touring car and one chassis.

Fiat Motor Sales Co., Boston—Five Fiat cars: two four-cylinder roadsters and one four-cylinder touring car; two six-cylinder touring cars and one six-cylinder chassis.

Ford Motor Co., Boston—Four four-cylinder Ford cars: two touring cars and one each roadster and landaulet.

Franklin Motor Car Co., Boston—Three six-cylinder Franklin cars: one roadster and two touring cars.

Fuller, Alvin T., Boston—Seven Packard cars: two six-cylinder roadsters, two limousines, one double limousine, one roadster and one four-cylinder touring car.

Habich Co., G. E. & H. J., Boston—Four Cole cars: one four-cylinder touring car, two six-cylinder touring cars and one six-cylinder chassis.

Harrington-Thompson Motor Cars, Inc.,

Digitized by Google

Boston—Two four-cylinder Krit cars: one each roadster and touring car and one chassis.

Henley-Kimball Co., Boston—Two Hudson cars: one each four- and six-cylinder touring cars and one six-cylinder chassis.

Hollander Motor Co., Boston—Two four-cylinder Metz roadsters and one chassis.

Hoyt Carburetter & Auto Co., Boston—Three four-cylinder Havers touring cars: two roadsters and one touring car; one chassis.

Imperial Motor Car Co., Boston—One six-cylinder Imperial touring car.

Inter-State Automobile Co., Boston—Three Inter-State cars: two four-cylinder touring cars, one six-cylinder touring car and one six-cylinder chassis.

Jackson Motor Car Co., Boston—Four four-cylinder Jackson cars: three touring cars and one roadster.

K-D Motor Co., Boston—One six-cylinder touring car with K-D sliding crescent valve motor.

Jeffery Co., Thomas B., Boston—Four four-cylinder Rambler cars: two touring cars and one each double limousine and roadster; one chassis.

Koehler Sporting Goods Co., H. J., Boston—Four four-cylinder Hupmobiles: two touring cars and one each coupe and roadster.

Lawrence & Stanley Co., Boston—Two Mitchell cars: one each four- and six-cylinder touring cars and one six-cylinder chassis.

Linscott Motor Co., Boston—Four four-cylinder Reo cars: two touring cars, one limousine and one roadster; one chassis.

Locomobile Co. of America, Boston—Six six-cylinder Locomobile cars: four touring cars, one limousine and one double limousine; one chassis.

Lozier Motor Co., Boston—Four six-cylinder Lozier cars: three touring cars and one double limousine.

Lenox Motor Car Co., Boston—Four four-cylinder Lenox cars: three touring cars and one roadster; one chassis.

Marathon Motor Works, Nashville, Tenn.—Three four-cylinder Marathon cars: two touring cars and one roadster.

Maxwell Motor Co., Boston—Three four-cylinder Columbia-Knight touring cars, one four-cylinder Maxwell touring car and one four-cylinder Maxwell roadster.

MacAlman, J. H., Boston—Four Stearns-Knight cars: one six-cylinder touring car, two four-cylinder touring cars and one four-cylinder limousine.

Maguire Co., J. W., Boston—Six six-cylinder Pierce-Arrow cars: four touring cars, one roadster and one limousine; one chassis.

Moline Automobile Co., East Moline, Ill.—One four-cylinder Moline touring car.

McFarlan Motor Car Co., Connersville, Ind.—Four six-cylinder McFarlan cars: three touring cars and one roadster; one chassis.

Michigan Motor Car Co., Kalamazoo, Mich.—Three four-cylinder Michigan cars: two touring cars and one roadster; one chassis.

Morse & Co., Alfred Cutler, Boston—One four-cylinder Mercedes touring car; one each Renault touring car, limousine and chassis, all four-cylinder.

Motor Car Mfg. Co., Indianapolis, Ind.—Five four-cylinder Pathfinder cars: two touring cars, three roadsters; one chassis.

Moyer, H. A., Syracuse, N. Y.—One six-cylinder Moyer touring car; one four-cylinder chassis.

Nyberg Automobile Works, Anderson, Ind.—Two Nyberg cars: one each four- and six-cylinder touring cars.

Oakland Motor Co., Boston—Four Oakland cars: two four-cylinder touring cars and one four-cylinder roadster; one each six-cylinder touring car and roadster.

Oldsmobile Co. of Massachusetts, Boston—Three Oldsmobiles: two six-cylinder touring cars and one four-cylinder touring car.

Peerless Motor Car Co. of New England, Boston—Six six-cylinder Peerless cars: four touring cars and two double limousines.

Paige-Detroit Motor Car Co., Detroit, Mich.—One four-cylinder Paige-Detroit touring car.

Pope Mfg. Co., Hartford, Conn.—Six Pope-Hartford cars: one each six-cylinder roadster and touring car, two four-cylinder touring cars and one each four-cylinder roadster and limousine.

Premier Motor Car Co., of New England, Boston—Three six-cylinder Premier cars: one each touring car, roadster and limousine; one chassis.

Proctor, G. H., Boston—One four-cylinder Pullman touring car.

R. C. H. Corp., Detroit, Mich.—Two four-cylinder R. C. H. cars: One each touring car and roadster; one chassis; one Hupp-Yeats electric double limousine.

Republic Motor Co., of Massachusetts, Boston—Two Little cars: One each four- and six-cylinder touring cars. One each six-cylinder Chevrolet touring car and chassis.

R & L Co., Boston—Four six-cylinder Garford cars: Three touring cars and one roadster; one chassis.

Russell Co., W. L., Boston—Six four-cylinder Regal cars: Four touring cars, one coupe and one roadster; one chassis. Two four-cylinder Haynes touring cars; one chassis.

Smith, Fred S., Boston—Two four-cylinder Mercer cars: One each touring car and roadster.

Standard Electric Car Co., Boston—One Standard electrique coupe.

Stanley Motor Carriage Co., Newton, Mass.—Four Stanley steam touring cars and one roadster.

Stevens, W. H., Boston—Four four-cylinder National cars: two touring cars and two roadsters; one chassis.

Stutz Motor Car Co., Boston—Four six-cylinder Stutz cars: Three roadsters and one touring car; one chassis.

Tiffany & Co., D. C., Boston—Two Rauch & Lang electric cars: One each roadster and limousine.

Tyler Bros. Corp., Boston—One Kelsey Motorette. One Columbus electric brougham.

Underhill Co., Boston—Five Knox cars: Two six-cylinder touring cars; one each four-cylinder touring car, roadster and limousine; one six-cylinder chassis. One Grinnell electric brougham.

Velie Motor Vehicle Co., Boston—Three four-cylinder Velie cars: Two touring cars and one roadster.

White Co., Boston—Seven White cars: One six-cylinder double limousine, two six-cylinder touring cars, two four-cylinder touring cars and one each four-cylinder collapsible coupe and roadster.

Whitten-Gilmore Co., Boston—Eight Chalmers cars: Two six-cylinder touring cars; three four-cylinder touring cars, one roadster and one limousine. Two Woods electric coupes.

Wing Motor Car Co., F. E., Boston—Five Marmon cars: One each four-cylinder roadster and limousine and two touring cars; one each six-cylinder touring car and chassis.

Winton Motor Carriage Co., Boston—Six six-cylinder Winton cars: Five touring cars and one limousine.

Westcott Motors Co., Boston—Three Westcott cars: One each six-cylinder touring car and roadster; one four-cylinder touring car.

Trucks That Follow Pleasure Cars.

When at the end of the three days—March 16, 17 and 18—permitted for moving out pleasure cars and rolling in commercial vehicles, Mechanics Building in Boston again is opened, the 46 exhibits of utilitarian machines will be surrounded and set off by the same decorations that are doing duty for the touring cars and runabouts. Advance information indicates that Boston will follow the lead of other important shows in showing nothing startlingly new, though there always is the off chance of a surprise. There will be a representative gathering of trucks from the lightest to the heaviest, to say nothing of the usual accessories. The show will remain open until Saturday night, March 19th.

The following commercial vehicles will be exhibited: Alco, Autocar, Atlantic electrics, Adams, Atterbury, Bessemer, Buick, Buffalo electrics; Chase, Couple-gear electrics, Decatur, Edison eelctrics, Federal, Flanders, General Vehicle electrics, G. M. C. electrics, Hupmobile, I. H. C., Knox, Kelly-Springfield, Little Giant, Locomobile, Lauth-Juergens, Lippard-Stewart, Mercury, Marmon, Overland, Packard, Peerless, Pierce-Arrow, Pope-Hartford, Reo, Speedwell, Stewart, Sanford, Stanley steamers, Smith-Milwaukee, Sowers, Sullivan, Schacht, Universal, Victor, Velie, Vulcan, Waverley electrics, White.

Lambert's Wonderful Flight Confirmed.

Despite the fact that it seems almost like accomplishing the impossible, mail advices confirm the cabled reports that on February 15th last Percy Lambert, driving a 25-horsepower Talbot on the 2½-mile speedway at Brooklands, England, covered 103 miles 1,470 yards in an hour, an average of 34.6 seconds per mile. The wonderful feat was accomplished—he set out to cover 100 miles within a span of 60 minutes—on the second attempt, the first of which was run on the Saturday previous, 8th ult., having resulted in a failure through the bursting of a rear tire on the last few laps. He however set up a new world's record for the half century, covering the distance in 29:10.5, or at the rate of 102.83 miles an hour. On the second attempt this record was lowered to 29:02.5, the rate being 103.4 miles an hour. One hundred miles were completed in 57:49.38 without mishap, the second time.

Although rated at 25 horsepower, the Talbot motor, which has a bore and stroke of 4.35 inches and 5.54 inches, respectively, figures out at 47.5 horsepower under the A. L. A. M. formula. At 2,500 revolutions a minute, the speed at which the motor operated when driving the car at the record-breaking speed, such was the design of the motor that it developed fully 2½ times this power—125 horsepower.

Elgin Sets Dates and Revises Program.

If things at Elgin, Ill., go according to the tentative program as mapped out by the Elgin Road Race Association, the fourth annual speed carnival over the local course will embrace the two days, Friday and Saturday, August 29th and 30th, and but a single race will be run on each day. On the first day of the meet the Ira J. Cobe trophy will be contested for, with the President's cup and the Jencks trophy, both of which were contested for in separate events last year, as second and third prizes, respectively. The Elgin National trophy will be the award for the victor in the second day's contest and the second and third man will receive the Illinois trophy and the Aurora trophy, respectively. Separate races also were run with these prizes as awards last year.

Savannah Dealers Form Association.

The dealers of Savannah, Ga., have formed the Savannah Automobile Dealers' Association. The temporary chairman who will direct affairs until the organization is completed is J. E. Finney.

BUFFALO COMMERCIAL SHOW FOLLOWS CARS BY A MONTH

Trucks Displayed in Red and White Trimmed Auditorium—Four Newcomers Among Twenty-seven Exhibitors.

Contrary to the usual order of things, the commercial vehicle section of the Buffalo Automobile Dealers' Association's annual show is being staged a little over a month later than the pleasure car section instead of during the following week. It was inaugurated on Tuesday evening last, March 11th, in the Broadway Auditorium—suitably adorned in red and white for the occasion—and will continue throughout the remainder of the week, until Saturday evening next, March 15th.

The show comprises 38 different makes of trucks displayed by 27 dealers and manufacturers; of the number, seven—Buffalo electric, Lippard-Stewart, Pierce-Arrow, Stewart, Kopp, Meyer and Willet—are local products. The three latter and the Coleman, which is shown by F. A. Ballou, are further distinguished in that it is their "first time out," so to speak, not having made their appearance previously during the present show season. Accessories are shown by eight dealers in motor car appurtenances and 11 different makes of motorcycles are on view, shown by half a dozen motorcycle dealers.

The trucks on view are: Atterbury, Kissel, Buffalo electric, Grabowsky, Coleman, Federal, Standard, Jeffery, Chase, Pope-Hartford, Alco, Studebaker, Mack, Saurer, Universal, I-H-C, Little Giant, Kopp, White, Lippard-Stewart, Sullivan, Marathon, Meyer, Overland, Packard, Pierce-Arrow, Autocar, Stewart, Menominee, Adams, Mais, Bessemer, Velie, Blair, Krebs, Commerce, Willet.

Forty Iowa Dealers Display Sixty Cars.

For the first time in the four years it has been staged, the exhibit of the Des Moines Automobile Dealers' Association has acquired proportions which necessitated separating the pleasure and commercial car displays. Part I, which comprised the pleasure cars, closed its doors in the Coliseum on Saturday evening last, March 8th, having held the boards for six days, from Monday evening, March 3rd.

The displays—60 different makes were shown by the 40 dealers who held space—revealed at least two makes of cars which are interesting in that they have not been previously exhibited during the present show season. They are the De Sota, a "six" of conventional lines which is made in Des Moines by the De Sota Motor Co., and the Zimmermann, product of the Zimmermann Mfg. Co., of Auburn, Ind. Accessory dealers to the number of twenty displayed the wares they handle.

The cars on view were: Cutting, Midland, Columbus electric, Imperial, Great-Western, Crow-Elkhart, Lambert, Maxwell, Ohio electric, Lozier, Buick, Moon, American, Hupmobile, Cartercar, Empire, Jackson, Metz, Cole, Studebaker, White, Rambler, De Sota, Ford, Chalmers, National, Woods electric, Oakland, Auburn, Velie, Reo, Apperson, Nyberg, King, Case, Detroit electric, Packard, Regal, Cadillac, Haynes, Detroiter, Hudson, Krit, Marathon, Marmon, Paige, Havers, Overland, Marion, Pierce-Arrow, Mitchell, R. C. H., Winton, Davis, White, Studebaker, Zimmermann, Colby, Michigan, Moline.

Sioux City Show on Three Floors.

Twenty-two dealers who had on display 33 different makes of motor vehicles, for both pleasure and commercial use in the Bennett Building at Sioux City, Ia., comprised the fourth annual show of the Sioux City Automobile Dealers' Association which closed its doors on Saturday evening last, March 8th, after a six-day run. In the matter of decorations, the building is not one that lends itself readily to the purpose of the decorator; however, the three floors which are occupied by the display were "dressed up" with draperies and pennants galore. The cars on display were: Cole, Haynes, Locomobile, Studebaker, Empire, Velie, Reo, Cadillac, Cartercar, Metz, Rambler, Buick, Abbott-Detroit, Ohio, Auburn, Chalmers, Herreshoff, White, Moon, Cutting, Pullman, Krit, Matheson, Kissel, I-H-C truck, Imperial, Paige, Mitchell, Oakland, Ford, Michigan, Hudson, Oakland, Marion.

A. C. A. Seeks a "Social" Clubhouse.

Having reached the point where its business affairs, which means its garage and its testing laboratory, interfere seriously with its purely social life, the Automobile Club of America, at the last meeting of the Board of Governors, decided to divorce these several interests, not only in spirit, but in fact as well and to seek other and more appropriate club facilities in a new location on Fifth avenue. The garage and the rest of the business interests will remain in the big building on West 54th street, but a committee consisting of A. J. Hemphill, Henry R. Taylor, Henry Sanderson, James A. Blair, Jr., and Dave H. Morris, has been appointed to choose a suitable Fifth avenue location, though whether the club will build or will lease a building already constructed is a matter which as yet has not been decided.

LOUISVILLE DISPLAYS CARS IN "STONE-WALLED" BOOTHS

Imitation Masonry and Iron Fences Divide Exhibits at Kentucky Exhibition — Twenty-five Dealers Display Forty-two Cars.

Although the sixth annual show of the Louisville Automobile Dealers' Association, which held the boards in the State Armory, lasted only four days, from Wednesday evening, March 5th, until Saturday evening, 8th inst., that it was not a year-long institution could not be judged from the nature of the decorations which rendered the interior of the building eye-pleasing. Ashlar walls topped with iron picket fences served to mark off the various booths and to edge the gallery which served for the display of the accessories, while imitation stone walls improvised from suitably painted fireproof fabric on wooden frames obscured all view of the real walls of the drill hall. Both the surrounding walls and the separating walls were garnished with sprays of green oak. Green and white draperies hid the ceiling girders and served to soften the glow from the myriad incandescent lights and the dozen or more arc lights which dispersed the last traces of gloom.

In the booths of the 25 dealers who exhibited motor vehicles were the products of some 42 different factories, and of the number, one, the Transit truck, is a local product. It is made by the Transit Motor Truck Co. Two new products in the shape of the Helical shock absorber and the Speedway tire—the latter a brand new Louisville production—came to light in the displays of the dozen accessory dealers who occupied space. The shock absorber is of the conventional helical type, the springs being enclosed to eliminate dust and dirt; it is also manufactured by a local concern, the Helical Shock Absorber Co.

The cars shown were: American, Buick, Cadillac, Case, Chalmers, Cole, Detroiter, Hudson, Hupmobile, Interstate, Locomobile, Lozier, Maxwell, McFarlan, Oakland, Overland, Packard, Paige-Detroit, Peerless, Pierce-Arrow, Premier, Rambler, Regal, Reo, Stearns, Studebaker, Stutz, White, Winton, and Baker, Chicago, Detroit, Ohio, Rauch & Long, Waverley and Woods electrics. The trucks were: Federal, Packard, Rambler, Studebaker, Transit, Urban.

Wire Mesh to Strengthen Gaskets.

A gasket made of asbestos packing can be made to answer its purpose for a considerable time without blowing out if a similarly shaped piece of wire mesh is placed in position with it.

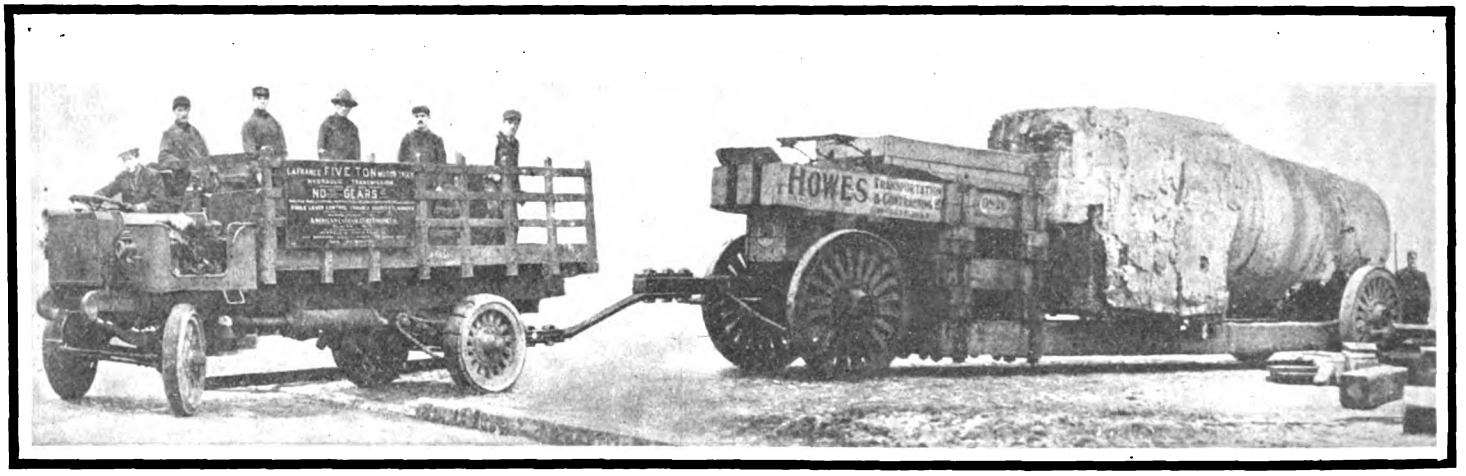
TREMENDOUS LOAD HAULED BY HYDRAULIC DRIVE TRUCK



Demonstration that Served to Bring to Light Unusual Tractive Effort—Total Weight Moved, Forty-five Tons.

One of the objections that sometimes is raised by truckmen and other users of horses when approached on the subject of motor haulage is that, while the carrying capacity of the machine is as a matter of necessity kept within strict limits, a horse-drawn truck will carry "all you can pile on it"—that is to say, as long as the horses are able to move it. The endeavor to carry this old horse truck practice into motor trucking—in other words, overloading—has led to almost countless failures and disappointments.

But while the makers of trucks are drawing their maximum limitations closer than ever, the increasing power and reliability of the machines is indicated by the increasing use of trailers, which make it possible to utilize the abundant pulling power when the limit of carrying capacity has been reached. An example of this kind is found in the recent haul made by a La France hydraulic transmision truck, which had its tractive powers tested to an unusual extent.

The truck, of a rated carrying capacity of six tons, was loaded with six tons of boiler fittings and coupled by means of a heavy drawbar to the front end of a huge contractors' truck of the type employed for the transportation of large boilers and other exceptionally heavy material. Upon the contractors' truck, which weighs 12½ tons without load, was placed a boiler weighing 23 tons, making the total weight of trailer and load 35½ tons; the total weight moved, including the La France truck and its load of boiler fittings, was 45 tons.

The whole weigthy outfit, which is shown in the accompanying illustration, was hauled from 19th street and Second avenue to 68th street and East River, going up Broadway to 59th street. The rate of speed approximated four miles an hour and the work was done without any particular difficulty, the truck and its bulky trailer being at all times under complete control. The job was undertaken by the Hydraulic Truck Sales So., of 1777 Broadway, New York City, which handles the La France machine, for the Howes Transportation & Trucking Co., of New York, in order to demonstrate the capacity of the machine. To do the work in the customary way would have called for the use of 20 horses, making an extremely long and awkward procession, and one difficult to handle on short turns. The time required wolud have been at least double the time taken by the hydraulic truck to make the trip.

LA FRANCE MANLY HYDRAULIC DRIVE TRUCK WITH ITS MAMMOTH FORTY-ONE-TON LOAD

Boston to Motorize Fire Department.

Boston has taken the first step toward the complete motorization of its fire department. It already has several motor vehicles in use, but the fire commissioner just has recommended that the city council make an appropriation of $300,000 in order to carry out the contemplated motorization within a period of two years. As the mayor and city council are in accord with the idea, the adoption of the fire commissioner's recommendation is practically assured. He figures that with $300,000 he can purchase 51 distinct pieces of motor driven fire apparatus, in addition to repair trucks and runabouts.

Where Mud Splashing is Punishable.

When driving along muddy roads in Saxony, there are two alternatives open to the motorist: He must either confine his speed to a walking pace or wait till the mud dries up or freezes. Otherwise he is liable to run foul of the laws, for the German courts hold mud-splashing to be a punishable offense. The latest case to be heard by the Dresden Court of Appeals resulted in acquittal for the driver, for though he was adjudged to have committed an offense against the traffic regulations in that he did not slow down when passing through mud, he was dismissed with a reprimand for the simple reason that no one was near enough to be spattered. Few others get off, however.

Texaco's Chief Chemist Discusses Gasolene.

Advocating in no uncertain terms the development of devices that will permit the burning of some fuel other than gasolene in present types of automobile motors, H. Tipper, who is the chief chemist of the Texas Co., and who did most of the talking at the joint "gasolene" meeting of the Indiana Section of the Society of Automobile Engineers and the Hoozier Motor Club, held in Indianapolis Monday night, 11th inst., virtually placed the burden of the whole problem on the shoulders of carburation experts. It is Tipper's opinion, and the opinion of a great many others as well, that the problem is rather one of burning existing fuels than of developing or discovering new ones, and by way of bringing the argument home he offered the somewhat startling information that the cost alone of refining the future naphtha production would reach the figure of $75,000,000 in the case of one manufacturer alone. It is the actual cost of refining the fuel, as much as the shortage of crude oil, that enters into the problem, he said.

Indiana's Anti-Testing Bill Recalled.

Although it had passed both houses of the Indiana legislature, the protests of the automobile interests have proved sufficiently effective to cause the recall of the bill prohibiting the use of testing cars on the highways of that State. It proved to be more drastic than its authors supposed and, as a result, a new and modified measure will be introduced.

Digitized by Google

tion of the length of the blade, of course; it may show level in one direction and not in another. This is no drawback, however, because the blade can be shifted around so as to indicate in any line. A tool to indicate in all directions at once should be made with a flat base and a single point over which the bob would poise on a level surface, but would move away from in the direction of any downward tilt.

One Use for Which the Tool Serves.

One of the uses to which the tool can be put is squaring up a piston with the crankshaft, or indicating a bend in a connecting rod. The shaft first is leveled carefully, after which the tool is applied to the piston. Owing to the fact that many pistons are tapered, or may be worn, it hardly is safe to apply the vertical edge of the square to the side of the piston, though this can be done if the piston is known to be parallel. If the top is concaved or perfectly flat the square can be applied there; otherwise a straight-edge should be placed across the bottom of the piston and the square placed on top of the straight-edge. If the piston is true with the shaft there should be no discrepancy in the readings of the bob. It goes without saying that in making such a test the bearings at both ends of the connecting rod must be closely fitted and without looseness if the readings are to be of any use.

As to dimensions, a good all-round tool may be about six inches long on the blade and eight inches on the upright. For extreme accuracy the upright, and consequently the plumb-line, should be made longer. Clearly the higher the point of attachment of the line the greater will be the deflection of the point for a given error. For the all-round tool the arched upright should be of 5/16-inch square stock and the blade about an inch or an inch and an eighth wide.

Smoothing Surfaces by Draw-Filing.

One of the easiest methods of getting a fairly smooth surface on a piece of metal is to draw-file it. Draw-filing consists of holding the file by the ends and drawing it sideways along the work; the cut is much smoother and finer than its ordinary cut. After draw-filing with a file a piece of crocus cloth may be put on a stick and used in the same way to give a final finish.

Hardening Sharp-Pointed Tools.

Heating the point of a scriber, or any other sharp point, for hardening, must be done very carefully if the point is not to be burned. The heat should be applied a little distance back of the point until the red gradually extends to the point. To harden, jab the heated steel into a piece of wax or a potato and let it cool there.

CONDUCTING DEALERSHIP AS A BUSINESSLIKE BUSINESS

More Required Than Getting Agency and Then Waiting for Sales, Says Cole Man—Coordinating Selling and Advertising.

Making a dealership a real business, conducted in a business-like way instead merely of maintaining an agency and trusting to the dollars to roll in more or less of their own accord is a principle which the present leaders in the trade have grasped and which those who hope to travel the upward path must incorporate in their business doings. Recently, when H. C. Bradfield, of the Cole Motor Car Co., of Indianapolis, was visiting dealers on the Pacific Coast he found conditions there such as to arouse the enthusiasm of the man who delights in a fructifiable territory and in talking for the benefit of Cole dealers and Cole dealers-to-be he concisely expressed a few facts of vital trade interest, also touching upon the relations between dealer and factory.

Automobile Business With Big "B."

"The possibilities for expansion in the motor car industry are wonderful," he said; "that is, for the man who is ambitious, for the man who is in the automobile business, spelled with a big 'B.'

"The day of being in the motor car trade and having an agency and salesrooms, just to be in some line of work, has passed, and now only those who are heart and soul in the work can hope for success.

"People who nowadays purchase motor cars are going to the dealer who not only has elegant and commodious salesrooms, but to the man who, in addition, employs a competent sales and service force, and gives his clients real service under all conditions.

Combined Selling and Advertising.

"The successful automobile dealer is the one who co-ordinates his salesmanship and advertising. The automobile merchant is making money becaues he pays the proper attention to all the angles of his business, especially to advertising. This is really an essential element, for it is one in which a great deal of money can be easily wasted without adequate returns, thus making the dealer discouraged.

"To advertise properly the first essential is to give advertising attention. It must not be done mechanically. The automobile dealer must not try to pass off the spending of money to the automobile factory. He must delegate to himself, or one of his salesmen, this important part of the business. There is not a concern but what has somebody in its force who is partial to advertising, and only needs a little encouragement to show it. Once you get this man interested he will be able to write an intelligent advertisement. He will be able to put that newspaper human interest in his advertisements the same as a reporter puts in his story. He will localize his advertising. He will make it pull business.

Publicity and Real Advertising.

"Advertising is divided into two classes—publicity and pulling advertising. The first gets your name before the public, but without care it can be easily abused and do more harm than good. Pulling advertising interests the prospect, brings him to you to inquire about the car. It gets him to the salesroom, then its mission stops; for no advertising carries a possibility of being in a signed order, except in very rare occasions. If after the advertisement brings the prospects, the dealer does not close, it is the fault of salesmanship or his confidence in his product.

"The automobile merchant is in business, not in a game, and he is getting more and more adapted to these conditions, and thus he is able to give better service.

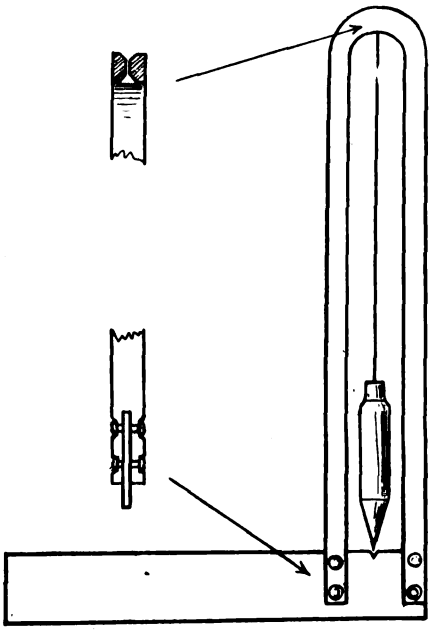
"Salesmanship in the automobile industry is a big factor. The man who can take an order under almost impossibilities is a salesman. He is the man who does not hang around the salesrooms. You never find him selling motor cars with his foot on the brass rail. Then there is the service question. This can also be much abused. The dealers in the automobile business are giving this department of their work proper attention, and getting results, because they conduct it from the business standpoint.

General Promotion Right Attitude.

"Last, but not least, the real good automobile dealer is looking after the industry from the general promotion standpoint. He is looking out to help the industry in general, whenever he gets an opportunity. That is one thing that is putting the Indianapolis made cars so firmly on the market.

"This co-operation of the big factories has done much for the general advancement of the trade and will continue to improve automobile conditions all over the country.

"The Western field is a good one for the motor car business and getting better each year. The factories realize this and are trying in every way to co-operate with their dealers in every field, to the end that business may be taken care of with as little friction as possible.



"The factories are now almost past the experiment phase of their career and consequently devoting more time and attention to where their products go."

ONE OF THE TOOLS THAT FATHER USED TO MAKE

Making Gravitation Help in Doing Accurate Work—Combined Square and Level That Serves Sundry Purposes.

That almost extinct species, the old-time all-round mechanic, did not have the opportunities for stocking his tool-chest with factory-made tools such as are now so readily obtained. The variety of tools sold used to be much less extensive than it now is, and it was a matter of course that a man's tools were in many cases of his own make—and they were by no means poor tools, either. Every mechanic worthy of the name knew how to "originate" a surface-

CONSTRUCTION OF THE LEVEL

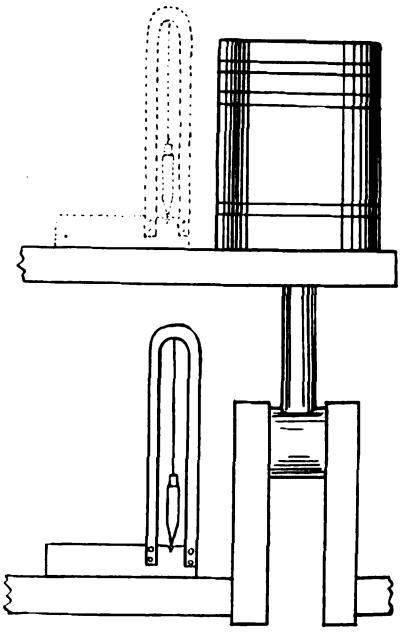
plate or a straight-edge, and it was considered an unnecessary expenditure of money to buy squares, surface gauges, calipers, and so on. In fact, it was rather the fashion to look down upon "bought tools" as less likely to be accurate than the home-made articles.

Handy Tool That Is Easily Made.

While good tools now are comparatively inexpensive and may be had of an accuracy difficult to equal in hand-made tools, there are not a few that are readily made up in spare time, and there is no gainsaying the fact that a man takes a certain pride in the use of a well-made instrument of his own production. The combined square and level shown in the accompanying illustrations is a case in point; it is by no means difficult to make, but it is very accurate and can be made useful in many ways. Used as a square only, it is like any other square, but used as a level it is considerably more accurate than a spirit level of the ordinary type, and for extremely fine work its construction can be made such as to multiply errors and so give exceedingly close readings.

In the construction of the tool the first and the main thing to do is to make a square, as shown, with a steel blade carrying an arched upright of square-section stock, preferably steel, though brass can be used if desired. Steel is much stiffer, of course, and is less liable to accidental damage. The feet of the arch should be carefully split with a hack-saw and the blade let in and riveted with rivets which fill the holes very closely, so as to avoid all possibility of misplacement once the tool has been trued up.

Making and Assembling the Parts.



When the arch is made it is necessary to use great care to get the two legs absolutely parallel; otherwise if the square is true on the outside it will be "out" on the inside, and vice versa. This can be done with the aid of a pair of calipers. After getting the legs almost exactly parallel, the outside and inside faces should be made perfectly straight and true, using a surface plate or a true straight-edge for the purpose, after which the final paralleling can be done. The position of the arch on the blade may be varied by cutting one of the slits a little deeper than the other; by this means the two parts can be set together almost exactly at right angles. When the riveting up has been done there should be little to do beyond a very slight final truing up. Whatever metal has to be removed should be taken from the foot of the blade, the top of the blade being made parallel to it afterwards, if necessary. If the work has not been accurately done and the legs of the arch are not parallel when riveted in place, the outside face will have to be cut down to bring it true to the inside face, and then the blade trued to the arch.

At the center of the bend of the arch a very small hole should be drilled and countersunk at both ends; the countersinks should be smooth, without burring or sharp edges to fray the line, which is threaded through the hole and retained by a knot which drops into the top countersink; the line must be a close fit in the hole—the closer the better. Perhaps the best possible thing to use for the plumb bob is a small mercury bob—a steel shell filled with mercury and tightly sealed. However, any small bob will answer the purpose.

Accurate Finish Essential.

It is absolutely essential that the bob should be accurate—that is, its point must be exactly in the same axis as the line from which it hangs. Twist the line a little to rotate the bob; if it is true the point will turn without shifting its position, but if it is not true the point will wobble about in a little circle. A mercury plumb bob rarely is inaccurate.

The last job is to locate the "notch" which corresponds to the center line of a spirit level. To do this it is necessary to set the tool on a surface that is known to be absolutely level, or to set it up in a vise with its foot truly horizontal and the upright truly vertical. In most instances the latter is the easiest method, for a plumb-line can be used to line up the vertical edge. This must be done with extreme care and the line must be a very fine one; a piece of thread answers the purpose very well. Another method is to use the line of the tool itself, calipering from the outer edge of the

METHOD OF USING LEVEL

arched member to the line; but this is rather a difficult and delicate job.

When the tool has been leveled, with the plumb bob hanging so that it comes as close as possible to the top of the blade without quite touching, a fine mark should be made to indicate the point, and a tiny notch filed. Or a point may be attached to the blade, making, perhaps, a little better job of it; the point, of course, should project upward. The line used should be fine, tough and pliable, such as a bit of small high-grade fishing line.

Some Practical Applications.

Obviously if the tool is set on a level surface the plumb bob will come to rest with its point over the center of the notch in the blade, while if the surface is not level the point will be off either to one side or the other. This tool indicates only in the direc-

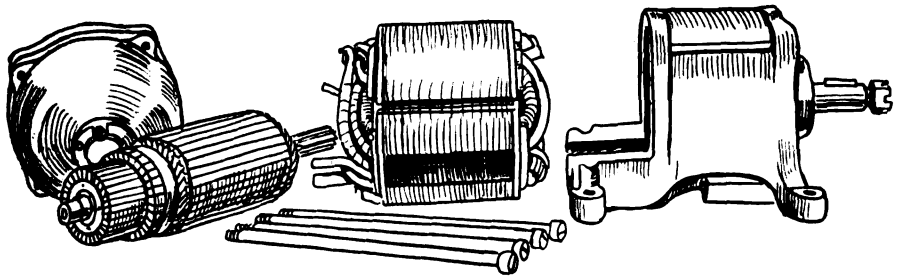
INFLUENCE OF SIMPLICITY IN STARTER DESIGN

Lack of Complexity That Permits the Average Man to Care for His Own Equipment—Knowledge Required for the Operation—Jesco Combined Lighting and Starting System as an Example in Point.

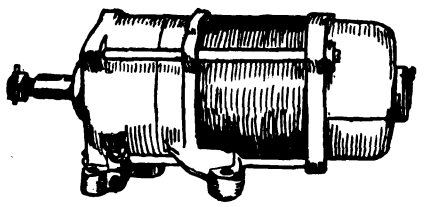
(This is the twenty-second of a series of articles designed to make clear the electric lighting and engine starting systems in use and to render easier their care and repair by the dealer and owner alike.)

There is this difference between the modern electric lighting and engine starting system and at watch, though both of them represent the result of highly specialized effort: The average person can sit down and in approximately half an hour take the lighting and starting system all to pieces, not counting the battery, of course, and in another half hour put it together again. There are mighty few persons who can take a watch to pieces and put it together again without having something left over; the watch would suffer by the proceeding. The lighting and starting system might suffer by the proceeding, and then, again, it might not suffer at all. At any rate, it has a better chance of surviving the ordeal without serious impairment of its efficiency than has the watch.



Adjusting the Circuit Breaker.

Happily, however, it is no more necessary to take the one apart than it is the other, though the distinction still remains that it requires a real expert to tinker with a watch, whereas the average amateur, aided by his brains, can tinker with his electric lighting and engine starting system without serious danger of crippling it. It is a rugged piece of mechanism as compared with the watch, though it may be just as delicately adjusted withal. But it has no tiny balance wheel and no hair-like springs, and though no man who values his timepiece will attempt to adjust it himself, for watches are not always adjusted by means of their regulators, it is no more difficult, as a rule, to adjust an electric lighting and engine starting system than it is to adjust a pair of suspenders. A screw driver may be needed, however, but a screwdriver is not a very complicated tool.



Probably the only part of the mechanism that ever will require adjustment, taking the word in its literal meaning which is to bring into such relations as will make for harmonious action, is the circuit breaker, that silent little watchdog of the battery and the dynamo which is eternally vigilant and which seldom takes a rest. Cases have been known, and in considerable number, too, where circuit breakers have lived out their useful life without any attention whatsoever. They have simply kept right on making the connection between the dynamo and the battery when the voltage of the former crept up and breaking it again when the voltage dropped despite neglect or wear or anything else. This, briefly, is the theory of such devices; they should operate indefinitely without giving cause for adjustment.

Most circuit breakers do operate for a year at least before they require cleaning and adjustment, and there are several reasons why this should be so. The first of them is that the mechanism is subjected to very little wear, for the good and sufficient reason that the circuit is made and broken only when the engine is started and stopped or when the speed is reduced 'way down below the legal limit, as when in heavy traffic. The second reason is that the latitude of movement of the parts is very limited and the parts themselves are designed with an ample factor of safety. Most manufacturers figure that it should not be necessary to touch their cut-outs for at least a year, and some of them are so sure of their ground that they strongly advise against making any alterations whatsoever; their instructions are, in the fewest possible number of words, "let it severely alone; if it shows signs of derangement send it back to the factory for adjustment."

The Jones Electric Starter Co., of Chicago, Ill., manufacturer of the Jesco electric lighting and starting system, is one of those which lays down the law pertaining to adjustments in no uncertain terms. The Jones company believes that after several years of experimenting and testing under very nearly every conceivable condition, it has evolved a system that will run almost indefinitely without any tinkering on the part of the owner. Hence, probably on the assumption (logical not so very long ago) that the average person, dealer or owner, is more likely to do damage than good in attempting to correct such slight troubles as are likely to occur with any system, the Jones company says, "let it alone," or words to that effect.

JESCO MOTOR-GENERATOR DISASSEMBLED SHOWING COMPONENT PARTS

MOTOR-GENERATOR ASSEMBLED

What to Do in Case of Trouble.

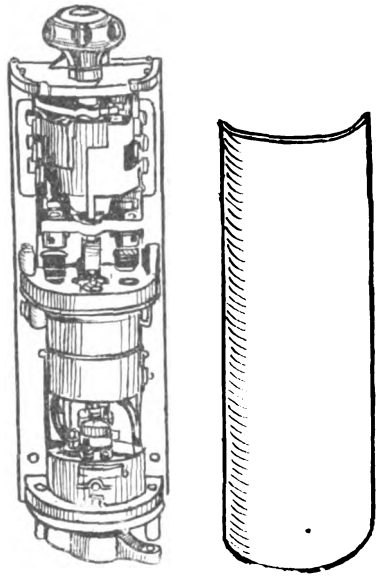
The manufacturer's wording is as follows: "Do not change any adjustments inside of controller without instructions to do so from the manufacturers." Obviously, it is the better part of wisdom to do as the manufacturer says—to write immediately the apparatus shows symptoms of laziness or inability to fulfill its mission in life and to be governed according to the reply. Then there is no chance of going wrong. But—and it is a very large but—conditions may arise, on the road, possibly far from human habitation, when adjustment of some sort is absolutely necessary in order to permit the car to be driven home. It is impossible to write or to wire to the manufacturer. Consequently, the owner must reply upon himself and no one else, at least temporarily. Ordinary common sense will help a whole lot, for as has been laid down in the twenty-one preceding articles on the same

Digitized by Google

subject which have appeared in Motor World, the cut-out is at once the easiest part of the mechanism to take care of and to adjust, and the part which can cause the most serious derangement of the whole system when it gets out of order and its disease is not cured at once. Incidentally, the Jesco circuit breaker is no more difficult to adjust than is any other. However, it must be remembered that great care, and judgment, are required in adjusting any of them.

Putting Cut-out Back to Work.

If nothing else can be done, the better plan is to disconnect the wires which lead to the battery. Naturally, this will prevent the dynamo charging the battery, but it also will prevent the battery discharging itself through the dynamo, and if there is any "juice" left in the battery it then will be available to light the lamps or to start the engine. If the cut-out contacts have become stuck together because of the presence of dirt or through weakness of the spring that holds them apart, the remedy suggests itself. If the spring has become broken, it often is possible to improvise a spring or to utilize that portion of the old spring that remains. If the spring is merely weak, its tension can be increased slightly, though only very little should be taken up or the dynamo will not commence to charge the battery until the car speed is considerably more than is allowed by the laws. Dirty contacts can be cleaned very easily with a very thin and very fine file, or a file can be made by glueing a couple of piece of fine emery cloth to opposite sides of a piece of thin Bristol board. Where nothing else avails, and the wires to the battery cannot be gotten at to disconnect them, a small piece of thick paper inserted between the contacts will prevent the battery discharging itself through the dynamo when the engine is stopped.



Combined Motor and Generator.

With a single exception, the whole Jesco system is very much like several other systems. Thus, for instance, the motor starter and the generator are combined in a single compact machine, thereby centralizing the apparatus and eliminating the necessity for separate drives to motor and dynamo. The single machine is connected to the gasolene motor through the intermediary of a "silent" chain running over a sprocket on the engine crankshaft.. It operates as a motor when the current from the battery is turned on and immediately the gasolene engine takes up its own cycle of operations it automatically is converted into a generator and without more ado promptly takes up its business of placing back in the storage battery the current drawn out for lighting for starting the engine; the armature speed is unaltered.

The rate of charging current delivered by the generator is regulated within certain limits by the demand upon it, regulation being an inherent characteristic obtained in the method of winding; no outside relays or other mechanical devices are employed. But, so that the operator may have some say in the operation, so to speak, a manually controlled method of varying the charging rate is provided.

Adjustable Charging Rate Provided.

For instance, if the car is used a great deal at night and very little during the day, the charging rate can be increased to make up for the added drain on the battery caused by continuous burning of the lamps. For normal conditions, when the car is used in the day and also at night, the charging rate can be made normal. If the car is used mostly during the day with very little night running and the engine is stopped and started comparatively little, a low charging rate will suffice and will be better for the battery. All of these different charging rates can be obtained quickly and easily by the operator without the necessity for him leaving his seat, with the aid of a tiny switch located beneath the controller; it may be seen quite clearly in the accompanying illustration. Moving the switch to the "high" side ensures a high charging rate, moving it to the left ensures a low charging rate, and if it is left in the center the rate will be normal for normal conditions.

JESCO CONTROLLER UNIT

This is one of the points of difference between the Jesco system and other systems. Another point of difference is in the arrangement of the starting switch and the light switches in a very small and compact "controller" which can be located almost anywhere on the car, though the preferable position is on the riser board between the front seat and the floor. In this position, it is right at the driver's hand and can be found, if need be, in the dark. The internal economy of the controller is shown by the accompanying illustration, which shows the arrangement of the switches.

Simple pressure downward brings two contacts together, thereby connecting the battery to the starting motor. Intermediate contacts are unnecessary, for the reason that the motor-generator always is permanently and directly connected to the gasolene engine. Rotating the knob until its pointer corresponds with indices on the top of the controller serves to make the necessary connections to light the various lamps in various combinations.

Operation of the Controller Unit.

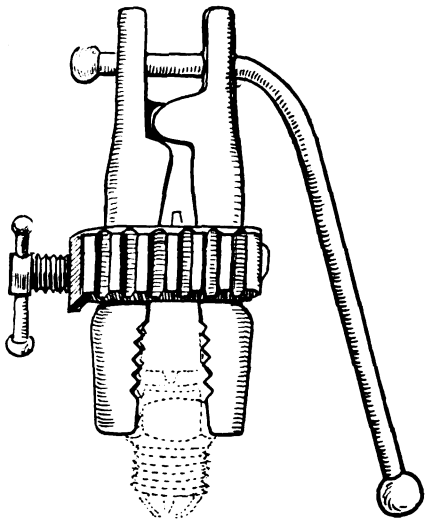
The lighting switch is of the drum type, and as it provides sliding contact it is self-cleaning and there can be no reason for poor connections. Similarly, as there is only the one moving part—the central drum—there is nothing in it to get out of order and it cannot be adjusted for the reason that there is nothing to adjust. The starting switch consists merely of two pairs of buttons of large area which are brought together when the knob is depressed. There is nothing in this part of the apparatus, either, that can get out of order, though it will do more good than harm occasionally to clean the contacts. For the purpose, a small, fine, flat file is to be preferred and care must be taken not to remove any more of the metal than is necessary to bring the contacts back to their original state of brightness. A certain amount of sparking is bound to take place when the contacts are separated, due to the heavy current drawn by the starting motor, and as a result a certain amount of oxide will form. A small amount will have no appreciable deleterious result on the operation of the switch, but if it is allowed to accumulate poor contact will result and the starter may not evince its customary vigor. But it is a very simple matter to remove it, and the operation can be performed in not more than 10 minutes.

Construction of the Generator.

The construction of the motor-generator is slightly unorthodox, judging solely by other motor-generators, in that the field piece instead of being solid, is made of laminated sheet steel securely fastened together. This system ensures maximum power for weight. Similarly, the armature is constructed of laminated sheet steel and the windings are held in place by wedges much after the manner employed for very

Digitized by Google

large and very heavy motors. The shaft is nickel steel carefully turned, tempered and ground true and the commutator is insulated with mica, no fiber or paper being used. The brush holders also are insulated with mica and the casing over the whole is formed of an aluminum alloy giving lightness and rigidity combined with water- and dirt-proof qualities.



In the care of the motor-generator unit, there is very little that need be done or that can be done. The brushes and brush holding apparatus and the commutator are exposed by removing one of the end plates, the operation being accomplished by taking out a couple of screws. As the brushes are composed of a special compound calculated to run without attention for from 20,000 to 30,000 miles, it is manifest that they will not require to be touched. In fact, it is part of the specific instructions of the manufacturer that they be permitted to remain undisturbed. Similarly, the brushes are self-lubricating, which fact probably will be reflected in the condition of the commutator after long service. After a season's use, it ought to be smooth and appear glossy and brownish, and if it does it should not be touched under any considerations. If, however, it appears dull and dirty and is slightly scratched, the sandpaper cure must be applied. Use No. 00 sandpaper and apply it lightly and for a time long enough to remove all the dirt and scratches. A heavy application is likely to do more harm than good.

In taking very nearly all the care required out of the owner's hands, Jesco engineers have not overlooked the lubrication problem, and inasmuch as lack of lubrication or too much oil or oil where there ought not to be any at all are three of the causes which contribute a great part of all the troubles that starting and lighting apparatus can give, the achievement of an automatic system ought to go a long way toward conducing to peace of mind. The armature is carried in imported annual ball bearings and consequently it requires very little oil. What little is required is supplied from a compartment in the case which holds sufficient oil for long periods. Incidentally, oil from the same compartment lubricates the drive chain. Hence, all that is required is to refill the reservoir from time to time, putting in as much fine, light oil as the compartment will hold. To take up the slack in the driving chain, an adjustment is provided.

Another distinctive feature of the Jesco system which should go a long way toward simplifying installation or subsequent overhauling or adjusting, is the use of wiring of different colors for different purposes. The wires that lead from the switch to the head lamps, for instance, are yellow and white, respectively; the wires that lead from the switch to the battery are black, blue, green and yellow, the battery being split into two units for convenience in charging and in distributing the lighting load. Other wires are of other colors, making it practically impossible for any one other than a color blind person to get the wires crossed and connected up wrongly.

Tool that Replaces Socket Wrenches.

One of those handy little tools that can be used for half a dozen different purposes has been brought out by the Raymond C. Agner Co., of Burlington, Wis., under the style Simplex wrench. One of the advantages of the device is its simplicity, which is so clearly shown in the accompanying illustration that extended description is

quite unnecessary. The tool takes the place of a set of socket wrenches, for many jobs, being adjustable to any size nut from 6/15 inch to 1¼ inches. It will handle any spark plug and can be used to hold the plug if, for instance, the plug has been removed while hot. In fact, it is an effective little hand vise. It works equally well with square or hexagon nuts, and may be used as a tap-wrench. The jaws are set to the right size by means of the screw, which also serves to clamp the jaws in position when the tool is used as a hand vise.

Conditions That Affect Cutting Edges.

The secret of a good cutting edge, whether it is on a cold chisel or a razor, lies in the correct angle and the proper hardness of the steel. Because a tool that is too soft will not take or hold a good cutting edge it does not follow that the harder the steel is made the better it will work. If the steel is excessively hard it will be brittle, and the thin edge will easily break away, leaving a rough, dull edge. If too soft the edge will bend over. Because a razor does not have to be forced hard, it can be made harder than an instrument that requires more weight to send it through the material it is designed to cut, and the edge can be thinned down. To go to the opposite extreme, a cold chisel, which is driven through metal by blows of a hammer, must be considerably tempered or softened and its edge ground to an angle that is very obtuse as compared with that of a razor. Almost any tool can be made too sharp—that is, so sharp that when put to its work the edge will either break off or turn over, according to the hardness of the steel.

Best Remedy for "Pocketed" Valves.

Continual grinding of the valves will in time cause the seats to be "pocketed"—that is, the seat will have worn away so that it is very much lower than it originally was, whereby the passing gases are throttled to a considerable degree. There are several ways of remedying matters. The simplest is to cut away the side walls of the pocket formed to allow of the free passage of the gases. Another method embraces threading the side walls and fitting a bushing in which a new valve seat is formed. The best method, however, is to cut a new seat in the side walls, which naturally will be of larger diameter than the original valve seat. Valves to accommodate the new seat then are fitted.

Alcohol as a Moisture Eradicator.

Although the greatest care should always be taken to keep moisture from the magneto, and in fact from each and every part that has to do with the ignition of the charge, when luck is "agin one" and water does creep in and prevent proper functioning, it should be remembered that alcohol has a great affinity for water, and because of this affinity it can be used to advantage to eliminate the very last traces of moisture. The magneto, or the wetted cables, as the case may be, should be immersed in the alcohol for a few moments and then fanned until the liquid has evaporated, and, evaporating, taken the moisture with it.

How Winter Starting May be Aided.

Stopping the motor by closing the air inlet to the carburetter results in the introduction of a very rich mixture into the cylinders and considerably facilitates matters when the time for starting arrives. The practice is to be recommended where a motor is difficult to start during cold weather.

Evolving an Emergency Screwdriver.

In a pinch, a right angle screwdriver can be very easily "rigged up" by placing a washer between two nuts on a bolt and locking it in place with one of the nuts. The protruding washer then is filed flat, so that it will not jump out of the slot in the head of the screw.

1,026,370. Vehicle-Wheel. Herbert J. Sewell, Detroit, Mich. Filed May 4, 1911. Serial No. 625,012. (Solid rubber tire mounted on resilient wheel felloe.) 3 claims.

1,026,374. Starting Device for Explosive-Engines. Ernest V. Swern, Denver, Colo., assignor of one-fourth to John H. East, Denver, Colo. Filed March 1, 1911. Serial No. 611,681. (Starting pedal belted to crankshaft.) 12 claims.

1,026,375. Driving-Gear for Vehicles. Judson R. Tibbles, Macedonia, Iowa. Filed Sept. 25, 1911. Serial No. 651,135. (Means for transmitting power to steering wheels.) 10 claims.

1,026,408. Wind-Shield. Frederick Schimper, Union, N. J., assignor of one-half to Alfred H. Koeller, Ridgefield Park, N. J. Filed Jan. 24, 1912. Serial No. 673,020. (Zig-zag type of windshield.) 2 claims.

1,026,424. Engine. Theodore J. Ashby, Perryville, Ark., assignor of one-fourth to J. E. Bell, Gordon, Ga. Field Oct. 5, 1911. Serial No. 653,080. (Atomizing nozzle leads directly into cylinder of two-cycle motor.) 4 claims.

1,026,462. Transmission Mechanism. Lewis E. Schlotterback, East Orange, N. J., assignor to L. E. Schlotterback Mfg. Co., a corporation of New Jersey. Filed Aug. 4, 1911. Serial No. 642,222. (Combined gearset and clutch.) 13 claims.

1,026,491. Carburetter. William Hull Browning, Rye, N. Y. Filed Nov. 2, 1910. Serial No. 590,328. (Fuel drips from needle valve onto inverted gauze cone.) 8 claims.

1,026,496. Vehicle-Spring. Arthur Collette, Brockton, Mass. Filed Dec. 18, 1911. Serial No. 666,401. (Helical spring attaching to component parts through a bell crank lever.) 4 claims.

1,026,504. Steering-Head for Vehicles. George Francis Garrity, Scranton, Pa. Filed Feb. 6, 1911. Serial No. 606,993. (Flexible grip for steering wheels.) 4 claims.

1,026,528. Starting-Crank for Hydrocarbon-Engines. Elias J. Patton, Michigan City, Ind., assignor of one-half to Jay P. Bergeron, Michigan City, Ind. Filed May 1, 1911. Serial No. 624,337. (Composite handle designed to be released in case the engine kicks back.) 9 claims.

1,026,534. Auto Cranking Device. Fletcher H. Waddill and Roy D. Fonda, Dexter, N. Mex. Filed June 28, 1911. Serial No. 635,725. (Pedal connected to crankshaft through levers and bevel gears.) 1 claim.

1,026,563. Internal-Combustion Engine. David H. Coles, Brooklyn, N. Y., assignor by mesne assignments to Requa Motor Co., a corporation of New York. Filed Oct. 16, 1909. Serial No. 523,044. Renewed April 1, 1912. Serial No. 687,773. (Two cycle motor with double diameter piston.) 9 claims.

1,027,409. Vehicle Wheel. John A. Etzold, Detroit, Mich. Filed Apr. 26, 1910. Serial No. 557,772. (Spokes in the form of strip springs). 2 claims.

1,027,434. Vehicle Wheel. Abraham Grove Reaman, Ringwood, Ontario, Canada. Filed Sept. 12, 1911. Serial No. 648,825. (Spokes formed of telescoping tubes with enclosed helical springs.) 1 claim.

1,027,447. Suspension Frame for Transmission Gear. Ernest M. Sternberg, Milwaukee, Wis. Filed Dec. 17, 1910. Serial No. 597,895. (Means for supporting gearset and connecting elements.) 3 claims.

1,027,450. Anti-Skid Device. Langdon S. Thompson, Jersey City, N. J. Filed Jan. 2, 1912. Serial No. 668,902. (Chain made of wire links.) 9 claims.

1,027,469. Muffler. Samuel W. Forney, Pulaski, Va. Filed Aug. 29, 1911. Serial No. 646,576. (Flanged end causes introduction of air which cools the gases.) 2 claims.

1,027,507. Vehicle Wheel. August Ferdinand Schulz, Milwaukee, Wis. Filed Mar. 17, 1911. Serial No. 614,982. (Strip steel springs between wheel rim and tread.) 1 claim.

1,027,508. Locking Cap for Tire Valves and the Like. Maximilian Charles Schweinert, West Hoboken, N. J., and Henry P. Kraft, New York, N. Y. Filed Jan. 22, 1907. Serial No. 353,544. (Notched disk engages with a spring and prevents turning.) 12 claims.

1,027,541. Anti-Friction Bearing. Henry Hess, Wawa, Pa., assignor to The Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 24, 1909. Serial No. 519,315. (Added raceway for the temporary reception of the balls.) 5 claims.

1,027,550. Inductor Magneto. Robert C. Lanphier, Springfield, Ill., assignor to Sangamo Electric Company, Springfield, Ill., a Corporation of Illinois. Filed Oct. 9, 1909. Serial No. 521,947. (Inductor type of magneto.) 8 claims.

1,027,647. Vehicle Wheel. Lucien R. Gruss, Chico, Cal., assignor to Auto-Compressed Air Wheel Company, Chico, Cal., a Corporation of California. Filed Aug. 8, 1910. Serial No. 576,231. (Helical springs enclosed in telescoping tubes which form the spokes.) 34 claims.

1,027,648. Engine Starter. Edwin Guthrie, Washington, D. C. Filed Mar. 1, 1912. Serial No. 680,913. (Cooling fan provided with buckets so as to form an impulse wheel against which water is directed under pressure to turn the crankshaft.) 3 claims.

1,027,649. Gas Engine Starting Device. William A. Hansen, San Francisco, Cal. Filed Dec. 13, 1910. Serial No. 597,025. (Auxiliary vaporizer provides mixture for the cylinders.) 11 claims.

1,027,680. Internal Combustion Engine Mastin L. Williams, South Bend, Ind. Filed Dec. 20, 1909. Serial No. 534,154. (Two-cycle motor with double diameter pistons.) 8 claims.

1,027,730. Motor Vehicle. Claud Hoadley, Gosport, Ind. Filed Feb. 11, 1911. Serial No. 607,924. (Means for transmitting power to all four wheels.) 8 claims.

1,027,733. Tire. Newton H. Horne, Kansas City, Mo. Filed July 19, 1911. Serial No. 639,385. (Tire made up of flat steel strips superimposed upon each other.) 1 claim.

1,027,736. Power Transmitting Mechanism for Motor Vehicles. Frank A. Kirby, Detroit, Mich., assignor to Kirby Motorcar Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 13, 1910. Serial No. 597,044. (Modified friction drive.) 7 claims

1,027,737. Lamp and Reflectors for Same. Charles Henry Kruger, Bradford and Clifford Whiteley Collinson, Baildon, England. Filed May 16, 1911. Serial No. 627,443. (Rays reflected by suitable mirrors.) 4 claims.

1,027,768. Carburetter. William E. Roby, Indianapolis, Ind. Filed Apr. 28, 1911. Serial No. 623,896. (Diaphragm operated on by the suction of the motor controls the fuel.) 7 claims.

1,027,798. Safety Cranking Device for Explosive Engines. John L. Beck, Springfield, Mass., assignor to The Auto Safety Crank Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1911. Serial No. 610,483. (Clutch for connecting the handle to the shaft.) 10 claims.

National 40

The Last Analysis—What Owners Say

"I have given my National car very severe tests and have found it absolutely satisfactory in every respect."

"I am free to say that I never had a car that gave me more real satisfaction than my National car has."

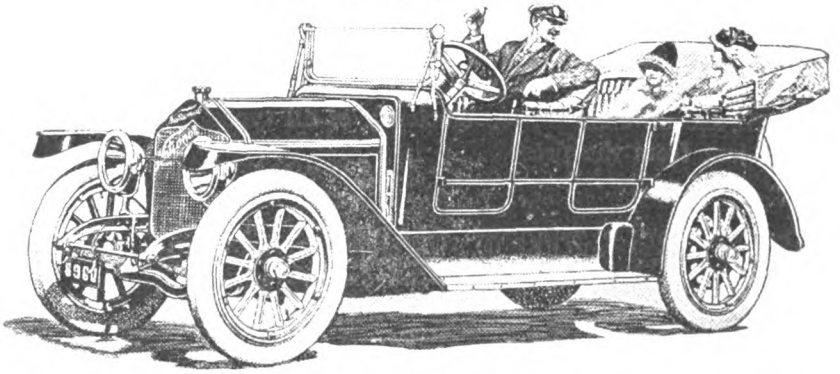
"This is the fourth car I have owned, but the National is the first car with which I have known the real pleasures of motoring."

"The National is as represented and has given me the best of satisfaction."

"It is a car of exceptional riding qualities. The National car is the one for those whose recreation is touring."

"The factory service is all that could be asked."

"If at any future time I purchase another car, it will be another National."



"I do not think that it is possible for me to buy anywhere in the United States, at any figure, any car that would give me any better satisfaction than I am getting from my National car."

"The car is satisfactory in every respect. Extreme flexibility and ample power make it a pleasure to drive this car; and after twelve years' experience in driving I appreciate the quality as well as the quantity of performance this car is capable of giving."

"My National 40 touring car is giving excellent satisfaction and seems to me to be all that could be desired in a first-class dependable machine."

NEW DEPARTURE BALL BEARINGS

Standard on 80% of 1913 Cars.

American Made for American Trade

The increasing use of ball bearings in motor cars is easily explained.

Manufacturers are not now required to buy ball bearings abroad. The New Departure has proved satisfactory in service, possesses all of the quality essentials and in every respect is an American masterpiece.

It is more completely anti-friction than any other type —the cost to operate the car mounted on these bearings is consequently less.

It is ten times as efficient as a roller bearing under same load conditions.

At the Boston Show, Space No. 430, Balcony, each of the three types of New Departure ball bearings will be shown, in slow action, with sections cut away for demonstrating anti-friction and other qualities.

Ask for copy of "Friction and Its Elimination"—a treatise on comparative efficiency of all types of bearings —just from the press.

REXO HORN

The Rexo Always Acts When Needed

The Rexo single-tone horn protects your own safety and that of other people because it always works—it never refuses to act just when it is most needed.

It gives out a strong warning note **every time** the button on the wheel is pressed, and commands **immediate** attention from pedestrians and drivers of other cars.

The Rexo horn is reliable because it is simple and free from complications. It has no parts to get out of order—it is substantial and well-built to stand the jarring and vibration of the car's motion—and it is finished so that the weather has no effect on its appearance or its operation.

Because the Rexo is so reliable and so trouble-proof we guarantee it for life.

The Rexo costs little for upkeep, as it operates with a small amount of current and can be connected to any 6-volt battery, an advantage in both cost and space saving.

This splendid horn takes none of your time or money for frequent overhauling or attention to lubrication or repairs. A slight adjustment once a year, made with a screw driver, is sufficient to overcome a season's wear.

The popularity of the Rexo is shown by the fact that more than 75,000 of these horns were sold for use on 1913 cars as **regular equipment.** Enormous sales to owners of cars make this the most widely used, low-priced horn made.

In addition to the Rexo, which sells for $8, complete, we make the Tuto, a high grade two-tone horn for $25, and the Tutoette, a smaller two-tone horn for $17.50.

TRADE MARK

TUTO HORN

The TUTO—The Horn for Careful Drivers

The careful driver who guards the safety not only of himself and the occupants of his car, but the safety of pedestrians and those in other cars as well, knows he must use a quickly responsive, attention-getting signal of warning.

The Tuto two-tone horn is the best safeguard that can be put on any automobile.

It is a complete signaling system. It electrically transmits two different and distinct sounds through a horn—one low and mild for ordinary usage, the other loud and penetrating for critical situations and emergencies. The degree of sound is regulated by the degree of pressure given the button located upon the steering wheel.

The Tuto is very reliable and absolute confidence can be placed on its perfect operation at all times It is free from trouble-making parts and requires no care or attention except perhaps a slight adjustment once a year to overcome the season's wear.

It operates by any 6-volt battery and costs little to maintain, as the low tone, which uses little current, is sufficient for most of the signaling done.

The Tuto horn is substantially and carefully built of the highest grade material and lasts for many years. Its satisfactory service and long life are insured by a liberal guarantee, in fact, a guarantee for "Life."

Finished in polished brass or nickel, plain black enamel, and black enamel with brass or nickel. Price, $25.00, complete with button and cord.

We also make the Rexo, a single-tone horn for $8, and the Tutoette, a small two-tone horn for $17.50.

MAXWELL MOTOR COMPANY

INCORPORATED

DETROIT, MICHIGAN

March 8, 1913

Gentlemen:-

There seems to be a lot of misunderstanding with regard to the manufacturing and sales policy of the new Maxwell Motor Company

This misunderstanding is largely due, doubtless, to a lot of misinformation that has been diligently circulated by competitors.

Their reasons for desiring to impede the progress of the reorganized company are apparent--they do not welcome such competition as we purpose giving them.

So their attitude is natural--and we don't mind.

We might have stopped a lot of the talk some time ago had we considered it worth while to tell our story. But we didn't.

It was not our time to talk--it was ours to work--to plan --to produce.

According to my idea, the time for the manufacturer to talk is when he is ready to deliver the goods. In times past we might have saved our office force a lot of work had we observed that rule. This time we have done so.

I think I know what you want.

I think you know we can produce that kind of a line.

That being the case, we have just gone ahead sawing wood --disposing of such plants and equipment as we could not use to advantage, and re-arranging and re-equipping the others preparatory to building cars in quantities.

Meantime, our engineers have been busy. They have had before them every car with which they will have to compete. Their task was to beat them all.

A big task, you'll say: Yes, but that's the kind of men who comprise this organization.

I figured--and I think the future will bear me out-- that our best plan was to keep quiet while the other fellow talked himself out.

Digitized by Google

He has shot his bolt. He has said all he can say--and now is ashamed of most of it. He's apologizing now--so we'll leave him in that position.

Meantime, we've followed Teddy's precept, "Step softly but carry a big stick."

Talk on our part would have accomplished nothing. We had no apologies to make--no goods to deliver--so why waste time talking.

What you as a dealer are interested in is a line of cars that will compete-- that will sell easier, and to which you can tie for permanency and profit.

Am I right?--all right. We have that line. And, our sales policy will suit you too well to suit our competitors!

I have always maintained that marketing the product is the big problem in business. Manufacturing is a problem in acreage--in capital, in machines, and men.

Most of my business life has been spent in selling. I think I know your problems.

And we need you to make this business a success.

We are going to need a lot of good dealers to sell the quantities of automobiles we are going to make. And we are going to need you more and more as the years go by--as competition gets keener and as manufacturing margins get smaller.

How are we going to get you-and keep you? That is our problem.

I think I know--I think I have worked it out so it will mean more to you to come with us, and more to you to stay with us than to go elsewhere or handle any other line.

Are you interested? Then read the series of open letters we will publish from week to week in this space. In those letters I will treat frankly and fully with every phase of the subject. Frankly and fully.

It's our time to talk now--for we have the goods and are about ready to deliver.

Yours very truly,

MAXWELL MOTOR COMPANY (Inc)

Walter E. Flanders.

President and General Manager.

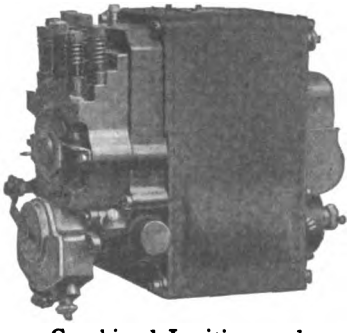
WESTINGHOUSE ELECTRIC

IGNITION LIGHTING AND STARTING

These Systems
Will Be Found on
Many of the Finest Cars
The Systems Using a Single Wire With a Ground Return



Lighting Generator

Ignition Coil and Switch

Illuminated Dial Voltmeter

Combined Ignition and Lighting Generator

Starting Motor

Lighting—Westinghouse Lighting Generators automatically charge the battery without the use of any relays, or solenoid-operated regulators. There are no adjustments to be made. The battery is at no time charged at an excessive rate. The generator is slow speed, eliminating noise and wear.

Ignition—A high power, single-unit coil, acting in conjunction with timing and distributing parts on the generator, furnishes high voltage for the spark. The battery operating alone, or with the generator, supplies continuous power. The interrupter gives automatic spark advance. The spark is uniform, regardless of speed.

Starting—Minimum weight of motor, and minimum discharge of the battery are features of the Westinghouse Starting Motors, permitting the use of a smaller battery and smaller charging generator.

Illuminated Dial Meters—Three inches in diameter, with black dials and white lettering to avoid glare. The lamp throws light on the dial only, no direct rays being visible. Ammeters or voltmeters supplied, but voltmeters used for standard equipments.

The Westinghouse Company has adopted the grounded system of car wiring, **using a single wire with a ground return.** The wiring is simplified; one-half the usual amount of wire is required; better insulation is secured; proper current carrying area is possible; installation cost is lowered; and troubles are reduced to a minimum. Complete parts are supplied for this grounded wiring, including lamp connectors and incandescent lamps with the **Center Contact.**

Electrical equipment that is the product of the Westinghouse Company, and backed by its long established reputation, warrants the consideration of every motor car manufacturer.

Westinghouse systems are proving the strongest talking points on high-grade 1913 cars.

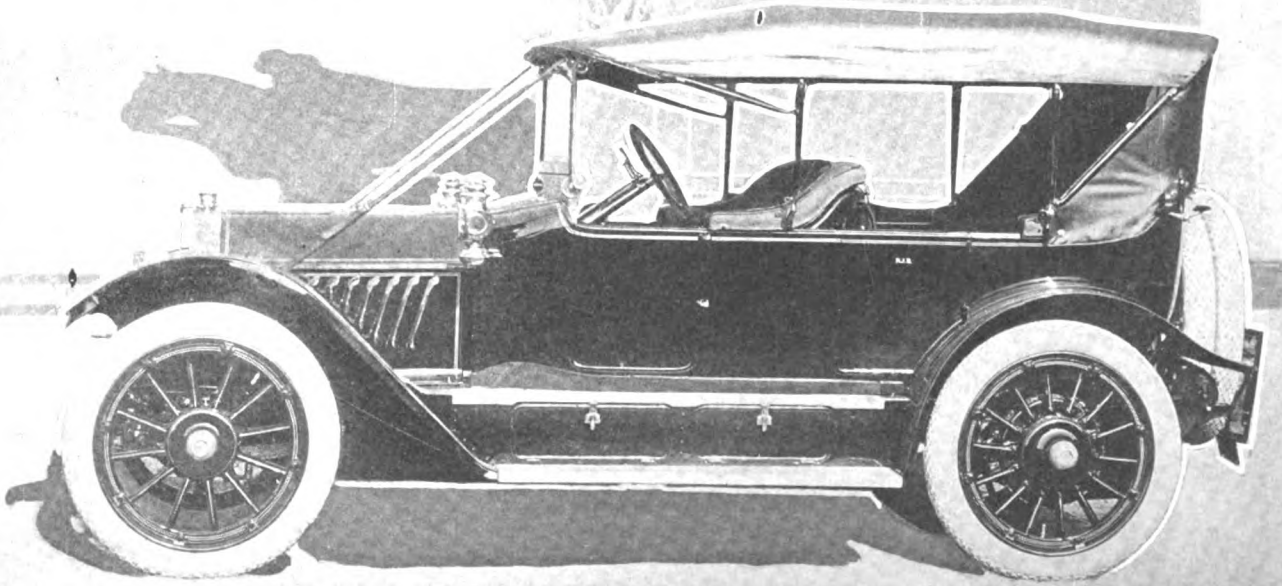
Springfield Metal Bodies

It is no longer the question—metal or wooden body, but simply, "What is the best metal body with which to equip?"

Springfield Metal Bodies are made by the originators of the metal body. This concern first grasped the utility and desirability of metal over wood. Today, after twelve years in the business, we hold the balance of high grade trade in aluminum and steel bodies, covering all types of pleasure cars.

Springfield Metal Bodies are standard on the majority of America's leading cars for the very good reason that they embody all the quality made possible by years of experience in the art of aluminum and steel body construction. This illustration shows one of the many body designs turned out by our factory.



Springfield Convertible Bodies

The Springfield Convertible Body, a later development, gives the owner a complete glass enclosed body in less time than an ordinary top can be raised and curtains adjusted. It is a subject for your investigation, if you are a dealer who insists on quality equipment.

Springfield Metal Body Co.

Springfield, Mass.

Regal

Advantages of the Underslung

The Seven Regal Reasons

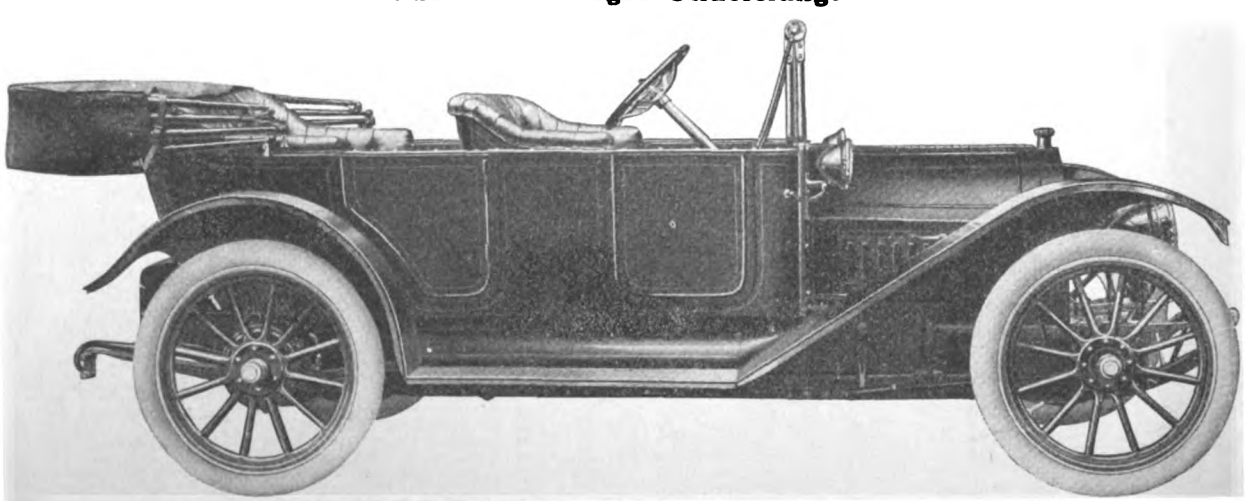
FIRST—An Underslung is the safest car. Its construction—the frame below the axle—brings the weight of the car nearer the road, yet allows full and even clearance. "Turning turtle" becomes an impossibility—skidding a rarity.

Second—Each Underslung has a "different" appearance. All the Regal Underslungs are attractive cars to look upon.. Their design embodies graceful lines, a low rakish appearance that is pleasing to the eye and the utmost in correct proportion. Every owner is proud of the car he drives. Dealers are frequently led to a sale through the appearance of the car.

Third—Their spring construction makes Regal Underslungs easy riding cars. The separate "halves" of each spring vibrate at different rates—overcoming the violent bounce. The flatness of each spring adds to its lateral strength and relieves the side sway.

Fourth—Regal Underslungs are economical on tires and in gasoline consumption. The rebound of all springs is upward, thus relieving the strain on tire casings. Low suspension means a straight line drive, and power developed in the motor is not wasted in the universal joints. Regal cars average between fifteen and twenty miles to the gallon of gasoline.

Fifth—The Underslung principle is a tried-out principle. It has been used for years on rapid moving conveyances and is now far beyond the experimental stage in the manufacture of automobiles. Eight successful firms are now engaged in the building of Underslung cars.



Sixth—We know how to design, build and finish Underslungs. In the field of the moderate priced car of this type we were pioneers and are today the largest manufacturers of this kind of car.

Seventh—Regal Underslungs are unusually good cars. Their dependable construction and conservative price makes them worthy your careful consideration. If intending the purchase of a car we ask you to learn more about the Underslung construction and Regal cars. Write us at the factory.

At the service of those who care to use them are special correspondents in our organization who will be pleased to answer further questions about Underslung construction. These Regal Reasons are only seven of several which we shall be pleased to give you. Address the Sales Department. Ask for Catalogue B.

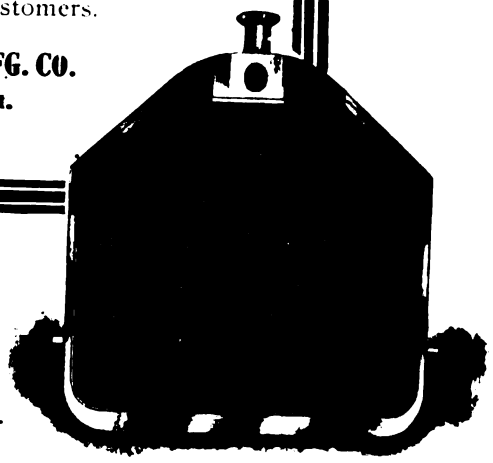
Livingston Radiator

Don't make water carriers out of your customers this summer

You, Mr. Dealer, and you, Mr. Manufacturer, are the men who ultimately must suffer the losses of both good will and patronage due to inefficient radiators. It's you who will be soundly berated when the water in the inefficient radiator boils away to such an extent that your motor power falls off perceptibly.

And you should be blamed—both of you—for Livingston Radiators will solve every single radiator problem—and Livingston Radiators will show a lower net cost to the car maker than any other radiator made. If you don't believe this write us—we'll prove it.



You, Mr. Dealer, must protect your customers

You, first, must bear the brunt of poor car service. Protect your reputation and your pocketbook by insisting on Livingston Radiators on the cars you sell. They mean more car life and more car comfort to your customers.

Insure Against Worry —Equip Your Car with the

FEPS CARBURETOR

CAN there be any question in the minds of motorists today that a considerable majority of motor troubles are traceable to imperfect carburetion? The carburetor has always been a source of dissatisfaction. Practically every other undesirable feature of motoring has been overcome, every other inefficient part perfected — but carburetors are today the big worry, and almost the only one, to the automobile owner.

At last there is "one way out," equip your car with the Feps Carburetor; experience the peace of mind that comes only with the knowledge of absolute certainty, learn for the first time the top notch efficiency of your car.

Why? Because the Feps will increase the power and speed of your motor in an astonishing degree, making it so intensely flexible that the slightest movement of the throttle finds immediate response. It will give a perfect gas mixture at all speeds with any grade of gasoline, and with all this, it will give you 25% to 50% increase in mileage per *gallon* of fuel. It also embodies a never-failing quick starting device. Yes; we know it sounds impossible; that's why we let you prove all these statements on *your car at our risk.*

Lancia

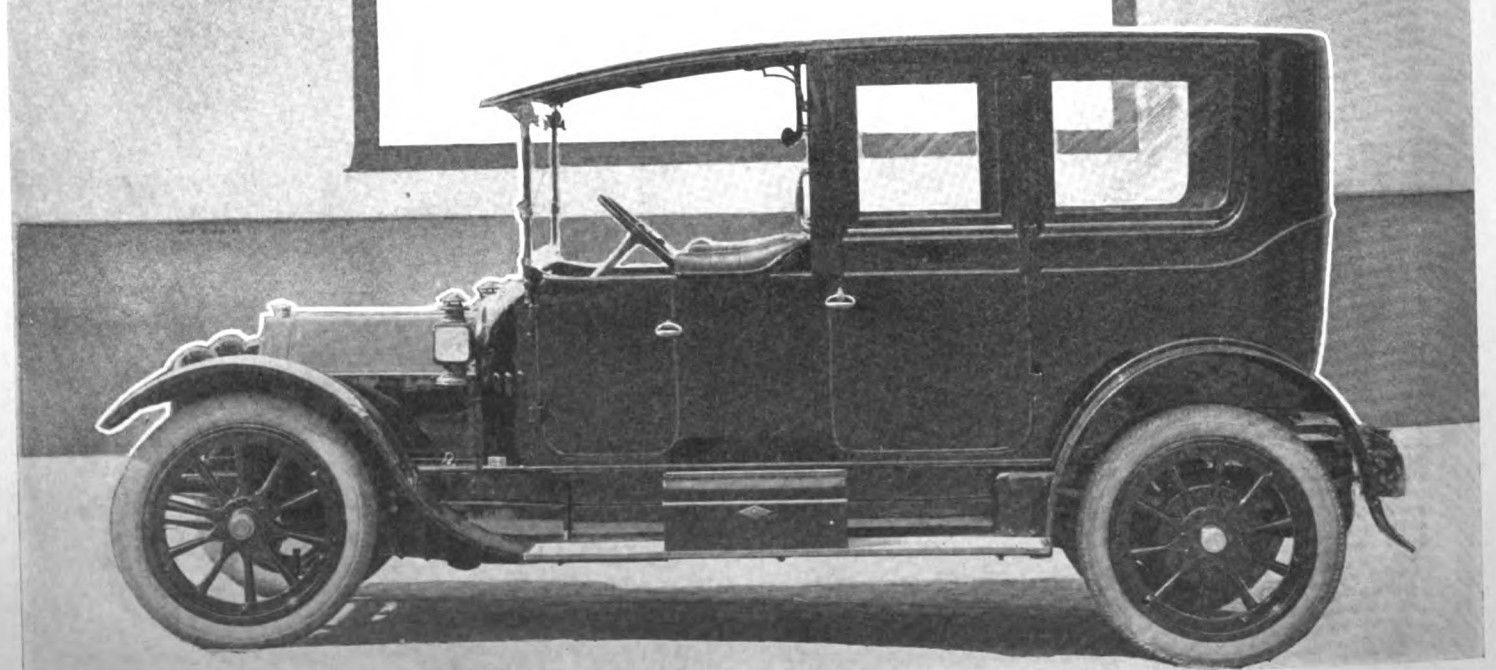
AMERICA'S FAVORITE FOREIGN CAR SOLD AT AMERICAN PRICES

Lancia cars, made in Europe, offer the American buyer every European point of superiority in material, engineering features, workmanship, design and finish—and it is conceded that car building methods which obtain on "the other side" are years in advance of American methods.

And American Dealers can sell Lancia cars at American prices.

You, Mr. Dealer, know that limited quantity production insures the ***personal attention*** of every man engaged in the building. Lancia production is typically European because it ***is*** limited. Here are no American cut and dried operations that produce quantity at the heavy expense of quality.

Lancia dealers use these arguments as the basis for selling arguments.



Car wise buyers who want European automobiles are quick to grasp and act upon them.

There is some choice territory awaiting dealers who are looking for that ***different and better car.*** Are you such a dealer?

THE ATTERBURY

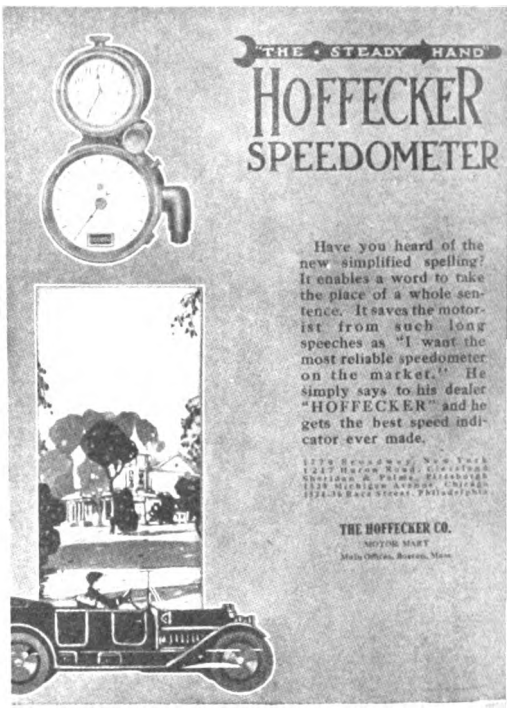
The United States Government has accepted Atterbury truck specifications, and placed orders with us for a large number of 1,500 pound delivery trucks, to be used in parcel post delivery work. Where the Government leads, it is safe for the ordinary buyer to follow.

Do you know there are certain accepted standard specifications covering material and workmanship, motors, frames, tires, etc., which are practically fixed for trucks of different sizes? We have not followed these specifications, **we have made these ourselves,** with the result that our trucks, as now produced, lay down the standard of truck construction in America.

These machines incorporate at least a dozen radical and advanced features which are now known to be absolutely essential to the successful operation of a motor truck. The illustration shows one feature of design that has already made Atterbury trucks famous; that is the exclusive Atterbury radius rod, with end buffer spring, so designed as to permit of two vertical and two horizontal motions, without throwing any strain upon the truck itself.

In addition to unequalled design, appearance, finish, accessibility of working parts and low cost of upkeep, we offer agents a complete assortment of machines from a 1,500 pound shaft drive delivery wagon up to and including one, two, three and five ton sizes.

Besides this, our prices are the lowest, and our discounts the best. Our campaign of advertising which is being directed to truck consumers has created a general responsive interest in the Atterbury line.



Join the "live" ones who have identified themselves with the most representative and best selling truck in America.

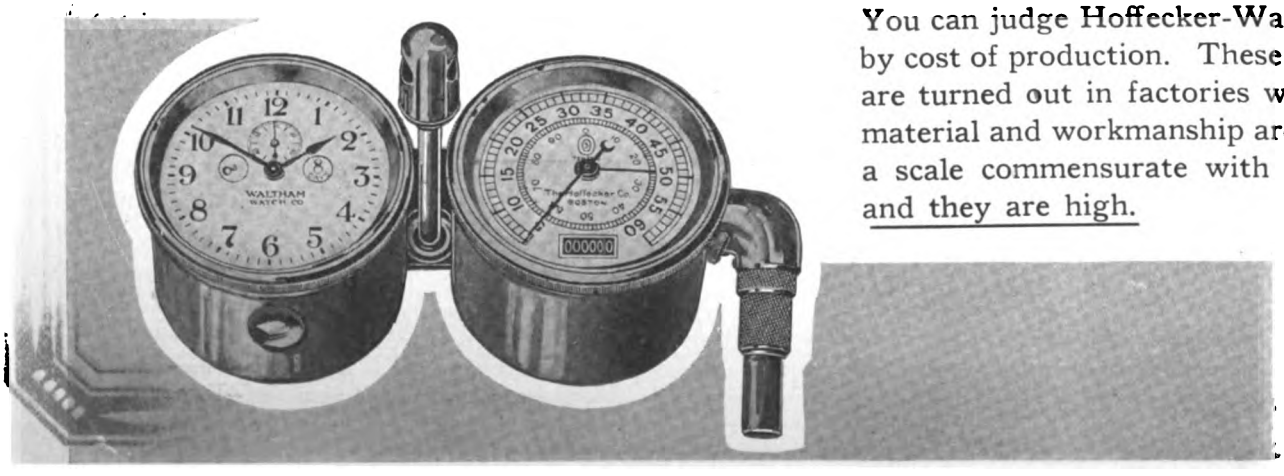
HOFFECKER SPEEDOMETERS

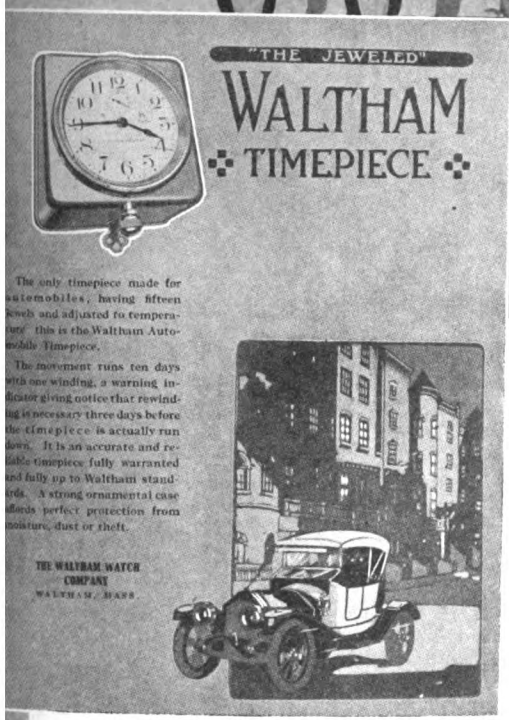


HOFFECKER IS TO A SPEEDOMETER WHAT WALTHAM IS TO A TIMEPIECE

Write to your car manufacturer—tell him to equip the cars you sell with Hoffecker Speedometers and Waltham Time Pieces—then you are selling another important item of service.

Hoffecker is to a speedometer what Waltham is to a time piece—both names stand for quality of product known and used wherever cars are found.

You cannot find better instruments anywhere at any price—and the fact that we can sell this combination to manufacturers at moderate cost emphasizes this argument.



You can judge Hoffecker-Waltham worth by cost of production. These instruments are turned out in factories where design, material and workmanship are paid for on a scale commensurate with our ideals—and they are high.

Digitized by Google

WALTHAM TIMEPIECES

HOFFECKER IS TO A SPEEDOMETER WHAT WALTHAM IS TO A TIMEPIECE

We subordinate selling cost (which is overhead) to cost of production, and to do this we concentrate our advertising in a group of publications that reach prospective car owners and owners only. A sample two-page spread of this advertising is shown here.

You, as a dealer, get the benefit of this advertising—it reaches the people to whom you sell cars and accessories.

The car manufacturer gets the noney we save (through economical, effective advertising) in the shape of the highest grade instruments at prices he can well afford to pay.

Again we say:

If you want to help your prospective car owner to exceptional speed and time recording service, then specify Hoffecker Speedometers and Waltham Time Pieces.

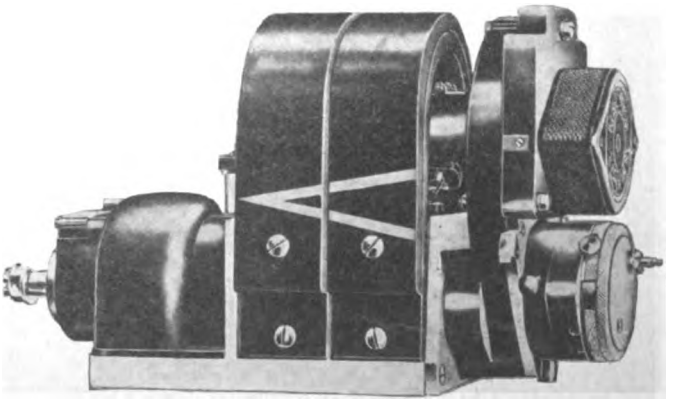
EISEMANN

Stop Shifting Your Gears When You Come to a Hill!

IF you want to know just how easily that engine will climb any ordinary hill without gear shifting and without pounding and knocking, see that an Eisemann magneto with automatic spark control is the source of ignition current.

In climbing a hill, the engine is bound to lose some of its momentum and slow down to a relatively low speed. This means retarding the spark, to prevent pounding and loss of power. Every driver, however, knows, that it is hardly possible with an ordinary manual controlled magneto to get a spark at full retard-position and low speed, when the engine works on a heavy hill—or in other words with the highest compression.



With the Eisemann magneto, with automatic spark control, when the engine slows down the governor automatically retards the magneto by changing the position of the armature in relation to the driving shaft. This solves the problem of correctly retarding the spark with the retarding of the engine speed, but it accomplishes this feat without diminishing the spark. As a result the automatic spark control magneto in climbing a hill ignites the full charge at exactly the right moment and with a maximum spark —consequently with maximum power resulting and the necessity of gear shifting eliminated.

WIRE WHEELS

AGAIN

At the Boston Show

McCue Wire Wheels proved the oft repeated statement that **Wire Wheels have come to stay.**

At this, the last national exhibition of the season, there were even more wire wheel equipped cars, more interest, more favorable comment thereon, than at any previous show.

Many dealers who read this advertising have seen these wonderful wire wheel expositions at the different shows—they will be responsible for forthcoming demand which is bound to follow. **Wire wheels are inevitable.**

You, Mr. Dealer, if you do not know what these wheels mean to the car and to the owner—write and ask us about them.

Digitized by Google

McCue Wire Wheels

make a good car still better—because they guarantee a resistance against radial and thrust shock far beyond the strength of the wooden wheel — because they are immune to deterioration from the evil influences of temperature changes and age.

They conserve economy in tire upkeep, reducing it as high as 50 per cent—increasing tire life by the same percentage, this due to the fact that their light rims minimize the swinging hammer-like blows inflicted on the rubber by the heavy rimmed wooden wheel.

Strength—tire economy—grace — these are the qualities you turn over to your customer when you specify McCue Wire Wheels on the cars you sell.

THE McCUE COMPANY
BUFFALO, NEW YORK

(S) STANDARD CO., SPOKES (S)

The strength of McCue Wire Wheels is exceptionally great—this because (S) spokes are used exclusively. (S) spokes are made by the Standard Company in Torrington, Conn., over the same standard set by the Coventry (England) Swaging concern. (S) spokes combine exceptional torsional and tensional strength, through the special drawn carbon steel used in their construction.

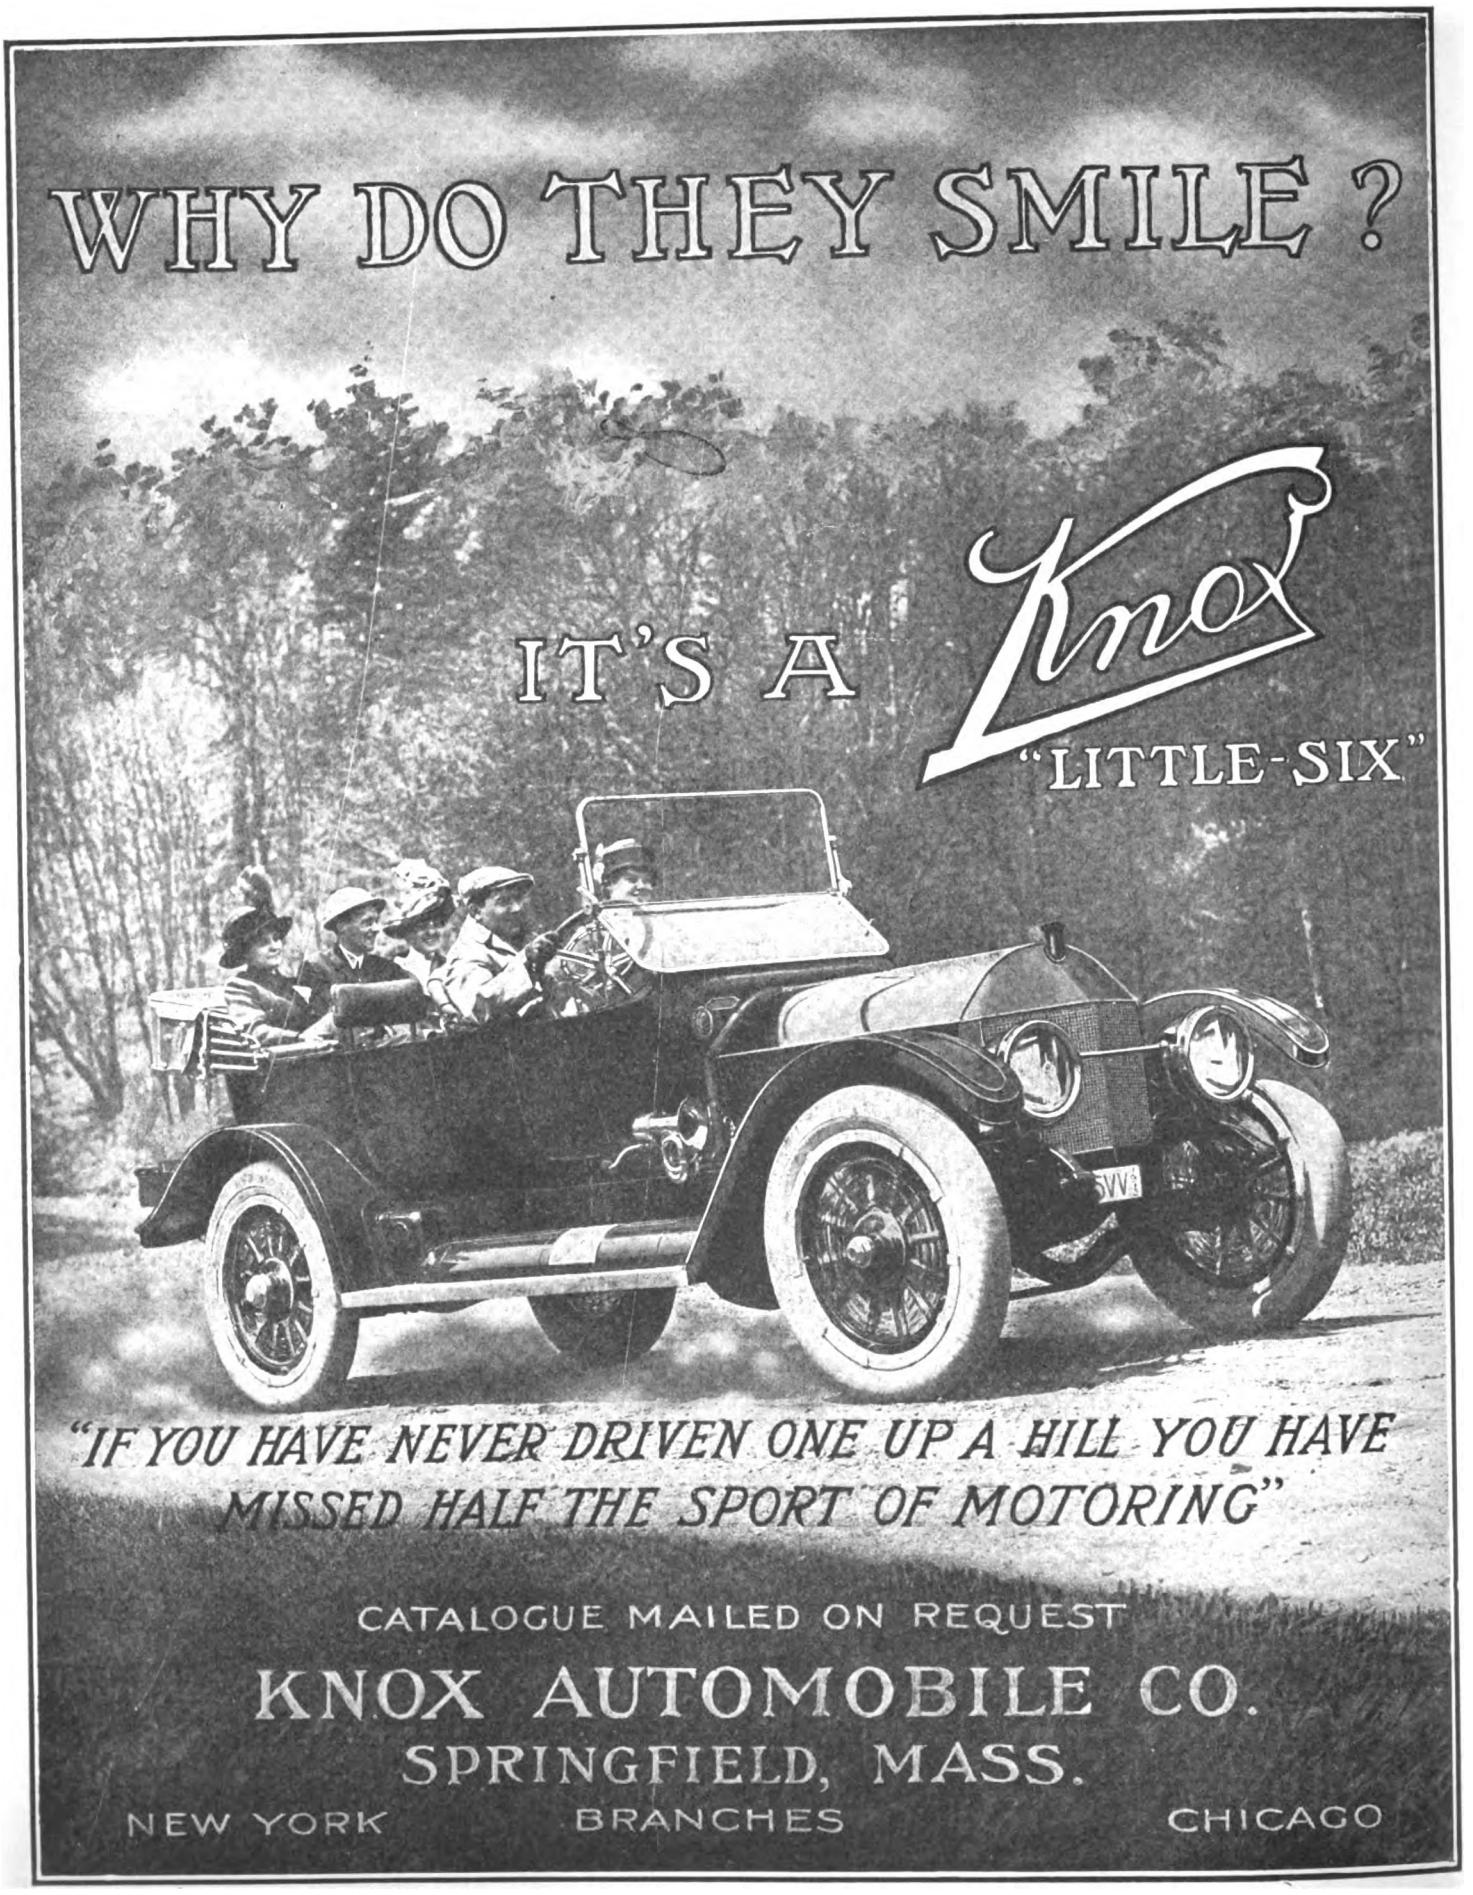
Hyatt Quiet Bearings



HEAT treating is an extremely important feature in the manufacture of the Hyatt Roller Bearing. By it the elastic limit or strength of the materials as well as the resistance to wear is increased over two and one-half times.

Uniform results are obtained by the standardization of materials—accurate temperature control—and the frequent testing of specimens to insure the prescribed physical results. These operations are under the personal supervision of competent metallurgists.

All Hyatt Flexible Rollers are now made of alloy steel and heat treated.

AMERICAN UNDERSLUNG

Electrically Started

The "American Tourist" (Type 34-A) $2350—Complete

Bigger Road Clearance

WHEN you drive an "American Underslung" you need not fear thank-ye-marms, country railroad crossings or road unevenness—no matter how serious, they can not strike a vital point.

The "American Underslung" has a road clearance of 12¼ inches. Contrast this safety with the fact that 85 per cent of all the domestic conventional overhung cars have an average clearance of only 11¼ inches.

But better still, the "American Underslung" with its greater road clearance has a straight clearance line. Neither the flywheel nor engine pan is forced to withstand any possible shock. It is taken on the sturdy, re-inforced "American Underslung" frame.

The men who have adopted the "American Underslung" have never gone back to the old-fashioned type of car. Greater clearance is one of their very best reasons.

Write us today for our interesting book, "The Advantages of Underslung Construction."

On Show Cars Goodyears Lead by 43.4%

At the 37 Shows held up to this writing, the average Goodyear lead has been 43.4 per cent.

In New York they led by 108 per cent. In Chicago, 118 show cars were equipped with these favorite tires. That broke every Chicago record on any make of tire.

For three years now Goodyear tires have led on cars equipped for exhibit.

But this year's lead is decisive. No other tire came within range of the Goodyears. At some leading Shows more Goodyears were shown than of all other tires together.

890,680 Go on 1913 Cars

We have contracts this year from 107 of the leading motor car makers. These contracts call for 890,680 Goodyear tires to go on this year's new cars.

That's enough to equip 222,670 cars. And that means a very large percentage of the 1913 cars.

Those facts show clearly what users demand, in the judgment of men who know.

12 Years' Demand in 1

Last year's output of Goodyear tires by far exceeded our previous 12 years put together. Yet that output failed to supply the demand by some 400,000 tires.

We now are building about 6,000 tires daily. That's enormously larger than the record output of any other plant in the world.

The demand from users is running at present twice as large as last year.

2,000,000 Salesmen

About two million Goodyear tires have now gone into use.

Those two million tires, on hundreds of thousands of cars, are the salesmen who sell Goodyears.

Make no mistake. Men in these days are not buying tires blindly. They are watching mileage figures. This sensational demand for Goodyear tires has come with the vogue of odometers.

A year ago, a million of these tires had gone out to tell their story. And the story they told, in the next 12 months, sold a million more.

Wastes That Must Stop

This simply means that men have decided to end rim-cutting waste.

Statistics show that 23 per cent of all old-type tires become rim-cut. All this loss is ended forever by Goodyear No-Rim-Cut tires.

It also means that men want oversize. No-Rim-Cut tires, in air capacity, are 10 per cent over the rated size. And that 10 per cent oversize, under average conditions, adds 25 per cent to the tire mileage. Men want that 25 per cent.

It also means that men demand tires built as well as men can build them. Legions know they get them in the Goodyear tire.

These are facts to consider. To you men who sell tires, and you men who use them, they are full of meaning.

This 14-year verdict, based on two million tires, is too overwhelming to be disregarded.

Write for the Goodyear Tire Book — 14th-year edition. It tells all known ways to economize on tires.

American Axles

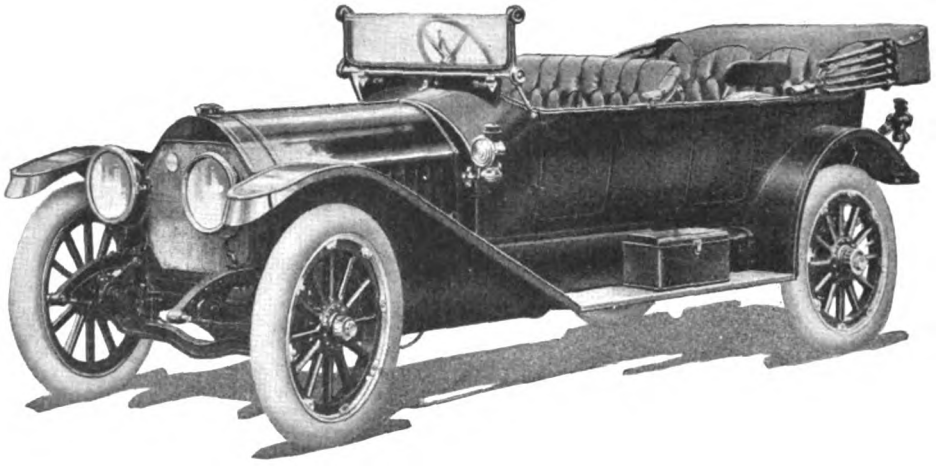
Their Essential Features Are Patented Features

Your car is only as safe as its axles are dependable.

The marvel of the motor car—its ability to make with security upon the rough highway the speed with which an express train glides on steel rails—is largely a matter of axle efficiency. Or—to make the analysis complete—of axle durability, axle silence **and** axle efficiency.

And these three requisites are dependent upon the correctness of the design; upon the experience of the workmen, and the mechanical equipment engaged in the execution of that design.

In the case of the *American Axle* the essential features of construction by which these three all-important characteristics are secured, are patented features.



Moreover, some of these patents are so fundamental and so inclusive in scope, that they may be accepted as literal definitions for axle constructions embodying the three qualities: durability, silence and efficiency.

Your car should have *American Axles* because their efficiency spells economy to you.

Comfort is engineered into the KisselKar

COMFORT is built into the KisselKar, not merely added on. The aim of KisselKar design has been to prevent the undue side lurches, sways and shock of road travel, not merely to modify them by spring action and upholstery.

Ride in a KisselKar—you will discover how this fundamental comfort, engineered into the KisselKar, plus all the added refinements of comfort, brings a new mildness to motoring—a steadier, lighter motion, free from sways and lurches—a riding ease that immeasurably surpasses ordinary ideas of car comfort.

KISSELKAR

The balance of the KisselKar makes it exceptionally sensitive to the steering wheel, and agile in picking the road. The flexible motor does away with the gear-shifting in ordinary driving, enabling you to drive as slow as needed, and climb hills on fourth geared up speed. "Thirty" $1700—"Forty" $2000—"Fifty" $2500—60 H. P. "Six" $3150. Electric started and lighted—fully equipped.

Write for big illustrated catalog—the 1913 KisselKar catalog illustrates the entire KisselKar line of pleasure models, and describes KisselKar design and construction. It will give you a new standard by which to judge automobile values.

KisselKar Trucks—1500 lb., 1, 1 1-4, 2, 3, 4, 5 ton Trucks, Delivery Cars, Fire Department Apparatus, Ambulances, Police Patrols, Hearses.

Kissel Motor Car Co., 159 Kissel Avenue, Hartford, Wis.

TIMKEN

BEARINGS & AXLES

Timken Tapered Roller Bearings on the spindle of a Timken-Detroit Front Axle for Pleasure Car.

THROUGH how many miles of road service will the bearings in your car stand up—and give *full* efficiency?

How long will they carry the weight of car and load, meet the hammer blows from jolts over rough city pavements and car tracks, from deep-rutted country roads?

How long will they keep shafts in alignment, keep gears in correct mesh, hold friction down to near nothing—save power?

These questions strike the root of the economy, the satisfaction and the safety of year after year operation of your motor-car.

The Timken Tapered Roller Bearing is the one anti-friction bearing whose principles of design enable the effect of wear to be wholly eliminated by adjustment without the least sacrifice of its efficiency.

Because it is adjustable perfectly for wear; because the line contact of its rollers enables it to support greater load and stand greater shocks; because its tapered construction enables it to meet end-pressure as well as vertical load—The Timken Tapered Roller Bearing is found in the wheels of the great majority of American motor-cars, both pleasure and commercial, and in many leading foreign cars as well.

The life-time efficiency of the Timken Roller Bearing is also one of the fundamental reasons for the success and wide adoption of Timken-Detroit Axles.

It will pay you to learn more about these essential parts of the car—bearings and axles. You can do so by sending for the Timken Primers T-7, on Bearings; T-8, on Axles. Sent free postpaid on request to either address below. Write today.

Auto-Liter

The "Auto-Lite" Starter and Lighter

Insures Simplicity, Efficiency, Service

THE "AUTO-LITE" electrical starting and lighting device has the great advantage of simplicity. There are but two units, operating on a 6-volt current. With the fewest possible parts—and these parts easily accessible and adjustable—our device presents no complications to puzzle those unskilled in electricity. The "Auto-Lite" is designed to be built into and as an integral part of the power plant and to operate constantly with the minimum of attention.

Our "Auto-Lite" lighting system has been in successful operation on thousands of cars for many seasons. It is always dependable for the most efficient lighting of the car. The "Auto-Lite" starting motor is built on principles shown to be perfect in the lighting system. It is a big, powerful apparatus which gives the maximum of service at all times. The two units are mechanically independent, sturdy of construction and absolutely dependable in action.

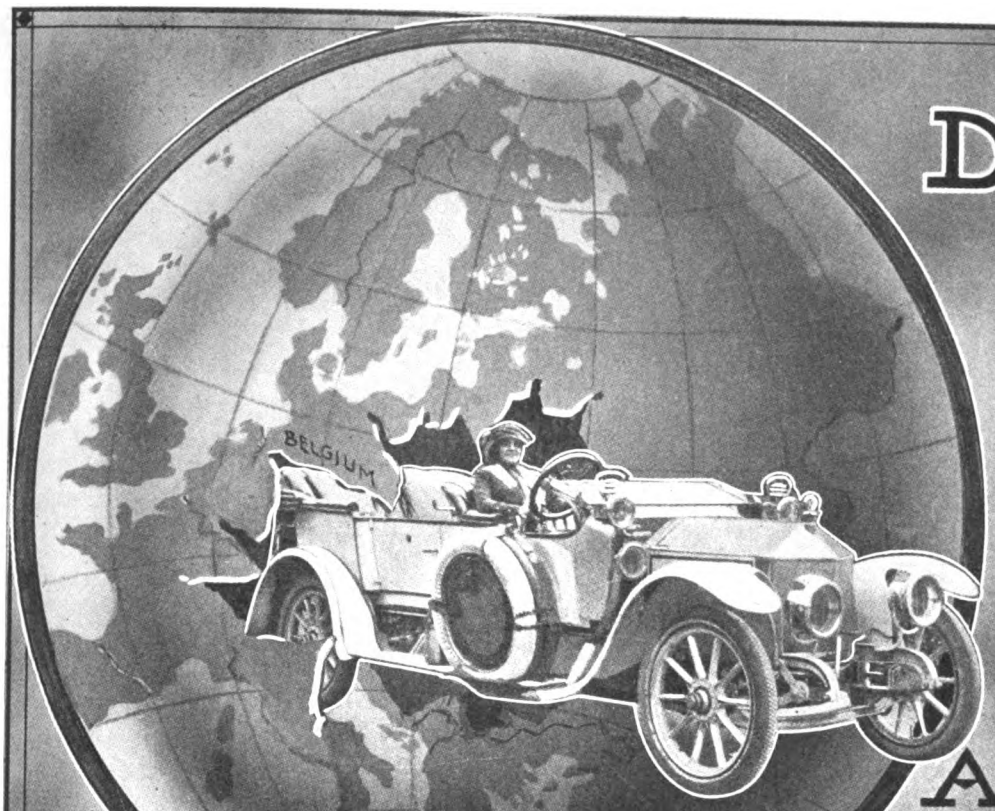
We have built up a business which warrants the strongest guarantee of service. Our plant, one of the largest in the country devoted solely to the manufacture of starting and lighting devices, is equipped with the most modern labor-saving machinery money will buy. We are ready at all times to produce an output which is denied to concerns with less complete equipment.

No demand is too large for us. We are turning out thousands of "Auto-Lite systems every week—and have facilities for greatly increasing our production instantly.

Manufacturers cannot but be impressed by our capacity for prompt service on large deliveries.

We have an attractive proposition for dealers on electrical lighting alone.

Every prospective purchaser should know our devices. He will insist that the car he buys be equipped with the "Auto-Lite" lighting and starting system.



We have illustrated catalogues and literature which are interesting and highly important to every manufacture, dealer and prospective purchaser. A post card request will bring them. Write today.

DEALERS—
Out of EUROPE Comes The Aristocratic
METALLURGIQUE

The Car You Can Sell to Men of Means and Fine Discrimination

¶ Are you in a position to locate and interest men of means, social standing and ability to recognize a car of impressive individuality, tremendous prestige and sterling performance.

¶ If so, we will use our sales organization to assist you in selling the Metallurgique, Europe's most talked of car and the one most sought after.

¶ This automobile is the product of fifty years steel making near Brussels, the Pittsburgh of Europe. In materials, it stands alone in quality. Its chassis is a revelation in construction that has given it a proven title, "The unbreakable car." In body design it is a model of sensational European originality that causes even the blase New Yorker to turn to admire.

¶ Metallurgique dealers have as sales ammunition a list of owners that reads like the International Social Register. Write for our beautiful brochure—it will introduce us.

AND GOOD SELLING TRUCKS

You have to know Kelly Service before you can really appreciate what it means to our dealers.

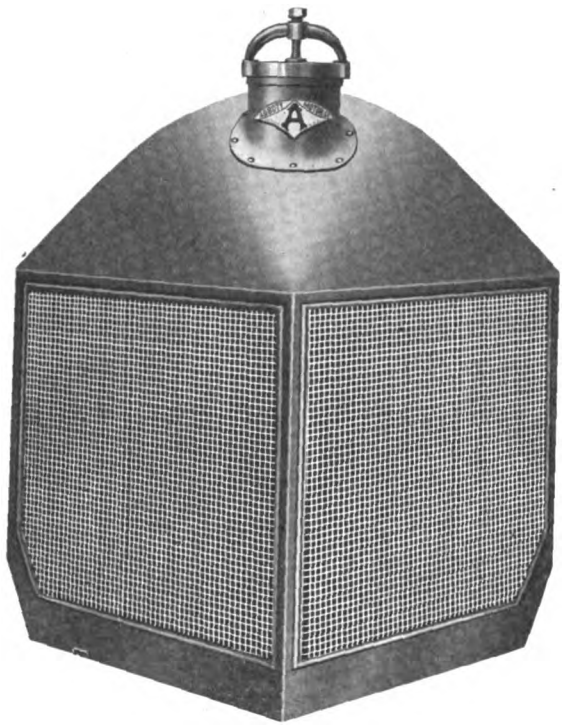
Fourteen Factory Branches To Help Our Dealers

We operate well equipped factory branches and service stations in the following centers:

Boston	**Dallas**	**Chicago**
Providence	**San Francisco**	**Kansas City**
Worcester	**New York**	**Seattle**
New Haven	**Philadelphia**	**Los Angeles**
Cleveland	**Birmingham**	

Kelly

No matter where you may be, you are within a few hours of one of these service stations. The necessary parts or equipment for any repairs can be dispatched to you from one of these stations without an instant's delay. The advantage of this plan can be seen readily by those who have often been compelled to wait many days for repair parts to be sent from a distant factory.



Let's get acquainted. Let us tell you more about our proposition.

Fedders Radiators

In producing an all-round efficient car, latter day engineers take no chances on parts that will "lay down" under hard work.

Inefficiency of a part is not blamed on the maker of it—but on the maker of the car.

Fedders Radiators are standard on a large line of America's best known cars and trucks that are making good.

Fedders radiators cannot clog—the square tube design makes this impossible. They cannot boil, under correct working conditions, because all four sides of each tube are surrounded by water—free circulation and ample cooling are insured.

In case of injury, the damaged tube or tubes can be immediately replaced right in the garage—no time lost and money wasted in sending the whole radiator back to the factory.

Fedders radiators are made of copper—the best heat conductor known among the baser metals.

We specialize on square tube design but we have ample facilities to build in large or small quantities over your specifications. Our engineering department is at your disposal.

BUFFALO, N. Y.

Don't Put Poor Cable Into a Good Car

Your reputation
The reputation of your salesmen
The reputation of the car you make or sell

All of these depend upon the future performances of each car.

The difference between cars that require little attention and cars that require constant attention often lies in the kind of cable used in wiring the car.

Ask the manufacturer or owner of any of the high class cars why he doesn't have lighting, ignition or other troubles. He will tell you it is because his car is wired with

Packard CABLE

Saves rewiring of cars.

Once you put Packard Cable into a car the wire question is settled during the life of the car. You won't have any "comebacks" from dissatisfied owners.

Dynamo, magneto and spark plug manufacturers know that efficiency in lighting, starting or ignition depends upon good wiring. To protect themselves against failures, they specify and use Packard Cable.

If you're not using Packard Cable, write today for new circular describing 27 different kinds of cable to suit every automobile need.

INTERLOCKS

Stop Your Tire Trouble

Don't fail to write today for Interlock Booklet which tells all about Interlock Inner Tires, and gives many new tire pointers of the greatest value to every automobile owner.

The Interlock is an **extra inside tire** which is placed between the outer casing and the inner tube for the purpose of so strengthening the tire that it will be proof against blow-outs, rim cuts and punctures and therefore last twice as long.

When you know what Interlocks will do, you will want them. They give you practically **two tires on each wheel** with no change in the looks of the tire. With this combined strength you can run your car an entire season without delays, annoyance or tire trouble, and save about half your tire expense.

In writing for catalog, please give name of your local dealer, and if he cannot supply you with Interlocks, we will send you the name of a nearby dealer who can.

To Dealers: A good proof of the efficiency of Interlocks is that they are regularly stocked in all sizes by the largest jobbers who only handle quality goods, such as Beckley-Ralston Co., Chicago; Bi-Motor Equipment Co., and Iver Johnson, Boston; Fry & McGill Co., Denver; Motor & Machinist Co., Kansas City; Chanslor & Lyons, Los Angeles; Western Auto Specialty Co., Iowa City; Ia.; Gibson Automobile Co., Indianapolis and all leading automobile supply houses.

We Want Live Dealers Everywhere

THE ATWATER KENT SYSTEM

has been silently advertised from coast to coast by the best advertising anybody can have—the personal endorsement of over 100,000 satisfied users.

The Atwater Kent Ignition System has no rival—no competitor. We do not use this term metaphorically, but in a lilteral sense.

You may think this is the use of a trite advertising term, but in this case it is nothing of the kind. That the Atwater Kent has no rival in the opinions of thousands of users has been demonstrated to us many-many times, when in ordering their new cars they have specified that they should be "Atwater Kent equipped."

There are a number of other good reasons for the superiority of the Atwater Kent System over the magneto and it is worth your while as a jobber, dealer or prospective buyer, to weigh and consider them carefully.

Space forbids our mentioning these reasons even briefly, but if you will write for our booklet "D," we will give you some of them. Then ask the motorist who drives a car "Atwater Kent equipped" and he will tell you the others, and the best reasons why the Atwater Kent Ignition System has no real rival.

WARN THE PEDESTRIAN, BUT DON'T TERRIFY HIM

Mr. Motorist: It's up to you to give persons on foot a courteous, friendly warning—a danger signal that will not rob them of their presence of mind and **literally drive** them **into danger** instead of **away from it.**

There is just **one, sure, courteous** way to signal your approach—one warning that is distinct and musical, that cheers and does not frighten—that never fails at the crucial moment—

The AERMORE Exhaust Horn

—the Horn Harmonious—

Why You Should Have An Aermore

The Aermore is the only **self-cleaning** exhaust horn on the market. Four melodious tones are blended in perfect harmony. The signal can be regulated by the pressure of your foot to give a low, soft warning or a loud, unmistakable note—not always **musical.** The Aermore cannot clog!

A Quick and Easy Seller for Dealers

The popularity of the Aermore is national. Its distinctive tones and its low price have created an ever-growing market for it. Order one full size Aermore Horn today. We'll rush it to you. Demonstrate it to your customers. The demonstration **will sell the horn.** The Aermore is made for automobiles, motortrucks, motorcycles and motorboats.

15-inch size, $12; 12-inch size, $11; 10-inch size, $10; 8-inch size (for motorcycles), $7.50

How the Broc Backs Up Luxury

The Luxurious BROC ELECTRIC

THE Luxurious Broc is made luxurious by its easy-riding qualities, the elegance of its trimmings and appointments, and its beauty.

But besides these there are other —and exclusive — features contributing to safety, comfort and satisfaction. Here is one of them:

It is impossible for a Broc to have power on and brake on at the same time. Application of the brake automatically and unfailingly shuts off the power. Warning signals, blow-out fuses and such devices are therefore unnecessary, and no reliance is placed on the driver's memory or caution.

Both forward-drive and rear-drive models, with individual stationary or revolving (pedestal) front seats. Several seating arrangements to choose from. With forward-drive, wheel steer or lever steer is optional.

Exide or Ironclad Batteries

A Steel Truck Body That Is Worthy of Your Truck

BUDD All Steel BODIES

represent the last word in the art of truck body building. They stand for security, strength, safety and sanitation. Made entirely of steel, they insure your truck a body that is practically indestructible—a body that will stand up under the most severe wear and tear—giving the maximum service—needing the minimum repair. They cannot split or warp. They will not rot and crack. They eliminate fire risk completely, and by reason of their light weight are relatively easy on tires.

Whether you manufacture commercial vehicles or simply contemplate purchasing a truck, it will pay you to investigate the Budd All Steel Body today. Let us furnish you estimates and full information.

If You Need Motor Lamps You Need This Catalog

We want you to write for the Solar Catalog before you decide on your motor lamps, for this is the most complete line of lamps on the market. Solar Lamps have been preferred by most motorists for the past fourteen years because of their brilliancy, their style, their strength and their several exclusive advantages —their special short focus lead glass lens mirror reflectors—the patented double ray light projection (in the Solarclipse), giving two distinct fields of light, for city and country use—the new black finish, the only such finish that's proof against heat and moisture—and other features that other lamps lack.

To fail to see Solars before you buy is to fail to include in your consideration the very finest lamps in existence. Solars are made for oil, electricity, gas and in combination, for pleasure cars, motor trucks, carriages, motor boats and airships. Write for catalog now—while you think of it. (136)

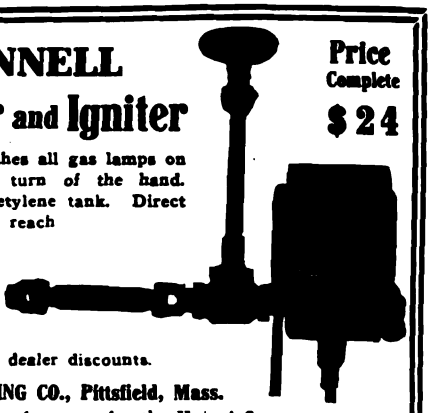
We Work With You for

BETTER VALVES

You can add to your own knowledge of automobile building our long experience in making valves.

Expert knowledge of welding processes enables us to use in each part of the valve the material which is best fitted for that particular service.



We make these valves to your own design but we can frequently offer suggestions which will improve the valve and increase the service which it will give.

Send blue prints for quotation.

All Acknowledge the Necessity of

Weed Chains

In one of those friendly after-luncheon, get-together parties at a well known city club, eleven men drifted on to *the subject of the dangers of skidding.* With a single exception each of the eleven owned an automobile, and each had a *skidding experience* to relate, and each felt that *his particular predicament* was the most sensational and startling.

While nearly all had experimented with the various so-called anti-skid tires, and acknowledged their possible advantages when new—yet when it came right down to "Brass Tacks," there wasn't a single one in the crowd but admitted that for *sure results,* for the **absolute elimination** of every possibility of skidding, **nothing even approximated Weed Chains,** and nothing took their place. Every one of the ten owners carried at least one pair of Weed Chains in his car.

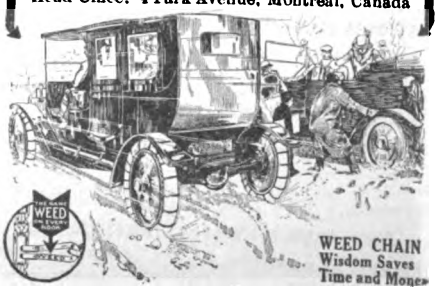
Go where you will, put the question to any assembly of automobile owners you like and the verdict will always be the same—"*We can't get along without them.*"

Weed Chains are universally acknowledged to be the only anti-skid device that can be absolutely relied upon at all times and under all road conditions.

Weed Anti-Skid Chains

Insure perfect control and safe, comfortable driving

Don't foolishly pride yourself on taking chances in order to prove your bravery, or to demonstrate your ability as a driver.



Weed Chains are an **absolute necessity** on both rear tires and to doubly guard yourself against accidents and to make steering comfortable and easy, put them *on the front wheels too.* They cannot injure tires because "they creep"—occupy very little space when not in use—applied in a moment without the use of a jack or other tool.

Take precaution now When you know the folly, the danger, the peril there is in driving your car over icy, slippery, snow covered roads and pavements, why not fully equip your car today with **Weed Chains** for your own protection and for the safety of other road users.

Factories: Trenton, N. J. Branches in Principal Cities

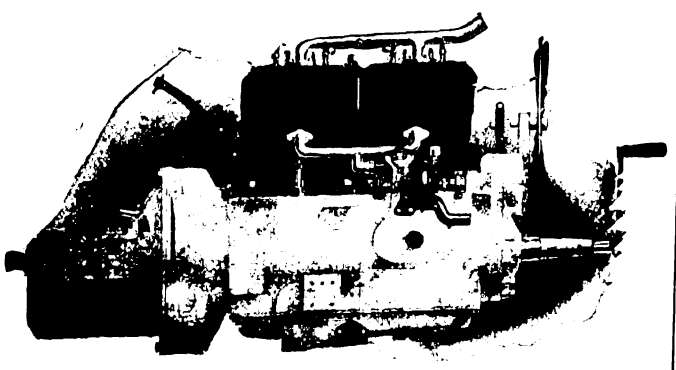
Digitized by Google

THE CRANK SHAFTS AND CONNECTING rods in Ergon Motors are made by the Driggs-Seabury Ordnance Corp., of Sharon, Pa., who have one of the largest and most finely equipped forging plants and machine shops in the United States.

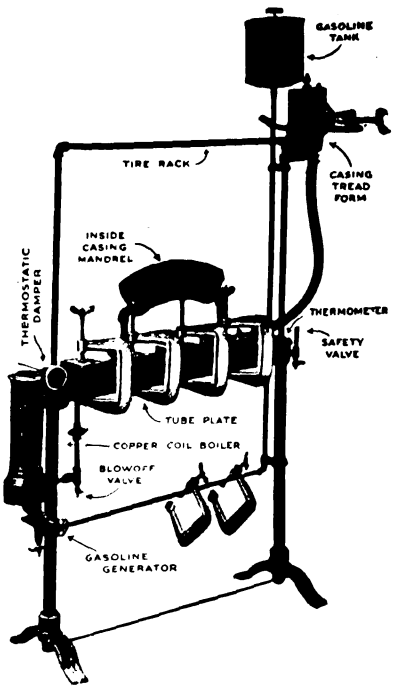
The crank shafts have three bearings of genuine die cast babbitt. All bearings are adjustable and exceedingly accessible.

The connecting rods are made from a tough high grade alloy steel and the big end is provided with a genuine babbitt die cast bearing dowelled into the rod and cap.

The cap is so constructed and held in place that it is impossible for it to become loosened.



Brass shims take care of adjustments of these bearings.



We stand ready and willing to demonstrate by a test that there is no superior to this new line of four-cylinder, four-cycle, long-stroke, water-cooled motors.

Please let us hear from you today with a definite statement of your wants.

HAZARD MOTOR MFG. CO.

Rochester **New York**

Complete Vulcanizing Plant $45

A great money maker for the garage or repair shop. Handles every practicable kind of tire repairing, from a tube puncture to largest casing blow-out.

No experience necessary for its successful operation as the steam pressure is automatically controlled and held at the vulcanizing point. Steam generated in a copper coil boiler that heats the machine as quickly as you can get a tire ready.

Place your order at once and insure delivery of your vulcanizer when you want it. Be prepared to handle the most profitable part of the repair business.

SHALER

Vulcanizers for Every Requirement of Motorist or Repairman

The Shaler line of vulcanizers, the only complete line in the world, includes models to suit everyone from the motorist with one small runabout, to the garage handling large quantities of work. A full line of electric, steam and gasoline heated vulcanizers. Write for catalog today.

Vitalized Rubber Diamond (No Clinch) Tires

answer your demand for More Mileage

Our chemists have discovered a scientific process of toughening pure rubber.

All types of Diamond Tires are now made of Vitalized Rubber—a flint-like, road-resisting rubber that retains all the young, lusty vigor of the pure gum with no loss of elasticity.

Perfect 3-Point Rim Contact

an additional Diamond advantage

Our Engineers have built up and torn down thousands of experimental tires in an effort to produce a perfectly constructed tire that would give you the "More Mileage" tire you have demanded.

In Diamond Tires today each thread of fabric and every ounce of rubber is combined to give the greatest strength and resistance, with no unbalanced strains at unsupported points—*Perfect 3-Point Rim Contact.*

Add to these advantages the No-Pinch Safety Flap for inner tube protection, and, if you wish, the now famous Diamond Safety (Squeegee) Tread and you have absolutely the most satisfying tire money can buy.

Cross Section of Diamond Safety Tread Tire

Be a Diamond Dealer

If you are not a Diamond Dealer—now is the time to get in line. There is a Diamond Branch near you—get in touch today.

So this time buy Diamond Vitalized Rubber Tires—you can get them to fit your rims at any of the

25,000 Diamond Dealers always at your Service

THE Klaxon is the out and out choice of 150,000 motorists. It meets the spirit and intent of all warning signal laws. Not only those of States requiring an "adequate" signal but—more important still—the recent ordinances of Chicago, St. Louis, Los Angeles, Newark, Dallas, and many other cities which rule more specifically against the out-of-date bulb horn by demanding an "abrupt sound, sufficiently loud to be heard under all circumstances."

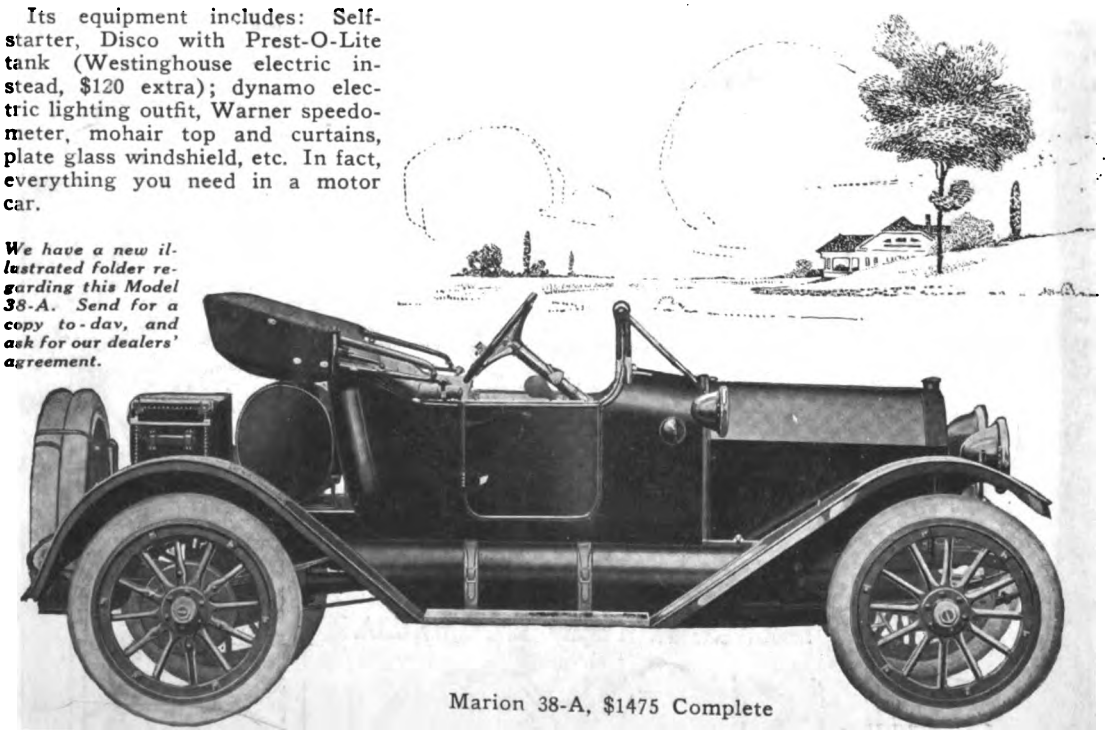
Marion

The Touring Roadster
A New Marion Model



THIS fore-door touring roadster at $1475 is the most advanced type of two-passenger car. It has unusual dignity and class in lines and color—just the car for professional men, business men and women.

It has recently been added to the Marion series to answer a definite demand from motorists wanting a Marion car similar to the famous "Bobcat" with an enclosed body. Since its appearance we have had to double our expected production through press of retail sales.

It has made a hit everywhere. It has the same chassis as the popular 37-A touring car, with quiet and powerful 30-40 h.p. motor; English steel springs; deep upholstering; option of colors—brewster green, deep wine, or cardinal red body with black running gear.

Its equipment includes: Self-starter, Disco with Prest-O-Lite tank (Westinghouse electric instead, $120 extra); dynamo electric lighting outfit, Warner speedometer, mohair top and curtains, plate glass windshield, etc. In fact, everything you need in a motor car.

We have a new illustrated folder regarding this Model 38-A. Send for a copy to-day, and ask for our dealers' agreement.

What They Say About the GRAY & DAVIS

6-Volt Electric Starter

28 car builders are now using this Starter—these 28 manufacturers indorse this system in the highest terms. Read a few of these opinions—the plain, unvarnished answer to the question—"Which is the *best* Starting device?"

"Absolutely the best that can be had—a starter that has proven itself 100% efficient in thousands of tests."

Paige-Detroit Motor Car Company

"The Gray & Davis Electric Starter and Electric Lighting Dynamo are the best to be had regardless of price."

Pope-Hartford Company

"The most powerful ever used."

Peerless Motor Car Company

"Admitted by authoritative engineers to be without a superior."

Lozier Motor Company

"The National's policy to use nothing but the best, resulted in the adoption of Gray & Davis electric starter and lighting systems."

National Motor Vehicle Company

"The Stearns equipment is absolutely complete. It includes Gray & Davis Electric Lighting and Starting system."

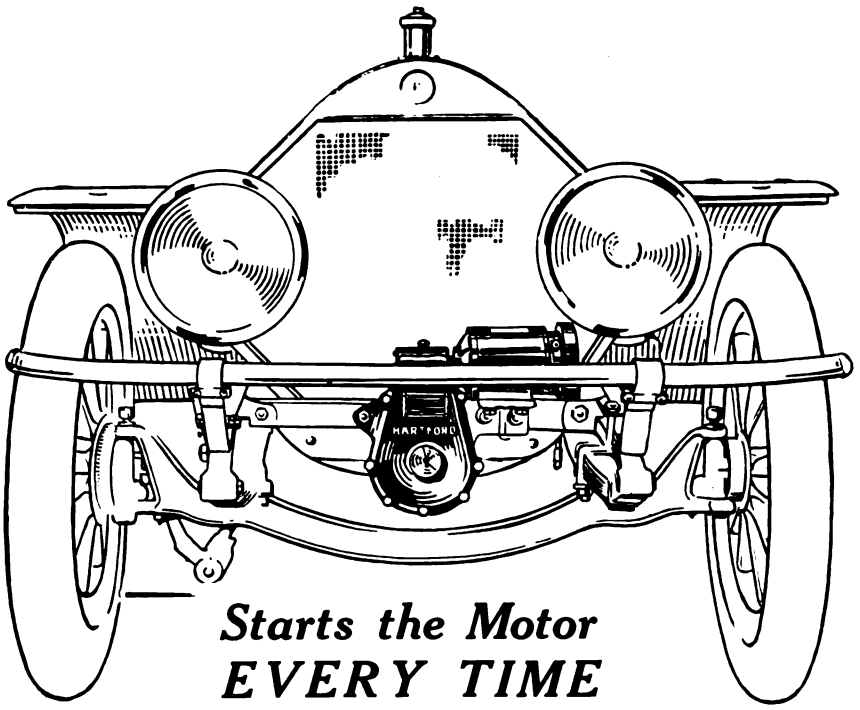
The F. B. Stearns Company

"It appeals to the man who is car wise because it is easily operated and does not complicate ignition."

The Motor Car Mfg. Company

"We have installed your electric starter on our Maritime 'Six' with extremely satisfactory results, and are satisfied that we made the wisest choice possible."

The Maritime Motor Car Co., Ltd.



"The most noticeable advancement for 1913 season is the adoption of the Gray & Davis Electric Starter."

Starts the Motor EVERY TIME

Starts the biggest motor with a press of the button—starts it unfailingly, positively every time. Yet the

HARTFORD ELECTRIC
Starting and Lighting
SYSTEM

is the smallest and lightest ever devised. Invented by Mr. Edw. V. Hartford three years ago, it has been simplified to the extent of six compact, light weight parts that make it the only system applicable successfully to **any** car, old or new. Most powerful motor invented utilizes a flywheel on its armature shaft—spins a 90 H. P. engine at 118 revolutions a minute. Most efficient generator invented—produces most power in proportion to size. Smallest battery equipment for a starter—six cells and adequate current constantly on hand for starter and lights.

A new factory with an annual capacity of 90,000 starters is now in operation, assuring delivery on all orders. Send for descriptive matter.

"Firestone"

Clincher Cushion Tires for Electric Cars

For Easiest Riding. Because a rubber has been perfected and a shape designed for these tires which afford the buoyancy of air.

For Greatest Economy. Most miles per battery charge. Extra resiliency gives extra traction and dual tread cuts down road friction.

Also Most Miles Per Dollar for tires. The superior toughness of Firestone rubber and a design which allows the tire to wear to the rim will save you many dollars.

Firestone tires never *give out when half worn,* because it is not necessary to weaken them in order to obtain resiliency. The easy ride is in the rubber.

Firestone Electric Tires give the final touch of superiority and efficiency to any car.

Service Stations in all localities.

Foremost Electric Car Manufacturers use them as regular equipment. More and more dealers and owners are demanding them. Get Book telling the facts.

THIS year we will sell 40,000 Overlands. We sold 400 in 1908; 4,000 in 1909; 15,000 in 1910; 15,000 in 1911; 28,000 in 1912. Year after year Overland sales grew until they now reach the 100,000 car mark; year after year Overland value has increased. Our prices have steadily decreased as our production cost has been lowered. Elsewhere you must pay $1200 for a similar car.

BERGDOLL CHARGED WITH MAKING "FAMILY" PAYMENTS

Creditors File Bankruptcy Petition After Sheriff Had Levied on Factory—Bergdoll Millions Not to the Rescue.

Although popularly supposed to have behind it the millions of Bergdoll wealth, a petition in bankruptcy against the Louis J. Bergdoll Motor Co., of Philadelphia, Pa., was filed on Monday last, 17th inst., the petitioning creditors alleging, among other things, that within the last 30 days the company had made preferential payments, all of a family nature. According to the complaint, these payments amounted to $33,120, as follows: $31,220 to Erwin R. Bergdoll, $400 to the C. A. Bergdoll Coal Co. and $1,500 to the North Broad Street Realty Co., in which the Bergdoll family is also interested.

The petitioning creditors and the amounts of their claims are as follows: W. C. Rhodes, Inc., $1,696.85; Chilton Co., $505; Castle Lamp Co., $1,772.85.

The first rumbling in the affairs of the Louis J. Bergdoll Co. were heard last summer, when the Westinghouse Machine Co. brought suit and obtained judgment for $104,000 for breach of contract, the Bergdoll interests having repudiated a contract for 1,000 motors after 600 of them had been delivered. The suit, however, was settled satisfactorily after the judgment had been entered. But a minor creditor precipitated matters last week by suing out a writ of execution on a claim of $1,500 and before the execution was satisfied Frank Fanning, at one time the Bergdoll sales manager, levied on the available funds. Seizure of the contents of the Bergdoll factory was made by the sheriff, a notice of the levy and sale having been posted on Monday last. The filing of the bankruptcy petition followed soon after.

While the Bergdoll car acquired a reputation, it really never cut a very large figure in the industry, but the wealth and prominence of the Philadelphia Bergdolls, who operate an immense brewery and are large property owners, served to give it quick financial standing which was assisted by the reputation which at least two of the Bergdoll boys had achieved in road racing.

The Louis J. Bergdoll Motor Co. itself was capitalized at $300,000, the principal stockholders beng the four Bergdoll brothers—Louis J., Erwin R., P. A., and Grover Cleveland Bergdoll, the latter of whom has had trouble of his own.

Fort Wayne Negotiating with Salisbury.

If Fort Wayne (Ind.) will subscribe for $300,000 worth of stock in a new million dollar company which will be organized under the laws of Indiana, the Salisbury Wheel & Mfg. Co., of Jamestown, N. Y., will pull up stakes and re-establish itself in the Indiana city. The proposal was made last week at a mass meeting of the business men of Fort Wayne, who took the offer under advisement pending a visit of an investigating committee to the Jamestown plant. In addition to the latter, the Salisbury company operates factories in Greenville, Pa., and Peru, Ind., and if the deal goes through all of them will be consolidated at Fort Wayne.

Stewart Retires from Active Service.

J. K. Stewart, of the Stewart-Warner Speedometer Corporation and the J. K. Stewart Mfg. Co. of Chicago, has retired from active participation in the affairs of both of those concerns. He, however, will retain his holdings and will be directly represented by C. B. Smith, the treasurer and general manager of the Stewart-Warner corporation. Nels Gross, the Eastern sales manager of the latter company, has relinquished that office and removed to Chicago, where he has become sales manager of the J. K. Stewart Mfg. Co., which produces die castings, and out of which the Stewart speedometer business originally grew.

ENTIRE INDUSTRY IS UNITED IN CHAMBER OF COMMERCE

Merger of N. A. A. M. and Board of Trade Formally Consummated—Clifton First President—Broad Charter Obtained.

The Automobile Chamber of Commerce is in being and Charles Clifton, of the Pierce-Arrow company, is its first president. On Monday last, 17th inst., its certificate filed under the membership corporation law of New York was approved by the Supreme Court, and yesterday (Wednesday) it was formally organized with Clifton, nine-time president of the Association of Licensed Automobile Manufacturers and the Automobile Board of Trade, as its head.

The other officers chosen were: Vice-president, W. C. Leland (Cadillac); secretary, R. D. Chapin (Hudson); treasurer, George Pope (Pope).

There are 14 directors, comprising the president, vice-president and secretary, but not the treasurer, and the following: C. C. Hanch (Marmon), Hugh Chalmers (Chalmers), Sidney D. Waldron (Packard), Samuel T. Davis, Jr. (Locomobile), Windsor T. White (White), William E. Metzger (Flanders), H. O. Smith (Premier), Albert L. Pope (Pope), George W. Bennett (Overland), L. H. Kittredge (Peerless), and H. H. Rice (Waverley).

They will hold office until June 4, 1914. Thereafter the annual meetings will occur on the first Thursday after the first Wednesday in June.

In the strictest sense the Chamber of Commerce is a new and distinct organization; in the trade sense it represents the long-pending merger of the Automobile Board of Trade and the National Association of Automobile Manufacturers, both of which will now proceed to go out of existence, leaving the Chamber as their successor. Practically they are as good as dead, but legally they will remain alive until their

Digitized by Google

affairs are wound up, which will be done gradually and will not be completed for several months.

The welding of the N. A. A. M. and the Board of Trade into the Chamber of Commerce represents the first time that the industry has been united since the day the Selden patent and the Association of Licensed Automobile Manufacturers, which was built around it, appeared on the scene. Soon after Henry Ford smashed the famous patent two years ago and made the A. L. A. M. a misnomer and required that it become the Automobile Board of Trade, sentiment was freely voiced that the time had arrived when there no longer was room for two national trade organizations, both working along the same lines, but it was William E. Metzger, president of the N. A. A. M., who first arose in open meeting and expressed official belief to that effect. Thereafter events moved gradually, and a year ago, after Metger had been re-elected, his expressed opinion took form in the shape of the appointment of conference committees by both organiations looking toward consolidation. They encountered more small stumbling blocks than was anticipated, and it was not until about three months ago that the last of the obstacles was removed, despite the fact that practically all members of the Board of Trade were also members of the N. A. A. M. and that the two associations occupied adjoining offices in New York and the dividing line was otherwise not very deeply or distinctly marked.

In the distribution of officers incident to the formation of the Chamber of Commerce, the Board of Trade received the presidency and treasurership and the N. A. A. M. the vice-presidency and secretaryship, although in each case the officers were members of the board of one organization or the other.

The scope of the Chamber of Commerce, whose corporate life is fixed at 25 years, is wide, its charter defining its objects as follows:

The particular objects for which the corporation is to be created are:

To foster the interests of those engaged in the trade or business of manufacturing automobiles and all other self-propelling vehicles;

To reform abuses relative thereto;

To secure freedom of its members from unjust or unlawful exactions;

To diffuse accurate and reliable information as to the standing of merchants and others dealing with members, as to all inventions, patents, processes or devices designed or intended for use in, upon, or in connection with such vehicles and the manufacture thereof, as to the state of the art relative thereto, and as to the condition and development of the trade in which the members are engaged, in the United States and foreign countries;

To procure uniformity and certainty in the customs and usages of such trade;

To promote the construction of better highways;

To advocate the enactment of just and equitable laws affecting members;

To settle differences between members;

To promote a more enlarged and friendly intercourse among business men engaged in such trade or dealing with persons engaged therein;

To acquire by grant, gift, purchase, devise or bequest, to hold and to dispose of such property as the purposes of the corporation shall require, subject to such limitations as may be prescribed by law, including inventions, letters patent and processes, or rights thereunder, for the benefit of its members and not for pecuniary profit.

Woman Dealer Gets Her Money Back.

One hundred and twenty-eight dollars which Mrs. Emma Thies, of Aurora, Ill., deposited as a forfeit when she signed up as a dealer for the W. H. McIntyre Co., of Auburn, Ind., were ordered returned to her last week by the Municipal Court in Chicago, where she sued the automobile manufacturing concern for the sum; after taking the agency she sold one car and then broke the contract, demanding her money back, which was refused. The transaction occurred a year ago, but suit was not brought until the recent Chicago show, when she attached one of the cars exhibited by the company. A counterclaim of $2,000, entered by the company, was withdrawn.

Benjamin Becomes Alco Sales Manager.

C. Arthur Benjamin, of Syracuse, N. Y., has been appointed general sales manager of the American Locomotive Co.'s automobile department and already has assumed the duties. He succeeds to the vacancy caused by the resignation of Harry S. Houpt. Benjamin, who is one of the oldest and best known dealers in central New York, where he handles Packards and Hudsons, will retain his interest there, having placed a manager in charge of his Syracuse establishment. Benjamin is no stranger to sales managers' duties, however, having served twice previously in that capacity.

Republic Quits Grant Patent Fight.

Although the Republic Rubber Co. of New York kept up its fight in the United States District Court for the Southern District of New York against the Consolidated Rubber Tire Co. in the latter's suit for infringement of the Grant imbedded-wire solid tire patent, No. 554,675, the Republic company surrendered last week in the midst of the suit and a decree was ordered in favor of the Consolidated. The Republic company had cross-examined the Consolidated's witnesses in court and so conducted itself that it was believed it would fight the case to a finish, but when it came time for it to produce witnesses and show its defense it decided otherwise.

Its decision was influenced by the decision of a similar suit against the Republic Rubber Co., of Youngstown, O., in the Federal courts in Chicago, where the matter was thrown out of the District Court by Judge Kohlsaat but was won by the Consolidated when an appeal was taken to the Circuit Court of Appeals. The suit in New York was practically the same as the one in Chicago, and with failure in the Western litigation the Republic company had comparatively little hope of success in New York. The decree directs an injunction and an accounting of the profits made by the New York Republic agency through the sale of the tires which infringe.

Maxwell Declares Branch Bankrupt.

By order of its board of directors(a petition in bankruptcy yesterday (Wednesday) was filed against the Stoddard Motor Co., 5 West 61st street, New York City. Its stated liabilities amount to $253,238, all of which is due the Maxwell Motor Co., which owns the Stoddard company. H. M. Bronner, former manager of the Stoddard branch, also has a claim against the company, which is not listed as a liability as the amount is unknown. It is understood to be about $30,000, and to cover an amount due for salary on a disputed or broken contract.

The assets, amounting to $66,988, are made up as follows: Parts and accessories, $34,302; office furniture, $2,439; garage tools, $2,304; good accounts, $12,404; cash in bank, $15,499, and cash on hand, $140.

Originally the Stoddard company was a branch of the United States Motor Co. and handled Stoddard-Dayton cars. When the United States Motor assets were taken over by the Maxwell Motor Co., the Stoddard branch, of course, went with them, but as it never had been a money maker the petition in bankruptcy was filed as being the most expeditious method of winding it up.

Charles G. Stoddard was president of the branch until March, 1912. Latterly W. M. Anthony, comptroller of the Maxwell Motor Co., has been serving in that capacity.

Courtney Tire Indebted for Tires.

Several judgments were taken above five months ago against the Courtney Tire & Rubber Co., of New York City, and its principal, William J. Courtney, were added to this week when the Ajax-Grieb Rubbeh Co. filed a judgment in the New York county clerks' office for $51.44. The suit was brought in the Municipal Court.

ONLY ATTACKS OWN AGENCY CONTRACT TO FREE FACTORY

Remarkable Point Raised in Action Due to Factory's Attachment—But Court Heeds It Not and Only Loses.

Unusual in that its procedure was an attack upon itself and its own dealership contract, the Only Motor Car Co., of Port Jefferson, N. Y., when arguing an appeal in the Appellate Division of the Supreme Court in New York City last week, offered as a part of its defense that the contract upon which Dudley H. Cohen asks $14,244 is invalid and in restraint of trade in that it fixes the retail price at which the cars are to be sold; "restraint of trade" is a term which has been much bandied about since prosecutions were inaugurated under the Sherman anti-trust law and the "fixed retail price" feature is the point about which many legal battles have been waged, but heretofore manufacturers who entered into contracts have been at great pains to show that their agreements were not of that variety.

The attorneys for Cohen, who signed up as New Jersey distributer but who claims he failed to get any cars, were somewhat surprised when the Only attorney introduced the restraint of trade idea, naturally not expecting that the manufacturing company would thus attack its own contract, and quite as naturally the argument that such a defense was untenable and should not be considered and their viewpoint apparently was in accord with that of the court for decision was rendered in favor of Cohen without discussion of the novel point. The Only attorney, after the conclusion of the argument, said he and his client were curious to know the status of this form of dealership contract, which is common in the trade, and therefore had decided to give the court an opportunity to discuss it, should the judges desire so to do.

Cohen, who claims he could have made profits on the 200 cars he contracted for and who states that he paid $1,000 for a demonstrating car which he has failed to get and therefore asks the $12,244, secured an attachment upon the Only factory several weeks ago in the Supreme Court for New York county, and the appeal by the Only company was from an order denying its motion to vacate the attachment.

The company, aside from the restraint of trade allegation, contended that Cohen had failed to show that he was able to take the first instalment of 16 cars had they been offered to him, that the contract is executory, that he had not adopted the correct rule for the ascertainment of damages, and that he has no cause for action. Cohen, in opposing these arguments, claimed the attachment should not be vacated unless the Only company was able to show that Cohen's suit would surely fail, and also alleged that the Only company, and not he, had broken the contract. While two of the judges declared that Cohen had no cause for action, the majority held that the attachment should remain in effect.

The contract specified net prices of $1,000 for touring cars and $800 for runabouts and retail prices of $1,250 and $1,000, respectively, the contract to run for a year from October, 1912, and the cars to be delivered in monthly instalments. The company also states that the contracts were incorrect in that the delivery of cars was to have begun before the delivery of the demonstrator.

Kansas City Dealer Sues Maxwell.

Alleging that it has been damaged to the extent of $80,000, the Bond Motor Co., of Kansas City, Mo., has brought suit in that city against the Maxwell Motor Co. of Detroit. Originally the Bond company had the agency for the Everitt car, and when the Everitt was absorbed by the Flanders Motor Co. the agency contract was renewed. When the Flanders, however, was taken over by the new Maxwell Motor Co., the latter set up its own establishment in Kansas City and proceeded to sell Maxwell cars, which sales, according to the Bond complaint, caused the amount of damage prayed for.

Commer Truck With Three Millions.

The Commer Truck Co. of America, capitalized at $3,000,000, has been incorporated under the laws of Delaware to continue the manufacture of Commer trucks in this country, which was interrupted by the failure of Wyckoff, Church & Partridge, who previously held the American rights. The personnel and plans of the Commer company, however, are not yet public property. The only men whose names have become known are those of the three incorporators: J. F. Curtin and H. O. Coughlan, of New York, and J. M. Satterfield, of Dover, Del.

Refinancing Grand Rapids Truck.

Refinancing of the Grand Rapids Motor Truck Co., which only recently located in that Michigan city after removal from Decatur, Ind., has been found necessary. In order to obtain the needed capital, holders of the $154,000 outstanding preferred stock have been asked to exchange their certificates for common stock and also have been requested to vote for an additional issue of $100,000 7 per cent. preferred, the latter to carry a bonus of 50 per cent. common stock.

TEXAS MAN, SORRY HE SOLD, SUES TO REGAIN COLE STOCK

Alleges He Was Induced to Sell Out Just Before Dividends Began to Grow—Asks Court to Rescind Agreement.

Lee Watson, a Texan, who when the Cole Motor Car Co., of Indianapolis, was organized acquired 165 shares of its stock, and who later sold it at a profit of $1,000, has repented of his folly, now that the Cole company has grown fine and large and waxed prosperous. He, therefore, desires to share the prosperity, and his effort to do so has taken the form of the institution of a suit in the Superior Court of Indianapolis asking that his sale of his stock be rescinded. In addition to the Cole company itself, Watson names as defendants Joseph J. Cole, J. Frank Morrison and Samuel J. Kuqua, who are officers of the company.

In his complaint, the Texan sets forth that when the Cole Motor Car Co. was incorporated in 1909, with an authorized capital of $100,000, he acquired the 165 shares of which he now is anxious to regain possession. Later, he alleges that Cole, Morrison and Kuqua, representing that the future of the company was uncertain and that the stock was worth no more, offered him 75 cents on the dollar, or about $12,000. Watson, however, held out and finally sold the stock to the Cole officials for $17,500, or $1,000 more than its par value.

When this transaction was consummated, Watson charges that instead of the future of the company being uncertain, the defendants were well aware that it shortly would declare a dividend of 30 per cent., of which, however, they said nothing to him. He also declares that 91 shares of the stock which remained in the treasury were distributed among Cole, Morrison and Kuqua.

Accordingly he asks the court to rescind the sale, agreeing to pay the company whatever amount the court decides he should pay for the 165 shares he formerly owned. He also sets up a claim for the amount of dividends he would have obtained had he retained his stock.

Wants Another Receiver for Clark.

The Clark Motor Car Co., of Shelbyville, Ind., which emerged from the hands of a receiver only a few months ago, is again in trouble. A creditor, whose claim amounts to $329.50, last week asked for the appointment of another receiver and also that the Clark property, which is not very extensive, he sold to satisfy the claim. The court granted the petition on March 18, naming Herbert Jones as receiver.

S. A. E. COUNCIL INDORSES A. L. A. M. RATING FORMULA

Formal Recognition Made in Resolutions Designed to Strengthen New Jersey Clubs' Position—Stroke Remains Ignored Factor.

Hopes that the Society of Automobile Engineers would realize the illogic and fallacy of the A. L. A. M. horsepower formula, which takes account of bore only, and would evolve a new method of rating wherein stroke would be permitted to cut a figure, have proved vain. Instead, the Council of the Society has gone on record as indorsing the A. L. A. M. method of rating.

Due to the situation which developed in New Jersey, where the commissioner of motor vehicles sought to have the legislature empower him to evolve his own rating, and to change it at will, and where at least two automobile organizations locked horns over the A. L. A. M. rating, the Society of Automobile Engineers was appealed to for assistance which, it came out only this week, was rendered at a meeting of the Council on February 19th last. At that time, the Council indorsed the A. L. A. M. rating by passing the following resolutions:

"Whereas, The A. L. A. M. horsepower formula was in May, 1907, adopted by the Association of Licensed Automobile Manufacturers, after the recommendation of its mechanical branch, the said recommendation being based upon the almost unanimous opinion of the association engineers after full consideration, the subject having been approached by determining what, in the light of the concensus of opinion as to good practice was a fair piston speed to assume, and the piston speed then formally adopted having been one thousand feet per minute; and,

"Whereas, The average view of the A. L. A. M. engineers as to a proper motor rating at the assumed piston speed was so nearly in accord with the formula theretofore adopted by the Royal Automobile Club of England, it was decided to adopt this formula; and,

"Whereas, Although the piston speed is not an element of the formula itself, the formula is based on one thousand feet per minute piston speed, it being assumed that the motor with the shorter stroke will make a greater number of revolutions per minute, and the one with the longer stroke a fewer number of revolutions per minute, relatively; and,

"Whereas, For the purpose of a general rating formula an approximation will suffice, and is indeed the only thing possible owing to the many variable factors which affect the power developed by any engine; it is

"Resolved, That the A. L. A. M. horsepower formula is as good a formula as can be devised for general purposes and meets all practical needs in rating gasolene automobile motors in the determination of registration-taxation, power developed when traveling on the road, comparison of engine performances by the public, etc."

TO PRODUCE UNDERSLUNG TRUCKS IN CALIFORNIA

Million Dollar Company Formed for the Purpose in Los Angeles—Double Worm Drive and Another Radical Feature.

For the purpose of manufacturing underslung trucks up to 20 tons capacity, the Los Angeles Motor Truck Mfg. Co. has been incorporated under the laws of California with an authorized capital of $1,000,000. A factory site has been secured at Bangle, near Dominguez, and architects are said to be at work on building plans. W. B. Joslyn is general manager of the company and M. S. Walton chief engineer.

The truck which will be produced is radical in that it is not only of the underslung type, but that it employs double worm drive to each rear wheel. The underslung construction permits the loading platform of the truck to be brought within 21 inches of the ground, which is expected greatly to facilitate the handling of heavy goods.

The double worm drive comprises worm gears at each end of the jackshaft, which is just behind the seat and transmits the power of the engine to drive shafts which follow closely and are protected by the channel steel frame of the bed and convey the power to each rear wheel by means of another worm and worm wheel, the latter being an integral part of the hub. The drive shafts have universal joints at both ends.

Hupp's Monarch Becomes Tribune.

Because of a prior claim to the name Monarch Motor Car Co., which he first selected, Louis G. Hupp, former secretary of the R. C. H. Corporation, has changed the style of his project to Tribune Motor Co., and has acquired factory facilities at 807-815 Scotten avenue, Detroit. The Tribune "30," as it will be styled, is a well standardized car which will list at about $1,250, the price not having been definitely settled. L. G. Hupp is president of the company and H. C. Limbach chief engineer, the names of their associates not having been made public.

BATAVIA CHARGES SEAMLESS WITH IMITATING ITS TREAD

Declares Unfair Competition in Likeness of "Safety" to "Security" Designs—Sues for Injunction and Accounting.

When the Batavia Rubber Co., of Batavia, N. Y., announced at the time of the New York automobile show that it would sue alleged imitators of its "Security" tread unless imitation ceased, it apparently was more than "bluffing," for suit was filed this week in the United States District Court for the Southern District of New York against the Seamless Rubber Co., of New Haven, Conn., alleging unfair competition and demanding an injunction and an accounting of damages.

The suit is more or less of an innovation in automobile trade litigation, for with such a multiplicity of tread designs there is often a similarity, and an unpatented tread design has not heretofore been considered as a worthy basis of a suit. The Batavia company, however, believes otherwise, and in its "warning" issued in January classed as imitators the Seamless Rubber Co., Kelly-Racine Rubber Co., of Racine, Wis.; United & Globe Rubber Cos., of Trenton, N. J., Stein Laplock Tire Co., of New York City, and the C. H. Stoddard Rubber Tire Works of Worcester, Mass. No suits have as yet been filed against the last four concerns mentioned.

The Seamless company's "Safety" tread is claimed to be an imitation of the "Security" to such an extent that the trade has been deceived and much profit has been diverted from the Batavia company; the 'Safety" tread tire is alleged to be inferior in workmanship, quailty and wearing ability. The goodwill of the "Security" tread, which has been manufactured for from three to five years, is estimated at $25,000, and it is "believed" by the Batavia company that the Seamless company has received profits of $10,000 which should have gone to the New York State rubber workers The "Security" tread tires are said to constitute 85 per cent. of the Batavia's business. Both treads consist of "cuts" at an angle to the center line of the tread.

Telephones and Tires Trouble Essenkay.

The Essenkay Sales Co., of New York City, is the debtor in a judgment filed this week in the New York county clerk's office by the New York Telephone Co. The amount is $37.84 and represents telephone rental. Another judgment, amounting to $40.08, was filed against it by the United States Tire Co.

The Week's Incorporations

Carroll, Ia.—Swaney Automobile Co., under Iowa laws; authorized capital, $50,000; to deal in motor cars.

Altoona, Pa.—Ceneral Motor Car Co., under Pennsylvania laws; authorized capital, $10,000; to deal in motor cars.

Mt. Pleasant, S. C.—Arby Automobile Co., under South Carolina laws; authorized capital, $200,000; to deal in motor cars.

Victoria, Tex.—Park Garage Co., under Texas laws; authorized capital, $10,000; to operate a garage. Corporators—John Frazer, J. T. Linebaugh, W. H. Crane.

Bedford, Ind.—Bedford Motor Bus Co., under Indiana laws; authorized capital, $10,000; to operate motor buses. Corporators—M. Wallner, A. E. Smith, C. K. Brock.

Moline, Ill.—Ohio-Moline Plow Co., under Illinois laws; authorized capital, $50,000; to deal in motor cars. Corporators—L. C. Blanding, J. C. Irving, G. A. Bannister.

Little Rock, Ark.—Paige-Detroit Co., under Arkansas laws; authorized capital, $10,000; to deal in motor cars. Corporators—J. C. Jones, William Rankin, W. M. Lewis.

Chicago, Ill.—United Rubber Tire Co., under Illinois laws; authorized capital, $1,000; to deal in motor car tires. Corporators—F. M. Hutchinson, W. W. Coe, Jr., A. W. Smith.

Marion, Ohio—Automatic Puncture Stop Co., under Ohio laws; authorized capital, $10,000; to manufacture tire sealers. Corporators—C. E. Merkle, M. McKinsey, F. C. Smith.

Chicago, Ill.—I. & W. Mfg. Co., under Illinois laws; authorized capital, $1,000; to manufacture motor car devices. Corporators—A. L. Currey, G. W. McIntyre, F. W. Nelson.

Milwaukee, Wis.—Creek Motor Sales Co., under Wisconsin laws; authorized capital, $25,000; to deal in motor cars. Corporators—R. C. Creek, Nora M. Creek, Willett M. Spooner.

Ravenna, Ohio—Ravenna Motor Truck Co., under Ohio laws; authorized capital, $200,000; to deal in motor trucks. Corporators—W. M. Traves, A. H. Knuth, H. Schwartz.

Muncie, Ind.—Derrickson Mfg. Co., under Indiana laws; authorized capital, $125,000; to manufacture motor car devices. Corporators—Harry S. Osborn, H. L. Kitselman, R. C. White.

St. Louis, Mo.—John Berry Automobile Co., under Missouri laws; authorized capital, $20,000; to deal in motor cars. Corporators—John Berry, Albert Bommer, Louis J. Koenigstein.

Spokane, Wash.—Harry L. Olive Co., under Washington laws; authorized capital, $2,000,000; to manufacture motor cars and supplies. Corporators—Harry L. Olive, Arthur J. West.

Waltham, Mass.—W. M. Caldwell Co., under Massachusetts laws; authorized capital, $5,000; to deal in motor cars. Corporators—William M. Caldwell, Fred Jordan, Thomas F. Carey.

Wilmington, Del.—Dreadnaught Tire & Rubber Co., under Delaware laws; authorized capital, $1,000,000; to manufacture tires, etc. Corporators—F. D. Buck, G. W. Dillman, B. M. Crawl.

Danbury, Conn.—Danbury Garage Co., under Connecticut laws; authorized capital, $10,000; to operate a garage. Corporators—Samuel M. Parmelee, Herbert A. Lake, Robert J. Congalton.

Oklahoma City, Okla.—Severin Tire & Supply Co., under Oklahoma laws; authorized capital, $10,000; to deal in motor car tires. Corporators—A. L. Severin, L. H. Severin, J. H. Eagan.

Rochester, N. Y.—Stein Auto Supply Co., under New York laws; authorized capital, $3,000; to deal in motor car supplies. Corporators—Anrrew E. Stein, Harry E. Pramer, Louise M. Stein.

Syracuse, N. Y.—Atlas Die Casting Co., under New York laws; authorized capital, $10,000; to manufacture die castings. Corporators—F. R. Holmes, Morey R. Smith, Simon B. Schlachter.

Canton, Ohio—Harper Tire & Rubber Co., under Ohio laws; authorized capital, $100,000; to manufacture motor car tires. Corporators—Warren D. Harper, James Thomas, Albert H. Vayo.

New York, N. Y.—Commer Truck Co. of America, under Delaware laws; authorized capital, $3,000,000; to manufacture motor trucks. Corporators—J. F. Curtin, H. O. Coughlan, J. M. Satterfield.

Cleveland, Ohio—Cleveland Speed Indicator Co., under Ohio laws; authorized capital, $10,000; to manufacture motor car devices. Corporators—Arthur Friedman, Leo Friedman, O. F. Friedman.

South Orange, N. J.—New York Simplex Auto School, under New Jersey laws; authorized capital, $25,000; to operate a correspondence school. Corporators—T. P. Ward, H. L. Smith, R. W. Hollman.

Indianapolis, Ind.—Lindsay Auto Parts Co., under Indiana laws; authorized capital, $250,000; to manufacture motor car parts. Corporators—Mahlon E. Bash, Matt W. Lowder, Joseph T. Head.

Rochester, N. Y.—Carthage Auto Co., Inc., under New York laws; authorized capital, $5,000; to deal in motor cars. Corporators—Arthur W. Alderman, Charles L. Pierce, Frederick A. Kuhnert.

Kingston, N. Y.—Brown Auto Supply Co., Inc., under New York laws; authorized capital, $7,000; to deal in motor car supplies. Corporators—Emerson Brown, Lewis Brown, Rodney B. Osterhoudt.

Yonkers, N. Y.—Broadway Auto Supply Co., Inc., under New York laws; authorized capital, $5,000; to deal in motor car supplies. Corporators—Frederick J. Snyder, Pauline A. Snyder, Bernard E. Reardon.

Rochester, N. Y.—Rochester Automobile Exchange, Inc., under New York laws; authorized capital, $500; to deal in motor cars. Corporators—Bertram E. Wilson, W. Hayes Mitchell, Owen D. Dewitt.

New York, N. Y.—Tioma Oil & Grease Co., Inc., under New York laws; authorized capital, $50,000; to deal in lubricants. Corporators—E. J. Forhan, F. B. Knowlton, J. J. Harper, all of 154 Nassau street.

Indianapolis, Ind.—Hampton Mfg. Co., under Indiana laws; authorized capital, $35,000; to manufacture motor car devices. Corporators—S. B. Nussbaum, Sol. Allman, M. Moskin, W. F. Hadley, Sam Rubens.

New York, N. Y.—Forty-Seventh Street Taxicab Co., Inc., under New York laws; authorized capital, $500; to operate taxicabs. Corporators—Thomas G. Garvan, J. E. Garvan, J. P. Garvan, 124 West 54th street.

Chicago, Ill.—Auto Commission Mfg. Co., under Illinois laws; authorized capital, $50,000; to manufacture motor car supplies. Corporators—Harry M. Snow, George W. Nevins, F. W. Robinson, Wm. J. Liddy.

Chicago, Ill.—Peterson Motor Car & Garage Co., under Illinois laws; authorized capital, $5,000; to deal in motor cars and operate a garage. Corporators—Monroe T. Peterson, Nels H. Linquist, William D. Petzel.

SEGALL'S $4,000 TRIMMED DOWN TO 6 CENTS BY JURY

Jury Admits He's Right But That's About All He Gets—Top Maker Sues on Deal That Brooklyn Dealer Supposed Settled.

The $4,195.85 which Solomon Segall, trading as the Brooklyn (N. Y.) Auto Top Co., asked of the Bruns Automobile Co., also of Brooklyn, on a broken contract for tops dwindled to six cents when the evidence was placed before a jury in the Supreme Court for Kings county last week; it is stated by the Bruns company that if Segall hasn't received his six pennies they are ready and waiting for him.

Segall claimed he contracted with the Bruns company in June, 1910, to build 50 tops, but that before the contract was completed it was broken by the Bruns company to his damage in the amount which he asked.

The defense set up was that Segall had been building tops for the Bruns company's cars for two years without a contract and that a contract for 50 was signed in 1910 upon Segall's plea that by showing a contract he could get better prices on the materials required in manufacture; before the contract was fulfilled the Bruns company secured an opportunity to sign up as a Chalmers dealer and notified Segall that no more tops would be required on the contract, to which arrangement he is said to have agreed. It was also stated that since the termination of the contract Segall had been given $500 or $600 worth of work by the Bruns company and that it had thrown considerable other work his way.

It was supposed the matter was satisfactory all around until last fall, when Segall filed his suit. The jury's verdict in effect is a statement that while Segall is technically right in his complaint he did not suffer greatly and is entitled to nominal damages only.

Changes Among Prominent Tradesmen.

C. R. Reiley has been appointed manager of the Moline Automobile Co.'s Minneapolis branch. Previously he was connected with the factory organization in Moline.

H. G. Harper has been appointed inspector general of the Studebaker Corporation in Detroit. He is not new to his duties, having been the organizer of the inspection system under which one of the most prominent cars in the country is produced.

Harry W. Doherty, who formerly represented the Studebaker Corporation in that part of the country, has been appointed Northwestern district manager for the Henderson Motor Car Co., of Indianapolis. He will make his headquarters in Tacoma, Wash.

Samuel M. Cooley has been appointed general manager of the Prest-O-Lite Co., of Indianapolis. The appointment is in the nature of substantial promotion, Cooley having been connected with the Prest-O-Lite interests for several years, latterly as assistant general manager.

Frank Fickling has been appointed manager of the Motz Tire & Rubber Co.'s branch, which was opened last week at 1012 Fourteenth street, N. W., Washington, D. C. Fickling has been engaged in the accessory trade in that city for many years and is, therefore, no stranger to his territory.

Bert Latham, who has been identified with the trade in Chicago and Los Angeles for about 12 years, has been appointed manager of the San Francisco branch of the Simplex-Mercer Pacific Coast Agency. He succeeds Rene J. Marx, who resigned to become Pacific Coast distributer of Mercedes cars.

C. W. Thompson, of Rochester, N. Y., who previously was identified with the Cutting Motor Car Co.., of Jackson, Mich., has been appointed New York sales representative of the Keeton Motor Co., of Detroit. He will cover practically the entire State and will make the rounds of his territory in a Keeton "six."

John Calder, former assistant manager of the Cadillac Motor Car Co., of Detroit, has been appointed acting vice-president of the International Motor Co., of New York. The appointment carries with it general supervision of the company's engineering designs and production of its there plants. L. P. Phillips, formerly the International works manager, becomes assistant to Calder.

S. W. Lowry, who has made a name for himself as the manager of the Pennsylvania Rubber Co.'s Pittsburgh branch, has been promoted to the management of the company's Los Angeles establishment, which carries with it direction of all of the South Pacific coast trade. In token of his good work, Lowry last week was tendered a banquet by the Pennsylvania officials and during the evening, to further emphasize his success, he was presented with a silver cup.

Warner Seeks Pay for Speedometers.

Speedometers to the value of $107.40 are the basis of a judgment filed last week in the New York county clerk's office by the Warner Instrument Co. against Earl H. Tritchman and Harry D. Chapin. They formerly traded in New York City as the Standard Automobile Supply Co., but are said to have "gone hence."

BATAVIA RUBBER OFFERS ITS PREFERRED TO THE PUBLIC

Bonus of Common Goes With It—Capital Is Desired for Enlargement—Company's Financial Condition as Disclosed.

In order to provide more working capital, the Batavia Rubber Co., of Batavia, N. Y., is offering for public subscription a portion of its $250,000 6 per cent. preferred stock, its authorized capital being $500,000. As a bonus, purchasers will be given one share of common with each share of preferred stock.

Bonds to the amount of $46,000, which do not mature until 1923, are outstanding, but if $100,000 of the present offer of preferred stock is sold it is the intention to retire the bonds in order that the preferred may become a first lien on the assets of the company.

With the money acquired, it is believed that the factory's output of solid tires for trucks can be at least doubled and that its net earnings will amount to $75,000 per year or more. The only inkling of the company's earning capacity is contained in a statement that during four months of 1912 its total sales amounted to $152,522 as against $112,314 for the corresponding period of 1911.

Its financial statement, as verified by inventory December 1st last, is as follows:

Assets		
Accounts receivable	$17,566.37	
Cash on hand	18.11	
Cash in bank	9,209.69	
Bills receivable	2,500.00	
		$29,287.17
Raw material	$24,108.68	
Stock in process	8,954.00	
Stock in factory, $13,734.86; on consignment, $42,957.65	56,692.51	
		89,755.19
Miscellaneous	$2,500.00	
Office fixtures	1,508.86	
Machinery, moulds, power, etc.	74,025.84	
Real estate	37,283.74	
		115,318.44
		$234,360.44

Liabilities.	
Capital stock, preferred	$12,000.00
Capital stock, common	74,0000.0
Bonds	46,000.00
Bills payable at bank	26,965.13
Accounts payable	12,641.53
Surplus	62,754.14
	$234,360.80

More Room for Four-Wheel Drive.

The Four Wheel Drive Automobile Co. has voted to place contracts for the erection of two additions to its plant in Clintonville, Wis. The buildings will be of brick, 100 x 120 feet.

In the RETAIL WORLD

Alex. Atahly is about to open a garage and repair shop in Ocheyedan, Ia.

Don Cameron is making ready to open an automobile repair shop in Washburn, Wis.

Peter Treyesser and George Schiering have entered the garage trade in Cheviot, Ohio.

E. R. Wilson, of Omaha, Neb., is erecting new salesrooms on 25th street. He is Buick dealer.

Stein & Krell have established a garage business in Dubuque, Ia., on Front street; they are Ford dealers.

William H. Chownes has opened a garage and repair shop on the State road between Sparkhill and Tappan, N. Y.

Dyche & Duncan is the style of a new garage firm in Columbus City, Ia. They will handle Michigan and Case cars.

M. Bailey, former editor of the Marshfield (Wis.) News, has entered the trade. He has taken the Paige-Detroit agency.

John Martinsen, who recently opened a garage in Audubon, Ia., has bought the equipment of the James Law repair shop.

The Riddell Auto Co., of Des Moines, Ia., has opened a branch in Oskaloosa, in the same state; it is located at 213-15 1st avenue, West.

R. H. Shannon has sold his interest in Shannon & Bishop, of Marengo, Ia., to William Ince, of Des Moines; the firm stocks Ford cars.

Fred Gust has bought a half interest in the Porter Bros. Garage, First street, Fairmount, Minn. The style has been changed to Bassett & Gust.

James O'Connell, of Brooklyn, N. Y., has secured plans for a two-story garage which he will have erected on Boerum place; the cost specified is $35,000.

Edward Anderson, of Delavan, Wis., has sold his garage to Steven Conley; Anderson contemplates opening another garage in Clinton, in the same state.

J. A. Wetzel has purchased the interest of his partner, E. W. Ewbank, in the Pacific Auto Co., in Eugene, Ore. He will continue to handle Ford and Auburn cars.

C. A. Bartholomew has closed his garage in Peoria, Ill., following the sale of the building he occupied and its utilization for other purposes by the new owner.

William H. Gragg has taken over the Allen Garage, on Broad street, Beloit, Wis. R. R. Allen, the former owner, retires, but Bert Allen will continue as manager.

The Mason City (Ia.) Auto Co. has completed a new garage at Washington and Fifth avenues. The equipment includes toilet and rest rooms. Ford and Colby cars are stocked.

The Boschken Motor Car Co., of San Jose, Cal., has commenced the construction of a new garage and salesrooms at First and San Salvador streets. The company is Oakland dealer.

M. Beauchamp, formerly connected with the Locomobile and Stearns agencies in Chicago, has entered the Motor Supplies Co., of 1200 Michigan avenue. He is president of the company.

The Howard Automobile Co., of 10th and Olive streets, Los Angeles, Cal., has established a used car department at 1148-50 South Olive street. The company is Pacific Coast distributer of Buick cars.

The Republic Tire Agency has opened up in Indianapolis at 35 West Michigan street, with E. A. Stone as manager. As the name indicates, the store will stock Republic tires and tubes and also will handle accessories.

L. E. Parker, formerly an employe of the Stewart-Warner Speedometer Corporation, is about to open a tire repair shop in Beloit, Wis. The firm style will be Beloit Tire & Cycle Co. In addition, a line of bicycles will be carried.

The People's Taxicab Co., of Altoona, Pa., has secured permission to erect a garage and repair shop, 40 x 60 feet, at 2200 Beale avenue; the cost will be $2,300. George F. Fleet, the proprietor, is a former police sergeant.

The Hollywood (Cal.) Garage, located at 1728 North Highland avenue, has been purchased by C. H. Kratz and Carl S. Frank, both formerly of Cincinnati, O. Kratz was secretary and treasurer of the Vulcan Copper Works, of Cincinnati.

New quarters have been completed for the Packard Kansas City (Mo.) Co. at Robert Gillham road and McGee street. The building is two stories and 97 x 116 feet and contains separate salesrooms for the R. & L. electrics, which are a part of the company's line.

The Sigourney Electric Garage has entered the trade in Hartford, Conn., in a new brick building, 100 x 35, located at 117 Sigourney street. C. H. Brooks, formerly with the Westinghouse Electric Co., in Pittsburgh, Pa., is president, and W. J. Congras is secretary and treasurer.

C. L. Du Puy has formed the Standard Auto Co. in Atlanta, Ga., with salesrooms at 225 Peachtree street. He will stock Paige-Detroit cars and Selden cars and trucks. Du Puy is not new to the trade, having been Southern representative of the Selden Motor Vehicle Co., of Rochester, N. Y., for five years.

J. F. Lang & Son, of Princeton, Ill., have purchased a garage, 62 x 125 feet, built recently by Edward Holmes, and have taken possession. Lang & Son handle Stoddard-Dayton, Howard and Krit cars and Excelsior and Pope motorcycles. The building contains a women's waiting room and has a storage capacity of 33 cars.

William Kingsley has entered the trade in Fairbault, Minn., under the style Central Auto Garage; his building, located at Central avenue and Division street, contains 17,000 square feet of floor space. The concern has agencies for Detroiter, Reo, Premier, Marmon and Stutz gasolene cars, Ohio electrics and Reo trucks.

The United Motor Supply Co. and O. Fernstermacher, automobile supply jobbers in Minneapolis, Minn., have combined under the style O. Fernstermacher Co. Some of the officers of both organizations are in the new one and the company, which is capitalized at $300,000, will retain the Fernstermacher location at 311 South Fifth street.

The Auburn Sales Co., Roy Scott manager, has been formed in San Francisco to handle the Auburn car; the company is made up largely of those who handled the R. C. H. retail business prior to the recent discontinuance of the R. C. H. branch in that city, and the turning over of the business to the H. O. Harrison Co. Temporarily headquarters are in the R. C. H. building on Ellis street.

The Schierbrock Automobile Co. has taken over the Atlantic Automobile Co., of Council Bluffs, Ia., of which T. A. Mitchell was proprietor; the new company, which is composed of R. J. Schierbrock, of

Digitized by Google

Neola, J. J. Muree and L. E. Julich, of Carroll, both Iowa towns, will retain the old company's 4th street location. The transfer carries with it the Ford and Studebaker agencies.

The Gordon W. Turner Co., which heretofore has engaged in the used car business in Boston, Mass., has branched out and added supplies to its line. It has purchased the store, stock and fixtures of the bankrupt Equitable Distributing Co., at 245 Columbus avenue, and will operate at this address. Arthur Sidwell, the former manager of the Distributing company, will remain in the same capacity with the new owners.

Schiller & Creswell, who recently succeeded the Utica (N. Y.) Electric Garage Co., located at 75 Cornelia street, have purchased property at Noyes and Francis streets, in the center of a residence section; the property, which is 118 x 156 feet and includes a round brick building 80 feet in diameter, will be remodeled as an exclusively electric garage and salesrooms. The firm, which handles Detroit electrics, will occupy its new quarters May 1.

The W. L. Huffman Automobile Co., of Omaha, Neb., has located in new quarters at 1814-18 Farman street, formerly occupied by the J. J. Deright Garage. W. M. Clement, formerly with the George Rogers Cigar Co., has been made general manager and N. J. Marvin, bookeeper for Huffman for two years, has been appointed to manage the branch in Sioux Falls. S. D. Huffman will devote more time to affairs within his territory, where he has several branches.

Carl H. Page & Co., Chalmers distributers at Broadway and West 50th street, New York City, have installed a branch in Brooklyn, at Bedford avenue and Fulton street. This territory formerly was covered by the Bruns Automobile Co. While the branch will handle retail sales in Brooklyn and wholesale matters throughout all of Long Island, the territory of Sammis & Downer, of Huntington, who have Nassau and Suffolk counties, will not be affected. Harry Unwin, formerly with the Page store in New York, is manager of the branch.

The Royal Automobile Co., of Montreal, Que., has been succeeded by the Royal Automobile Garage Co., Ltd., with a capital of $50,000. The new company will maintain salesrooms at the former location, St. Denis and Ontario streets, for the distribution of Cole, Stevens-Duryea and Apperson cars and will operate a garage at 375-85 Ontario street. The officers are: President, G. A. Simard; vice-president, H. Beauregard; secretary and treasurer, Dr. E. Dubeau; directors, H. Danereu, former Cole and Stevens-Duryea dealer, and E. Barlatier, former Apperson agent.

JACOBS WOULD PLAY MOSES TO OWNERS OF MOTOR CARS

Would Lead Way to Promised Land of Discounts—Unravelled Mystery Discloses U. A. O. P. A. and Beautiful "Aims."

If artlessness proves of avail, E. A. Jacobs, of New York, soon will be wallowing in wealth. Jacobs evidently has heard of leagues and associations and societies whose desire to "protect" automobile owners is of the burning sort, and having heard of them he has more or less organized one of his own. It is carrying the impressive title, United Automobile Owners' Protective Association, and its "main office" appears to be the office of E. A. Jacobs, at 29 Broadway, where a sign on the door—like Jacobs's letterheads — reads "Investment Securities."

The first that many New Yorkers knew of the United Automobile Owners' Protective Association was when they last week received a letter on Jacobs's "Investment Securities" letterhead telling them that their names had been given to Jacobs by "a mutual friend who is one of our pleased members," and imparting the delightful information that "This is not an association like the numerous others now in business whose aim it is to make big profits for themselves."

In equally delightful fashion, Jacobs referred to the discounts he is able to quote and expresses the pleasure he will feel if the recipients of his letters will forward him $5, which will "entitle them to a member's card" and "permit them to begin trading at once." Thereafter Mr. Jacobs develops a streak of exquisite artlessness and throws a spell of mystery around his project, for, listen to the gentleman himself: "The name of the association is kept quiet on account of interfering with our purchasing privilege."

Who would not undertake to penetrate such a deep, dark mystery, even if he did not surrender $5 for the purpose?

Motor World's investigation located the U. A. O. P. A. in Jacobs' "Investment Securities office," as stated. Jacobs himself was not present, but his representative—whose appearance also suggested that his name might be Jacobs—cheerfully handed out the "Protective Association's" literature, which included an "Application for Membership Buying Privileges." The signing of it binds the owner to pay $5 per year in advance until doomsday, unless he notifies the association to the contrary. In return therefor, Jacobs very kindly agrees to furnish such automobile supplies "as he may be able to obtain (note the "may") at dealers', jobbers' and manufacturers' prices."

He also further handsomely "agrees to maintain, without expense, to the members," a "home office," and even more benevolently binds himself to mail annually to each "member" "a printed catalogue." In order that there may be no misunderstanding on the point, the conditions printed on the application for membership include this soothing clause: "This constitutes the entire contract."

It is also provided that all checks be made payable to the order of the association, but for some reason orders for accessories must be sent to Jacobs personally.

Although the application makes appear that the $5 fee is for the gracious privilege of buying goods, Jacobs's letter states that it is "for the registration of your car."

The way in which automobile owners are to be "protected," and what they may expect, is indicated by a yellow leaflet which promises nothing but asks the recipient whether he desires to save so much money on a number of several enumerated articles.

But the "aims" of the U. A. O. P. A. are the real things. Jacobs himself has painted the picture. He has closed both eyes and made himself see an U. A. O. P. A. automobile factory, a tire factory, an accessories factory, a club house, a chain of hotels, and ever so many other things, all designed for the "protectiveness" of the deal old automobile owner who gives up $5 to Jacobs.

More Suits Against Long Island Garage.

Unpaid accounts are the basis of several recent suits against the Cook-Borstel-Brown Co., garage operators in Huntington, L. I., and one resulted this week in a judgment of $188.70 in favor of the Fisk Rubber Co. Another action is brought by the Mutual Auto Accessories Co., of New York City. Both suits are in courts in New York City.

Michelin Gets Judgment Against Dealer.

Judgment for $607.98, in favor of the Michelin Tire Co., of Milltown, N. J., against Leonard A. Crozier, proprietor of the Floral Park (N. Y.) Garage, was rendered in the Supreme Court for New York county last week. The amount represents the value of tires consigned to Crozier for which he failed to render an accounting.

Fisk Calls Woodmere Man to Court.

Claiming that goods supplied between October 1 and November 3, 1911, are unpaid for, the Fisk Rubber Co., of Chicopee Falls, Mass., filed suit this week in the Supreme Court for New York county against J. M. Richmond, a garageman, of Woodmere, N. Y. The amount asked for is $100.25.

NEW YORK, MARCH 20, 1913

DESTINY OF GASOLENE SUBSTITUTES.

As pregnant with possibilities as is the present fuel situation, what with several substitutes for sure enough gasolene in sight, it would seem that there is at least one angle which, if not entirely overlooked, has not entered into any discussion of this much-discussed subject. Though the gasolene producers profess to be in sympathy with the movement to find something just as good as gasolene, it would be a grievous misunderstanding of human nature to suppose that they would stand idly by and see such a rich prize slip through their fingers merely for the want of cash.

In these days of enlightenment (of the purchasing power of gold) money will buy pretty nearly anything and that "pretty nearly anything" may very easily include patents or processes designed to alleviate the fuel situation by substituting some other product for the commercial petroleum derivative; already, it is reported, the British Shell interests have purchased outright successfully operable patents for extracting "petrol" from paraffin, and thus at least one infant industry has been gobbled up by the trust almost before it became known. That others will go the same way seems reasonable, for the petty prizes that have been offered for a gasolene substitute are as molehills to mountains compared with the inducements the oil companies are able —and apparently willing—to offer inventors.

The British case is a typically British one, of course, with the subject of the King grasping the bird offered by the trust, with his conservatism or doubt urging him to overlook the two in the bush in the fear that they may escape him in the form of too strenuous opposition or production obstacles. Just what the speculative American would do in similar circumstances it is difficult to foresee, though if past performances can be taken as a criterion, it is not unlikely that he would prefer to take his chances on getting a firm grip on the tail feathers of the birds in the bush—and therein lies the hope. But even the proverb declares that hope is a slender peg on which to hang ambition.

OUTLAWRY AND A WORLD'S FAIR.

If they have not already done so, the gentlemen who rebelled against the American Automobile Association for enforcing in California the same rules that apply in all other parts of the country, should pause in their folly and consider its effect on the Pacific-Panama Exposition which is due to be held in San Francisco in 1915.

In the natural order of things, automobile events will cut a figure in the sports which are to be attendant on the great fair. By the same token, they must be held with the sanction and under the rules of the A. A. A., for it is not reasonable to suppose that the management of such an international enterprise will cast a blight on the exposition, or permit its success to be in any way jeopardized by recognition of outlawry in any form, or in any sport. And as the A. A. A. is the only sports' governing body recognized by other sports' governing organizations here and abroad, if, peradventure, the Pacific-Panama authorities should recognize the outlaw body which has been loosely organized on the Pacific coast, it will mean that the Pacific-Panama sports will be closed to the rest of the world, and that the only participants in them will be the disgruntled "native sons." On the other hand, as seems inevitable, when the sports are sanctioned by the A. A. A., they will be closed to these very outlaws, who of necessity must compete in their own backyards, so to speak, if they compete at all.

It is not a particularly agreeable prospect and unless they are carried away by their own misguided enthusiasm they will do well to stop just where they are and undo what they have done. The success of the big exposition ought to transcend more or less personal grievances.

FORMULA THAT IS MERE APPROXIMATION.

That the method of rating automobile motors by the antiquated A. L. A. M. formula gives only an approximate figure that may or may not come near to the real horsepower of an engine, and therefore is chiefly useful as a rough means of obtaining comparative data, long has been known, and though the recent action of the Council of the S. A. E. in indorsing the formula despite its evident shortcomings may occasion mild surprise, the very fact that it has been indorsed only as "an approximation that will suffice" ought to stimulate the search for something better. The palpable fallacy of the formula lies in the supposition that the crankshaft speed will decrease in proportion to any increase in stroke over the "square" motor, and though it may suffice as an "approximation" of power, now that nearly every engine is a long-stroke engine the approximation scarcely can fail to be sadly awry.

AJAX INAUGURATES MILEAGE CONTEST FOR CHAUFFEURS

Will Give $500 for Chauffeurs' Best Tire Performance and 207 Minor Cash Prizes—Conditions Governing Contest.

Emulating the example of the Winton Motor Carriage Co., the Ajax-Grieb Rubber Co. has formulated and promulgated an annual service competition for users of Ajax tires. It provides for the award of prizes, 208 in number, to chauffeurs driving Ajax-tired cars who, in the twelve months between April 1st next and March 31st, 1914, make the best mileage records.

The first prize will be $500, the others being apportioned as follows: 1 prize of $300, 1 of $200, 5 of $100, 10 of $50, 40 of $25, 50 of $20 and 100 of $10.

The Ajax-Grieb company will provide blanks for those who desire to enter the competition. The blank will require that there be recorded the size of the tire, the make of car on which it is to be used, the date of purchase, the date on which the tire is put in service, the serial number of the tire, the speedometer reading, and where the tire is bought. This is to be signed by the employer of the chauffeur, and the information will be copied on cards at the place where the tire is bought.

To complete the competition, notification will be made when the tire has ceased its usefulness, the date when it was removed from the car, the speedometer reading and the number of miles covered by the tire. This is all to be signed by the owner and returned within five days after the tire has been taken out of service Any number of tires for one chauffeur count in deciding the contest.

The three judges who will decide the awards will be Alfred Reeves, of the Hartford Suspension Co.; M. L. Scudder, a New York chartered accountant, and R. A. Paterson, president of the Tarrytown (N. Y.) National Bank.

While the money prizes will go to the chauffeurs, it naturally follows that the latters' efforts to obtain mielage from their tires will accrue to the financial benefit of the owners of the cars.

Tire Men to Oppose Dating Bill.

In an effort to defeat the ill-smelling tire-dating bill, which is half way through the New York State legislature and which demands that tire manufacturers stamp their products with the date of manufacture, Sidney S. Meyers, representing the "tire group" in the Motor and Accessory Manufacturers, will appear at 2.30 o'clock this afternoon, 20th inst., before the Miscellaneous Corporations Committee of the Senate. Meyers will present the claims of the tire men that the bill is unnecessary and impracticable, that it would work an injury to the tire trade, that it would achieve no good and that it is unconstitutional. Meyers endeavored to get a hearing when the bill was before the Assembly, but the measure went through on greased wheels, despite his protest. Should it pass the Senate and be signed by the Governor, the tire men will contest it in the courts. They will expend no money to defeat the measure in the legislature.

Garageman Krauss Wins Another Suit.

Henry Krauss has been having considerable trouble as president of the Washington Bridge Auto Co., of New York City, but with the winning by him of a lawsuit in the Supreme Court for New York county this week he hopes he can settle down and conduct his business peacably; the suit just concluded grew out of an act of the former president of the company. Krauss's predecessor held a chattel mortgage for $4,000 on the company property, and when he sold his stock he transferred half of the mortgage to Krauss and then proceeded to file a satisfaction of the whole thing. Krauss sued to have half of the satisfaction set aside and succeeded, $2,000 worth of it becoming again effective. Prior to this Krauss had sued the company to compel it to pay a damage claim which a person injured by a company car had secured against Krauss as president of the company.

Omaha Organizes Credit Association.

The Automobile Supply and Jobbers' Credit Association has been formed at Omaha, Neb., to "look into" the standing of those to whom credit is extended. The officers are: President Clarke G. Powell; vice-president, Arthur Storz; secretary-treasurer, L. C. Kohn. The board of directors comprises the officers with T. V. Groves and H. L. Waldman.

Gray & Davis Enlarging Once More.

Gray & Davis are again adding to their large and strikingly handsome plant in Cambridge, Mass., where they are now laying the foundation of a new building, 381 x 81 feet. It will be of five stories and built entirely of reinforced concrete with steel sash and tapestry brick facing. It is expected that the structure will be ready for occupancy about July 1st next.

Federal Opens Branch in Detroit.

The Federal Rubber Mfg. Co., of Milwaukee, Wis., has opened a branch in Detroit at 846 Woodward avenue. It is in charge of A. L. DeVault.

*Indicates Sanction by A. A. A.

March 17-22, Norfolk, Va.—Norfolk Automobile Trade Association's second annual show in the State Armory.

March 19-22, Springfield, Ill.—Springfield Commercial Association's show in the Armory.

McCLELLAND BILL LIKELY WILL SLUMBER IN PEACE

Opposition Offered at Hearing in Albany Practically Dooms Obnoxious Measure—Some of the Objections Raised.

It is now altogether unlikely that owners will have to wear badges like their chauffeurs, as provided in the now famous—or infamous—McClelland bill, which was introduced into the New York legislature on the 6th inst., and it is equally improbable that they will be subjected to a doubling of license fees and all the various other obnoxious provisions which it sought to impose; for as the result of the public hearing on this and other measures, held in Albany on Thursday last, it is practically assured that the bill will be permitted to die a peaceful death in the pigeonholes of the Internal Affairs Committee. This belief is shared by all of those who attended the hearing, and considerable strength was added to it by the subsequent action of Senator White, who is chairman of the committee, in introducing a bill authorizing Governor Sulzer to appoint a commission of three to co-operate with similar commissions representing Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Delaware and Maryland in an effort to obtain uniform automobile legislation.

Although the hearing covered the score or more measures that have been introduced, the chief point of attack was the McClelland-McGrath bill, as being at once the most drastic of all and the most important, inasmuch as it was drafted in accordance with the views of Secretary of State Mitchell May and indorsed also by Governor Sulzer himself.

As usual, Charles Thaddeus Terry, representing both the National Association of Automobile Manufacturers and the Automobile Dealers' Association, led the opposition, and his review of the McClelland bill was both scathing and thorough. In drawing attention to the fact that when two years ago the Callan law was passed, increasing the taxation from $2 to $5, $10, $15 and $25 with annual registration, it generally was conceded that the million dollar increase in revenue it represented was at least partly justified to offset the expense of motor vehicle registration, he stated that if the present proposed increase to net $2,000,000 a year to the State were conceded, motorists might as well make up their minds that still further advances would be made each year. "That is not regulation or taxation," he declared, "it is confiscation." Adding that New York had never been "a pirate State," Terry continued:

"If the theory is that those using the highways should pay their proportionate share of the cost of the improvement, then every citizen of the State using the highways should be required to pay his proportionate share, and any method adopted by the legislature of this State to help pay for the cost of highway improvements which casts upon one class of citizens more than their proportionate share, imposes an unjust and discriminatory tax and is unconstitutional. The revenue derived now is far in excess of the amount required to defray the expenses of the regulation of motor vehicles, and there is no justification whatsoever for the increased taxes. The rates for pleasure cars already are as high as they ought to be; if the rates in other States were higher there might be some reason, however unsound, for the suggested amendment."

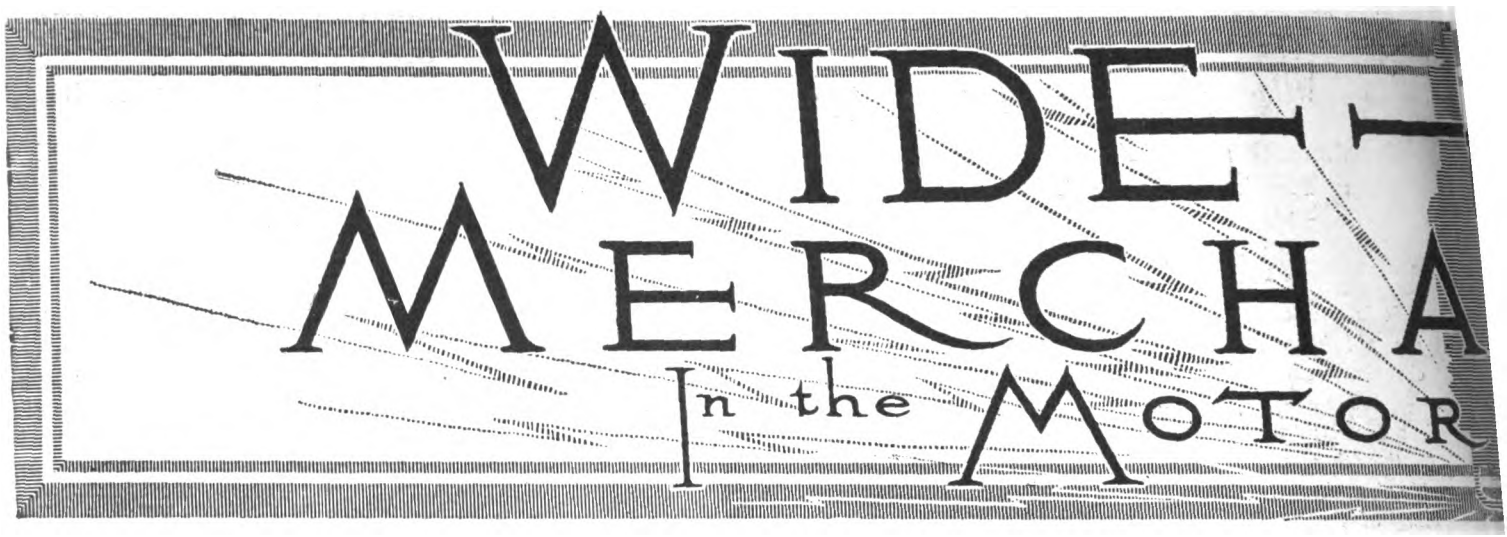
In pointing out the incongruity of taxing commercial vehicles according to their weight, he drew attention to the obvious fact that very few of them are operated on the State roads and further stated that "it is against the policy of the State to tax an instrument of commerce, and the motor truck is now becoming a necessity in the business world; to increase the tax and compel an owner to pay a personal tax as well is laying a double burden on the business man who adopts the motor truck as a means of conveyance."

Melvin Bender, of Albany, who is attorney for the New York State Automobile Association, which embraces all but two of the motoring organizations in the State, was another who attacked the measure vigorously. Among other things, he suggested that if the tax is based upon the use of the roads, then every vehicle, irrespective of its motive power, rightfully should be taxed.

The only man at the hearing who supported Secretary May in his defense of the measure was Frederick R. Coudert, who said he represented the so-called National Highways Protective Association. Briefly, Coudert pooh-poohed the idea that the taxation of motor vehicles was an infringement of individual rights and gave as his opinion that while the Callan law is a good law, it requires the addition of an amendment to make it still better. His criticism, despite his championing attitude, was destructive rather than constructive, however, for he advocated merely the vesting of some power in the Secretary of State to allow him to revoke a chauffeur's license for "running his car like a fool," and a speed provision that would presume the operator of a car to be guilty of negligence when he exceeded the speed limit. He also declared for an examination of owners.

"CHAUFFEUR ARISTOCRATS" ORGANIZE EXCLUSIVE BODY

French Auto Workers' Association Results from Clique in High-Class Garage—Members Employed by Millionaire Owners.



What might be termed the "Aristocracy of Chauffeurdom," or what may correspond to the Head Chauffeurs' Association in England, has been formed in New York City by a number of drivers and mechanicians in the employ of some of the city's wealthiest car owners under the name French Auto Workers' Association; the organization's certificate was approved last week in the Supreme Court for New York county and plans for the full launching of the project are under way, not that it will possess a large membership, for when all the eligibles are enrolled the group probably will be found to consist of not more than 35 or 40.

The idea originated with a group of chauffeurs whose employers' cars are stored in the garage of the Automobile Club of America, and since these few men felt a common bond because they were employed upon cars of French make they gradually formed a clique; then the idea of uniting with other men employed upon French cars was broached and the body was formed by Oeley Gavett, Warren S. Campbell, William A. Malone, Thomas Woods, Adolph Poret, Eugene Mesnard and Alexander Le Borgue; the last two and Raoul Devort, Victor Sancier and Leon Von Molle are directors.

While the membership is not restricted to men of French nativity or extraction, as the names Malone, Campbell and Woods suggest, a large number naturally will be Frenchmen and capable of speaking that tongue, since many wealthy owners in New York's multimillionaire group are prone to engage drivers who can act as interpreters on European tours; many of these drivers have assistants and regard themselves as of a class apart from the ordinary gasolene pilot. In fact, it is said that a sure method of self-extinction for a taxicab chauffeur, even though he were French, would be to apply for admittance to this exclusive circle.

The object of the body, as stated in its certificate, is largely social, but provision will be made for the interchange of ideas and information relating to the foreign cars which these men handle; also a clubhouse or clubrooms are being considered. No location has been chosen, however, but the clubrooms probably will be secured in some location conveniently located to the Automobile Club's garage.

WEEDING OUT GARAGE LOAFERS

Shooing Away the Pest Who Makes the Garage or Salesroom His "Hangout"—How He Happens and the Treatment He Needs.

A voice from Indiana says, "Please say something about the garage loafer in your "Wideawake Merchandising Department." And the subject is one about which much may be said.

Wants To Be Identified With "Gas."

There is a species of human barnacle known to the trade as the "garage loafer." His age ranges anywhere from 15 to 50. His business is to be somewhere near where gasolene is used. He has never owned a car and never expects to own one. He likes to be identified with the gasolene fraternity. He does not want to work at anything. He just wants to be "around." His entrance is usually made at the back door of the garage; he was perhaps one of a crowd who gathered to see Bill Jones's car tested. The rest of the crowd dissipated, faded away, if you like, but he remained, like a piece of driftwood cast up by the tide.

He pays no attention to the "No Smoking" sign that the insurance people ordered up, but goes calmly ahead and makes up his "Bull Durham" cigarette or fills his evil-smelling pipe. He watches the repairs as they are made, perhaps assists with his suggestions. Gets into conversation with customers who drop in and gradually drops into the role of an habitue of your place of business.

Unnoticed Until Well Established.

You have seen him around a few times and supposed he was someone whose car was being fixed; then first thing you know he is spending part of the time in front in the salesroom, spitting and dropping ashes on the floor and looking out at the people as they pass by. Later he takes to sitting in the driver's seat of your car—then back to the greater luxury of the tonneau. Perhaps by this time he has a friend or two with him and has made the floor covering in the tonneau look like the back door mat of an alley entrance. He is not blatantly offensive and oftentimes is well connected. You hesitate about ordering him out; perhaps you know his family; but after he has butted in once or twice you finally summon up courage enough to tell him to "Beat it!" You should have done it six months ago.

Garage loafers of any age have no place in the automobile business. They are a menace and a nuisance. They are impossible! They should be swept out the back door at their first appearance, and if they persist in thrusting their obnoxious personalities on you further, the police should be invited to participate in the eliminating ceremonies.

VALUE OF HAVING FULL STOCKS ALWAYS ON HAND.

One of the most successful dealers in Iowa, who during the past year sold not less than 140 cars priced above $1,200, credits much of his success to the fact that he always had an ample stock of cars on hand. Even when it got close to time for new models he had a stock of cars from which he could make immediate deliveries. And he made them. He did not carry over one. His shipments were so arranged that he always had from 10 to 15 cars on hand. Every time a fresh shipment came in he let the cars stand out in front of his store all day so people knew his goods were moving.

Affording Buyers a Good Variety.

Then the effect of show-room always full made it appear as if he had a large stock, which showed more plainly than words that he had the utmost confidence in the salability of the goods; it also gave people a chance to select, and there is a lot in that idea. People like to look over several articles, in order to buy one, whether it is automobiles or baby buggies. If a customer wanted a car the day the order was placed this dealer could give immediate possession and most of the other dealers had to ask them to wait. He got the best business and made the most money; and, given equal selling ability and equally good reputation, the dealer who carries the stock ready to meet the demand is the one who will make the greatest and the surest sales. The truth of this will be more and more apparent as the automobile business is developed still further.

GETTING NAMES OF PROSPECTS.

"One good turn deserves another" ought to be written large on the flyleaf of every automobile salesman's order book.

When you have delivered a car and thus created a satisfied and delighted customer, then is a bully good time to secure the names of his friends who are likely to be interested.

Do not hesitate about asking for this information. It costs your customer nothing, and if you have properly sold him on your car and made him an enthusiast he will be keen to help you line up his friends.

"CASHING IN" ON FACTORY TIPS.

Factory tips to dealers as to methods and plans and business-building ideas are not always given the careful, serious consideration they deserve. There is this one thing to be thought of: The factory cannot cash in on a single idea it advances for its dealers unless the dealer cashes in first. If it's a plan for making more sales it is the dealer who first is assured of his profit. Think it over. Of course, there are exceptions, but beware lest, being afraid of exceptions, you miss all the good ones.

LETTING OPPORTUNITY ESCAPE

Permitting "Ripe" Prospects to Slip Away for Lack of Attention—Doctor Who Bought a Car in Spite of the Dealer.

That a man may inquire the price of storage space in a garage and still not be a car owner was evidenced by a recent happening in Cleveland. He may be a prospect.

It seems that a doctor had just moved into the city from a small town in the State. He was well-fixed financially and his first move was to buy a home. Soon after he was settled he began thinking of buying a car. He had no garage, but two blocks away was a dealer with a clean-looking store and a very efficient appearing garage.

Got Information But No Attention.

"Before I buy a car," mused the doctor, I'll find out where I can keep it." With this thought in his mind he paid a visit to the neighborhood garage. They told him their charges, which were perfectly satisfactory, but they did not show any particular interest in him—did not even ask him what kind of a car he owned—did not ask him his name or where he lived. He wanted to know their rates and they told him; that's all there was to it.

Going out through the salesroom, the doctor espied a runabout that struck him as being about the niftiest thing he had seen. He inquired the price and they told it to him. On his way he went. Here was a rich, ripe prospect walking into their salesroom and out again and nobody any the wiser. It happens every day in the large cities.

Finally Sold Himself the Car.

Daily the doctor went past that garage. The beauty of the runabout in the window grew on him. He dropped in again to look at it. He brought his wife to the window to view it. Three months later he bought it. He sold it to himself.

Well, what's the point? You ask. The point is that if a real live salesman had been on the job the sale would have been made three months sooner—and the dealer would have been three months' storage ahead, besides being sure of the sale.

WHERE SALESMAN FOUND INSPIRATION AND STRENGTH.

An automobile salesman in Jackson, Mich., who is always on the alert for a hint or a suggestion that will make him a still better salesman, found an idea in Motor World a few weeks ago that helped him land a sale that looked like a "goner."

Where a Motor World Story Helped.

"I followed the suggestion that I read in one of Motor World's stories; and I am convinced that otherwise I would not have had the sale. The man was very persistent; he wanted all sorts of things; and then he wanted a cut price. I told him our position plainly, showed him the folly of the "cut price"; explained that throwing in accessories was exactly the same thing; told him we would stand pat on our prices—and then, instead of remaining on the defensive, I turned on him and asked him one or two questions that put him on the defensive. He could not give the right answer without embarrassing himself, so he left.

Refused to "Cut" But Made Sale.

"In the afternoon he came back, saw my father, and remarked that I was pretty independent and had told him I absolutely would not cut any prices, that he wanted to get a concession. Father did not say much, but he did say, kind of slow like, 'My son told you we would not cut prices, didn't he? Well, he usually means exactly what he says.' That was the finishing touch, and the order came across at regular price without any extras of any kind. But if I had not read that Motor World story I would not have been ready for him and we would probably have missed the sale. Believe me, I am reading the paper closely every week."

"KNOW THY CAR."

To be enthusiastic about the car you sell, you must believe in it. How can you believe in it unless you know it?

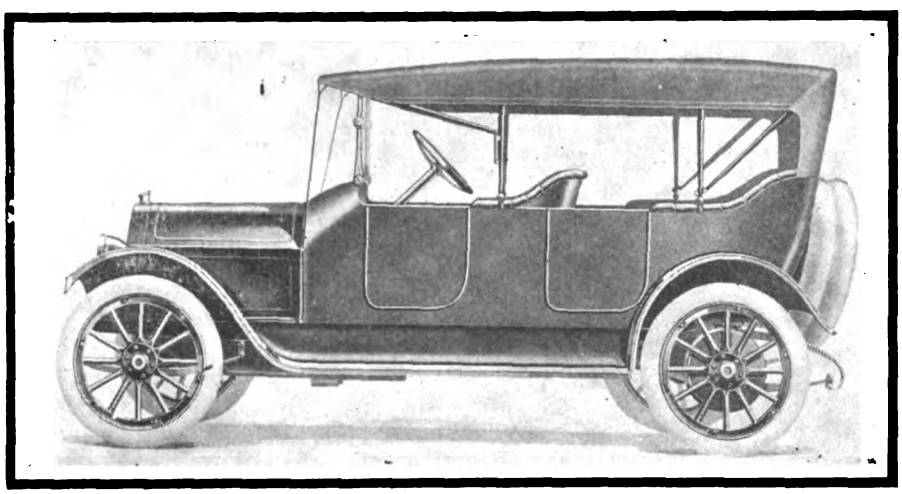
Knowing a car does not mean familiarity with its specifications. It means taking the specification book in hand and checking up each detail so you know exactly what is meant and whether or not the catalog exaggerates or understates. It means taking the plate off the transmission and getting a firm mental grip on every detail of its construction, the gears, the shafts, the bearings, the shifting fingers, etc. It means a similar study and thorough grasp of the rear axle, the motor, the lighting and starting systems, if such are used.

Understanding Every Detail of Car.

Then it means asking for full information on any detail or part that you do not fully understand. When you have gone this far and have driven the car so that you know its economy, its power and its comfort you are fortified to talk with anybody.

Sales often have been lost by lack of a ready answer regarding some vital point of construction. The point is not that you are expected to tell the customer all the things you know, but, as you cannot tell what he will ask, you must and should be informed on every point that could possibly come up.

MAKING STUDY OF CAR DISPLAY.



There is nothing you have to sell that will not be better sold and sold oftener if it is displayed in the best possible manner; if you sell cars, for instance, study the placing of cars on the salesroom floor.

FIRST TRIBUNE PRODUCT WELL STANDARDIZED CAR

Employs Long-Stroke Block Motor in Which Accessibility is Keynote—Unusual Lamp Equipment Supplied.

First details of the Tribune, as the car constructed by the Tribune Motor Co., Detroit, Mich., of which Louis G. Hupp, formerly secretary of the R. C. H. Corporation, is the moving spirit, will be styled, reveals an uncommonly well standardized product in the construction of which such well-known trade names as Buda, Timken, Brown & Lipe, Gemmer and others are conspicuous. For the time being, or until a larger factory can be put up in Detroit, building operations will be confined to the production of a single five-passenger model which is to sell, completely equipped, for about $1,250; eventually, the line will be increased by the addition of roadster, limousine and other types.

SIDE VIEW OF FIRST TRIBUNE FIVE-PASSENGER CAR

The motor in the newcomer is a Buda of the familiar L-head type, with its four cylinders cast in a single rigid block which is supported at three points in the chassis frame, thus providing for a certain amount of weaving and removing the strain from the supporting arms. The bore and stroke measure 3¾ inches and 5½ inches, respectively, giving 234 cubic inches cylinder capacity and a total brake horsepower of 35 at 1,500 revolutions. Large valves and a comparatively short intake manifold are conspicuous features of the motor and legitimately may be expected to contribute to high efficiency. Lubrication is effected by a force feed constant level system and a high tension magneto furnishes ignition sparks.

One of the distinctive features of the motor is that the pistons and connecting rods—the latter are exceptionally long—can be removed from the bottom without the necessity for dismantling the motor. The removal of the oil pan exposes the connecting rod bearing caps, which, when taken off, permit the pistons to be extracted from the bottom; it is not necessary to take out the crankshaft. Both the crankcase and the oil pan are made of aluminum and a bell housing to accommodate the multiple disk clutch is cast one-half integral with the crankcase and the other half integral with the oil pan. To discourage accumulations of dust and dirt, the cylinders are carefully enameled to present a smooth surface and the exposed metal parts are nickel-plated. Intake and exhaust manifolds are on the left side with the magneto on the right side.

From the motor, power is transmitted to a full-floating Timken rear axle through the intermediary of a Raybestos-lined multiple disk clutch that may be run either dry or in an oil bath, and a three-speed selectively controlled gearset. Gear ratios on the various speeds are worked out to give a reduction of 13 to 1 on the first speed, 6¾ to 1 on the second speed, 3 11/13 to 1 in direct drive and 15¾ to 1 for reverse. The axle housing is of pressed steel and encloses a five-pitch bevel gear and pinion. Conforming to the present tendency, the steering gear, which carries a Gemmer name-plate, is mounted at the left side with the gear shift and emergency brake levers in the center of the footboard.

Indicating the liberality of the manufacturers, the total braking surface provided is considerably in excess of the one square inch per 10 pounds of car weight laid down as a requirement as the result of recent tests of brakes, the service set being internal expanding and operated by pedal and the emergency set being external contracting; the total surface provided is 320 square inches; the weight of the car in touring trim is 2,300 pounds. Both sets of brakes are on rear wheel drums.

The frame is of the single drop type formed of channel section steel with three cross members reinforced with integral gussetts. It is supported in front on semi-elliptic spring members measuring 37 x 2 inches and having six leaves; rear springs are full-elliptic with the under member hung beneath the axle to lower the center of gravity of the car. These rear members measure 42 x 2 inches and are finished off at the back with a single scroll. Wheels are shod with 32 x 3½ non-skid tires, both front and rear, and are of selected second-growth hickory; wire wheels will be supplied, however, though their specification increases the list price of the car by $50.

Quite as a matter of course, electric lights operated from a storage battery and generator, are supplied as standard equipment. One of the individualities of the lamp arrangement is that the head lamps carry 16 candlepower bulbs for use in touring and seven candlepower bulbs for use in city streets where less light is required. The remainder of the equipment includes a four-bow Pantasote top with patented quickly placed side curtains and a boot, rain vision windshield, speedometer, electric horn, demountable rims with an extra rim, robe and foot rails, and the usual jack, pump, tool kit, tire repair outfit and spare parts.

May Make "Junk" Law Cover Accessories.

The increase in the volume of thefts of automobile tires, lamps and other accessories has led the police commissioner of San Francisco to request the Board of Supervisors to amend the law which requires second-hand dealers to make daily reports to the police of articles received and to keep an accurate record of their business; as the measure now stands it specifies certain articles and includes bicycles and tools, but the automobile accessories are not included. The police commissioner's suggestion is that the law be made to read "Goods, wares, merchandise or articles of any description." The police officer's request is backed up by automobile insurance companies, which favor such revision.

Alcohol for Cleaning Lamp Lenses.

Alcohol, or a mixture of alcohol and water, is very good for cleaning glass lamp lenses, electric light bulbs, etc. Incidentally, it is surprising the amount of light that a film of dust or dirt can cut off, and there is a very perceptible difference between the light of a clean lamp and that of one that is even slightly in need of cleaning. Needless to add, alcohol must not be used in proximity to an open acetylene flame.

REILLY PLACES ESTIMATE ON SELF-CONFIDENCE

Tells the Sales Manager the Difference Between I-Don't-Believe-I-Can and I-Believe-I-Can Types of Men—Instances Where Confidence Was the Factor in "Making Good."

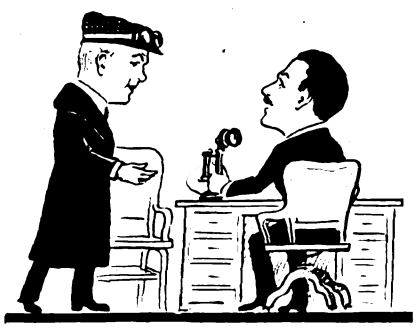
"Never mind that call for Mr. Reilly," said the telephone girl in the front corridor of the factory as she pushed a plug in one of those numerous and mystifying holes in the switchboard and passed the order to the toll operator, her action immediately following the last faint cough from the muffler of Reilly's car as that individual stopped in front of the factory, touched the switch with his toe and closed the throttle.

"The Sales Manager was just trying to get you on long distance," remarked the girl as the dealer entered the outer doors, and upon receiving this information he jogged along toward the Sales Manager's office. As he entered, that dignitary looked up in amazement.

"Well, what do you want?" demanded Reilly, as if this method of answering a

long distance call were the most ordinary procedure.

"Whew!" ejaculated the Sales Manager. "Some telephone service! Here I tell the girl I want to talk to you, and five minutes later you walk in the door. I can't understand it. What are you down here for today?"



"Periodical visit," explained Reilly. "Easter suit—me and the wife."

"Well, I'm glad you came," asserted the Sales Manager. "Say! Do you know a man named Craig? He says you do. He wrote in about a job and wanted to see me, so I told him he could call this morning, and I wanted to talk to you before he got here. He's"——

Reilly Withdraws from the Situation.

"I'll bet that's the man now," remarked the factory man as the telephone jingled.

"Yes, send him in," he directed the girl in the front hall, and in a few seconds Craig appeared, but before he entered Reilly had

slipped out to wait in an adjoining office for the termination of the interview, which interview was not lengthy.

Reilly was reading a trade paper when the Sales Manager came to tell him the caller had gone.

Did Not Realize His Own Worth.

"What kind of a man is he, anyway?" asked the Sales Manager: "I didn't give him any definite answer, but told him that there weren't any openings now but might be later, and that I would ask you about him."

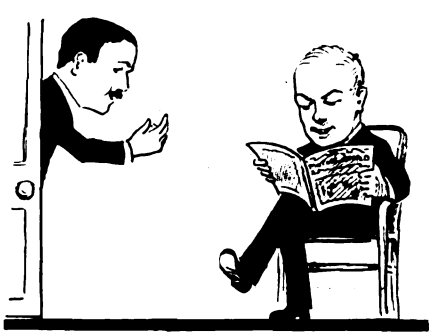
"What does he want to do?" asked Reilly.

"He says he'll do anything," replied the Sales Manager. "He doesn't look like a man who would accept any old kind of a job. Why, he says he used to be a dealer—is that true?"

"I'm afraid it is," answered Reilly.

"Well, what ails him? Why didn't he keep it up? Is he any good?"

"He's more good than he thinks he is," said the dealer, "which may appear somewhat enigmatical, but it's true, nevertheless. If he knew how good he was he'd be surprised, and if some one told him how good he was he wouldn't believe it."



"I'm glad you admit that statement is enigmatical," was the Sales Manager's response. "Perhaps what you said means something; does it?"

"Craig is afraid of himself," continued Reilly, not noticing the sarcastic interruption. "He lacks courage or confidence or whatever you want to call it. He's had all sorts of chances, but never did very much to get himself above mediocrity. He has ability and would make a good salesman if he only could convince himself that he could sell cars, or anything else for that matter."

"What good will he be to me?" queried the factory man.

"If you can wake him up and give him a few lusty kicks where they will do him the most good he will be lot of good to you," came back the dealer. "And not only that, but you will have done a good deed, which ought to win an extra small shovel for you

when you get down and at work on the big coal pile. Craig started out wrong; I've known him for years, and I don't think, unless he changes, that he'll ever get so high up in the world that he won't be willing to admit that I know him.

Lacking in Confidence When a Boy.

"Craig and I lived in the same neighborhood when he were kids and sort of grew up together, and now that I look back at it I can see that even when he was a boy he lacked confidence in himself. One day I suggested to Craig that we go out and sell newspapers and make a little change for ourselves. Craig liked the sound of the word 'change' but said he didn't believe we could sell papers. I asked him why not, and he said he just didn't think we could.

"I said, 'Other kids do, don't they? Why can't we?' He didn't have any very good explanation beyond his belief that we would fail, but we started out. Craig didn't surprise himself; he didn't sell very many papers. I didn't sell many, either, the first few days, but after I had licked a couple of

Digitized by Google

kids who disputed my right to the street and had got a few regular customers I made quite a little money."

"Must hate himself, doesn't he?" asked the Sales Manager.

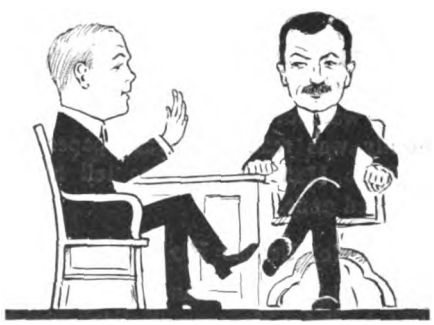
Got Along in Mediocre Positions.

"He ought to," replied Reilly. "He had numerous other jobs, and if it was something that didn't require much ability he got away with it, but when it was a question of standing on his merits he fell down after a time. When I told him I thought of getting a dealership in automobiles he looked surprised and said, 'Why, you never ran an agency!' That made me mad, and I said, 'I know I never ran an agency, but why can't I? Do you know any good reason why I can't?' He repeated that his reason was that I never had run one.

"After I began to show a little prosperity as a dealer Craig decided he would enter the trade, and he dug up a job as a salesman. He made just enough sales to hold his job, but the sales were mostly sure things that he hardly could have lost if he had tried to lose them. Then he saw how I was getting on and he decided that he would like to be a dealer. He finally secured an agency, but at the very start he told me he didn't think he could make it go. He didn't surprise himself, either; it turned out just as he expected it would and he gave it up. If you offered him your job he might take it but he'd 'be sure he couldn't make it go,' and he wouldn't. He would——"

Sales Manager's First Managership.

"Hah!" interrupted the Sales Manager, "that reminds me of the first chance I had at a sales managership. The old man in the company where I was working then was sitting in his office one day and, having heard that the sales manager had resigned, I told the old man I wanted the job. It jarred him for a minute and I could feel his eyes going clear through to my backbone as he stared for a minute and never said a word. Then he snapped out, 'Think you can do it?' I told him emphatically that I thought I could. 'We'll see,' he snapped again, and that ended the interview.



"A few days later he told me he would give me a trial, and when the time came I stepped into the bigger job with some work on my hands. If I do say it myself, I never once thought seriously of failing—I didn't have time. I certainly worked those first weeks, and bye and bye I began to feel that I was getting to a point where I had things going fairly well. It wasn't long before I knew I had pretty nearly made good."

"Craig couldn't pull off a stunt like that in a thousand years!" added Reilly. "He can work hard enough and has ability and all of that, but he lets this 'Suppose I fail? Suppose I fail?' keep bobbing up in his mind and it isn't long before he's saying, 'I know I'll fail, I know I'll fail,' and the next thing he says is, 'See! I failed, didn't I? Just as I said I would.' Men are pretty much alike. One man starts out with the determination and confidence that he is going to succeed and the other is obsessed with the idea and expectation that he will not succeed, and both of them wind up just where they expected they would. It's only the old story that a man can do what he believes he can. Craig believes the wrong thing."

Salesman Shows Trace of Scepticism.

"Do you expect me to believe that there is nothing a man can't do if he gets a notion he can do it?" sceptically asked the Sales Manager.

"Well, you 'it!'" protested Reilly, "you

wouldn't expect you could tip the factory over with one hand, would you?"

"Hardly!" replied the Sales Manager.

"There's reason in everything," added Reilly. "No sane man would expect to do such an impossible thing, although men have done things that others said were impossible. Napoleon thought he could conquer the world; he didn't succeed, but he got a mighty big handful of it. My grandmother used to tell about aiming at the moon and hitting a star, or something like that, which was but another way of saying that aiming high often lands you quite high, even if not as high as you hoped. You might say it was impossible for a man to be in three places at the same time, but Julius Cæsar did it. It must be true, too, for he wrote the story himself.

Confidence of Columbus and Wrights.

"Columbus never would have discovered America if he hadn't been confident that he could find land on this side of the ocean. He had to have confidence not only for himself but for three shiploads of men. The Wright brothers were so confident they could fly that folks thought the boys were crazy, but public opinion changed when they produced results."

"And," was the Sales Manager's comment, "if the old man who made me sales manager for the first time hadn't had unbounded confidence in himself and his business ability he wouldn't have any business to-day. Everyone said he was full of wild ideas when he kept soaking money into the business at a time when everyone said he was on his way to the financial graveyard—but he fooled 'em."

Self-assured Man Generally "Gets There."

"Sure!" responded the dealer. "It only bears out what I said—that a man who is confident in himself and thinks he can do things generally gets there."

"I suppose that, if you made up that mind of yours, your self-confidence would enable you to talk your wife out of an Easter hat, wouldn't it?" asked the Sales Manager with just a trace of semi-sarcasm.

"James," reprovingly replied Reilly, "no matter what a man thinks he can do, some things are impossible."

Post Office to Handle Parcels "Collect."

Having mastered quite satisfactorily the workings of the Parcel Post, Uncle Sam's employes will be given additional duties July 1 in this service, when there will go into effect an order providing for the collection by the Postal employes at its destination of whatever charge may be affixed to a C. O. D. package, thus making it possible for a store to mail a package to a customer "collect," leaving it to "Uncle Sam" to make the collection from the customer and to remit the amount to the sender; however, this applies only to packages whereon the charge is not in excess of $100 and an additional fee of 10 cents is charged, to be affixed to the package in stamps; also, the amount of collection must be marked on the package. This also will insure the package up to $50.

Beginning March 1 the special delivery system was made applicable to the Parcel Post, the regular ten cent fee being called for, to be affixed in regular or special delivery stamps.

Bromlee Urges Engine Starter Test.

By way of combining a mild form of excitement and a demonstration, Wayne K. Bromlee, sales manager for the Motor Car Mfg. Co., of Indianapolis, has proposed what he styles an electric "self-starter" race as a sort of prelude to the Decoration Day race on the Speedway, and if everything goes as it is planned some cars will be lined up in front of the Claypool Hotel, ready for the "race" on the 29th of May. All the cars are to be in touring trim and are to be propelled by their engine starters alone. As a precautionary measure, it is added that where the starter is attached between the clutch and the rear axle, the clutch must not be disengaged during the time of the contest.

TRUCKS IN SHADE OF SHELTERING PALMS

They Replace Pleasure Vehicles in Boston's Babylonian Garden and Present a Brave Front Notwithstanding—Only Two New Trucks, Including a Steamer, Appear but Three Others are "On the Way".

With the trunks of most of the apple trees somewhat misshapen from the squeezing of the crowds of last week, but the foliage as green and umbrageous as ever; with the waterfalls of the Babylonian gardens hoisted bodily out of the landscape, but the rest of the scenery as Egyptian as possible in the presence of the dominating bulks of huge vehicles, the motor truck section of the Boston show was inaugurated in Mechanics' Building, yesterday (Wednesday) evening, with the usual first night crowds and the old-time difficulty of getting from one place to another any faster than the average speed of a slow-moving mass of humanity would allow. The man with the dictionaries has gone, and so has the life insurance agent, but the soft-voiced dispensers of soft drinks are still on the job and doing well, thank you

As to the main thing—the exhibit of motor trucks—it seems too bad, in a way, that Boston has its show so late in the season, for though it includes most of the machines of importance seen at other big shows, there are not many that have not already been more or less fully described in connection with other exhibits. It is not often that Boston does not bring out a few newcomers, and though this year's show is not quite an exception, it is a little unusual in that there is nothing radically new, in which respect it is in line with the important exhibitons that have gone before it since the begnning of the year.

Novelties Few and Far Between.

There is, however, a new gasolene truck and a new electric machine, the Sowers and the Edison, respectively. The Sowers is not only a newcomer, but it is so very new that the paint still is soft on the first model, which is a 1½-ton machine built on standard lines throughout. The motor, which is a Wisconsin of 3¼ inches bore and 5 inches stroke, is placed under the footboards and drives through a leather-faced cone clutch, three-speed selectively controlled gearset, jackshaft and side chains to the rear wheels, which are no less than 40 inches in diameter, with 4-inch solid tires. The front wheels are 38 inches, with 3½-inch tires; the wheelbase is 110 inches. The machine is listed at $1,950, with standard stake body. Another model is in course of preparation, built along the same general lines, but with the motor under a hood in front and a wheelbase of 130 inches; the same motor and transmission will be employed. The makers, the Sowers Motor Truck Co. of Boston, are arranging for a factory in that city.

The Edison electric truck was delayed in getting away from the factory as so was not in place for the opening of the show; it is expected to arrive, however, within a day or two.

Plenty of Trucks in the Basement.

Of course the Stanley steamer shows its round-fronted hood and its many valve-wheels and its nickel-plated high-pressure engine to the crowds; a Boston show hardly would be complete without it. Lonely as is the steamer among the hosts of gasolene cars, there seems no more possibility than ever there was of its abandoning its boiler and link-motion for a carburetter and magneto.

Not only has the Boston show made good in that practically all the cars named in the entry list have put in an appearance, but several not on the original list have turned up to help fill the big triangular building. These include the Mais and the Brown, which between them uphold the principle of internal gear drive through a live axle, Garford, Jeffery, Best, Flint, Gramm, and Selden. All of these except the Brown and Mais are in the basement, as are also the Little Giant and the Sullivan, to say nothing of an overflow from the Packard and White exhibits upstairs. The Packard basement contingent consists of no less than ten machines, mostly chassis, making one end of the cellar look like a Packard warehouse, while there are three big, black Whites over near the other end.

Fire Apparatus and Firemen Too.

As is usual, there is a goodly sprinkling of fire-fighting motor vehicles on view, and a number of visiting department officials made a round of critical inspection during the afternoon, before the doors were officially opened. The Knox people show their big pumping engine and a combination hose and chemical wagon, while the makers of the Pope-Hartford, Federal and White also have combination machines in their stands, and the Kelly-Springfield people show a fire and police patrol wagon. It goes without saying that all these machines are of the reddest possible red with the brightest of brass and nickel trimmings. All these concerns show also their standard models and the Knox, of course, makes a conspicuous feature of the Martin tractor.

While the Marmon 1,500-pound commercial car is not quite a new product, having been on the market for about a year, it is being exhibited for the first time at a big show.

The T-head motor is similar in design to the Marmon pleasure car motor but is smaller, the bore and stroke being 4 and 5 inches, respectively. It is rated at 25 horsepower and is automatically controlled by a governor that permits a maximum car speed of 20 miles an hour. The motor is carried on a three-point suspension. Final drive is by shaft, the intermediate transmission elements including a dry multiple disk clutch and three-speed selectively controlled gearset. The wood wheels are 32 inches in diameter and are fitted with four-inch pneumatic tires front and rear. In fact apart from the motor and a few details, the commercial Marmon is built along the same lines as the pleasure car.

The Packard exhibit in the Babylonian section of the building literally holds not only the center but all the rest of the stage, for it is on the platform at the end of the hall that the machines are grouped, and so numerous, in fact, are they that half a dozen overflowed to the floor in front of the stage and, as already stated, ten trickled into the basement. Scarcely less numerous were the exhibits of the Peerless, Pierce-Arrow and White.

Representative Showing of Electrics.

Electricity is well represented. Atlantic, Buffalo, Couple-Gear, Waverley, Edison, G. M. C., and General Vehicle—seven, count 'em—electric cars make a decidedly formidable showing, though none of them are departing from their well-known methods and models. The Couple-Gear, the feature of which is its self-contained electric motor wheel, is shown by the Eldridge Mfg. Co., which has the knack of taking a pair of motor wheels and a box of battery cells, sticking two of the wheels under the front of a

Digitized by Google

wagon and the battery box under the body or under the driver's seat and turning out a slow-moving but powerful and economical outfit. Six new designs are shown, all driven by a single pair of front wheels except two, one being of the semi-trailer type with four driving wheels, the weight of the battery on the front wheels and the weight of the load on the rear driving wheels and the trailers, and the other a dump-cart with a single driving and steering wheel in front. This probably is the only heavy commercial car built with direct steering, and hand wheel being mounted on an extension of the fork in which the wheels turns, exactly like a bicycle. It is said that there is no difficulty in steering the machine, the fact that the steering wheel is also the driving wheel apparently preventing the transmission of strain and shocks to the driver's hands.

Unusual Provision for Third Man.

One of the little details that help to adapt a truck to the needs of a particular line of business is seen on a Packard furniture truck. Furniture movers usually need a crew of three men, and in order to accommodate this number the seat is extended to the left, overhanging the running board and providing ample room for the third man.

One of the very few exhibits that did not turn up, but which caused considerable curiosity, was that of the Flanders Motor Co., which, with the Detroit and Edison electrics, are represented by "breathing spaces" in the hall, though the Edison, as already explained, is on the way. The usual crowds surrounded the Packard, Locomobile, and other exhibits in which tipping bodies rose and fell to the accompaniment of humming electric motors and, incidentally, entirely spoiled the Babylonian effect for a radius of many yards.

Some of the Show Outside Building.

Outside the big building, where the trucks were unloaded from the cars and hooked onto a cable to be dragged up a long incline into the hall, there was an interested, if small, assemblage of early arrivals "taking stock" of the machines under the glare of the early spring sun. While most of the machines were towed to the spot, a few were under their own power, and among them the Lauth-Juergens, which attracted their share of attention because of the extremely smooth, regular working of their motors and the excellent clutch action. Even when throttled down to the limit the motors of these cars continued to run without a miss and with steam-engine-like steadiness, though obviously raw from the factory.

Little Newness in Accessory Exhibits.

While the exhibitors of accessories are a lonely lot, by comparison with the number present at the pleasure car show, there are enough to make quite a respectable showing, thanks to the fact that they have been moved together so as to leave all the blank spaces in a block—a much better arrangement than leaving yawning gaps between exhibits. Of the 60 exhibitors showing parts, sundries and supplies, 51 are "holdovers" and the remaining nine newcomers. As is the case with the cars, the accessories are for the most part those which have been seen at other shows. The newcomers in the accessories department are as follows: Baldwin Chain & Mfg. Co., driving chains; William H. Brown, Trafilog truck recorders; Federal Chain & Mfg. Co., Federal and Gaylor non-skids; Gibney Tire & Rubber Co., Gibney tires and vulcanizers; Neverskid Mfg. Co., non-skids; Polack Tire & Rubber Co., Polack tires; Service Recorder Co., truck recorders; Sewell Cushion Wheel Co., Cushion wheels; Whitney Mfg. Co., Whitney driving chains.

SUMMARY OF COMMERCIAL VEHICLES EXHIBITED AT BOSTON SHOW

American Locomotive Co., Providence, R. I.—Alco.
Autocar Co., Ardmore, Pa.—Autocar.
Atlantic Vehicle Co., New York City—Atlantic electric.
Boston Motor Co., Boston—Selden.
Bowman Co., J. W., Boston—Waverley electric.
Buick Motor Co., Boston—Buick.
Chase Motor Truck Co., Syracuse, N. Y.—Chase.
Chicago Pneumatic Tool Co., Chicago, Ill.—Little Giant.
Connell & McKone Co., Boston—Overland.
Curtis-Hawkins Co., Boston—Speedwell.
Dodge Motor Vehicle Co., Boston—Buffalo electric.
Driggs-Seabury Ordnance Corp., Boston—Vulcan and Bessemer.
Durant-Dort Carriage Co., Flint, Mich.—Flint and Best.
Edison Electric Vehicle Co., Lawrence, Mass.—Edison electrics.
Eldridge Mfg. Co., Boston—Couple Gear electric.
Fuller, Alvan T., Boston—Packard.
Garford Co., Elyria, O.—Garford.
General Motors Truck Co., Boston—G. M. C. electric.
General Vehicle Co., Long Island City, N. Y.—General Vehicle electric.
Grand Rapids Motor Truck Co., Detroit, Mich—Decatur.
International Harvester Co., Akron, Ohio—I-H-C.
Jeffery Co. of N. E., Thos. B., Boston—Jeffery.
Koehler Sporting Goods Co., H. J., Boston—Koehler and Hupmobile.
Kelly-Springfield Motor Truck Co., Springfield, Ohio—Kelly-Springfield.
Linscott Motor Co., Boston—Reo.
Locomobile Co. of America, Bridgeport, Conn.—Locomobile.
Maguire Co., J. W., Boston—Pierce-Arrow.
Maddocks, H. Ross, Boston—Stewart.
Mais Motor Truck Co., Indianapolis, Ind.—Mais.
Mercury Mfg. Co., Chicago, Ill.—Mercury.
Myer, Abrams & Co., Boston—Lauth-Juergens.
Peerless Motor Car Co. of New England, Boston—Peerless.
Pope-Hartford Co., Boston — Pope-Hartford.
Power Truck Sales Co., Boston—Adams.
Rawding, Leslie G., Boston—Atterbury.
Sanford Motor Truck Co., Syracuse, N. Y.—Sanford.
Sowers Motor Truck Co., Boston—Sowers.
Stanley Motor Carriage Co., Newtown, Mass.—Stanley steamer.
Smith Co., A. O., Milwaukee, Wis.—Smith-Milwaukee.
Sullivan Motor Car Co., Rochester, N. Y.—Sullivan.
Underhill Co., Boston—Knox.
Universal Motor Truck Co., Detroit, Mich.—Universal.
Velie Motor Vehicle Co., Moline, Ill.—Velie.
Victor Motor Car Co., Buffalo, N. Y.—Victor.
White Co., Boston—White.
Whitney-Barney Co., Boston—Federal and Standard.
Wing Motor Co., F. E., Boston—Marmon.

SUMMARY OF ACCESSORIES EXHIBITED AT BOSTON SHOW

Ajax-Grieb Rubber Co., New York City—Ajax tires.
Austin & Doten, Boston—Shelby steel tubing.
Baldwin Chain & Mfg. Co., Worcester, Mass.—Non-skids.
Batavia Rubber Co., Batavia, N. Y.—Batavia tires.
Bell, Bayers & Woodbury, Boston—Lighting systems for cars and garages.
Bowser & Co., S. F., Fort Wayne, Ind.—Gasolene and oil storage systems.

Digitized by Google

Boyd, Shirley F., Boston—R. J. V. ball bearings.

Brown, Wm. H., Cleveland, Ohio—Trafilog recorders.

Champion Ignition Co., Flint, Mich.—A-C spark plugs.

Charles A. Jackson Co., Boston—Aplco lighting system.

Clark Foundry Co., Rumford, Me.—Machine tools.

Coes Wrench Co., Worcester, Mass. —Wrenches.

Cramp & Sons Ship & Engine Bldg. Co., Philadelphia, Pa.—Parsons white bronze bearing metal and worm gearing.

Dean Electric Co., Elyria, Ohio—Tuto and Rexo horns, Dynalux lighting systems, Elyria-Dean and Ohio starting and lighting systems, Elyria-Dean speedometers, etc.

Diamond Rubber Co., Akron, Ohio—Diamond tires.

Dixon Crucible Co., Jos., Jersey City, N. J. —Graphite lubricants.

Dunn-Ray Co., Boston—Electric headlight lighters.

Edison Storage Battery Co., West Orange, N. J.—Edison batteries.

Electric Storage Battery Co., Philadelphia, Pa.—Exide batteries.

Expansion Tire Co., Boston—Cushion tires.

Korine Carbon Remover Co., Amesbury, Mass.—Carbon remover.

Federal Chain & Mfg. Co., Springfield, Mass.—Non-skid devices.

Firestone Tire & Rubber Co., Akron, Ohio —Firestone tires.

Fisk Rubber Co., Chicopee Falls, Mass.— Fisk tires.

Gibney Tire & Rubber Co., Philadelphia, Pa.—Truck tires and vulcaniers.

Goodrich Co., B. F., Akron, Ohio—Goodrich tires.

Goodyear Tire & Rubber Co., Akron, Ohio —Goodyear tires.

Gray & Davis, Inc., Amesbury, Mass.— Electric starting and lighting systems and lamps.

Harris Oil Co., A. W., Providence, R. I.— Lubricants.

Hartford Suspension Co., Jersey City, N. J. — Truffault Hartford Shock absorbers, Hartford jacks and bumpers and electric starting and lighting systems.

Heinze Electric Co., Lowell, Mass.—Heinze magnetos and other ignition devices.

Jaeger Co., Boston—Marine and stationary motors.

Jones Speedometer, New Rochelle, N. Y.— Jones speedometers and recorders.

Kelly-Springfield Tire Co., New York City —Kelly-Springfield tires.

Marburg Bros., Inc., New York City—Mea magnetos, S. R. O. ball bearings, Marburg-Hagen springs.

Motz Tire & Rubber Co., Akron, Ohio— Motz cushion tires.

MacDonnell-Webster Co., Haverhill, Mass. —Scientific inner tubes.

Never-Skid Mfg. Co., New York City— Non-skid devices.

Ozo Co., Boston—Carbon remover.

Perfection Filler Co., Somerville, Mass.— Tire fillers.

Pennsylvania Rubber Co., Jeannette, Pa.— Pennsylvania tires.

Polack Tyre & Rubber Co., New York City —Polack tires.

Remy Electric Co., Anderson, Ind.—Remy magnetos and electric lighting and starting system.

Ricker Bennett Co., Cambridge, Mass.— Paints.

Robinson & Son, Wm. C., Boston—Lubricants.

Rose, P. R., Boston—Microscopes.

Sages Trunk Co., Boston—Automobile trunks.

Service Recorder Co., Cleveland, Ohio— Service truck recorders.

Sewell Cushion Wheel Co., Chicago, Ill.— Cushion wheels.

Splitdorf Electric Co., Newark, N. J.— Splitdorf magnetos and other ignition devices and electric lighting systems.

Standard Welding Co., Cleveland, Ohio— Electrically welded tubing and parts.

Stewart & Clark Mfg. Co., Chicago, Ill.— Stewart speedometers.

Swinehart Tire & Rubber Co., Akron, Ohio —Swinehart tires.

Texas Co., New York City—Texaco lubricants.

U. S. Light & Heating Co., New York City —U-S-L starting and lighting systems.

United States Tire Co., New York City— United States tires.

Vacuum Oil Co., New York City—Mobil lubricants.

Veeder Mfg. Co., Hartford, Conn.—Tachometers, odometers and die cast parts.

Vesta Accumulator Co., Chicago, Ill.—Vesta batteries and lighting systems.

Warner Instrument Co., Beloit, Wis.—Warner Autometers.

Weed Chain Tire Grip Co., Boston—Weed tire chains.

Whitney Mfg. Co., Hartford, Conn.—Whitney chains.

Willard Storage Battery Co., Cleveland, Ohio—LBA batteries.

Wolverine Lubricants Co., New York City —Wolverine lubricants.

Car Prize Helps Cedar Rapids Show.

Bait, and attractive bait, too, in the shape of a 1913 motor car, which was offered as a door prize to the holder of the lucky ticket, was used to entice the good people of Cedar annual show of the Cedar Rapids Automo- Rapids, Ia., and neighboring towns to the bile Dealers' Association, which closed its doors in the local auditorium on Saturday evening last, March 15th. Decorations were of a simple nature, but were none the less eye-pleasing. The ceiling and the balcony were obscured by a canopy of pink bunting which was banked with incandescent lights. Suitable posts bearing signs announcing the names of the cars on display marked the booths and smilax-laden bowers partially covered the aisles Of the 33 different vehicles which were shown by 19 dealers, none save the Denning tractor, a farm implement made by the Denning Farm Implement Co., was of local production. The cars on view were:

Moline, Paige, Thomas, Speedwell, Case, Overland, Metz, Enger, Empire, Paterson, Marathon, Abbott-Detroit, Mitchell, Studebaker, Ford, Rambler, Denning tractor, Oakland, Detroiter, Chalmers, Lozier, Michigan, White, Reo, Cole, Hudson, Velie, Baker electric, Cadillac, Garford, Matheson, Richmond, Davis.

Forty-three Dealers at Peoria Show.

Peoria's third annual show under the auspices of the Peoria Automobile Dealers' Association closed its doors in the Coliseum in that Illinois city on Saturday evening last, March 15th, having held forth for four days, from Wednesday evening, March 12. The usual vine-grown and flower-bedecked trellis work and the orthodox white pillars topped with potted palms to separate the booths, not to mention myriad varicolored incandescent lights, and very much daintily tinted bunting comprised a decorative setting that was eye-pleasing if not wholly original. Twenty-eight different makes of motor cars, both pleasure and commercial, were exhibited by the 23 dealers who held space, and naturally the two local productions—the Glide car and the Avery truck—were very much in evidence. Accessories were displayed by half a dozen dealers. The cars shown were:

Broc electric, Detroit electric, Waverley electric; Ford, Chalmers, Inter-State, Packard, Avery truck, Cole, Hupp, Reo, Moon, Rambler, Case, Hudson, Peerless, Westcott, Overland, Michigan, Studebaker, Buick, Paige, Franklin, Regal, Glide, Cadillac, Apperson, Warren.

When Exhaust Pipes Create Steam.

Probably more than one person has received a bad scare on a wet day when, on stopping his car, it has been immediately enveloped in what looked and smelled like a cloud of smoke. Investigation generally reveals that it is nothing more fearsome than steam caused by water splashed onto the hot exhaust pipe. If the water is dirty and contains combustible matter, the illusion is likely to be more complete.

BRITISH PETROL BARONS PUT UP PRICE OF "GAS"

Both Principal Companies Make Four-Cent Increases In All Grades—Heavier Fuel Is Offered at the Former Price.

Echoing recent American advances in the price of gasolene, the British Petroleum Co., which is the sole distributer for the United Kingdom, of the Shell products, has advanced the price four cents a gallon, the market price of Shell Spirit, which is practically the same as gasolene, now being 43 cents a gallon. Incidentally, either to placate users or to stimulate the use of heavier fuel, a new brand has been brought out under the name of "Shell II"; it is slightly heavier than Shell Spirit and sells for 39 cents a gallon, which was the prevailing price of the latter up to about one week ago.

At the same time the Anglo-American Oil Co., which produces Pratt's Perfection Spirit, also has advanced its prices, bringing them up to those of the Shell distributers, and also has added another brand which is known as "Pratt's II"; Like "Shell II," it sells for 39 cents a gallon. The price of Pratt's Taxibus Spirit, which is the heaviest of all the fuels, has been advanced four cents a gallon along with the others and now sells for 37 cents. All of these fuels are sold in sealed tins containing two imperial gallons, the American equivalent of which is 2.4 gallons. Consequently, the prevailing price of the best grade Shell Spirit, judged by the standard of the United States gallon, is approximately 36 cents.

Court Rules on Owner's Liability.

If the owner of a car allows his chauffeur to use the car on a personal errand, and if the chauffeur while engaged on such personal business injures a person, the owner is not exempted from liability, according to a decision of the Massachusetts Supreme Court last week. It has not unqualifiedly said the owner is liable, but has ordered a retrial in a case wherein judgment was directed for the owner by a lower court.

The action was brought against William F. Denholm by Carroll Reynolds, who contended that he was struck by the latter's car August 7, 1910, while the chauffeur, who slept at the owner's house but ate at another place and had his laundry done at still another place, but all at the owner's expense, was on his way to get laundry, having his employer's permission to use the car. Commenting upon the action of the lower court in directing a verdict for the defendant and reviewing the manner of the chauffeur's remuneration and maintenance, the court, in directing a retrial, said:

"If under these circumstances the jury should find that the use of the automobile by the chauffeur in going for his laundry was an incident of his employment, or was assented to either expressly or impliedly by those having authority from the defendant to direct the conduct of the chauffeur, then we think the defendant would be liable."

Schimpf to Visit Troubled Section.

Having disposed of his business interests in Brooklyn, Wm. Schimpf, chairman of the contest board of the American Automobile Association, departed on Sunday last, March 16th, for a visit to the Pacific Coast, where he will "look into" the causes which had to do with the breakaway of a faction of Southern California motorists and their formation of the Western Automobile Association. Schimpf first will journey to Los Angeles, which it is expected he will reach on March 22d, and there he will consult with the powers that be in the Automobile Club of Southern California with a view to retaining that organization in affiliation with the national body. Action on the part of the club has been deferred until after the conference with the contest board chairman. It is expected that Mr. Schimpf will remain on the coast for some time to come the better to understand the situation in Western automobile circles.

Boast Costs a "Record Breaker" $25.

Hereafter, Rupert Jeffkins, who is an Australian and is fairly well known as a racing driver in this country, is likely to be more circumspect in boasting of his speed exploits. Jeffkins recently drove at a whirlwind clip between Oakland and San Jose, Cal., carrying a letter from Mayor Frank K. Mott to Mayor Monahan, and in doing so he smashed pretty nearly all the local speed laws between the two cities. Which might have been all right as far as it went, if he had not been over-anxious to tell about his "record breaking." But he was—and District Attorney Free of San Jose heard him and promptly did what every zealous district attorney should do under similar circumstances, even though two mayors aided and abetted the offense; he "pinched" Jeffkins, and had him arraigned on his own admission of having violated the law. Later, Jeffkins paid a fine of $25. No one saw him kick himself.

Clark M. Stewart has been chosen to head the Marysville (Kan.) Automobile Club. The other officers elected at the annual election of officers are: Vice-president, Joseph Ellenbecker; secretary-treasurer, E. O. Webber.

LEGISLATORS "KID" FATHER OF FREAK AUTOMOBILE BILL

North Dakota Man's Measure Is Sensationally Amended and Interred in Committee—What Happened to Would-Be Law.

"Kidding the father of a bill," that old method of killing an unpopular piece of proposed legislation, worked effectively last week in North Dakota when a rural member of the legislature introduced the typical rustic measure which requires the driver of a car to stop when signaled by the driver of a horse-drawn vehicle and to do sundry other things which would make automobile travel more or less of a comedy; the "kidding" took the form of numerous amendments which went one better any of the propositions of the father of the bill.

One legislator tacked on an amendment requiring the driver of a car to "sprinkle the road for eighty rods when signaled by a farmer," and another dignified solon insisted upon a "twenty-five horsepower whistle" as necessary equipment. Besides automobiles and motorcycles, the law was made to include "road lice," wheelbarrows, aeroplanes, submarine boats and baby carriages, although the lawmakers conceded that a wheelbarrow or baby carriage with a "twenty-five horsepower whistle," or one that would sprinkle the road for eighty rods would be some vehicle.

This apparently didn't suit the fastidious tastes of the representatives of the people, and they further amended the bill so as to require a motorist to take his car apart and hide the parts in the bushes beside the road "when signaled by a farmer" and to carry a supply of skyrockets to send up when approaching a crossroads. After being thus "desecrated" the bill was humorously referred to the committee on military affairs, where it undoubtedly will rest in peace for some time to come.

President's Daughters to Drive Electric.

President Woodrow Wilson may be putting his most democratic foot forward as an initial appeal to the "dear common people" who have high hopes in his administration, but two of his daughters, Miss Eleanor and Miss Jessie, are appearing in a role which smacks somewhat more of an aristocratic taste. They are learning how to pilot an electric car in the Capitol City. Abel Long, who is in charge of the White House motor car equipment, is instructing the young womenn in piloting the vehicle which Miss Helen Taft drove successfully and skilfully through the streets of Washington during her father's incumbency.

GETTING A BUSINESS MANAGER FOR THE GARAGE

Manager of Supply Store Who Has Dealt With Many Garages Discusses Their Weakest Point and Points to an Effective Remedy—Tells of Garages Which Play a Losing Game.

When merchandising and any trade are reviewed, it is found as a general rule that the trade and the merchandising methods have progressed together, if they have progressed at all; for instance, the shoe trade of even a quarter-century ago is not the shoe trade of to-day: the trade has grown, and with it have improved the merchandising methods, as is apparent in the store fronts, store displays and please-the-public attitude which exist. Hardware men and hardware selling are on the upgrade, the tobacco business has gone away beyond the wooden Indian period, and in other fields of endeavor modern men are building business by modern methods.

Men and Methods Progress Unequally.

That there can exist a condition wherein methods have progressed while the men of the trade have not done so may seem paradoxical, yet that such is true to a certain extent in the garage trade may not seem so absurd upon an investigation of the great blanket of garages which covers the country. This seemingly incongruous statement is made by Matthew D. Sweeney, who at the present time is the manager of Charles E. Miller's Eighth avenue store in New York City. Sweeney is well qualified to know whereof he speaks, for as former chauffeur for Miller, who is one of the trade's largest supply men, Sweeney has traveled thousands of miles and has come in contact with hundreds of garages.

As Sweeney expressed it, "This business is away above a lot of men who are in it. They are not business men—they're mechanics; and they're good mechanics but not business men."

Value of a Good Business Manager.

Asked what he would suggest as a remedy for this condition in the garage trade, Sweeney was quick to answer, "Place a business man in the garage."

"Take a partner?" he was asked.

"No," he replied, "often a partner is a bad proposition; hire a man to be business manager and make him draw the trade and build the business."

Sweeney added that many garages are one-man affairs where the hiring of a business manager would be too great an expense, and in that case he conceded that the success or failure of the establishment rests upon the ability of the proprietor to adapt himself to circumstances and fill the dual position of chief mechanic and business manager. In fact, it is but a few days ago that a Long Island garageman who has the basis of a flourishing business told Sweeney he was looking for a good man to act as a business manager for the place and to act as the "glad hand" between the shop and the public.

In the many miles that Sweeney has traveled as pilot of the Miller car there is but one garage which stands out in his recollection as an appeal to a man of merchandising instinct and as a pleasure to the "travel tired motorist." This garage is not in a big city, it is in Portland, Me., a city of only about 60,000 inhabitants.

Service That Brought in Trade.

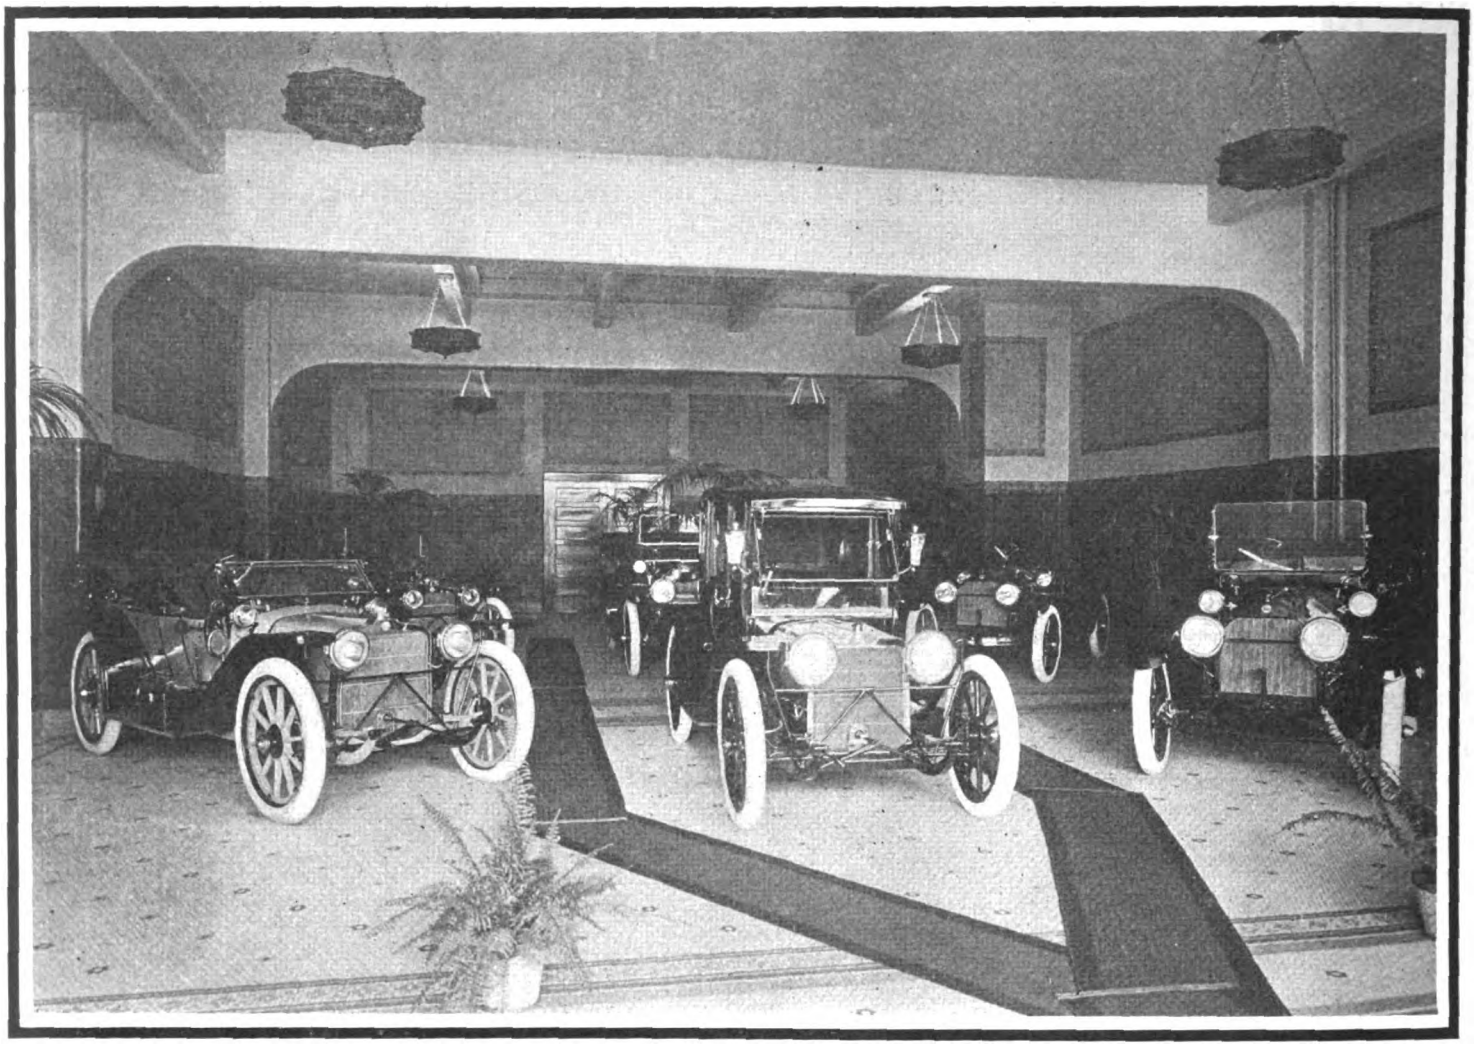
"I think it's called the Hotel Garage," said Sweeney, "and I'll never forget it. We drove in one day and were greeted by a very pleasant man who immediately strove to take care of us to the best of his ability. He was the boss and he didn't do anything but be the boss; he certainly was a good investment to himself.

"After I drove in he said, 'Will you need any gasolene? We aren't very busy just now and can fill you up just as well as not if you need any.' I might not have bought any 'gas' until I got out on the road, but I knew the tank would stand quite a little, so I told him to fill it up. He called a young fellow and said, 'Herbert, will you fill the gentleman's tank?' Herbert was right on the job, and while he was pushing the portable tank to the car the proprietor said, 'How are your lamps? Do they need any oil? You're going up in the mountains and you will surely need your lamps.' When I assented, he told Herbert to fill the lamps.

"Then he asked me if I had any tubes that needed fixing. He said they had a fine repair department and could have any tires or tubes all fixed up by the time we were ready to re-start. I certainly never would have thought of that, but when he reminded me of it I remembered that I had two or three tubes that I had thrown into the car with the intention of getting them fixed up some time; so he got that job, too. Next he asked me if the batteries for the horn were all right. He said the horn might come in very handy in the mountains. I knew he was right about that, too, and I told him to look the batteries over and fix them up if they needed it. By that time I quit worrying about whether I needed anything or not, for I was sure that if the garageman couldn't think of it I certainly couldn't.

When Tactful Suggestion May Help.

"He got quite a little trade from that one car. If he hadn't suggested all those things I probably never would have thought of most of them until we were out on the road, and while we would have had to pay the bill some time, some one else would have gotten it. You don't know how a motorist appreciates being taken care of like that; nine times out of ten he needs something when he goes into a garage, but he never thinks of it until he is out on the road and needs it; and then he needs it bad. That manager's business ability is making lots of money for the garage that with other methods would pass right by the door."



"How about the other kind of garage?" was asked.

An Example of Bad Management.

"Lots of them!" replied Sweeney. "The worst one I know of and one that ought to pay big money is in a small town in New York State on the main line of East and West travel. Two partners run it. They are good mechanics but are poor business men. They have an opportunity for a wonderful trade, for it goes right by their door; but I don't see how they can stay above water much longer. We drove in there one day, and as we had to wait quite a while we had a fine opportunity to watch things. There must have been ten cars that came along while we were there, and most of them went away after tooting their horns and not getting a response. One man drove into the garage and honked his bulb horn for several minutes—nothing doing! Then he honked it some more—nothing doing! Then he cut loose with his Klaxon, and finally one of the partners came from the back of the shop, his arms covered to the elbows with grease and, as he entered, holding his hands up as if he were afraid they would touch something, he asked, 'Did you want something?' 'No!' roared the man in the car,

ONE OF INDIANAPOLIS'S NEWEST AND MOST IMPOSING SALESROOMS

Quarters of the A. & M. Sales and Service Co., agent for American and Marion cars

'I just drove in to see if this was a moving picture show.' When he threw in the reverse and backed out he left a cloud of smoke that filled the place.

"Oh, yes; there was another man over in New England that I recall. I made it a practice to get a receipt for whatever I bought and I asked him for a receipt for gasolene. He rummaged around and found a sheet of paper, but when he came to make out the receipt his hands were so dirty and greasy that no one could read it after he had finished it. He looked perplexed, then handed the paper and pencil to me and blurted out, 'Here, make out your own receipt!' "

These last two are but samples of the many garages which are on the forgotten list, while the Portland establishment is of itself the entire remembered list. In the case of the two partners, were Sweeney's recommendation carried out, a man would be engaged to take care of the public and manage the business. A young man of ability who would take care of the office and would not demand a large salary could do much toward filling this position; at least, he could see to it that no man went away from the garage without an opportunity of making his wants known.

"Yes!" exclaimed Sweeney, "the office! Where do you find the office? Half the time you can't find it. It's stuck 'way back in the garage instead of being up front where a man who wants to do business can find it. Ninety per cent. of the offices are in the rear of the garage and the other 10 per cent. are out where they offer the motorist some means of getting in connection with the man they want to see.

Motorists who tour doubtless will remember that this is true even though they never happened to have thought of it before; when a man enters a garage and is not met at the door, he naturally looks for the office—sometimes he finds it. Sweeney has other tales to tell of employes who looked up at the toot of a horn but immediately returned to their polishing or other work, busier than ever, as if to say, "The nerve of that guy, to want me to wait on him!"

All of these things appear to be indisputable evidence that many men in the garage trade are not in tune with the methods of the day. The shoe trade, the hardware trade, and many others grew up through the days when merchandising was not the science it is today; but when selling improved they adopted the new things. It is true that the garage trade is young, comparatively, but there is no excuse for not being up-to-date in management. Other trades have developed selling and business methods which need only to be adopted, and efficiency plans have been so widely advertised as to be within the reach of anyone who realizes their value and cares for them; but despite this it is only the minority of garagemen who are growing wealthy as fast as they might. A plane of efficiency exists, the garage trade is fitted for it, and what Sweeney calls "real" garages are upon or near this plane, which is why he says that the trade is higher than the tradesmen. He means that the garage business is one which requires thorough business management and is one in which the installation of proper business-getting and trade-retaining methods is not difficult, yet is neglected.

MAKING SHOP APPARATUS FROM COMMON MATERIALS

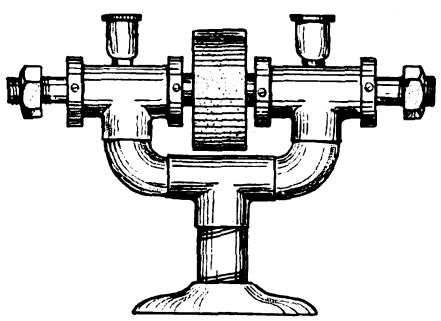
What Can Be Done With a Few Pipe Fittings and Pieces of Steel—An Emery Grinder That Is Good, if Homely.

It often happens that a man who has a small shop—whether he be an amateur or a repairman—loses a good deal of time because there are certains items of equipment that are lacking, perhaps because of the expense involved in their purchase. For instance, it is a common thing to find that emery grinding is done by putting an emery wheel on an arbor and mounting the arbor between the centers of a lathe. Undoubtedly this makeshift answers the purpose, after a fashion; but it is by no means as convenient as a separate grinder, and if the expense of such a tool is the only obstacle to its acquirement, it is readily swept away, for it is possible to make a very good grinder, as shown in the accompanying illustration, for a fraction of the cost of a factory-made article of the same capacity.

Things That Are Needed for the Job.

The materials required include a few pipe fittings, a short piece of steel shafting, a small pulley, a chunk of good babbit metal and some shaft collars and nuts—all of which are cheap and easily obtained. The size of the grinder may be anything up to one that will carry a 8-inch wheel on a ⅞-inch shaft. For larger work it is not advisable to follow the method described, because the power required is considerable and the stresses imposed are severe.

The first step is to make the standard of pipe fittings. For this the following items are necessary:



3 tees
2 elbows
4 close nipples
1 medium nipple
1 flange

Connecting Up the Pipe Fittings.

The medium nipple, which should have a length of approximately three times its diameter, screws into the flange, which is drilled for four holding-down screws. To the other end of the nipple is screwed one of the tees by its middle outlet, while the two elbows are joined to the other two outlets by the close nipples; each close nipple screws half way into the tee and half into the elbow, and the parts are tightened up until the nipples are completely covered. It may be necessary to file a little off the abutting faces of the tees and elbows in order to bring them close together all around and to bring them in the proper relative positions when tightened up. The two remaining tees are attached to the elbows by the two remaining close nipples, the same precautions being observed; they act as boxes for the babbit bearings, and should be lined up nicely.

"Rusting Up" to Prevent Loosening.

When all the parts have been put together and found to assemble properly they should be taken apart, care being taken to mark them so they will go together the same way, and all the threads, inside and out, freed from oil, which may be done by washing them in hot water and washing soda, or in gasolene. Then they are reassembled, the threads first being well wet with a saturated solution of salt or of sal-ammoniac, which will cause them to rust together so firmly that the whole frame will be practically a single piece. This is of importance because any movement of the

PIPE-FITTING EMERY GRINDER

parts with relation to each other would make trouble.

The spindle is made of a piece of high-grade steel shafting, which should have each end slightly shouldered and a thread cut on it in the lathe, so that it will be quite true. The nuts on these threads should have their faces true and at right angles to the axis of the spindle; otherwise there will be danger of breaking the wheels. An ordinary solid shaft collar fits closely against each shoulder, and two other collars are required having holes fitting snugly on the larger diameter of the spindle.

Babbitting the Shaft Bearings.

The next step is the babbitting of the bearings. The shaft, well smoked, should be held in position in the boxes by wooden wedges inserted in one box only; the wedging must be done so that the shaft will be in the center, leaving an equal amount of space all round for the babbit. Some care will be necessary in order to bring the spindle just right in the box that is without wedges. One of the larger collars must be on the shaft between the bearings. Bring this collar up against the inside end of the bearing that is not wedged, and plaster a layer of clay or asbestos and water around the joint. Place the whole thing in a vise, or set it up in any other secure way with the shaft vertical and the unwedged end uppermost. Heat the tee evenly all round with a blow-torch until it is hot enough to melt solder, and then pour in the babbit, which, when melted, should be just hot enough to make a pine stick smoke a little when plunged in the ladle. Incidentally, the opening in the tee, where it joins the elbow, must be filled, before the parts are put together for the last time, with wooden plugs.

Smoking the shaft consists simply in holding the parts that will be surrounded by babbit in the flame of a gas jet or oil lamp until a good even coating of soot is produced. This will prevent the soft metal from sticking to the shaft and at the same time will provide the slight clearance necessary to prevent the babbit from closing in too tightly when it cools, which makes scraping necessary.

Putting On the Finishing Touches.

When the babbit has solidified the opposite box may be treated in exactly the same way, first taking out the wedges, of course, and turning the frame with the filled bearing down. The two inside collars should be brought up close against the ends of the babbit bushings and, of course, a pulley mounted on the spindle between the bearings.

As to dimensions, the spindle diameter is the guide. The tees must be large enough to allow at least a full eighth of an inch all round for the babbit, as it is difficult to pour into a smaller space. When the fittings are put together they will indicate the length of the spindle, and the thickness of the wheel to be used will determine the length beyond the bearings. Pipe fittings are made in both light and heavy weights; the heaviest should be used. The babbit should be of high grade, and it should not be allowed to remain at pouring heat any longer than is necessary. For the lubrication of the bearings, holes should be drilled in the tops of the boxes and tapped for small oil cups, which may be filled with waste to retain oil and feed it slowly.

What May Cause Varying Compression.

A not uncommon experience with a motor is varying compression—that is, the compression of one cylinder will be perfect one day and scarcely perceivable the next; naturally perfect operation under these conditions is next to impossible. The trouble is due to stuck piston rings and the cause naturally suggests the remedy—loosening, with the liberal use of kerosene if possible, and if not, by disassembling the motor and removing the pistons.

COMPANY WHICH HELPS ITS EMPLOYES BUILD CHARACTER

Pacific Coast Accessory House Directs Pointed Talks to Sales Force—Danger of "Brain Freeze" Is Emphasized.

Just who is benefitted the more, the employer or the employe, by an increase in the efficiency of the employe is open to more or less difference of opinion, for while an impartial critic might contend that the advantage is equal, the employer getting greater results and the employe qualifying for a better position, statements to the contrary are not uncommon, and they favor both sides; but that the employer who endeavors to prevent his helpers from rising too rapidly for fear they will demand more money is putting a stumbling block in his own business pathway appears to be the belief of the Weinstock-Nichols Co., which maintains accessory houses in Oakland, San Francisco and Los Angeles, Cal.

Those who are aware of the success which has been attained by the company are quite willing to concede that its methods must have had considerable to do with its progress, and those familiar with the methods employed know of the many instances when the company has put forward suggestions for the betterment of its employes. These have taken the form of four-page pamphlets and, issued frequently, contain on each occasion a thought which, if applied, is bound to work some change in the character or performance of the employe.

Also, that the Weinstock-Nichols Co. has the true spirit of general uplift of the whole trade is evidenced by the superscription upon the front cover, which says, "Some of our fellow employers are passing these around among their employes. You may want to do likewise. If so, we will furnish them free while they last." And in addition the folder carries a list of the company's stock, which is but another way of keeping the company's name and business before the public, for it is safe to say that the folders, which are extensively used as mailing inserts, are preserved in many instances by employers as well as by their employes. A mental jog which, however, need not be confined to the "sales force," to whom the folder is addressed, is contained in a late number in the series, which is as follows.

"Don't Let Your Brain Freeze."

"The Worker is ever in danger of mental dry rot. He is ever in danger of letting his brain freeze for want of mental exercise. Many of us are physically lazy. Many more of us are mentally lazy. We find it so easy to jog along at the same old pace that we are likely soon to fall into a rut. Once there, we are in danger of sticking. The moment we stick, we have mentally stopped growing. Having ceased, mentally, to grow, our brain begins to freeze and, as a rule, we have then reached our topmost commercial earning power.

"This is the case whether we happen to be eighteen or eighty years of age. In fact, years have nothing to do with it. There are men of eighty whose minds are fresh and keen and alert and who keep growing mentally every day of every year. There are many who at eighteen have minds that are like solid cakes of ice—minds that will remain like cakes of ice until they are made to melt by mental exercise.

"If you want to fill the place some day in the ranks of salesmanship that you are dreaming about; if you want some day to earn the income that you are hoping for, don't become a victim of brain freezing. Let your mind, as well as your hands, be at work at your business. Try to size yourself up as other people, especially as your Employers are sizing you up. Dig out your weak spots; set your brain at work to build up these weak spots. Become a thinking animal rather than a mere calculating animal. Resolve to become a leader in your branch of salesmanship. Let others learn to come to you for help, for information and for advice in place of you going to them.

"Don't run away from your problems in salesmanship, be they big or little, but solve them by the exercise of your brain. Keep this God-given gift freshened and brightened up by constant use. Remember that the lot of the dull-witted Worker is to do the dull work that commands only the lowest pay. The quick-witted Worker who uses his wits fairly and honestly is the one who, in time, becomes the dull-witted fellow-worker's boss and who also commands the business world's highest rewards."

Oil Telltale that Interrupts Ignition.

By way of providing an infallible oil level indicator, the manufacturers of the foreign Schneider car have evolved a device which automatically interrupts the ignition current directly the oil level drops to the danger point In its simplest aspect it is nothing more than a small tube containing a float buoyed up by the lubricant. The float carries a contact which comes against another contact, short-circuiting the magneto when the level of the oil becomes lower than normal. Thus, it is impossible to drive the car with insufficient lubricant in the reservoir.

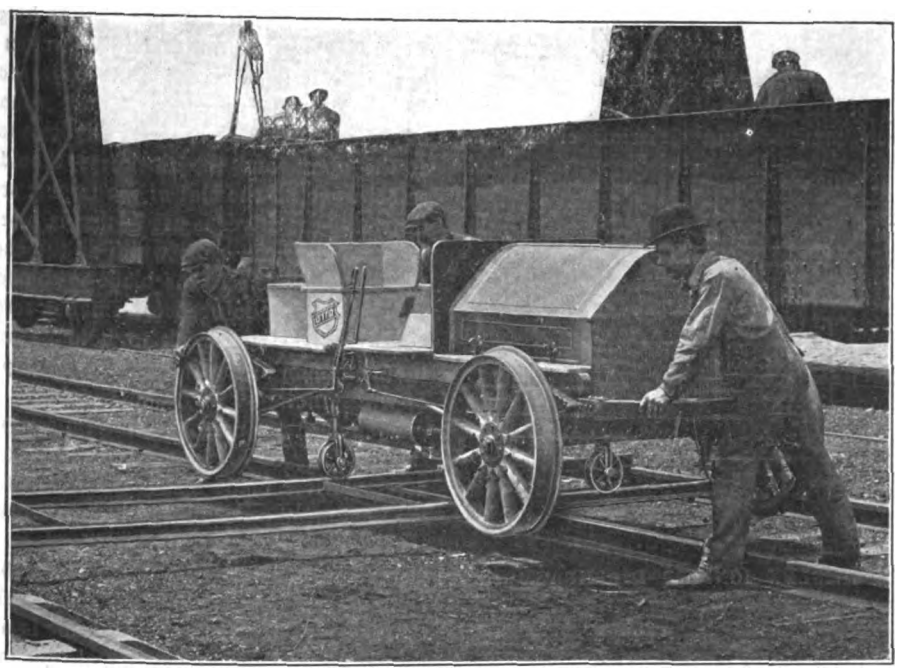
"PAROL" OFFERED BY SOUTH AFRICA IN PLACE OF "GAS"

Substitute for "Petrol" Evolved from Kerosene—American Consul Participates in Test Which Gives Promising Results.

The agitation that has followed upon the heels of the rising price of gasolene has resulted, among other things, in the stimulation of research with a view to the production of a satisfactory substitute for the volatile fluid, and reports of "new fuels" are of almost daily occurrence. One of the most recent of these liquid hydrocarbons is "parol," which was developed in South Africa and is being introduced in Johannesburg, where it is said to be attracting considerable attention because of its excellent qualities as a motor fuel.

Parol is made from kerosene and is produced from that oil without the employment of heat; its cost, measured by South African standards, is 50 per cent. more than kerosene and 25 per cent. less than gasolene. Though it is less volatile than gasolene, reports of tests indicate that it can be used without without difficulty in motors adjusted for gasolene, and greater efficiency is claimed for it than for the lighter fuel. Other advantages attributed to parol are the absence of the strong odor of kerosene and non-sooting qualities.

In a test made with a five-passenger Ford taxicab which was prepared for the trial merely by having the tank emptied of gasolene and filled with parol, a run of 72 miles was made over roads described as being exceptionally hilly, with a full load, the weight of the passengers aggregating 765 pounds. The run, of 36 miles out and back over the same route, was made with only one stop, at the "out" end of the course. The American consul at Johannesburg was a member of the party, and he reports that no tendency toward overheating was observed, the driver, on the contrary, stating that the motor ran cooler than with gasolene, and there was no perceptible misfiring or knocking in the motor. There was no smoke and very little odor. The fuel consumption worked out at 27 miles per gallon. Examination of the spark plugs at the end of the trip disclosed no sooting or fouling.



So encouraging have been the various tests of the new fuel—the name of which, by the way, is a combination of the first syllable of paraffin, British for kerosene, and the last syllable of petrol, which is gasolene—that the inventors express the intention of entering the various contests that are being promulgated in England for fuels usable as alternatives to gasolene.

MOTOR SECTION CAR THAT FACILITATES RAIL LAYING

Pittsburgh & Lake Erie Car Carries Crew and Helps Lay the Rails—Permits Eight Men to Place 1,400 Feet a Day.

The adaptability of the automobile to special work of various kinds is being demonstrated in some new way almost every day, there being, apparently, almost no limit to the number of instances in which work can be facilitated or improved by the use of the machine. Among the more recent plans is that worked out by the Pittsburgh & Lake Erie Railroad for speeding the work of track laying under special conditions.

CONVERTED OTTO CAR WHICH IS USED FOR TRACK LAYING

A special section car, built on the lines of an automobile but, of course, fitted with flanged wheels for running on the track, was built for the railroad by the Otto Gas Engine Works, of Philadelphia, Pa. The motor, placed under the usual hood in front, has four cylinders and is rated at 30 horsepower. The special feature of the machine is the method adopted for removing it from the track after it has been run to its destination. A short bridge, built of light rails, is laid across the main track between the front and rear wheels of the car. A set of special castor wheels on the car is lowered onto the bridge and the weight of the machine transferred to them by an ingenious system of jacking. The projecting end of the bridge is blocked up, the car pushed off, blocking placed under the main wheels and the bridge removed. The car is put back on the track simply by reversing the process.

Track-laying under the special conditions which brought this novel car into existence involves the use of screw spikes, for which holes must first be bored in the ties; afterwards the screws are turned into the holes. In order to eliminate the great loss of time that would ensue if this work were done by hand the car is fitted with a campact electric generator which is housed with the motor under the hood; means are provided for readily connecting and disconnecting the generator from the engine. When the car arrives at the scene of operations and is removed from the track, as already described, the generator is connected with the engine and the engine started up; the current generated is carried through cables to electric boring machines and to electric "screwdrivers" for making the holes and putting in the spikes. The cables are long enough to permit the machines to be worked nearly 1,000 feet from the car. The equipment consists of two boring machines, each operated by two men, and a spike-setter, operated by two men. A gang of eight men—four borers, two spike-setters, an engine man and a foreman—under ordinarily favorable conditions, can do the spiking for about 1,400 feet of track per day.

It almost goes without saying that the car is used also as a little locomotive, being coupled, on occasion, to a special trailer fitted with seats and used for the transportation of men to and from distance construction points. It is possible to save considerable time in this way and the men are saved some fatigue, to say nothing of the fun they get out of the "joy-riding."

NEWER JONES SPEEDOMETERS REVEAL THOROUGH REVISION

Equally Spaced Speed Indices, Larger Figures and Improved Actuating Mechanism Among Refinements—Prices Increased.

Believing that a speedometer—even a Jones speedometer—is not good enough until it is as good as it can be made, the Jones company just has revised its entire line, adding a number of improvements and refinements and, incidentally, increasing the prices in accordance with the higher quality of the instruments. The same number of models is being listed, of the same capacity ranges as the older ones.

Possibly the most important change is in the means for giving the needle a uniform rate of travel over the scale, so that the divisions can be equally spaced. The cam mechanism formerly employed has been replaced by a simpler and equally effective device. The pivoted ring which rotates with the main shaft and which, through centrifugal force acting against a spring, tends to assume a position at right angles to the shaft when in motion, is connected to an arm on the needle arbor by a slotted lever, a pin on the arbor arm engaging in the slot. When the slotted arm swings it carries the pin with it and, of course, moves the needle; but the centers are so placed that the further the slotted arm swings the nearer the needle-arm pin approaches its outer end—which means that the needle moves further, in proportion to the movement of the rotating ring, when the ring is revolving slowly than when it it revolving rapidly and so is more nearly at right angles to its shaft.

The main shaft, carrying the rotating ring, formerly was placed horizontally in the case; it now is in a vertical position, which is considered more favorable to accurate materials and workmanship, there are no other changes in the internal mechanism of the "New Jones."

In the method of transmitting motion from the road wheel to the shaft of the instrument there are improvements in the swivel bracket, which carries the lower end of the flexible shaft, and in the shaft itself. The bracket now swivels on ball bearings, instead of the older plain bushing. Coiled wire shafting has been abandoned in favor of a chain shaft, in which alternate links of square steel connect with "barrel links" which practically fill the space in the casing; the square steel links are hooked into square holes in the ends of the barrel links, the result being that there is an absence of the tendency to slip and twist up that is pres-

Digitized by Google

ent when round wire links hook into round holes.

The exterior appearance of the latest models shows that the figures have been substantially enlarged, making it easy to read the instrument even at a considerable distance. A clever little refinement consists in turning on edge that part of the needle which swings over the odometer openings. With the needle of the usual shape, the flat shank partly obscured the odomoter figures in some positions; the present form shows but a thin black line.

Considerable attention is being given to the designing of special instruments for cars on which Jones speedometers are used as regular equipment, the finish of the car and the outline of some characteristic part being used as bases for designs. One new set that is being worked out consists of a speedometer, clock and barometer arranged in a triangle on a common base to be sunk flush in the dashboard.

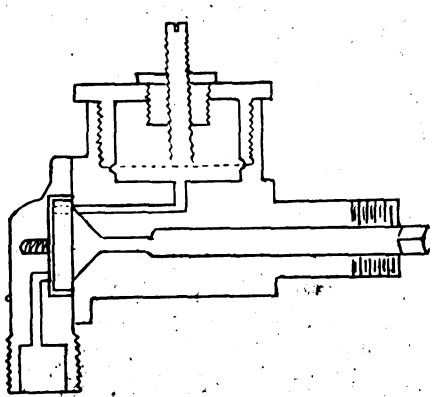
New models are designated according to their prices—model 25, model 50, model 60 and model 75. The old scale of prices ranged from $20 to $60.

Locating a Difficult Radiator Leak.

Locating a leak in a radiator if the hole be small is oftentimes a difficult task because the liquid spreads, due to capillary attraction, over a wide surface around the point from which it is oozing. A good plan is to apply the plumber's "smoke test," forcing smoke into the radiator by means of a tire pump and preventing its escape by any other means than the small hole. The smoke for the purpose is best generated by drawing the air supplied to the pump through a series of wash bottles containing strong ammonia water and hydrochloric acid.

Nut Locking That Is Effective.

A method of locking a nut that sometimes is useful is to drill a hole lengthwise into the end of the bolt, in the center, countersink and tap it for a flathead machine screw, split the bolt through the hole for a short distance and, when the nut is home, put a tight-fitting machine screw into the hole, slightly spreading the spit. It makes a neat and effective job, though it is not practicable in many cases.



"Soft" Hammer for Finished Work.

A very good "soft" hammer for striking finished work can be made of a common tee pipe-fitting by inserting a handle in the single branch and filling the other two with babbit. The babbit should be poured in and carried beyond the branch ends by temporary molds or collars of sheet asbestos, clay or leather. The filling can be melted out and renewed when it has become worn

ACETYLENE GAS CONTROLLER SERVES DOUBLE PURPOSE

Obviates Possibility of Lamp Explosions by Acting as Its Own Igniting Spark Switch—Ingenious Diaphragm Used.

In electric lighters for acetylene gas lamps there is a possibility, where the gas valve and the spark lever are operated separately, of leaving the gas turned on too long before switching on the spark, the result being anything from a slight puff to an explosion wrecking the lamp. To eliminate this possibility the Simplex lighter has been brought out by the Simplex Appliance Co., of Indianapolis, Ind., the object sought being gained by making the pressure of the gas itself operate a diaphragm which completes an electrical circuit and

SIMPLEX IGNITER DIAPHRAGM

causes the igniting spark at a predetermined time.

The vital part of the apparatus is the gas valve, which is placed on the dashboard with only the stem and key on the driver's side, the valve itself being on the motor side. The accompanying illustration shows the construction of the valve. Upon admitting gas by turning the key the diaphragm is forced upward against an insulated adjustable terminal and a spark is made to jump across the points placed at the burner in the usual way. The points commence sparking before the gas commences to flow, so that the very first gas to issue is ignited and there is no chance of an accumulation previous to the passing of the spark.

The Simplex lighter is made in two models; in one, designated as style A, the head and tail lights are lighted simultaneously by turning the key to the right. In style B a turn to the right lights the head and tail lights, while a turn to the left lights the side and tail lights. In both cases a regulator, attached to the gas tank, reduces the line pressure to four ounces, eliminating the chance of causing leaks through high pressure.

Increasing the Screwdriver's Efficiency.

A screwdriver certainly is a simple tool, one of the simplest in the whole kit—and the idea that there is very little to know about it is a natural one. Nevertheless, there are several ways in which the efficiency of a screwdriver may be affected.

To begin at the beginning—the material of which the tool is made—if the steel is too hard it is sure to break when the tool is subjected to a heavy strain, while too much softness will allow it to bend and the edges to wear, the latter trouble causing the "business end" to slip out of a screw slot at inopportune times.

It is a mistake to suppose that as long as a screwdriver is not actually broken or bent it is in good order. The edge should be straight and square and not rounded off; there should be the very slightest taper at the point, and the thickness should be sufficient to fill the slot of the largest screw for which the driver is used—that is, a screw with a slot of the same width as the end of the driver blade. If the blade is thinner it can, of course, be used for smaller screws, but it will be too weak to hold up under the maximum strain it ought to be capable of withstanding.

Even such a little thing as the direction of the grinding or filing marks on the end of a screwdriver blade makes a difference. If the final grinding or filing is done across the blade, rather than lengthwise of it, the minute ridges will help prevent the blade from slipping when a good, hard pull is taken—especially if the screw slot is a little worn. The difference is real, not imaginary.

There is no use trying to make a single screwdriver fit all the screws in sight and then expect it to be at its best when tackling big, tight ones. The tool kit should include at least three, and if these are kept in good condition the time saved and the satisfaction experienced in using them will be such as to make their possession well worth while.

Missing Caused by Weak Exhaust Spring.

A frequent cause of the motor missing when throttled is a weak exhaust spring which allows the spent mixture to be drawn back into the cylinder on the intake stroke to the detriment of the explosive charge. The malady is best determined by inserting a screwdriver between two coils of the spring when the motor is operating and turning it so as to increase the tension, which will have the effect of causing proper functioning. A repair embraces the fitting of a new spring or, for temporary purposes, stretching the old one.

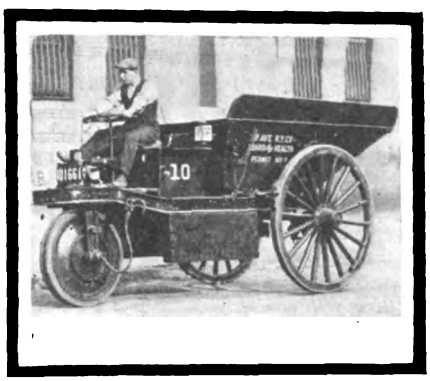
DRIVING A DUMP CART WITH BUT ONE MOTOR WHEEL

How a One-Horse Tip Cart Was Converted Into a Front-Drive "Tricycle"—Driver-proof Construction an Essential Feature.

The Third Avenue Railroad Co., which operates no inconsiderable part of the surface car system of New York City, believes in the utility of automobiles and has made use of them in various branches of service — emergency or "hurry-up" wagons, line repair wagons, tool wagons and so on —and foresees the time when horses will be dispensed with entirely. But before the last "hay-motor" can be sent to pasture there are many knotty problems to be solved, and the trolley-car engineers are attacking them one by one, making haste slowly in order to avoid future retrograde steps.



Problems in Need of Solution.

One of the problems of the company has been anxious to solve is that of replacing its little two-wheel dump carts with motor vehicles that will have no drawbacks as compared with the horse-drawn vehicles. The little two-wheelers, capable of carrying about a ton each of ashes or refuse, are substantial, springless affairs, can be turned and maneuevred in an extremely limited space and can be used for a great variety of purposes, carrying rubbish or tools, snow or ashes, coal or castings, and are used all over the city in great numbers. The ordinary type of motor vehicle does not answer the purpose at all, for it occupies too much room, cannot be turned in anything like so small a space, will not stand the treatment that is meted out by the class of men who drive the two-wheelers and who cannot be reformed for a couple of generations (according to the calculations of the engineers) and, last but not least, are too expensive to buy and operate, considering the class of service in question.

How the Chief Engineer Went at It.

It is believed, however, by Chief Engineer Mullaney of the Third Avenue company, that if the "ash-cart problem" has not been solved, a very long step has been taken in the right direction by the evolution of the three-wheeled car shown in the accompanying illustration. The machine consists of a regular dump-cart with a single couple-gear driving wheel pivoted on a forward extension, the drive being effected by an electric motor enclosed in the wheel itself and taking current, through a flexible cable, from a storage battery carried under the driver's seat.

By comparison with the horse cart, the three-wheeler suffers not at all. In the matter of over-all length it is but a few feet longer than the cart alone, not including the horse, and of course is a good deal shorter than the cart and horse measured together. It stands the banging and all-round pounding that the carts endure, and there is no "machinery" in sight to get into trouble through a too intimate acquaintance with water, snow, dust, ashes, tinkering fingers and other things that are not good for working parts. The single driving wheel will take the machine along at from six to seven miles an hour, without load, and from four to four and a half miles an hour with a two-ton load, and will pull that load up the inclines to the dumps on the docks, where ashes and other refuse are loaded into scows; the grade is slightly worse than ten per cent. and it is the invariable custom to haul the horse-drawn carts up with the aid of an electric winch.

COUPLE-GEAR ASH CART

Comparisons That Are Not Odious.

As to maneuvering in a close place, the machine leaves nothing to be desired. The driving-steering wheel can be turned at right angles to the straight-ahead position, when the wagon can be spun around in its own length and worked in and out in a space where a horse could do nothing. While the horse carts normally carry one ton, it has been found that the three-wheeler will handle double that weight readily—which, incidentally, has led to the undoing of the rear wheels, designed for the lighter loads and the very deliberate rates of progress of the old carts. The machine has been in use for some three or four months, and apart from a few details that are susceptible of improvement owing to the fact that the wagon is the first of its class and was considered an experiment, has given entire satisfaction. Chief engineer Mullaney is only awaiting the result of a more extended period of service before building more of the same kind.

A feature of the machine that is not a little remarkable is that the driving motor has a normal capacity of but three horsepower, though the cart, without load, weighs three tons, or a total of five tons with normal load.

It is a fact that the motor has an overload capacity of 200 per cent., but only for a few minutes at a time, for the heavy flow of current required to develop 9 horsepower would overheat the winding and destroy the motor if long continued. Long trips have been made, carrying two-ton loads over hills and levels, good and bad roads, without overtaxing the little motor. The explanation made by the engineers is that front drive is more efficient than rear drive, in the first place, and that the single wheel involves the minimum of friction, both of the road and of the bearings. The direction of the wheel and the direction in which power is applied always are coincident, eliminating the loss of power involved, in rear wheel drives, in applying power in one direction while the steering wheels are turned in another.

Some of the Structural Features.

The battery used is an old one, borrowed from a pleasure car for the experiment. Several years ago it had a capacity of 110 ampere hours; but its present capacity is unknown. However, it is capable of giving the machine a mileage of about 40 miles an a single charge, which is considerably more than is required. Under ordinary working conditions the current consumption is less than 80 ampere-hours for a day's service.

The wagon is built with a channel-iron frame which is carried forward to a semi-circle over the driving wheel. Riveted to the semi-circle is an extremely heavy cast steel socket bored out to take a correspondingly substantial pivot rising from the fork in which the wheel turns, fork and pivot being integrally cast, also of steel. Steering is effected through a simple set of spur gears and a gear sector on the pivot; the gear works sufficiently easily to permit steering with one hand.

The electric motor driving wheel is the product of the Couple-Gear company and has its armature shaft geared to the wheel internally through a reduction of 25 to 1; the motor remains stationary, being practically integral with the axle, while the wheel rotates around it. In lieu of spokes the wheel has a shell of heavy steel plates, fitted with removable covers through which the motor may be inspected and lubricated. The wheel and the covers are water-tight and dust-proof.

A ball check valve that leaks can be made a tight fit in its seat by tapping it with a light hammer, using a soft metal bar to prevent the marring of the ball.

FACTORS THAT INFLUENCE FUEL ECONOMY FIGURES

Car and Combustion Knowledge Needed for Low Consumption, Says Franklin Expert—Unheeded Leaks Important.

Economy in the use of gasolene, which does not make such a strong appeal when the vital—from a motor point of view—fluid is sold for a dime and a half a gallon as it does when the price is perching on its present lofty eminence, is the timely topic discussed by Arthur Holmes, chief engineer of the H. H. Franklin Mfg. Co., who commences his discussion with the undeniable statement that economical operation with a six-cylinder car, or, for that matter, any car, may be said to be attained when about 14 miles to a gallon of fuel is the average for a fairly long period of use—which average, however, is in no wise general.

Other Economies Than in Gasolene.

It is not possible, however, according to Holmes, to consider gasolene economy by itself, for, he states, "gasolene economy is but one of the many economies that can and should be worked for on a car. This is one reason why it will never be possible commercially to get the maximum economy of gasolene, as to obtain that maximum, it is necessary to sacrifice a good many other details that lead to a satisfactory car.

"What is possible, however, is very seldom obtained by the average man, no matter what car he owns. This merely indicates that he has not the knowledge of the different things that go to make up economical use of gasolene.

"We believe that every man selling cars should know the points that are necessary to be understood in their operation in order to obtain commercial economy in the use of fuel.

No General Rule That Suits All Cases.

"What it is possible to do, and what is actually accomplished by a good many people are two entirely different things, and often you hear of records from five to six miles to twenty miles on a gallon of gasolene. We know that 20 is possible; we know that 5 is possible. We know how to obtain 20 miles on a gallon of gasolene from a car that was giving five miles on a gallon, but we can never tell a man specifically how to do it in his particular case without a study of the actual car and man. However, a study by the salesmen of all the different points that lead toward economical gasolene consumption should help him in helping the owner, and in putting the problem to the future owner.

"In general, if each salesman understood the combustion of fuel in the cylinder, he would have all that is necessary to understand economical operation. He should know that a certain amount of fuel, and this will practically in every case be gasolene, requires air mixed with it in order to have it burn and thus produce power. It is necessary that it should have the correct amount of air, although a little excess of air does very little harm. It is necessary in order to have economical operation that each cylinder have a correct mixture, and this problem is one of distribution. If a perfect mixture were made in the carburetter, distribution would be easy, but in general to-day it is a mechanical mixture of gasolene and air, and the correct distribution of this is not easy.

Ignition Factor in Fuel Saving.

"Ignition is another factor of gasolene economy, and ignition should always be at a point that would give maximum power.

"How a man should drive is another important feature in securing gasolene economy. You can easily see that if the operator is holding out his clutch when going down a hill, and allowing the engine to run under its own power, he is needlessly using gasolene. In fact, every time that the brakes are used on the car and the throttle not closed—and this can happen by holding out the clutch and leaving the throttle open—he is wasting gasolene.

"The average man does not realize the importance of the needle valve. In all cases, this valve should be adjusted to the minimum possible and still have good operation. Adjusting this needle valve to the minimum really means getting the right proportion of gasolene and air, and to-day even in warm weather the gasolene is so hard to vaporize that it is absolutely necessary to use the needle valve under several different adjustments when starting up, and until the engine is well warmed up. In the winter time the valve may be opened up to twice its regular opening in order to get good operation when everything is cold. It is very likely that if the needle valve is not closed down and the motor warms up, from two to three times as much gasolene is used as is necessary.

Leaks Often Source of Heavy Waste.

"Another big source of gasolene loss is in small leaks. Very frequently the gasolene valve or some of the unions leak just a drop now and then, but inasmuch as this drop is going on for 24 hours a day, it amounts to a great deal. For this reason all such places should be examined at regular intervals to note their conditions.

"Touring in the country gives the best possible chance for economical operation, as it allows the motor to be used at a more economical point in its power. At the same time, driving at high speed in the country does not give economical operation, as far as gasolene is concerned, because the wind resistance increases so fast that the amount of gasolene used in covering any particuar mileage is very much greater than if that same mileage was covered at a slower speed. Probably 20 miles per hour represents the best speed for economical operation.

One Extravagant Remedy for Leakage.

"Leaks in the suction yoke, and, in fact, anywhere in the gasolene line, affect the quality of the mixture. For instance, if the suction yoke leaks where it goes into one cylinder, the only way to drive and not have popping back in this cylinder is to open the needle valve. Naturally, this affects all the cylinders, and whereas it may correct the difficulty in this one place and get the right mixture, in the other five cylinders it gives a mixture altogether too rich, and for that reason is very uneconomical. Therefore, any leakage at practically any point in the suction line seriously hurts economical operation. This is true also to a certain extent when any valves leak.

"Naturally, the carburetter has a good deal to do with the gasolene consumption, but with a standard carburetter there is not a great deal of difference in its use of gasolene. But there are quite a few things about a carburetter that can produce uneconomical operation, such as leaks in the float or air leaks around the carburetter, and for that reason it is very desirable to give this part enough attention to know that it is clean and in good operating condition.

"Economy in the operation of an automobile is a big factor today. People want to know what is economical operation, as far as actual cost is concerned, and also how to obtain this economy."

Etching on Metal or Glass Surfaces.

Etching can be done on glass, steel or other metal by the following method: Cut a paper stencil of the desired pattern, number or whatever it may be and paste it in place on the surface to be etched. Fasten the piece to the open end of a small box, such as a cigar box if the job is small, with the stencil in, and put into the box a good handful of shot and some coarse emery or corundum. Shake the box so that the shot and emery will strike the surface; the emery will quickly etch the pattern where the paper is cut away. The longer the shaking is continued the deeper will be the marking.

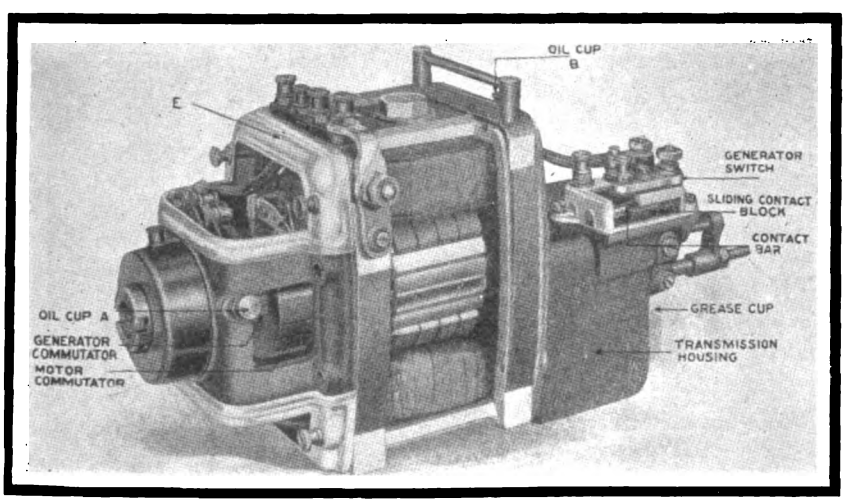
MAINTAINING EFFICIENCY OF ELECTRIC EQUIPMENT

Fine Points of the Delco Lighting, Starting and Ignition System as Applied to Cadillac Cars Made Plain in a Manner to Assist in Its Care—When and Where to Make Adjustments and How To Go About It.

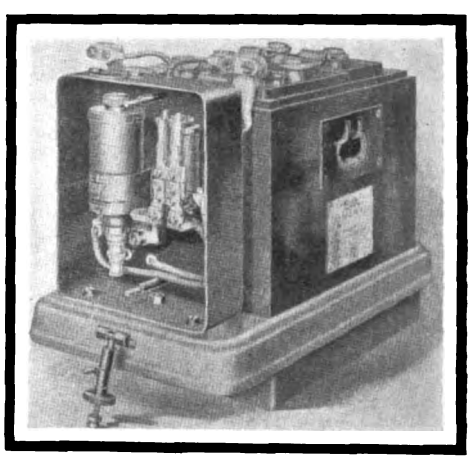
(This is the twenty-third of a series of articles designed to make clear the electric lighting and engine starting systems in use and to render easier their care and repair by the dealer and owner alike.)

No two engines of different makes are exactly alike in their characteristics, regardless of whether their bores and strokes are the same or not; each has its own idiosyncrasies and individualities. One motor may start very easily and another may start very hard; one may require considerable "spinning" at considerable speed before it can be induced to chug on its own behalf and another may go off "on the first pull up"; some motors require no little power, muscular or otherwise, to "turn them over," and others are so easy to crank that the real power they develop when they get to running regularly may be surprising, judging by the ease with which the crank can be swung around. All of which is fairly well known, of course, and the reason for the difference is not difficult to understand: Compression pressure has a good deal to do with it, the ratio of bore to stroke also has something to do with it, and so has the "fit" of the parts.



Consequently, it may be appreciated that no little difficulty may enter into the problem of designing and constructing an electric lighting and engine starting system which shall operate with equal efficiency on any engine, regardless of make or size. As a matter of fact, few manufacturers attempt it, though it is only fair to add that those who have attempted it have received a measure of success that should be gratifying.

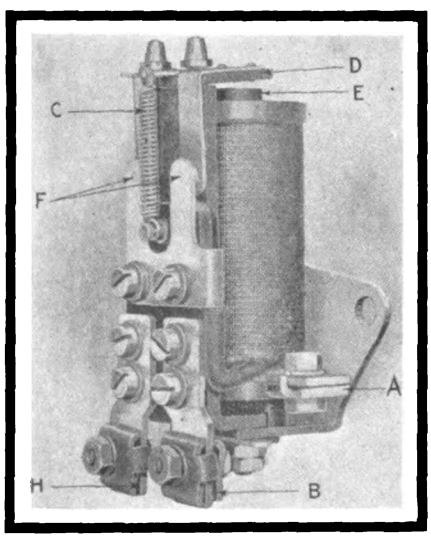
There is another factor, however, which enters into design and which cannot well be overlooked: No two engines are any more alike in their method of mounting and the disposition of their accessories, if the pump and the magneto and the carburetter may be styled such, than they are in their characteristics. Hence, special means of mounting and driving electric lighting and engine starting systems designed for use with them must be provided; it seldom is possible to take any lighting and starting system and apply it to any engine, and the practice is not very openly encouraged by manufacturers whose experience has taught them that for the greatest all-around efficiency an electric lighting and engine starting system must be designed for a particular engine and must be just as much a part of the engine as the carburetter and the magneto and the water pump or any other part.



Need of "Built-to-Order" Systems.

In appreciation of all these facts, the Dayton Engineering Laboratories Co. of Dayton, Ohio, which company probably is the pioneer in the combination of electric lighting, starting and ignition apparatus, produces no stock designs. Each Delco system, as applied to Cadillac, Packard, Oldsmobile, Hudson, Cole and others, is a "built-to-order" system and each differs slightly from the other in one respect or another. The functioning of the apparatus as applied to all these cars also differs slightly from the other in one respect or another, due to the constructional details of each, though the principle upon which they all operate is exactly the same. Thus, though a description of one of the systems—the system as applied to the newer crop of Cadillac cars, for instance—will serve to make plain the general features of Delco apparatus, and the principles involved, it will not cover accurately all the systems; allowances must be made for varying construction in the several makes of cars to which it is applied.

In one respect, though, all Delco systems are alike and in that respect the system is radically different from anything else of its kind; there is nothing that even approaches it in design. The combined generator and motor, which is the same for all systems except for a slightly different arrangement of some of the external parts to accommodate it to the different engines, employs what is virtually a double armature. The construction is made plain by the accompanying illustraton, which shows the arrangement of the two commutators and the two pairs of brushes. The double armature, however, is practically solid and, except for the presence of the two commutators, might be taken for a single armature of the orthodox pattern; needless to add, there is no movement between the two parts of the armature.



DELCO MOTOR-GENERATOR AS USED ON CADILLAC CARS

BATTERY BOX AND REGULATOR

Digitized by Google

When the machine is operating as a motor to start the engine, current is passed to it from the battery through the motor switch, mounted in an integral housing and through the larger of the two commutators and its own separate pair of brushes. As a motor, neglecting the generating function for the time being, the machine is a simple series wound one with a spur gear pinion on the end of the armature shaft. Between this gear and the gearing cut in the periphery of the flywheel there is a pair of gears to give the required reduction of approximately 25 to 1 and a positive one-way clutch to permit the gears to overrun for the short space of time required to disengage the gears after the motor has started. The operation of this part of the mechanism, and of all the other parts, for that matter, is perhaps best made plain by

CUT-OUT MECHANISM EXPOSED

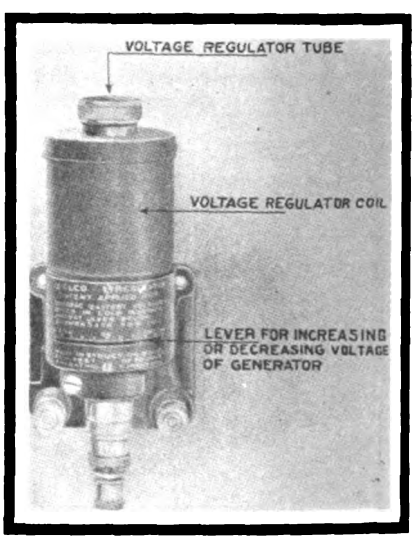
considering the various functions as they take place.

Starting Operations Made Plain.

To start the engine, the spark advance lever first is placed in the center of the quadrant, which operation makes the necessary connections to permit the apparatus to be put to work. The next operation, taken in the order of proceeding, is to depress the button marked "start" in the bank of four buttons that is part of the system. Depressing the button has two direct results, simultaneously obtained. The first of them is that a magnetic latch is energized from the battery and placed in the position for starting, and the second is that a small amount of current is passed to the motor, thus causing the armature to rotate slowly to facilitate the engagement of the starting gears. Then, if the clutch pedal is merely depressed, the one movement suffices to engage the flywheel gears and connect the battery full strength to the motor. Releasing pressure on the clutch pedal (after the engine has started) disengages the flywheel gears and the motor-generator unit then takes up its functions as a generator pure and simple.

The magnetic latch, which is illustrated herewith in section the better to make plain its operation, is one of the important parts of the apparatus and one of its distinctive features. In its simplest aspect, it consists primarily of a small electro-magnet the armature of which forms one of the latch parts (C). The other latch part (B) is directly connected to the clutch pedal. Therefore, the clutch pedal portion is free to move without moving the rest of the apparatus, except when the magnet is energized, when the two parts (B) and (C) are brought into such relation that the one catches on the other, causing the whole device to be moved. As the motor starting switch and the lever that engages the flywheel gearing are interconnected with the clutch pedal through this latch, the operation of the starting motor virtually is controlled through it.

The electro-magnet portion of the device is thoroughly protected from dirt and moisture and is so ruggedly constructed that there scarcely is even remote possibility of it getting out of order. However, it may be necessary after long use to adjust the latch, and for this purpose the adjusting screw (D) is provided. When the latch is properly adjusted the pawl (C) should just pass the arm (B), leaving approximately the space indicated by the arrows when the engine clutch is disengaged and no current is passing through the magnet. The distance between the parts can be decreased by screwing up the adjusting screw (D), or increased by unscrewing the screw.



Connecting Battery and Motor.

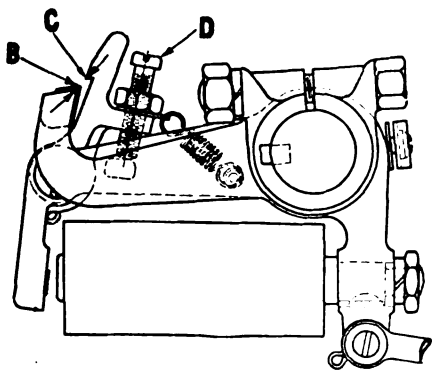
The starting switch of the Delco system is unique in that it is designed to perform two functions. It is shown herewith in section, and, as has already been explained, is interconnected with the clutch pedal through the magnetic latch. Beneath the cover of the switch (A) there is mounted a sliding block contact (B) which is mounted on a rod and presses against the conductors in the cover, the free end of the rod (C) being connected to the mechanism which operates the wheel gearing through another rod (D). The sliding contact (B) is not connected to the rod (C) but is forced into its starting and operating positions by collars and a coiled spring (E), which is interposed between the block upon the forward end of the pull rod and a rear collar abutting directly against the sliding block. A small latch (G), engaging with pins on the sliding block, serves to hold it firmly in the forward position.

In practice it will be found that very little attention will be needed in caring for the switch. Dirty contacts will result in gradual slackening of the speed at which the motor is cranked when the battery is fully charged and serves as an indication that the contacts require cleaning. They are accessible by removing the cover (A) and may be cleaned with gasolene. If they are pitted or burned, it is recommended by the manufacturer that they be ground in with valve grinding compound and afterward lightly lubricated with fine oil.

How the Regulator Does its Work.

After the engine has taken up its own cycle of operations, the motor-generator unit automatically is converted into a plain shunt wound generator and without more ado takes up its functions of placing back

DELCO-CADILLAC REGULATOR



in the battery the current drawn out for starting and for lighting the lamps.

The regulator, which is contained within the battery box, consists essentially of a small solenoid connected in series with the battery. When the battery current is low, the solenoid drops, thus cutting resistance out of the generator field and permitting more current to be generated and passed to the battery. When the battery is fully charged, the solenoid stands virtually at the top of its "pit" when considerable resistance is placed in the shunt field of the generator, reducing the charging current to the minimum. It is comparatively well known that low temperatures necessitate somewhat higher charging rates than do high ones, and these conditions are cared for by a small, variable resistance or rheostat contained within the same housing as the main voltage regulator. Moving a tiny lever to the left, for very cold weather, increased slightly the charging rate without interfering with the operation of the main regulator and moving it to the left, for very hot

Digitized by Google

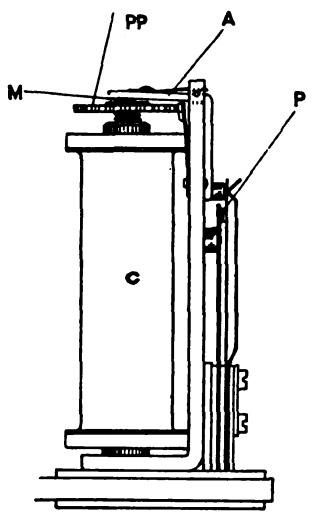
weather, decreases the charging rate. It is unnecessary, however, to alter the adjustment for slight temperature changes.

As is the case with very nearly every other system, the Delco system is equipped with an automatic cut-out, the function of which is to connect the generator to the battery when its voltage is higher than

OPERATION OF MAGNETIC LATCH

that of the battery and to break the connection immediately the generator voltage drops below that of the battery. The device itself consists of an electro-magnet with a compound winding. The voltage, or fine wire, coil is placed in series with the circuit between the battery and the generator through the terminals A and H, and is opened and closed at the contacts F.

Operation and Care of Cut-Out.



In operation, the tension of the spring (C) is overcome when the generator voltage builds up to approximately six, the armature (D) being attracted to the core (E), thus closing the contacts (F). These contacts, which are in series with the current or coarse wire winding, close the circuit between the generator and the storage battery and the current passing through the coarse wire winding increases the magnetic pull, making more positive the connection. Immediately the battery voltage exceeds the generator voltage, as when the speed of the armature is reduced, the passage of current through the coarse wire winding in the reverse direction neutralizes the pull of the voltage winding, and the spring opens the contacts. As the device is in operation only at long intervals and cannot possibly get out of adjustment, no means of adjusting it is provided.

The Tale the Ammeter Tells.

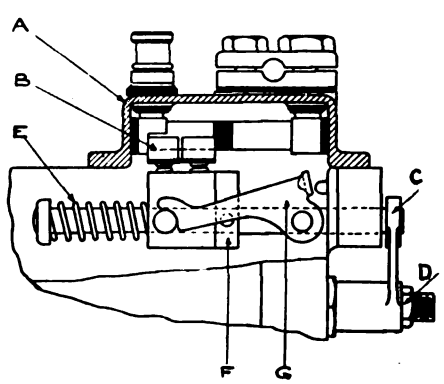
The ammeter which forms part of the Delco system is mounted on the dash and is particularly useful as a tell-tale to indicate the operation of the system.

After the motor has started and is running at a speed in excess of 300 revolutions a minute, the ammeter needle should swing over to the charge side of the scale indicating the amount of current being supplied by the generator to the storage battery, the lamps, if lighted, or the ignition system, as the case may be. In this respect, it should be remembered that the voltage regulator of the system provides a "taper" charge and consequently, with no lamps lighted, the amount of current indicated by the motor will vary according to the speed of the car and the condition of the battery. If the car is being driven at a high rate of speed and the battery is fairly well exhausted, the needle should indicate the maximum charge, and when the battery is nearly fully charged and the car is driven slowly very little current will be indicated by the meter.

The remainder of the Delco system consists of a battery, discussion of the care and

DELCO IGNITION RELAY

operation of which is outside the province of this article, and a complete dual ignition system comprising a battery timer and a magneto circuit breaker and distributer. The magneto circuit breaker and distributer are orthodox in pattern except that automatic advance of the spark is provided by centrifugal means. The battery timer is similar in construction to the magneto distributer except that the advancing mechanism is manually controlled.



Reason for the Ignition Relay.

Included in the ignition system, there is what is styled an ignition relay, the function of which is to interrupt the primary ignition current from the battery immediately the magneto button is depressed, thus switching the engine from the battery to the magneto. In construction, it is quite similar to the generator cut-out, and is shown herewith in section. When the battery button is depressed, the magnet (C) attracts an armature (A), thus separating the contacts (P), breaking the primary circuit. There are two windings on the magnet, one being of comparatively coarse wire so connected around the contacts (P) as to hold the armature after the circuit through the coarse wire coil is interrupted. If this second coil were not effective, the contacts would vibrate continually, resulting in a shower of sparks at the plug instead of only one spark. The shower of sparks is employed only in starting, which, briefly, explains the reason for the relay.

Adjustments That Are Easily Made.

Actually, the relay is simple in construction and before troubles are attributed to it a careful search for loose or broken wires should be made. There is only one adjustment that can be made, and that is at the pole piece (PP). This regulates the distance between the armature and the pole piece and consequently the size of the gap between the contacts (P). Turning the notched screw clock-wise increases the gap between the contacts, and turning it the other way decreases the gap. Generally speaking, the gap should be just wide enough to permit the passage of a thin busness card. One very good way to adjust it is to turn it counter clock-wise until the motor ceases to fire, after which it should be turned four or five notches the other way. Under no condition, however, should the adjusting screw be turned more than a few notches in either direction.

The bank of ignition switches which forms part of the Delco system consists of four small buttons concentrically arranged about a Yale lock. Depression of the button marked "Start" makes the necessary connections, which result in a shower of sparks at the plugs and should not be used except when starting; under other conditions it is wasteful of current. When the button marked "B" is depressed the dry

DELCO GENERATOR SWITCH

cell ignition system is switched on and the button automatically is released when the "M" or magneto button, connecting the generator ignition system, is depressed. The "Off" button serves to release any of the buttons that may be depressed and at the same time cuts off the ignition current from any source.

1,028,231. Attachment for Vehicle-Lamps. Harry A. Lewis, Chicago, Ill. Filed July 29, 1911. Serial No. 641,236. (Hood attaching to headlight to eliminate glare.) 4 claims.

1,028,271. Lamp-Cover. William T. Phillips, Berkeley, Cal. Filed July 22, 1910. Serial No. 573,236. (Telescoping hood for attachment to headlight.) 5 claims.

1,028,277. Current-Controlling Mechanism for Internal-Combustion Engines. Lewis T. Rhoades, Mont Clare, Pa. Filed Sept. 16, 1911. Serial No. 649,631. (Quick break device for coil ignition circuits.) 16 claims.

1,028,304. Fuel-Oil Filter. Joseph Remi Tourangeau, Windsor, Ontario, Canada. Filed March 20, 1911. Serial No. 615,512. (Trap provided with suitable strainers to prevent the passage of dirt into the fuel line and a tap at the lowest point for draining off sediment and water.) 1 claim.

1,028,331. Vehicle-Tire. William J. Cunningham, Philadelphia, Pa. Filed May 23, 1911. Serial No. 628,959. (Suitable springs between wheel felloe and rim which mounts a solid rubber tire.) 2 claims.

1,028,334. Puncture-Proof Tire. McRoy De Viese, Fresno, Cal. Filed Oct. 7, 1911. Serial No. 653,392. (Pneumatic tube mounted in a protective telescoping casing which is provided with a solid rubber tread.) 3 claims.

1,028,347. Variable-Speed Planetary Gearing. Emil Gnoeth, Madisonville, Ohio. Filed July 3, 1911. Serial No. 636,586. (Planetary arrangement which provides three-speeds in one direction and one reverse speed.) 13 claims.

1,028,359. Means for Cooling Gas-Engines. Chester Charles Jones, Beatrice, Neb. Filed March 5, 1909. Serial No. 481,274. (Under surface of the piston of two-cycle motor provided with cooling lugs with which the mixture contacts when passing into the cylinder.) 1 claim.

1,028,400. Shock-Absorber. Horace B. Stanton, Boston, Mass. Filed Aug. 8, 1910 Serial No. 576,066. (Cylinder containing liquid which is permitted to pass from one side of piston to the other by means of a constricted passages.) 7 claims.

1,028,442. Gearing. Joseph Dain, Ottumwa, Iowa. Filed Nov. 7, 1908. Serial No. 461,568. Renewed July 3, 1911. Serial No. 636,708. (Friction type of gearing with double plates set at an angle to each other.) 30 claims.

1,028,451. Reversible Hydraulic Transmission. Peter English, San Francisco, Cal., assignor to Milton P. Ropp, San Francisco, Cal. Filed July 21, 1910. Serial No. 573,060. (Liquid filled casing containing wheels provided with wings.) 1 claim.

1,028,501. Road-Engine. George B. Selden, Rochester, N. Y. Original application filed May 8, 1879. Divided and this application filed Sept. 7, 1895. Serial No. 561,733. (Motor mounted on front axle, which is silod, steering being accomplished by turning the whole axle on a central pivot.) 21 claims.

1,028,514. Igniter or the Like. Walter C. Westaway, Chicago, Ill., assignor, by mesne assignments, to Chicago Pneumatic Tool Company, Chicago, Ill., a corporation of New Jersey. Filed July 16, 1909. Serial No. 507,894. (Means for supporting the electrodes and the insulating material.) 3 claims.

1,028,522. Variable-Speed-Transmission Device. Frederick T. Adams, Victoria, British Columbia, Canada. Filed Aug. 14, 1911. Serial No. 643,896. (Hydraulic transmission comprising suitable compressing cylinders with suitable controls for varying the movement of the liquid.) 6 claims.

1,028,656. Pneumatic Hub. Norman E. Andrie, Centerville, Md. Filed Oct. 31, 1911. Serial No. 657,758. (Hub comprises an inflated bag, rigidity being obtained by suitable telescoping members.) 1 claim.

At Boston Automobile Show

259 Cars Were Exhibited With ELECTRIC LIGHTING or STARTING or Both.

Storage Batteries

were installed on

184

showing that

71.5%

of the manufacturers who exhibited have selected the GLBA because of its superior merit.

GLBA SUPREMACY Was Demonstrated at the Three Big Shows as Follows:

New York	— 277 Cars Exhibited	— 188 with GLBA Batteries	— 67.9%
Chicago	— 242 Cars Exhibited	— 185 with GLBA Batteries	— 76.4%
Boston	— 259 Cars Exhibited	— 184 with GLBA Batteries	— 71.5%

Use the Class A GLBA Battery with an Electric Lighting Generator
Use the Class B GLBA Battery with an Electric Self-Starter

REXO

A "Standard Equipment" Horn

The Electric Warning Signal will be standard equipment on practically every automobile marketed in 1913, and most of the earlier models will be brought up to date by the installation of an efficient electric horn by the car owner. We know this to be a fact, for our mammoth sales of the Rexo, Tuto and Tuto-ette Electric Horns to automobile manufacturers and jobbers is the most conclusive evidence.

45,000 Rexo Electric Horns of special design are specified by one car maker, the largest electric horn order ever placed.

We have already sold over 75,000 Rexo Horns for 1913 cars. When you see a Rexo on a car it means that the maker of that car is willing to hitch up his car's reputation with the Rexo reputation and take our word for it—every car carrying the Rexo is a good car.

The many car manufacturers who will use the Rexo as standard equipment for 1913 are not doing so because of our advertising, but—knowing that to some extent a car is judged by its accessories, they put the Rexo through most gruelling tests and then adopted it because it made good in actual service, was attractive in appearance and required no attention from the user.

The Rexo is made in the same factory and has features which have made the Tuto Horn so successful. The Rexo has a single tone of uniform intensity. The horn is instantly responsive and can be relied upon under all conditions. It is free from constant care and is most effective for emergencies, yet is not too loud for regular service. Our mammoth output makes a low price possible—complete with button and cord, $8.

The TUTO—The Driver's Safeguard

The Tuto two-tone horn safeguards the pedestrian, the occupants of other cars and the driver who operates it.

The Tuto Horn is a complete signalling system, It electrically transmits two different and distinct sounds through a horn—one low and mild, the other loud and penetrating. The degree of sound is regulated by the pressure of your thumb upon the button located upon the steering wheel.

This horn is built upon modern electrical principles in everyday use on thousands of telephones throughout the world. It is reliable, positive-certain.

It can be connected to any ordinary 6-volt battery. It uses very little current because it is not necessary to use the powerful danger tone, except in an emergency, the lower tone being sufficient for the ordinary polite request.

Tuto Horns have many advantages to be found nowhere else. They are:

SIMPLE—No revolving parts; nothing to require lubrication or attention.

WATERPROOF—Water in a Tuto Horn from rain or washing the car, doesn't affect it at all. Water in a motor-driven horn puts it out of commission. It is, of course, dust-proof.

ECONOMICAL—The Tuto Horn consumes but little current.

INSTANTANEOUS—You don't have to wait for the Tuto to "get under way." Pressure on the button brings complete instantaneous response.

GUARANTEED—The Tuto guarantee is "for life" and we live up to it. The horns are substantially built, of the highest grade material. They last.

Finished in polished brass, polished nickel, plain black enamel, black enamel and brass, or black enamel and nickel. Furnished complete and ready for easy installation. Price, $25.00.

R-C-H "Twenty-Five" Completely Equipped $900 F. O. B. Detroit

THE CAR

Wheelbase—110 inches.

Motor — Long-stroke, four cylinders cast en bloc; 3¼ in. bore, 5 in. stroke. Two-bearing crankshaft. Timing gears and valves enclosed. Three-point suspension.

Steering—Left Side. Irreversible worm gear, 16 in. steering wheel. Throttle control on steering column.

Control — Central Lever operated through H-plate integral with universal joint housing just below. Hand lever emergency brake at driver's right. Foot accelerator in connection with hand throttle.

Springs—Front, semi-elliptic; rear, full elliptic and mounted on swivel seats.

Frame—Pressed steel channel.

Axles — Front, I-beam, drop-forged; rear, semi-floating type.

Transmission—Three speeds forward and reverse; sliding gear; selective type.

Construction—Drop-forgings wherever practicable; chrome nickel steel used throughout all shafts and gears in the transmission and rear axle; high carbon manganese steel in all parts requiring special stiffness.

Bodies—Touring car, full five-passenger English type; extra wide seats. Roadster, two passenger, English type.

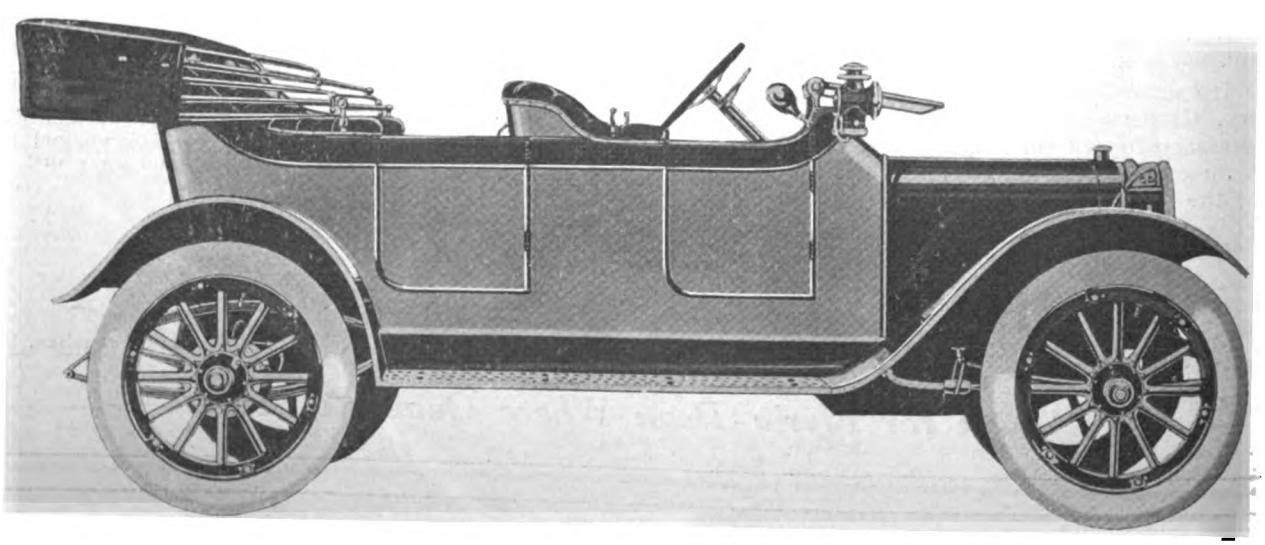
EQUIPMENT

Tires—32x3½.
Large gas headlight with Prest-O-Lite tank or generators; oil side and tail lamps. Electric lighting outfit by special arrangement.
High-grade magneto.
Stewart speedometer.
Demountable rims.
Extra rim and holder.
Tally-ho horn.
Jiffy curtains—up or down instantaneously.
Top and top cover.
Windshield.
Tool kit, Jack, Tire repair kit, Pump.
Robe rail.

A CAR which makes good in its first season cannot help but be a bigger success in the second. So it is with the R-C-H "Twenty-Five." We delivered 7,000 R-C-H "Twenty-Fives" last year; this year our output far exceeds that of last.

And the efficiency of each individual R-C-H "Twenty-Five" is increased this year in like ratio. The car is perfectly developed—fit for the hardest kind of service anywhere. Every single mechanical part of the chassis has been proven and tested. It is a stronger, better R-C-H "Twenty-Five" than ever.

The confidence of the public in the R-C-H "Twenty-Five," the R-C-H factories and the men behind both, is marked by increased orders and contracts from every section of the world. We have contracts at this date calling for $12,000,000 worth of 1913 R-C-H "Twenty-Fives"; the distributor for Great Britain asks for one thousand cars, and there is not one automobile-using country under the sun in which the R-C-H is not selling, today. Representatives in no less than forty-two foreign countries have orders on file.



In short, the strength, stability and thoroughness of the R-C-H Corporation and its production system is typified in the quality of the 1913 R-C-H "Twenty-Five."

We cannot promise to take care of you in the Spring rush—unless we get your specifications now. Write us today.

NEW DEPARTURE BALL BEARINGS

Standard on 80% of 1913 Cars.

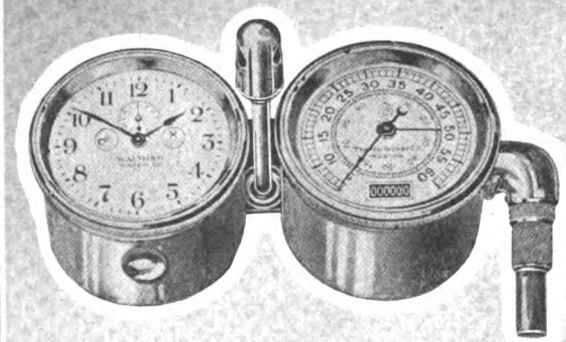
American Made for American Trade

The increasing use of ball bearings in motor cars is easily explained.

Manufacturers are not now required to buy ball bearings abroad. The New Departure has proved satisfactory in service, possesses all of the quality essentials and in every respect is an American masterpiece.

It is more completely anti-friction than any other type —the cost to operate the car mounted on these bearings is consequently less.

It is ten times as efficient as a roller bearing under same load conditions.



At the Boston Show, Space No. 430, Balcony, each of the three types of New Departure ball bearings will be shown, in slow action, with sections cut away for demonstrating anti-friction and other qualities.

Ask for copy of "Friction and Its Elimination"—a treatise on comparative efficiency of all types of bearings —just from the press.

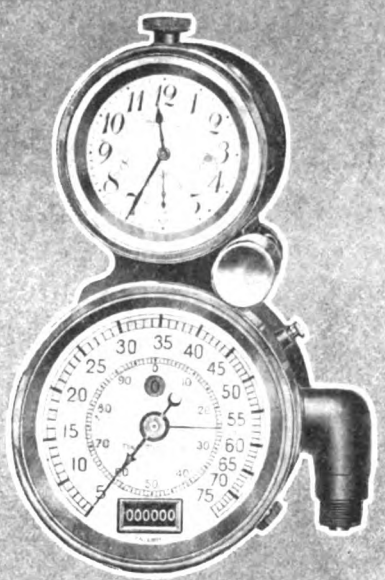
HOFF SPEEDO

STANDARD EQUIPMENT

NO higher recommendation could be bestowed upon any accessory, for the Lenox people have a reputation for building cars of a quality that makes for performance and general all-round efficiency.



The engineers of the Lenox Motor Car Company, selected the Hoffecker Speedometer to go on 1913 Lenox cars, after an exhaustive investigation, in which our speedometers proved their superiority in scientific construction, refinement in mechanical detail and artistic appearance, the first two qualities presupposing and guaranteeing great service and long life, the latter adding materially to the artistic details of the car.

This speedometer, which we want you to recommend to the prospective buyer and to specify on the cars you sell, embodies many exclusive features, including a daily trip, which can be easily

Digitized by Google

ECKER METER

ON 1913 ENOX Car Output

and quickly set to any desired mileage---a fractional mile register ---a hand that remains steady, regardless of the vibration or the speed of the car.

You, Mr. Dealer, can specify a higher priced speedometer, but you cannot specify one with any single "different and better" feature. We put less money than others into advertising, and more into materials and workmanship. Your customer gets the excess quality.

It stands to reason that you want the best equipment possible on the cars you sell. It follows, then, that when you specify the Hoffecker Steady-Hand Speedometer, you are putting on an instrument that goes a great way toward making a good car still better.

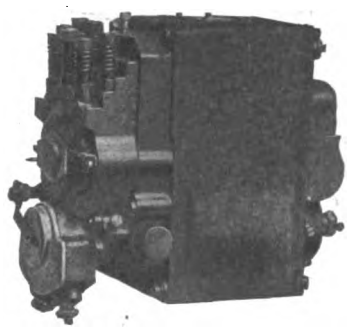
WESTINGHOUSE ELECTRIC IGNITION LIGHTING AND STARTING

These Systems Will Be Found on Many of the Finest Cars The Systems Using a Single Wire With a Ground Return



Lighting Generator

Ignition Coil and Switch

Illuminated Dial Voltmeter

Combined Ignition and Lighting Generator

Starting Motor

Lighting—Westinghouse Lighting Generators automatically charge the battery without the use of any relays, or solenoid-operated regulators. There are no adjustments to be made. The battery is at no time charged at an excessive rate. The generator is slow speed, eliminating noise and wear.

Ignition—A high power, single-unit coil, acting in conjunction with timing and distributing parts on the generator, furnishes high voltage for the spark. The battery operating alone, or with the generator, supplies continuous power. The interrupter gives automatic spark advance. The spark is uniform, regardless of speed.

Starting—Minimum weight of motor and minimum discharge of the battery are features of the Westinghouse Starting Motors, permitting the use of a smaller battery and smaller charging generator.

Illuminated Dial Meters—Three inches in diameter, with black dials and white lettering to avoid glare. The lamp throws light on the dial only, no direct rays being visible. Ammeters or voltmeters supplied, but voltmeters used for standard equipments.

The Westinghouse Company has adopted the grounded system of car wiring, **using a single wire with a ground return.** The wiring is simplified; one-half the usual amount of wire is required; better insulation is secured; proper current carrying area is possible; installation cost is lowered; and troubles are reduced to a minimum. Complete parts are supplied for this grounded wiring, including lamp connectors and incandescent lamps with the **Center Contact.**

Electrical equipment that is the product of the Westinghouse Company, and backed by its long established reputation, warrants the consideration of every motor car manufacturer.

Westinghouse systems are proving the strongest talking points on high-grade 1913 cars.

You Need This New Product—

It Heals Tire Cuts

The Motorist's Self-Vulcanizer

Unlike ordinary tire repair mastic

Fills the cuts and holes, solidifies quickly and becomes like a part of the tire. No car owner can afford to be without it. Reduce tire expense fifty per cent.

Use

NARCO TIRE CUT FILLER

Requires no Kneading

Very large tube one dollar.

a non-shrinking, rubber compound, heavy in rubber; a combination cement, cut filler and mastic. Refills and unites the torn place in the tire with a permanent plug of rubber more resilient than the tire itself. Welds the loosened tread to the canvas body. Supplied only in patent, collapsible tubes, with tapering spout.

Easy to Use

All you have to do is to clean the cut out thoroughly with gasoline—remove all oil, sand and other foreign matter; insert the tapering spout into the cut and compress the tube, smooth off the cut filler and the repair is completed. Allow it to heal over night; in the morning it will have become *like a part of the tire.* Rivets itself to the walls of the cut, forming a union so perfect no road abuse can remove it

This is the logical manner of tire repair. Every automobile owner in America should make Tire Cut Filler a part of his repair outfit and begin saving in tire cost *now.* Very large tube, $1.00. Money refunded if not satisfied.

TRADE MARK

TIRENEW

waterproofs the outer rubber casing of the tires and penetrates down to the inner fabric, protecting it from oil, air and moisture. Preserves the tires and prevents decay. Spread it over the surface of your tires after mending with Tire Cut Filler. *Makes tires look like new.*

There are imitations which paint but don't protect—insist on Tirenew.

Narco Rubber Reviver and Refinisher

a reviver, refinisher and waterproofer for anything rubber or fabric. Make your auto tops like new.

Narco Triple-Strength, Non-Inflammable Rubber Cement

A rubber cement three times as strong as ordinary cement, and costs no more.

ALL GOOD DEALERS CARRY NARCO PRODUCTS OR WILL GET THEM FOR YOU

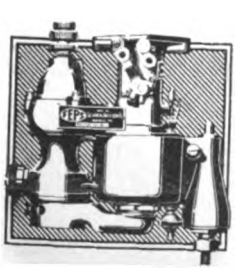
"A Giant in Power"

FEPS CARBURETOR

End View of the Feps

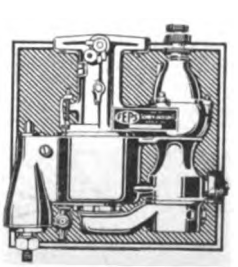
JUST now when the price of gasoline makes it an expensive luxury while its quality grows steadily worse, the subject of carburetors is brought forcibly to the front. Practically every other undesirable feature of motoring has been overcome, every other inefficient part perfected—but carburetors remain the one "big worry" to the automobile owner.



But—there is a way out.

Equip your car with a Feps Carburetor. Experience the peace of mind that comes only with the knowledge of absolute certainty; learn for the first time the real efficiency of your car.

The Feps contains no springs, cams, balls or reeds, it will increase the power and speed of your motor in an astonishing degree, making it intensely sensitive to the slightest movement of the throttle. It will give a perfect gas mixture at all speeds and with any grade of gasoline, and with all this it will give you 25 to 50 per cent increase in mileage per gallon of fuel. It also embodies a never-failing quick starting device.



We are well aware that these statements sound impossible to the average motor car owner. That is why we ask you to try the Feps on your car at our risk.

The Ward Leonard System

No car complete without it

The completely equipped car of the future will as surely have a reliable and efficient lighting and starting system as it will have tires.

The motoring public has been educated to demand electric lighting and starting, and its demands can be easily and satisfactorily met by the installation of the WARD LEONARD SYSTEM. Motorists want electricity to light and start their cars. Manufacturers have always desired to give it to them, but they have failed because they have absolutely missed the connecting link between satisfactory lighting and starting, and the automatic control of the output of the dynamo.

It is this control of the dynamo that gives the WARD LEONARD user satisfaction with his lighting and starting outfit. We use a shunt-wound dynamo for lighting and a series motor for starting. Every electrical engineer knows that the use of these two standard devices, not joined in the same unit, represents the height of electrical experience and judgment.

No guess work about the WARD LEONARD SYSTEM. Its electrically operated switch controls the amperage with absolute regularity, regardless of the speed of the automobile.

Engineers the world over have endorsed the WARD LEONARD design. Satisfied users in all parts of the earth testify to the practical perfection and the unerring operation of the finished WARD LEONARD product.

The absence of any one of these four obvious essentials means a sacrifice of either capacity or endurance. Gurney Ball Bearings are the only ball bearings in which all of these essentials are always present and which possess raceways of the right contour.

Full Complement of Balls
Solid One-Piece Separator
Uninterrupted Raceways
Full Depth of Raceways, to Resist Thrust

CAPACITY
GURNEY
ENDURANCE

A full complement of large balls—deep, uninterrupted raceways of right contour—and yet a solid, one-piece

Ball Separator

This unique Gurney separator plays a mighty important part in sustaining the Gurney reputation for great capacity and great endurance. It is so sturdy and fool-proof that separator troubles are never encountered in using Gurney Bearings. Die cast, of special wear resisting alloy, this separator, as the name implies, has no joints, screws or clips to come apart or loosen or otherwise interfere with continuous bearing performance. In fact, the separator will be the last part of the bearing to wear out.

The use of this unique separator does not necessitate a reduction in the number of balls. With it, it is practical and safe to run the balls much closer together than with any other separator ever made. The partition or septum between each pair of balls is so efficient and so durable that it does not have to be so thick as to displace some of the balls and so reduce the capacity of the bearing.

Bear in mind always when considering ball bearings that most important is the question of raceway contour, for just so far as you fall short of right contour, in just so much do you fail to realize the full efficiency to which you are entitled.

Gurney Ball Bearing Co.

AJAX
MILEAGE CONTEST

The Ajax-Grieb Rubber Company, as an incentive to the proper care of Ajax Tires (guaranteed in writing for 5,000 miles) and to publicly demonstrate their wonderful mileage

OFFERS $5,000 IN CASH PRIZES

To the **LICENSED CHAUFFEURS** obtaining the greatest mileage on any Ajax Tire from APRIL 1, 1913, TO MARCH 31, 1914.

Prizes to be Distributed as Follows:

STANDING OF CONTESTANTS ACCORDING TO MILEAGE						
1		1 prize				$ 500.00
2		1 "				300.00
3		1 "				200.00
4- 8	(inclusive)	5 prizes	of	$100.00	each	500.00
9- 18	"	10 "	"	50.00	"	500.00
19- 58	"	40 "	"	25.00	"	1000.00
59-108	"	50 "	"	20.00	"	1000.00
109-208	"	100 "	"	10.00	"	1000.00
		208 Prizes				$5000.00

The Contest is open to licensed chauffeurs but not to owners or chauffeurs driving their own cars. Entrants are to make application at once to Ajax-Grieb Rubber Co., New York, nearest **Ajax Branch or Ajax Dealer,** for blank on which formal entry must be made to Contest Department, Ajax-Grieb Rubber Co., 1796 Broadway, New York. On this blank must be recorded Size of Tire, Serial Number, Where and of Whom Purchased, Date of Purchase, When Put in Service, Speedometer Reading at Start—all to be countersigned by the employer of the chauffeur. When official entry has been made a report card will be furnished by which the entrant will supply the Contest Department, Ajax-Grieb Rubber Co., 1796 Broadway, New York, the date each tire is out of use, the speedometer reading, etc. —this report to be countersigned by the employer.

What the Ajax Mileage Contest Means to Owners

Owners will recognize at once the merits of the Ajax Mileage Contest. It will mean a direct interest on the part of the chauffeur in the Mileage obtained from the Ajax Tires on his car—the same care and consideration of these tires as the **good** chauffeur gives to the entire mechanism of his machine. The use of Ajax Tires (guaranteed in writing for 5000 miles) under any conditions is a Great Economy. With better care and increased interest on the part of the chauffeur **this economy will be even greater.**

COMMITTEE OF AWARDS

A committee of men well known in different walks of life has consented to judge the final awards. This committee consists of Alfred Reeves, Vice President and General Manager, Hartford Suspension Co., Jersey City; R. A. Patteson, Vice President, Tarrytown National Bank, Tarrytown, N. Y.; L. W. Scudder, Certified Public Accountant, Investors Agency, 55 Wall St. In case of ties, lots shall be drawn by this committee.

CHAUFFEURS—It Costs Nothing to Enter the Ajax Mileage Contest. The only Requirements are that your car be equipped with Ajax Tires (guaranteed for 5,000 miles) and that you fill out the regulation entry blank, signed by your employer. Entry may be made to any **Ajax Branch or Dealer** before March 31, 1914. THE SOONER YOU ENTER THE LONGER TIME YOU WILL HAVE TO WIN A PRIZE.

TRADE MARK

MAXWELL MOTOR COMPANY

INCORPORATED

DETROIT, MICHIGAN

March 15, 1913

SUBJECT: WHY WE CHOSE THE NAME MAXWELL.

Gentlemen:-

This is the second of the series of letters in which I promised to treat frankly and fully with every phase of our policy, and give you, as directly interested parties, the reasons why.

In letters and in personal conversation, many dealers have asked, "Why did the reorganized company adopt the name Maxwell for the whole line of cars?" So I will answer that.

In a word, the reply to the question is: Because that name stands for more than any other name we had a right to use.

Now to elucidate: We could have used, an entirely new name, with all the lost motion that involves in the way of establishing a new product and a new name in the public and trade confidence.

More, it would have left us open to the accusation of adopting a new name so as to avoid responsibility with regard to past models made by the various companies that are now incorporated in this concern.

So that was not to be thought of.

Or, we could use rightfully the following names: Stoddard-Dayton; Maxwell-Briscoe; Sampson; Brush; Courier; Flanders.

Let's consider the last name first, since you would naturally suppose I would like to see my own name on the product.

The name Flanders on a motor car is confused in the minds of the public. To some it means E-M-F (E.M. Flanders), to others Flanders "20" and to still others Flanders Sixes. Not to mention Flanders Electrics, which were made by an entirely different concern, tho the public has never known the difference.

Now to be frank, on only one of the above mentioned cars does the name mean anything today. E-M-F "30" and Flanders "20" are really Studebaker cars. I have had no active connection with that concern for more than a year.

So the only cars now out, on which the name stands for anything

Digitized by Google

MR. FLANDERS TO DEALERS

are the Flanders Sixes—and there were less than 100 of these cars in hands of users when the Flanders Motor Company was absorbed by purchase by this concern.

Now consider this: There were in hands of owners more than 100,000 cars known as "Maxwells".

That was more than all the cars that had been made by all the other concerns combined—Stoddard-Dayton, Brush, Sampson, Flanders, etc.

And Maxwell cars were always honest cars.

So were all the others—but the grounds on which we selected the name were the number of owners to whom we felt the new company owed allegiance and service.

And we also considered the dealers who have sold so many Maxwell cars. Would it be fair to them to adopt any other name?

Maxwell dealers were always loyal—why ask them to transfer allegiance from a name to which so much sentiment as well as success was attached?

Looking at the matter from a purely business standpoint, do you not agree that we selected the best name—the name that stands for more in the trade and means more in the way of a guarantee of good faith to old customers on the part of the new company.

Here let me assure all dealers who sold and persons who now own Stoddard, Brush, Sampson, Flanders and any of the other cars formerly made by the companies which now constitute the Maxwell Motor Company, that we feel we owe the same loyalty to them. We will continue to make and promptly furnish replacement parts for all former models—so they remain current as the latest coined dollar.

I am sure we selected the best name, and when you have considered it from every angle, I know you will agree.

Yours very truly,

MAXWELL MOTOR COMPANY (Inc)

Walter E. Flanders.

President and General Manager,

P.S. In the next letter I will explain "Why we did not use all our plants."

The advertising of the Michigan "40" has so far brought us inquiries from 14,299 men.

It has brought hundreds of dealers here to inspect it—dealers who have bought.

It has brought to us experts from eleven foreign countries. And this car will be running, before the season is over, on half the roads of the world.

Why They Came

They came because this car is built by W. H. Cameron, who has built 100,000 very successful cars.

They came because John A. Campbell designed for this his most artistic body.

They came because every detail, every specification, shows the utmost in modern practice. And because no other car in the whole Forty class begins to give so much for the money.

Make Comparisons

What other car under $1,950 has four - forward - speed transmission? What other car in this class has such tires, such brakes and springs, such margin of safety?

What car at any price has 14-inch cushions, a 22-coated body, such impressive design, such width of seat?

What car has a better engineer behind it, a better body designer, or a factory with better facilities?

And what car is advertised more efficiently than the Michigan "40" this year?

We are not lacking orders, but we seek this year the widest distribution. In every section we want a few cars to build up Michigan prestige.

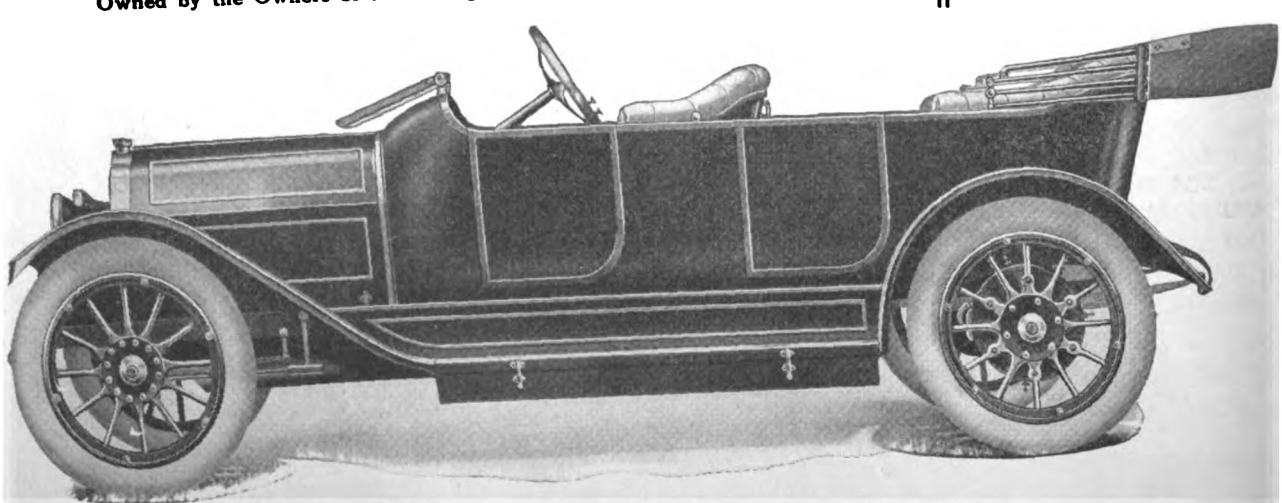
If you are seeking the utmost in Forties let us hear from you.

Michigan "40"

$1,585

With All These Special Features

Four-forward-speed transmission, as used today in all the best foreign cars.
Oversize tires—35 x 4½ inches—making the Michigan practically the only excess-tired car in America.
Electric lights—with dynamo.
Center control.
Left side drive, to which all the best cars are coming.
40 to 46 horsepower.
Cylinders—4¼ x 5¼ inches.
Brakes—extra efficient—drums 16 x 2¼ inches.
Springs — 2¼ inches wide — front, 37 inches long; rear, 50 inches long.
Steering post adjustable. So are clutch and brake pedals, insuring perfect comfort and fit to every driver.
Shortsville wheels, with 1¾-inch spokes —12 to each wheel.
Demountable rims — Firestone quick-detachable, with extra rim.
Wheel base—118 inches.
Straight-line body, designed by John A. Campbell. Finished with 22 coats.
14-inch Turkish cushions — The deepest cushions, we believe, and the most comfortable in use on any car.
Rear seat 50 inches wide inside — 22 inches deep. Doors 20 inches wide. Tonneau room 50 inches either way.
Nickel mountings.
Headlights—electric—12½ inches diameter, very powerful.
Sidelights—set in dash—flush with it.
Windshield built as part of body, easily inclined to any angle.
Mohair top, side curtains and envelope complete.
Electric horn.
$50.00 Jones Speedometer.
Foot rail, robe rail, rear tire irons, tool chests, with all tools, under running boards.
Over-capacity. Every driving part made sufficient for a 60-horsepower motor.



Self-Starter

There is such a difference of opinion about the relative merits of the various types of self-starters that we have not adopted any one type as regular equipment. We prefer to leave this selection to the buyer.

However, we equip with either the gas starter or a positively efficient electric starter, at a very moderate extra price. (167)

SPRINGFIELD CONVERTIBLE BODIES

Dealers who anticipate the wants of hypercritical car buyers will be quick to see the advisability of specifying Springfield Convertible Bodies, for it stands that they make good cars still better and the quality argument they offer is too big to be discounted.

As specifications they offer a strong selling argument for both the manufacturer and dealer.

Beauty, convenience and sterling worth of these bodies is apparent to all who have seen them and studied their construction.

We show here an illustration which is a faithful picture of one of our products—made in a factory equipped to turn out bodies and tops of every style and size, from the smallest runabout to the most pretentious limousine or landaulet.

Send for complete details of construction.

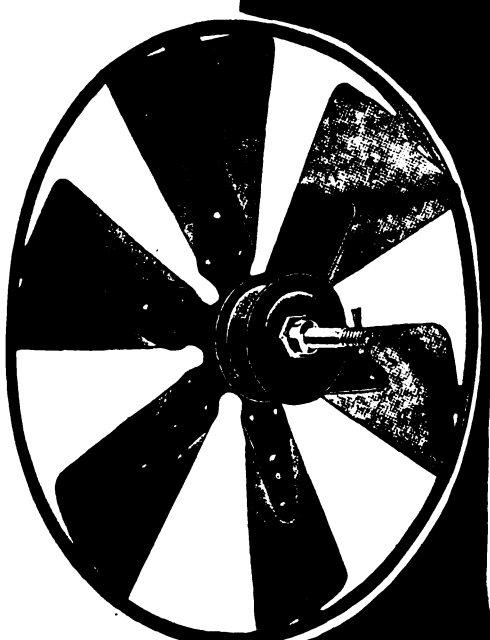
BOSCH PLUGS

As Good As Bosch Magnetos

BOSCH Plugs like Bosch Magnetos are built on a quality basis, **not** on a price basis, the quality basis that has maintained Bosch Reputation at zenith in the gas engine industry. That is why Bosch Plugs are selected by those engineers and motorists who desire the utmost.



Bosch Plugs are made better and consequently serve better. Dealers find they sell without effort and add quality reputation to their establishments. Your orders are desired on the basis that you will be satisfied.

$1.00 each, from your dealer or direct

THE ATWATER KENT SYSTEM

has been silently advertised from coast to coast by the best advertising anybody can have—the personal endorsement of over 100,000 satisfied users.

The Atwater Kent Ignition System has no rival—no competitor. We do not use this term metaphorically, but in a literal sense.

You may think this is the use of a trite advertising term, but in this case it is nothing of the kind. That the Atwater Kent has no rival in the opinions of thousands of users has been demonstrated to us many-many times, when in ordering their new cars they have specified that they should be "Atwater Kent equipped."

There are a number of other good reasons for the superiority of the Atwater Kent System over the magneto and it is worth your while as a jobber, dealer or prospective buyer, to weigh and consider them carefully.

Space forbids our mentioning these reasons even briefly, but if you will write for our booklet "D," we will give you some of them. Then ask the motorist who drives a car "Atwater Kent equipped" and he will tell you the others, and the best reasons why the Atwater Kent Ignition System has no real rival.

Digitized by Google

The value of your motor car depends upon the quality of its parts.

In its assembling you used several hundred screw machine parts—and upon them much of the car's efficiency depends.

Accurate NAMCO products are the result of a careful study of the requirements of the automobile industry and a long experience in serving nearly every manufacturer of motor cars or accessory equipment. When you buy NAMCO Screws and Special Parts you get accurate parts that stand the test of your inspector, make your assembling easy, and hold up on the road. That nearly all high grade cars use NAMCO parts in increasing numbers each year indicates the superior quality of NAMCO screw machine work.

Our estimating department quotes promptly upon receipt of your samples. Let us have them with your inquiry and ask us to send "Special Milled Product" book. It shows the wide range covered by NAMCO product.

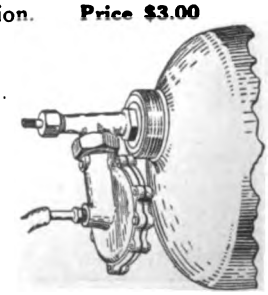
The Prest-O-Lite
Automatic Reducing Valve

With this device attached to your Prest-O-Lite, you do not have to turn the tank valve up or down to get the correct flame in the lamps.



Turn on the gas, light your lamps, and the flame is bound to be just right, without any adjusting.

It pays for itself in gas saved, so its convenience costs you nothing.

Unlike other reducing valves, the Prest-O-Lite Automatic gives the correct gas pressure at all times, whether the tank is full, half full, or nearly empty. It is truly automatic in its action. **Price $3.00**

Anyone can attach it in less than five minutes.

Your dealer has it or will quickly get it for you. If not, we'll send it to you on receipt of price. Try your dealer first. Every Prest-O-Lite Branch Office has this Automatic Reducing Valve in stock.

All Acknowledge the Necessity of

Weed Chains

In one of those friendly after-luncheon, get-together parties at a well known city club, eleven men drifted on to *the subject of the dangers of skidding.* With a single exception each of the eleven owned an automobile, and each had a *skidding experience* to relate, and each felt that *his particular predicament* was the most sensational and startling.

While nearly all had experimented with the various so-called anti-skid tires, and acknowledged their possible advantages when new—yet when it came right down to "Brass Tacks," there wasn't a single one in the crowd but admitted that for *sure results,* for the **absolute elimination** of every possibility of skidding, **nothing even approximated Weed Chains,** and nothing took their place. Every one of the ten owners carried at least one pair of Weed Chains in his car.

Go where you will, put the question to any assembly of automobile owners you like and the verdict will always be the same—"*We can't get along without them.*"

Weed Chains are universally acknowledged to be the only anti-skid device that can be absolutely relied upon at all times and under all road conditions.

Weed Anti-Skid Chains

Insure perfect control and safe, comfortable driving

Don't foolishly pride yourself on taking chances in order to prove your bravery, or to demonstrate your ability as a driver.

Weed Chains are an **absolute necessity** on both rear tires and to doubly guard yourself against accidents and to make steering comfortable and easy, put them *on the front wheels too.* They cannot injure tires because "they creep"—occupy very little space when not in use—applied in a moment without the use of a jack or other tool.

Take precaution now When you know the folly, the danger, the peril there is in driving your car over icy, slippery, snow covered roads and pavements, why not fully equip your car today with **Weed Chains** for your own protection and for the safety of other road users.

Blow-out repairs that outlast the tire.

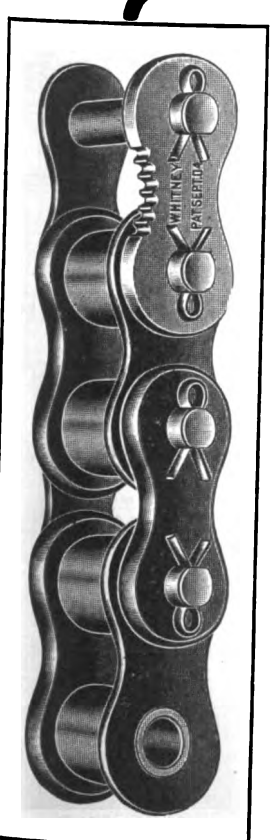
The only way to make **durable** blow-out repairs **economically** is to reinforce the tire with fabric applied to the inside, fill the hole through the tire with Para gum, then apply heat **both** to the inside and outside. This method avoids cutting away and wasting a lot of expensive tread stock, requires a minimum of fabric and makes a repair that is stronger than the tire. Anyone can use it because the work is all straightforward, requiring no special experience. One set of forms fits all sizes of tires. No extra moulds required.

SHALER Steam Vulcanizer

The Shaler is the only steam vulcanizer that permits using the approved wrapped tread method as it is the only one that applies heat to the inside and outside of a tire simultaneously. It makes perfect blow-out repairs.

To make it complete as a garage equipment it is provided with a tube plate 4 x 30 inches that will mend six tubes as quickly as one.

The boiler, a conical copper coil, heated by a powerful gas or gasoline burner, raises steam so quickly that you can profitably heat the Shaler even if you only have a tube puncture to mend.



The essential Shaler feature of a thermostat to hold the temperature at the vulcanizing degree automatically makes it impossible to overheat a tire. Simply light the burner, and steam is raised to the correct pressure and held there indefinitely.

Price of the complete outfit, including all attachments for tube and casing work, $45.

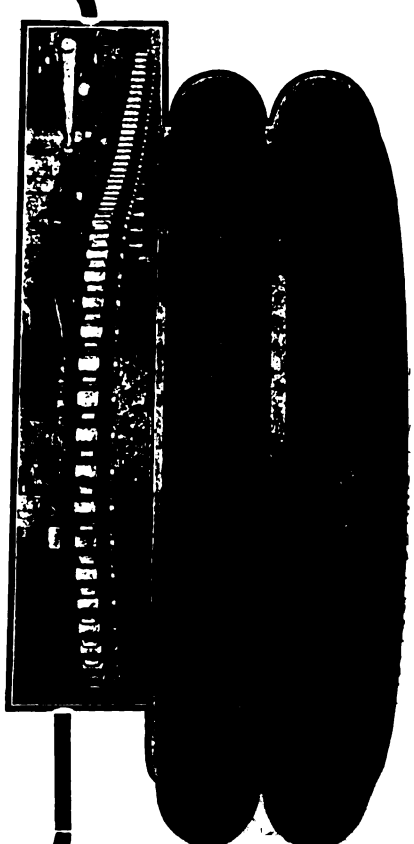
C. A. SHALER CO., 411 Fourth St., Waupun, Wis.

Free—a tire handbook for repairmen

Write today on your letterhead for a copy of "Common Sense About Tire Repairs." It contains a lot of money-making ideas about the most profitable part of the repair business.

"WHITNEY" Chains

WE call your attention here to "Whitney" Cotter Detachable Chains as the most practical chains ever offered for motor vehicles. They have made a record for themselves which no other Detachable Type has approached.



This Cotter Pin feature is so practical and necessary that it calls for little detailed explanation. The illustrations tell their own story, proving that this form of construction is logical and necessary for chain equipped motor vehicles. This Cotter Detachable Chain can be taken apart at any link and lengthened, shortened or repaired without the use of any special tool, as the Cotter Pin can be removed with pliers, screw driver or any sharp pointed instrument. The use of "Whitney" Cotter Detachable Chains assures the builder, owner and driver of commercial vehicles uninterrupted service on account of the ease of repair.

"Whitney" Chains are made from steel best adapted for the purpose, carefully hardened and calculated to resist the most wear, while in the matters of machining and assembling the utmost care is exercised and thorough inspections and tests characterize each process of manufacture. Their future service, however, depends upon the accuracy of sprockets, care, lubrication, alignment and adjustment, for the best chain in existence cannot withstand the evil influence of improper conditions and give best results.

Write for our illustrated catalog which shows top and side views of each size of all Roller chains manufactured by us.

"Whitney" Chains Are Built for Strains

FIVE MODELS
$2750 to $3400

Five Passenger Touring Car

Published Weekly by the Motor World Publishing Company, 1600 Broadway, New York

The Truffault Hartford Shock Absorber allows the spring full, normal play—about 5 inches.

When You Buy a Shock Absorber

Get the Original—Not an Imitation

There is only one principle upon which to construct a *real* shock absorber. That principle has exclusive application in the Truffault-Hartford.

The Truffault-Hartford controls spring action positively, but unlike others, without limiting the normal, necessary *full* play of the spring.

Full play is only "fair play" if you expect from your springs that flexibility which insures comfort.

Full play is *not* free play. Spring expansion beyond a certain point is dangerous, discomforting, damaging.

Full play is assured—free play is prevented—and comfort is certain if your car is equipped with the Truffault-Hartford — the original shock absorber and the only one *mechanically right.*

Truffault-Hartford equipment on YOUR car means exactly what it means on the cars of 25 leading manufacturers who include it as regular factory equipment—freedom from jolt, jar and vibration; ability to ride any road in ease; absolute protection against spring breakage; more tire mileage and a material reduction in cost of upkeep.

Five Models — Automatic $60 — Standard $50 — Intermediate $40 — Junior $25 — Juniorette $15, per set of four respectively.

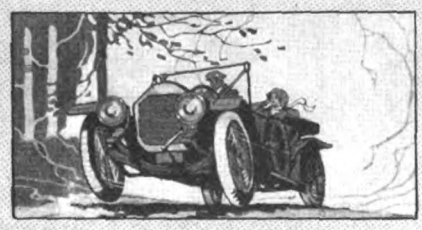
DEALERS!

AN IMPORTANT SELLING ARGUMENT

Features that will enhance the value of your cars in the eyes of your customers are important selling arguments for you.

If your cars are equipped with R. I. V. Bearings you have a decided selling advantage in the opportunity afforded to inform your customers of this fact.

Nearly everyone knows that R. I. V. Ball Bearings are a distinct sign of merit. They indicate to the prospective purchaser that your factory are buyers of quality products in equipping their cars.



R. I. V. Bearings are recognized all over the world as the last word in QUALITY Ball Bearings. Is it not, therefore, to your interest to say that your cars are equipped with bearings whose prestige will help your salesmen in disposing of them?

Fedders Radiators

In producing an all-round efficient car, latter day engineers take no chances on parts that will "lay down" under hard work.

Inefficiency of a part is not blamed on the maker of it—but on the maker of the car.

Fedders Radiators are standard on a large line of America's best known cars and trucks that are making good.

Fedders radiators cannot clog—the square tube design makes this impossible. They cannot boil, under correct working conditions, because all four sides of each tube are surrounded by water—free circulation and ample cooling are insured.

In case of injury, the damaged tube or tubes can be immediately replaced right in the garage—no time lost and money wasted in sending the whole radiator back to the factory.

Fedders radiators are made of copper—the best heat conductor known among the baser metals.

We specialize on square tube design but we have ample facilities to build in large or small quantities over your specifications. Our engineering department is at your disposal.

Vol. XXXV New York, U. S. A., Thursday, March 27, 1913 No. 1

LOCK MAKERS ASK COURT TO PROTECT "YALE" TRADEMARK

Declare Two Accessory Dealers Overstepped Bounds in Marketing a Lock Buckle—Value Goodwill at Million Dollars.

Having spent 40 years and thousands of dollars in building up a trade prestige about the name "Yale" as applied to locks, it is quite natural that the Yale & Towne Mfg. Co., of Stamford, Conn., should frown on any attempt by others to place the name "Yale" on any but Yale & Towne locks; and that it is prepared to spend still more money in upholding its claim to the name is indicated in suits which it filed this week in the United States District Court for the Southern District of New York against the General Automobile Supply Co., Inc., and Frederick Ray, F. Arthur Haines and Daniel R. Smith, who are known in the metropolitan accessory trade as Smith-Haines.

The allegation is that the company's rights have been infringed by the sale of the "Lynch Yale Lock Buckle" and the "Yale Lock Principle Buckle," the latter by Smith-Haines and the other by the supply company. The complaint states that the name "Yale" is incorporated in a trademark which was registered July 2, 1907, under the number 63,654.

While the two accessory houses are made the defendants in the suits, they are not the manufacturers, the Yale & Towne company charging that the devices in question are manufactured by the Lynch Mfg. Co. The General Automobile Supply Co. is alleged to have sold its "Lynch Yale Lock Buckle" since October 2, 1912, while the beginning of the Smith-Haines sales dates back as far as February 1, 1911.

In its complaint to the court the Stamford company asks that an injunction issue restraining further sales of the articles named, that an accounting and damages be directed and that all catalogues, literature and advertising matter relating to the devices be destroyed. How the word "Yale" is regarded by the lock manufacturers is shown by its statement that the trademark is worth more than $1,000,000 and that the good-will is of the same value.

Goodyear to Build in Rio de Janeiro.

According to cable advices, the Brazilian government has awarded to the Goodyear Tire & Rubber Co. of South America the contract or right to erect a complete rubber manufacturing plant in Rio de Janeiro, and also for the erection of a rubber washing plant in Manaos, the likelihood of which was reported in Motor World of March 6th. It is provided that the Goodyear Co. of South America, which is capitalized at $3,000,000, shall have the plants erected and in operation one year from the date of signing the final contract.

Maxwell-Briscoe Plant to be Sold.

All doubts concerning the future of the Maxwell-Briscoe branch in Tarrytown, N. Y., have been removed. Immediately following the failure of the United States Motor Co., by which it was owned, the factory was shut down and it has remained idle ever since. It is now announced that it will be sold by the United States Motor Co.'s successor, the Maxwell Motor Co., and though rumor has stated that J. D. Maxwell himself had eyes on his old factory, it is possible to say that he is looking much further west.

Maxwell Formally Takes Over Flanders.

Although it generally had been understood that the Flanders Motor Co. of Detroit already was a part of the Maxwell Motor Co., it transpires that the deal actually was not consummated until late last week, when the Flanders property was formally taken over. Previous thereto it appears that the arrangement between the two companies was of a tentative nature and that, pending the actual transfer, the Flanders company was being operated as a Maxwell branch.

GASOLENE PRICES NOW ON DECIMAL FRACTION BASIS

"Seven Sisters" Legislation in New Jersey Causes Headache Quotations —It Requires Prices to Vary with Transportation Costs.

In New Jersey, the gasolene situation, at least so far as prices are concerned, has taken a peculiar turn, which may or may not result in the sale of the very necessary fuel at varying prices throughout the State. Certainly it has already resulted in a general revision of wholesale quotations, which are so finely drawn in decimal fractions that it will put dealers and garagemen to some pains to check their invoices correctly. Unless the New Jersey legislature sees fit to step into the breach, even 1/100 of a cent hereafter will figure in the price.

This unusual state of affairs is one of the immediate effects of what was termed the "Seven Sisters" legislation, which was fathered by Governor Wilson before he relinquished that office to become President of the United States and which was aimed to correct certain corporation abuses. The particular section of the law which has caused resort to decimal fractions follows:

"It shall be unlawful for any person, firm, corporation or association, engaged in the production, manufacture, distribution or sale of any commodity of general use, or rendering any service to the public, to discriminate between different persons, firms, associations or corporations, or different sections, communities or cities of the State, by selling such commodity or rendering such service at a lower rate or price at a point away from that of production or manufacture as at the place of production or manufacture, after making due allowance for the difference, if any, in the grade, quality or quantity and in the actual cost of transportation from the point of production or manufacture, if the effect or intent thereof is to establish or maintain a virtual

Digitized by Google

monopoly, hindering competition, or restriction of trade."

On Sunday last, immediately after the law became effective, the Standard Oil Co. of New Jersey announced that in order to comply with it, it had been found necessary to make new selling prices on all of its various products, which, of course, include gasolene, kerosene and lubricating oil. As an example, the big company cited the price of what is known as "tank wagon water white kerosene oil." In Bayonne, the manufacturing point, the Standard Oil Co.'s price is 8½ cents per gallon, and as the freight rate to Newark is 3 cents per barrel of 50 gallons, the Standard Oil Co.'s Newark price automatically became 8.56 cents per gallon.

In the notice to its customers announcing the revision of its prices, the Standard Oil Co. of New Jersey remarks that the law "very properly contemplates a uniform price for petroleum products in every part of the State, subject only to difference in transportation rates from the point of production, manufacture or distribution to the various points of consumption," and points out that "an analysis of the prices to be thus charged in 70 consuming centers for tank wagon deliveries of illuminating oil and gasolene, indicates that in the majority of these localities the prices charged will be fractionally higher rather than lower as compared with prices hitherto prevailing.

"Literal compliance with the new law involves invoices or calculations which include varying cumbersome fractions of one cent, which must prove alike embarrassing to consumer and distributor," continues the statement.

"Could this not be obviated to the convenience of all and with injury to none by authorizing (through legislative amendment) invoices at only full cents and half-cents? For example: If the Bayonne price were 8½ cents and the freight 39/100 of a cent, then the invoice should be at 9 cents instead of 8 89/100 cents per gallon; but if the Bayonne price were 8½ cents and the freight 1 17/100 cents, then the invoice should be at 9½ cents instead of 9 67/100 cents per gallon.

"As the legislature, of course, did not intend to embarrass the detail of this important commerce, our suggestion may not be regarded as inopportune."

Chandler Secures Site in Cleveland.

The Chandler Motor Car Co., which recently was organized by former Lozier department heads, has acquired a six-acre site on St. Clair and 131st streets, Cleveland, Ohio, on which will be immediately erected a steel and concrete building, 420 x 120 feet. It will be ready for occupancy July 1st.

COMMISSION REFUSES LOWER RATE TO CANADA ON CHASSIS

Upholds Rate Established After Buick Assembler Lodged Complaint with Interstate Commerce Commission—Points Involved.

Efforts of the McLaughlin Motor Car Co., Ltd., which reproduces the Buick car in Oshawa, Ont., to secure the same freight rates on parts constituting a complete automobile as apply on agricultural machinery, vehicle stocks and certain automobile parts, have failed.

The effort was made through the United States Interstate Commerce Commission and took the form of a complaint against the Grand Trunk Railway Co. of Canada which was filed November 13, 1911. It, however, just has been decided by the commission, which, while awarding reparation to the McLaughlin company, declines to order the railroad to institute the rate of 23½ cents per 100 pounds, which governs shipments of agricultural machinery and the like. A rate of 37½ cents per 100 pounds having become effective since the complaint was filed, this latter rate is held to be just and reasonable.

For the purposes of the case, a typical shipment of 10 complete chassis, knocked down and boxed, and which constituted a carload of 16,400 pounds, was cited, on which the first class rate of 51 cents per 100 pounds had been imposed. That rate covers "Vehicles, self-propelling, without bodies," and was applied to complete automobiles, whether set up or knocked down. In rendering its decision, the United States Interstate Commerce Commission wrote as follows:

"The Commission's decision in Auto Vehicle Co. v. C., M. & St. P. Ry. Co., 21 I. C. C., 286, which complainant refers to in support of its contention that the rate charged should not exceed fourth class, involved the transportation of various metal automobile parts from Milwaukee, Wis., to Los Angeles, Cal., governed by the Western classification, and did not relate to completely manufactured automobile chassis knocked down for the purpose of shipment.

"The automobile chassis, which in the present instance were thoroughly tested on a track or by machinery prior to shipment, are stated to be of greater value than the various parts thereof not forming a complete chassis. Moreover, automobile chassis might well be accorded a higher rate than the various other articles of machinery referred to by the complainant. We do not believe, however, that automobile chassis knocked down should be charged as high a rate as that provided for chassis set up or for complete automobiles.

"Considering all the facts and circumstances disclosed by the record, we are of the opinion and find that the charges collected on complainant's shipments were unreasonable to the extent that they exceeded a rate of 37½ cents per 100 pounds, minimum weight 15,000 pounds, but as this rate has been in force for over 16 months, no order prescribing a rate for the future is deemed necessary. We also find that in so far as complainant has paid freight charges upon the basis herein found to be unreasonable, it has been damaged to the extent that such charges exceeded what would have been collected on the basis herein found reasonable, and that complainant is entitled to reparation accordingly. Upon receipt of a statement of the shipments of complainant and its verification by the carrier and approval by the Commission, an order of reparation will be entered."

Chevrolet Not to Leave Detroit.

Although advertisements appearing in the Detroit papers and offering for sale "the building now occupied by the Chevrolet Motor Co. on West Grand Boulevard" in that city, have given rise to a variety of rumors, it is not the intention of the Chevrolet people to vacate the property, or to remove to Flint, Mich., as has been reported.

The building is owned by the Corcoran Lamp Co. and the method of advertising it is merely the real estate broker's idea of attracting attention to the property. It is under lease to the Chevrolet Motor Co., and whether or no the building is sold the present tenants will continue to occupy it.

Weed to Concentrate in Bridgeport.

The Weed Chain Tire Grip Co., of New York, has purchased additional property, between Locust and Hewitt streets, in the east end of Bridgeport, Conn., and is preparing to concentrate its manufacturing in that city, which means that the Oneida Community chain plant, which Weed acquired last summer, will be removed to the Connecticut city. Two property owners in the immediate location presented objections to the closing of certain streets, but the Bridgeport authorities bowled them over and acceded to the Weed request that the streets involved be closed.

Winton Advances Wages 10 per Cent.

The Winton Motor Carriage Co. last week announced a 10 per cent. wage increase applying to all grades of labor in its Cleveland plant. It was purely voluntary on the part of the company and will joyously affect some 1,100 employes.

SMELTER MAN IS HEAVIEST BUYER AT THOMAS AUCTION

Secures Good-will and Parts and Also Around-the-World Trophy—Cars Bring $1,900 Each—Six-Day Sale Nets $250,000.

Sentiment played no part in the receivers' sale of the assets of the once-proud E. R. Thomas Motor Car Co., in Buffalo, which was concluded on Saturday last, 22nd inst. The very last article disposed of was the imposing trophy won by the Thomas car in the more or less memorable race around the world in 1906, which was promoted jointly by the New York Times and the Paris Matin. It was purchased for $300 by C. A. Finnigan, manager of the Empire Smelting Works, of Depew, N. Y., which may or may not indicate that a smelting pot will mark the finish of the trophy.

Finnigan was the largest individual purchaser of Thomas goods. Paying $51,000 for them, he bid in the good-will and the repair shop and stock room and their contents. What Finnigan will do with the property is a matter of speculation. He was once engaged in the automobile business in Kentucky, and that fact has given rise to reports that he may again embark in the automobile industry, using his Thomas purchases as a basis.

The auction was largely attended and all of the nearly 6,000 lots offered on the block were disposed of by the auctioneer, J. E. Conant, of Lowell, Mass. The repair parts and factory scrap were purchased by the Shiffmann Iron & Metal Co., of Detroit, for $6,000, while 15 high-priced Thomas cars brought $1,900 each.

The sale netted a total of $256,467, the value of the goods disposed of being appraised at $559,000. The first day's sale realized $84,500, the second day $17,400, the third day $72,200, the fourth day $49,300, the fifth day $11,300, and the sixth day $21,767.

George Finley, of Buffalo, one of the Thomas company's receivers, states that it will be about two weeks before a settlement with the creditors can be made.

Lozier Recapitalized at $5,000,000.

As was practically a foregone conclusion, the stockholders of the Lozier Motor Co., of Detroit, have authorized the increase of the company's capital from $3,000,000 to $5,000,000. The new shares consist of $1,000,000 7 per cent. cumulative preferred and $1,000,000 common stock, making the company's capital stock consist of $3,500,000 common and $1,500,000 preferred. A large part of the new preferred already has been subscribed by the Lozier stockholders, it having been offered for subscription at par. The new common will be retained in the treasury for use in conversion of the preferred. According to President Jewell, the added capital was required to facilitate the increased business that followed the launching of the Lozier light "six."

Tornado Hits Omaha's "Automobile Row."

The tornado which made a path of ruin through Omaho, Neb., last week did not slight Farnam street, which thoroughfare is the site of numerous automobile establishments; while considerable damage was sustained by salesrooms and garages, the greatest loss befell the Electric Garage and the Packard Garage, both at Farnam and 40th streets. The former building was completely demolished and scattered to the four winds and two men were killed; many cars in storage were transformed into junk; the loss is estimated at $200,000. The Packard Garage suffered similarly, many cars being smashed when the building was torn apart.

Employes' Testimony Must be Oral.

If the Parish & Bingham Co., of Cleveland, Ohio, desires to have the testimony of any of its factory employes introduced as evidence in a suit the frame company has brought in the New York Supreme Court in Queens county against the Palmer & Singer Mfg. Co., of Long Island City, the men must be taken into court and made to give oral testimony. This ruling was made this week when the court denied the Parish & Bingham company's request that it be permitted to take the testimony in Cleveland in order to avoid the expense of bringing the men to New York. The Cleveland concern asks $15,067.35, alleged to be due on goods delivered on a contract.

Wants Iowa Freight Rates Readjusted.

In behalf of the automobile interests of the State, E. G. Wylie, rate commissioner for the Greater Des Moines committee, has filed with the Iowa State Board of Railroad Commissioners a petition for the equalization and correction of the freight rate classification governing shipments of automobiles. It is alleged that motor cars can be shipped across the State from points in Illinois and Nebraska for less than is charged for intermediate service over the same lines.

Cole to Erect Four-Story Addition.

The Cole Motor Car Co. is inviting bids, making ready to erect a four-story addition to its plant in Indianapolis. The work probably will begin May 1st and the building be ready for occupancy October 1st. It will represent a cost of $150,000.

NO PATENT MONOPOLY ON WRAPPED TREAD APPARATUS

Court of Appeals Declares Thropp Patent Was Anticipated—Four-Year Fight Ends in Victory for Fisk Company.

After four years' litigation, the United States Circuit Court of Appeals for the First Circuit, which sits in Boston, has confirmed the decision of the lower court in favor of the Fisk Rubber Co. in the suit involving the molds used in the manufacture of tire casings by the one cure wrapped tread process.

The suit against the Fisk company was brought by the De Laski & Thropp Circular Woven Tire Co., of Trenton, N. J., and alleged infringement of the P. D. Thropp patent No. 822,561, of June 6, 1906, which invention "relates more particularly to apparates holding a clincher tire in position during the vulcanizing process," although it does not assert novelty in such process.

The chief advantage of the Thropp patent was that it claimed to permit the production of what has come to be known as the "wrapped tread" tire as distinguished from the molded tire.

In its defense, the Fisk company set up that the Thropp patent was invalid by reason of anticipation, which defense was upheld by the United States District Court in Massachusetts and finally, as stated, by the Circuit Court of Appeals, which latter held that the Thropp device had been clearly anticipated by drawings and molds made by the B. F. Goodrich Co. previous to April, 1905.

The Thropp interests claimed that the Goodrich devices were mere experiments but the Court of Appeals held that that proof of anticipation "seems to us clear, unequivocal and convincing."

Cordner Becomes Vaughan's President.

A. B. Cordner, who several months since retired from the General Motors Truck Co., has been elected president of the Vaughan Car Co., of Kingston, N. Y., which recently was incorporated with an authorized capital of $1,350,000, to continue the manufacture of the car of that name. The other officers of the Vaughan company are F. E. Muskovics, vice-president and general manager; E. S. Partridge, vice-president and sales manager; and H. W. Johns, of the Johns-Manville Co., secretary and treasurer. The Vaughan car itself has been redesigned and when it makes its reappearance it will be in the form of a six-cylinder model listing in the neighborhood of $2,500, fully equipped.

INCREASE OF 14 PER CENT IN FIRST MONTH'S EXPORTS

Shipment of Cars Gains $278,787 Over January of Last Year — France Leads All Divisions in Percentage of Increase.

The export of cars, parts, engines and tires during January of this year gained 20 per cent. over the value of these products exported in the initial month of the calendar year 1911, as was previously stated in Motor World, but according to detailed statistics just issued by the Federal government, the export of cars themselves did not quite reach that figure. The January shipments of cars increased by 110, or 5 per cent., in number, and by $278,787, or 14 per cent., in value. Parts, of themselves, showed a loss of $38,665, or 8 per cent., which brings the total monetary gain for cars and parts down to $240,122, or 10 per cent.

Of the 12 geographic divisions into which the export statisticians divide the world, South America leads for January, with a gain of 164 in number and $151,543 in value, 88 and 63 per cent., respectively; but when percentage increases are considered France moves from the tail-end position it held in December and leads with an increase of 265 per cent., represented by 53 cars, and 393 per cent., which is $47,233; and this country is followed in order by the West Indies and Bermuda, 240 per cent.; Asia and Other Oceania, 181 per cent.; Other Countries, 142 per cent., while British Oceania foots the list with ¼ per cent.

In percentage of values gained France is followed by Germany, 380 per cent.; Italy, 341 per cent.; West Indies and Bermuda, 292 per cent., while Canada, 23 per cent., was last. Losses were shown in number and value by the United Kingdom, Other Europe and Mexico, and in value by British Oceania.

The Philippines and Hawaii continue to be the most active of the non-contiguous American possessions in buying cars; the Philippines led with a gain of 34 cars, or 189 per cent., and its gain of $31,485 is 175 per cent. Hawaii's gains were 18 cars, or 33 1/3 per cent., and $65,621, or 22 per cent. Porto Rico's figures are small and Alaska for January had none. The total of cars shipped to the possessions in January, 170 valued at $275,073, was greater by 56 cars and $97,797 than the shipments of the preceding January, respective percentages of 49 and 55. The exports of cars and parts to all lands in January gained 166 cars, or 8 per cent., and $337,919, or 18 per cent.

For a period of seven months, ending with January, 1913, the number of cars shipped to foreign countries increased 2,306, or 22 per cent., while the grand total of cars and parts to all countries gained $3,101,400, or 23 per cent. The average value per car to foreign countries in January was $1,036 and to the possessions $1,507.

Engine exports for the two Januaries were: 1912, 837, $102,028; 1913, 1,705, $285,316, gains per cent. of 104 in number and 179 in value, as previously stated. Tire exports were: January, 1912, $161,337; 1913, $273,519, a gain of 69 per cent. The figures in detail follow.

	January, 1912. Number.	Values.	January, 1913. Number.	Values.
France	38	$102,770	24	$57,649
Germany	6	13,955	21	54,735
Italy	10	11,942	10	18,222
United Kingdom	25	58,341	8	25,401
Other Countries	5	12,189	8	18,682
Total cars	84	$199,197	71	$174,689
Parts (except tires)	..	25,145	..	37,688
Total cars and parts	84	$224,342	71	$212,377

JANUARY IMPORT OF CARS SHRINKS BY 12 PER CENT

America's Foreign Purchases Are Thirteen Cars Less Than a Year Ago—But Import of Parts Increases 46 per Cent.

But for heavy losses recorded by France and the United Kingdom in their shipments of cars to the United States during January, that month as compared with the same period of 1912 would have shown a gain—something which has not occurred in imports in some time; as it was, the imports decreased by 13 cars only, which is 15 per cent., and in value by $24,508, or 12 per cent.

Germany's gain in percentage was large, the 15 cars which it added to its shipments being equivalent to 250 per cent., and even in value, which gained by $20,780, the percentage rise was 149. Although car imports lost, parts imports, as previously stated in Motor World, gained $12,543, or 46 per cent. The losses of France and the United Kingdom were, in value, respectively 44 and 56 per cent. For the seven months ending with January, the gains were 108 cars, or 17 per cent., and $174,884, or 11 per cent. The figures in detail are:

	January 1912		January 1913		Seven Months Ending January 1911		1912		1913	
	Quantities.	Values.	Quantities.	Values.	Quantities.	Values.	Quantities.	Values.	Quantities.	Values.

Memphis, Tenn.—Blomberg Automobile Co. from $10,000 to $30,000.

PROMINENT MEN IN TRADE WHO ASSUME NEW DUTIES

Resignations and Promotions That Serve To Place Many Workers In New Places—Few Leave the Industry.

F. R. Bump has resigned as sales manager of the R. C. H. Corporation, of Detroit. His successor has not yet been chosen.

M. L. Bricker has been promoted to the post of production manager of the Briggs-Detroiter Co., of Detroit. Previously he was its superintendent.

James G. Smith has been appointed manager of the Motz Tire & Rubber Co.'s New York branch. Previously he was in turn connected with the Goodyear and Gibney companies.

Thomas G. Craig has been appointed sales manager for the Universal Wheel Co., of Detroit, which is producing a demountable wheel. Previously Craig was engaged in the stock brokerage business in Detroit.

Guy Vaughan, who designed the original car of that name but who latterly has been attached to the engineering staff of the Olds Motor Works in Lansing, Mich., has signed up with the F. B. Stearns Co., of Cleveland. He will, of course, be one of the Stearns engineering experts.

J. V. Hall, former sales manager of the Olds Motor Works, of Lansing, Mich., who was transferred to the Pacific Coast several months ago, where he took charge of the Olds branch, will return to the factory and resume his former duties. O. C. Hutchinson, who at about the same time was appointed vice-president and general manager, has relinquished the latter office and will go to Detroit, where he will serve as Olds representative.

Court Frees "White Elephant" Fords.

Those thirteen Ford Model T's which became a white elephant on the hands of the Atantic Transport Co. because of a suit in the Supreme Court for New York county by the Ford Motor Co. against Bowring & Co., New York exporters, have been taken from the hands of the steamship company and they may now proceed toward New Zealand. The Appellate Division of the Supreme Court this week upheld the lower court, which vacated an attachment secured by the Ford company against the cars and declared inoperative an agreement between Ford and the Atlantic company whereby the latter was to keep the cars until the suit was settled.

Ford claimed the cars were intended for the Ford dealer in Chili, but were secured by Bowring through a roundabout channel and consigned to New Zealand, which was construed as an unlawful invasion of the Ford New Zealand dealer's territory. After the attachment was secured the steamship company agreed to keep them in its possession throughout the suit if the ship were permitted to sail.

White Loses in Delivery Body Case.

A score of White delivery cars have been running about New York City in the service of Gimbel Bros. and have helped straighten out many kinks in the department store's delivery problem, but all through their period of service the delivery bodies upon them have remained an article of dispute in a suit in the New York City Court; the complainant was George B. Marx, a body builder, of Greenpoint, N. Y., and the defendant was the White Co., of Cleveland, Ohio. This week the suit was ended with a verdict of $1,489.58 in favor of Marx.

The action had its beginning about six months ago, when Marx fitted bodies to the 20 White chassis and the cars were turned over to the department store; when the matter of payment came up a settlement out of court proved impossible. The White Co. claimed it paid all it should pay and Marx demanded a balance amounting to the verdict rendered.

Fanning's Lawyer is Bergdoll's Receiver.

Growing out of the bankruptcy petition filed against the Louis J. Bergdoll Motor Co., of Philadelphia, on the 17th inst., Frank J. Harrington, an attorney, was appointed receiver of the company on Thursday last, 20th inst. Harrington was the attorney for Frank Fanning, who was a one-time Bergdoll sales manager and who levied on all the available funds, which action brought about the seizure of the contents of the Bergdoll factory and precipitated the bankruptcy proceedings.

Perfection Men in Toledo Enterprise.

Interests identified with the Perfection Spring Co., of Cleveland, have acquired a 5½-acre site in Toledo on which will be erected a plant for the manufacture of springs, chiefly for the John N. Willys's factories. The Perfection plant in Cleveland will be continued, and it is probable that the Toledo enterprise will be conducted under an entirely different corporate title.

Garageman Sued by Hess-Bright.

Goods and court fees make up a judgment which was filed this week in the New York county clerk's office by the Hess-Bright Co. against the Manchester Garage Co., of New York City. The amount is $33.19.

In the RETAIL WORLD

O. R. Buford has opened a garage in Anna, Ill.

Kephart Bros. will erect a garage in Lakeville, Minn.

Lon De Peel is about to open a garage in Presho, S. D.

Kelch & Sharp, of Los Angeles, Cal., will build a new garage.

J. H. Williams is about to open a repair shop in Abilene, Kan.

Charles Nelson is about to enter the garage trade in Junction City, Ore.

Ward C. Parsons, of Unionville, Conn., is about to open a garage in that town.

The Sibley Motor & Sales Co. plans to build a new garage in Worthington, Minn.

J. Vavricka, formerly of Batin, Neb., is about to open a garage in Crete, in the same State.

Benjamin Davy, of Wilkesbarre, Pa., has had plans prepared for a new garage. He will build it on Loomis street.

MacFarlane & Meyham is the style of a new repair firm in Berkley, Cal. The shop is located at 1919 Allston Way.

E. A. Bleck has opened up in Lima, Ohio, at 125 South Elizabeth street. He will stock accessories and Overland cars.

M. Orgens and Oliver Ostlund have formed a copartnership in Kerkhoven, Minn., and will operate a garage.

O. E. Bickford has established a garage business in Fitchburg, Mass., at 100 Main street. He will stock accessories.

J. A. Graves, of Los Angeles, Cal., has awarded the contract for a two-story garage. The estimated cost is $50,000.

Guy Ginther, of Lemmon, N. D., has taken over the garage business of Walter Smith, in Mott, in the same State.

The Wilton Automobile Co. has been formed in Wilton, N. D. It will erect a garage and repair shop and conduct an agency.

Neyhart & Green have taken over the Sixth Street Garage in Stroudsburg, Pa. The building will be enlarged and improved.

C. E. Glidden, of Sisson, Cal., has purchased an interest in the Sisson Garage. The future style will be C. E. Glidden & Sons.

Simpson & Huffman and Earl Moore are about to establish a garage business in Columbus, Ohio. They will locate at 237 North 4th street.

Guy Stansbury, of Fort Madison, Ia., plans to enter the garage and repair trade in that town. Quarters are being prepared for him at 811 Front street.

Thomas H. Roche, formerly of the Dwyer & Roche Co., has opened a repair shop in Hartford, Conn. It is located at 16-18 Park street.

Himmelberg & Cochran, proprietors of the Glasgow (Mo.) Garage, have become dealers. They have taken the Cartercar agency.

The Texas Motor Car & Supply Co., of Galveston, Tex., has sold its Victoria (Tex.) branch to John Frazer, of Cuero, in the same State.

Paul J. Wisdom, of Santa Ana, Cal., will erect a new garage, to cost $5,000. He is a sub-dealer under the Cole Motor Co., of Los Angeles.

The Swaney Auto Co., of Carroll, Ia., has arranged for the construction of a garage on West 6th street. It will be ready for occupancy July 1.

The Dawson Machinery Co., of Worcester, Mass., has purchased property at 140 Foster street. A machine shop and salesrooms will be erected.

The Auto Owners' Supply Co. has opened a garage and repair shop in Newington, Conn. Walter L. Foss, of New Britain, in the same State, is manager.

The Packard Motor Car Co. of Chicago is erecting salesrooms and a service station in Milwaukee, Wis. It will cost $50,000 and H. P. Robinson will be manager.

M. J. Carroll has entered the trade in Houghton, Mich. He has secured the Ford agency and has located his salesrooms in the Citizen's National Bank Building.

E. H. and H. A. Hawisher have accepted plans for a garage which they will build in Lima, Ohio. The estimated cost is $12,000. The firm style will be Hawisher Bros.

The Mount Royal Tire Repair Co., of Baltimore, Md., is to build a larger and more modern plant than it now possesses. It has bought a site at 906 West Mount Royal avenue.

The Standard Automobile Co., of Washington, D. C., has opened a new garage at 442 West Chestnut street. The company handles Mitchell, Empire and Hupmobile cars.

Fred T. Hendee, formerly a business man in Beloit, Wis., has formed the Perkins-Hendee Garage Co. in San Bernardino, Cal. His associate is Clement D. Perkins, a nephew.

K. E. and F. L. Fosha and L. R. Larson have organized the Washington Street Garage Co., in Green Bay, Wis., with a capital of $10,000; they have located on Washington street.

V. L. Singley has purchased the Palace Garage, on Hannon avenue, Camden, N. J., and will improve and operate it. Formerly he was connected with the Locomobile Co. of America.

Leach & Christensen have purchased part of the building in Hartford, Wis., formerly occupied by the Hartford Casket Works, and will establish a garage and salesrooms; they are Overland dealers.

The Interstate Motor Car Co., of Waterloo, Iowa, has moved into new quarters at 424 East 6th street. The company, of which Ralph Slippy is proprietor, handles the Interstate and Michigan cars.

The Beloit (Wis.) Auto Supply Co. is about to open a tire store and vulcanizing plant in Beloit, at 420 South State street. H. J. Rett, a Rockford (Ill.) business man, will manage the establishment.

W. B. Stevens and others have formed the Star Garage Co. in Clintonville, Wis. The concern will open a garage, repair-shop and salesrooms on Mill street. Orre Williams will manage the mechanical department.

The B. E. Griffey Co., of Indianapolis, Ind., which formerly confined itself to advertising novelties, has entered the automobile trade as manufacturers' agents. It already has secured several accessory accounts.

Charles Tiffany has secured permission to erect a two-story garage on Market street, in Poughkeepsie, N. Y. Permission was secured despite objections to the effect that the garage would disturb a library and a church nearby.

Myer Abrams & Co., of Boston, Mass., who recently lost their quarters and many cars by fire, have arranged for the opening

Digitized by Google

of a truck department on Portland street near the North Station. The company is Lauth-Juergens dealer.

The Little Rock (Ark.) Auto Co. has been sold by Gordon P. and J. A. Van Etten to W. L. Lewis and C. H. Vaughn. The latter has been employed by the company for three years, while Lewis until recently was in business in Memphis, Tenn.

The Cumberland Motor Car Co., of Nashville, Tenn., has completed a garage at 15th avenue and Broadway. The company is dealer in Premier, Abbott-Detroit, Chevrolet and Little gasolene cars, Standard electrics, Federal trucks, Firestone tires and Harris oils.

Oscar Stegeman, president of the Stegeman Motor Car Co., of Milwaukee, Wis., manufacturer of Stegeman trucks, has entered the pleasure car field as a dealer. He has taken the Howard agency and will maintain a salesrooms and service station in the Stegeman works at Linus and Woodward streets.

C. W. Bull and T. A. Young have opened an agency in Syracuse, N. Y., at 500 East Genesee street. They represent the Franklin Automobile Co., which is located in the same city. Bull for the past year has been in charge of city sales for the Franklin company, while Young for several years has handled Peerless and R. C. H. cars in Syracuse.

The Detroit Automobile Exchange has been formed in that Michigan city for the purpose of dealing in used cars. It is located at 294 Jefferson avenue and has storing room for 200 cars. Its officers are: Grover C. Farnsworth, general manager; Everett W. Pingree, secretary and treasurer, and Robert M. Drysdale. Pingree is also a shoe manufacturer.

The Southwest Motor Co. has been formed in Phoenix, Ariz., to take over the Buick and Apperson agency in Arizona. The company was formed by Messrs. Roper and Bird, who recently went from the East to Arizona to enter the Arizona Land and Improvement Co. John Smith, who was connected with the Ferguson-Mohn Co., the former owner of the agency, is sales manager.

The Central Motor Car Co., of Reading, Pa., has had plans prepared for a three-story brick, fireproof building, 110 x 61 feet, to be erected at 5th and Cherry streets; the company is Ford dealer and has subagencies in Hamburg, Kutztown, Wernersville, Boyertown, Morgantown and Birdsboro. The first floor will be offices and stock and showrooms; the second will be for storage, accommodating 84 cars, and the third will be a repairshop with a capacity of 18 cars. The equipment includes a heavy freight elevator.

JERSEY TRADESMEN RAISE DUES AND HEAR SPEECHES

Also Take Over Newark Show and Honor Retiring President—Ellis Chosen to Head Organization for Next 12 Months.

At its annual meeting in Newark, on Saturday last, 22nd inst., the New Jersey Automobile Trade Association elected officers as follows: President, W. H. Ellis; vice-president, George H. Smith; treasurer, R. A. Green; secretary, R. B. Mann; trustees, G. B. Thayer, C. Louis Fitzgerald, I. M. Uppercu, George Paddock and G. E. Blakesley.

At the same meeting it was voted to increase the initiation fee for active members from $25 to $100 and to associate from $25 to $50, and to raise the dues of the actives from $10 to $15 and for the associates from $5 to $7.50 per year. The Trade Association also formally took over the management of the Newark automobile show, which heretofore has been conducted by the New Jersay Automobile Exhibition Co., which is composed largely of the same men.

At the banquet which followed, George E. Blakeslee, the retiring president of the association, was presented with a handsome silver service in token of his there years' service as the head of the organization.

Among the guests were Job H. Lippincott, State Commissioner of motor vehicles, who, when called on, declared that "there was no longer an 'automobile question'" and professed his desire "to solve the problem of regulating motor cars and to give the owners a square deal." H. A. Bonnell, who, among other things, is general manager of the Automobile Board of Trade, declared that the three problems facing automobile dealers are "the sale of second-hand cars, legislation and the construction of good roads."

Benjamin Sells His Syracuse Business.

Although it was stated that C. Arthur Benjamin, who last week became the sales manager for the American Locomotive Co.'s automobile department, would retain his retail business in Syracuse, N. Y., an unexpected offer came his way and, as a result, it was disposed of on Monday last to W. D. Andrews, a bicycle and sporting goods dealer in that city. The sale includes Benjamin's salesroom and main garage on West Onondaga street and his service building on South Clinton street, as well as their entire contents.

It is Andrews's intention to continue both establishments and for the purpose he is organizing a $100,000 company of which he will become president; Ross L. Andrews will be treasurer and general manager, and E. T. Fuller, Benjamin's former superintendent, will be vice-president. Seventeen years ago Benjamin and Andrews were partners in the bicycle business in Syracuse, Benjamin withdrawing to engage in the automobile industry. Latterly he handled the Packard and Hudson cars.

Recent Losses by Fire.

Chicago, Ill.—David Hogg, 46 Oak street, garage destroyed. Loss, $25,000.

Minneapolis, Minn.—McMillan Garage, 239 Clifton avenue, damaged. Loss, $400.

Buffalo, N. Y.—Clarence Gifford, 77 Edward street, garage damaged. Loss, $5,000.

Attleboro, Mass.—Arthur E. Rounds, West street, garage destroyed. Loss, $3,000.

St. Paul, Minn.—Northwestern Fuel Co., garage, three trucks and one car destroyed. Loss, $15,000.

Pasadena, Cal.—F. H. Latimore, 460 North Madison avenue, garage damaged. Loss not given.

Providence, R. I.—Pugh Bros., 53 Mathewson street, garage damaged by explosion of vulcanizing tank. Loss not stated.

Quick Action in Stoddard Bankruptcy.

It develops that the Stoddard Motor Co., of New York, against which on Wednesday last, 19th inst., a petition in bankruptcy was filed by order of the board of directors, was adjudicated a bankrupt the same day, Stanley W. Dexter being appointed referee in bankruptcy. He has called the first meeting of creditors to occur April 4th, at which time a trustee will be chosen. As the Maxwell Motor Co., successor of the United States Motor Co., is practically the only creditor of the Stoddard company, which is merely a New York branch, the winding up proceedings will undoubtedly be as expeditious as was the adjudication in bankruptcy.

Priest is Garageman's Big Creditor.

Dennis J. Carney, operator of a garage in Worcester, Mass., has filed a petition in bankruptcy, stating that his liabilities amount to $10,353 and his assets to $2,898. Of his liabilities, $1,160 is secured and $9,193 is due to about 25 unsecured creditors, the principal of whom is Rev. John J. O'Keefe, of Dalton, Mass., to whom Carney owes $6,981 for borrowed money, rent and promissory notes.

Daughters-King to Produce Tops.

The Daughters-King Auto Specialty Co. has been formed in St. Louis, Mo., to manufacture tops, seat covers and similar goods. It is located at 3323 Locust street. W. K. Daughters is president of the company.

Single Copies (Postage Paid) . . . . . 10 Cents
Foreign and Canadian Subscriptions $3.00
Invariably in Advance

Postage Stamps will be accepted in payment for subscriptions. Checks, Drafts and Money Orders should be made payable to The Motor World Publishing Co.

Change of advertisements is not guaranteed unless copy therefor is in hand on SATURDAY preceding the date of publication.

Contributions concerning any subject of automobile interest are invited and, if adequate, will be paid for; or, if unavailable, will be returned provided they are accompanied by return postage.

Cable Address, "MOTORWORLD," NEW YORK

Entered as second-class matter at the New York Post Office, November, 1900

NEW YORK, MARCH 27, 1913

GOVERNOR SULZER, THE TOO CONSIDERATE.

Governor Sulzer, of New York, is too considerate. Before he permits the introduction of his special bill seeking to double the tax on automobiles, he should seriously commune with himself. He owes it to the common "peepul" whose particular champion he long has professed to be. For what does double taxation mean to the men or women who own automobiles? It is a trifle lighter than air.

Politicians, like death, love shining marks, and having found that the State is in the chronic condition of needing more money, and the secretary of State, who is also new to his job, having informed him that automobilists can afford it, why should they be permitted to escape with a mere doubling of the fees now imposed upon them? The suggestion is ridiculous! They always have been "marks"—"easy marks"—shining marks. Their tax, therefore, should at least be quadrupled.

Even if in investing $200 or $300 in the purchase of a second-hand motor car or motor wagon any man believes he is thereby increasing his pleasure or facilitating his business by dispensing with a horse, he has no right to such beliefs. The possession of any vehicle not drawn by animals is absolute proof of unlimited wealth. It is proof that the owner is fit not merely for double taxation, but for triple or quadruple taxation. It is convincing evidence that he can afford it. He has no rightful claim to sympathy. He has no right to own an automobile anyway. He deserves to be "shaken down."

We repeat, the governor is too considerate. He should find some legal means of taking the coat from the automobilist's back or the shoes from his feet—some means of making him pay for the air he breathes, or at any rate for so much of it as is drawn into his carburetter. That sort of thing will be fair and just and proper, and in the interests of the common "peepul" who cannot afford automobiles and who have no carburetters to consume more air than is their portion. The governor should go the limit while he is about it.

The Sulzer idea and the Mitchell May ideas are simply great! Let the good work go on, "and damned be he who first cries Hold! Enough!" If it goes far enough, the automobile interests may discover that they have about 500,000 votes in the State of New York alone and that, properly marshalled, that number of ballots will give as much pause to Sulzers and Mays and other politicians as does the Grange vote; and that consummation will be worth even triple taxation.

ELECTRIC STARTERS FOR USED CARS.

Although it is one of the advantages of the average electric lighting dynamo that it can be applied to almost any car by almost any person possessing even a modicum of mechanical ability—the common variety of repairman can be assumed to possess a little more than that modicum—the same can be said of very few electric starters. So far, only one manufacturer has developed an electric starter that is easily applicable to any existing car without the necessity for extensive alterations, and has advocated its application by any one other than himself, and though the lothness of others to follow suit may be excused, in a measure, by their fear of permitting installations that may fall short of the efficiency and dependability demanded and obtained of factory-made installations, it would seem that they may be overlooking a by no means small field.

The used car problem has not been solved as yet. And until all manufacturers re-build cars taken in exchange, bringing them up to date by the addition of such modern equipment as the electric lighting and starting system represents—which may or may not represent the happy solution of the problem and which probably never will come to pass—there will remain on the market large numbers of old cars that are minus these features. In many cases their owners want electric lights and engine starters and are willing to pay a reasonable price for them, but they are liable to balk at any proposition involving extensive and expensive alterations and the consequent loss of the use of the car for a time long enough to make the installation.

Now that the electric lighting and engine starting system has become standard equipment on so many cars, much of the mystery that shrouded it when first it appeared has been dissipated and its installation outside of factories rendered possible.

One other point: The development of such easily attached systems very likely would open up a way for the dealer in used cars to bring his wares more up to date and to dispose of them more easily, thus, in turn, opening up the way to greater trade in new cars by providing an easier gateway for those taken in exchange.

OBNOXIOUS BILL REAPPEARS SHORN OF SEVERAL CLAUSES

New York Secretary of State "Patches Up" McClelland Act and Has It Reintroduced — Sulzer, Too, Has a Pet Measure.

Although it is generally believed that the only automobile legislation likely to be enacted by the present legislature of New York is Senator White's bill providing for the appointment of a commission to confer with the authorities of other States, with a view of drafting a uniform law, Secretary of State May, like all other new officials, has so much automobile on the brain that he is not content to abide that result.

May was the real author of the obnoxious McClelland bill, and after it was punched full of holes at the public hearing two weeks ago he again took it in hand and, after patching it here and there, he had it reintroduced on Monday last. Among other things, the double taxation feature has been eliminated, and as for the other things that are dear to the May heart, he points out that they already are parts of the laws of some or all the several States with which Senator White's proposed conference committee would confer.

Because it has been stricken out of the modified McClelland bill, however, does not mean that the effort to squeeze the automobile interests by imposing a double tax has ceased. On the contrary, Governor Sulzer is having a separate and distinct bill drafted to accomplish that specific purpose so dear to the Sulzer heart.

Morgan to Reach Catskill or Bust.

"Pike's Peak or Bust" was a comparatively trifling undertaking compared with the "Catskill or Bust" scenic tour. Although Catskill is only about 125 miles from New York City, where he is located, W. J. Morgan for some six years has been unsuccessfully trying to reach that Hudson River town and to bring guests to the hotels which abound in summer vacation regions adjacent thereto.

Not willing to admit defeat, and with the idea of having it recorded as his "farewell appearance" as a promoter, Morgan has revived the oft-revived "scenic tour" and will endeavor to reach Catskill on May 15th next, after starting from New York the day before. He states that he has applied for A. A. A. sanction and that the route now is being mapped. Also that "in addition to being a pleasure jaunt the tour will be an endurance, reliability, hill climb and fuel economy test."

If Morgan really does reach Catskill this year, and despite his announcement that the scenic tour is his "farewell contest," it is given out that thereafter he will promote contests for the Motor Car Dealers' Contest Association of New York, making it appear that his is a Patti "farewell."

As the dealers' representative, he has in prospect a four-day inter-city reliability contest that will reach from New York to Philadelphia and then to Boston.

Northwest Seeks the National Tour.

Unless some hitch develops in the tentative program that has been mapped out, Detroit, the Automobile capital, will not witness the start of the A. A. A. National Reliability Tour, which was abandoned last year because of insufficient entries, nor will New Orleans witness the finish of the renamed Glidden A new route, of approximately the same length as the "Lakes-to-the-Gulf Route," which was mapped out for last year's tour, has been tentatively chosen. It stretches from Minneapolis, Minn., to Kalispell, Mont., in the very heart of the new Glacier National Park; the preliminaries have been undertaken by the Automobile Club of Minneapolis and the Civic and Commerce Association of that city, which bodies are working in conjunction to secure the start of the tour for the Flour City.

Receiver Takes Brighton Beach Track.

If "Bill" Pickens, or anyone else, conducts races at the Brighton Beach track in Brooklyn, N. Y., this summer, they first must reckon with a receiver. For Samuel Gompertz has been appointed receiver of the Brighton Beach Racing Association as a result of foreclosure proceedings on a $50,000 mortgage. The action, which it is stated is a purely friendly one, was taken for the purpose of having someone handle the property in an effort to make it a paying proposition, which means that it will be "hired out" whenever possible exactly as heretofore, which has not been often since "playing the ponies" ceased to be profitable or legal in New York State.

New Jersey May Punish Non-Residents.

New Jersey still is having a hard time convincing itself that reciprocity is wholly right and proper. The effort to rescind non-resident privileges having failed, the legislature has passed and the governor has signed a bill authorizing the motor vehicle commissioner to suspend the 15-day touring privileges when cause is presented. When guilt is proven, it is punishable by a fine not exceeding $200. The governor also has signed a bill providing a fine of $500, or imprisonment for 60 days, for the manufacture of any imitation of the official registration plate.

*Indicates Sanction by A. A. A.

March 24-29, Indianapolis, Ind.—Indianapolis Automobile Trade Association's show.

March 24-29, Watertown, N. Y.—Annual show of the Watertown Automobile Dealers' Association in the State Armory.

March 29-April 5, St. John, N. B.—New Brunswick Automobile Trade Association's show in Queen's Rink.

April 1-6, San Francisco, Cal.—San Francisco Automobile Dealers' Association's motor truck show.

April 5-12, Pittsburgh, Pa.—Pittsburgh Automobile Dealers' Association's seventh annual show in the East Liberty Market building.

April 14-16, Chicago, Ill.—Chicago Motor Club's reliability tour for commercial vehicles.

April 16-17, Taylor, Tex.—Track races under the auspices of the Taylor Automobile Club.

May 5, Washington, D. C.—Start of the reliability-economy run for commercial vehicles under the auspices of the Washington Post.*

July 1, Indianapolis, Ind.—Start of the Indiana Automobile Manufacturers' Association's cross continental tour to Los Angeles, Cal.

ADVOCATES ELECTRIC CARS FOR "ALL YEAR" BUSINESS

High Cost of Gasolene Will Increase Demand, Says Brand—Advantages to Dealer Who Handles Them.

In these days when the price of fuel is a burning question with the gasolene car dealer, it enables the electric car dealer to score one on every other kind of a dealer, for, as every one knows, since the "steamer" lost its popularity, the electric has been the only vehicle that is independent of gasolene. That this very fact should operate to stimulate the demand for electrics and that their successful exploitation in cities where they are not so well known, as well as a substantial increase in the business they represent in cities where they already are well established, requires only a dealer's initiative is the opinion, expressed or unexpressed, of no inconsiderable number of persons whose positions in the trade enable them to feel the pulse rate of the motoring public and from this to draw conclusive arguments.

Frederick A. Brand, who is secretary and treasurer of the Broc Electric Vehicle Co. of Cleveland, Ohio, is one of these persons, and in view of his intimate knowledge of the electric vehicle industry and all that pertains to it his opinions and advice cannot well fail to carry weight. Brand's creed, expressed in so many words, is to assist the dealer along the broad highway of success by pointing out to him new methods of increasing his yearly business, and as one simple means of accomplishing this end he suggests that gasolene car dealers consider carefully the desirability of taking up electric cars as well, if not as a means of creating an "all-year" business, which with gasolene cars alone is wont to show signs of lagging in the early fall and spring, then to increase that business and make it show a better credit balance.

Brand also points out that the electric car trade is the easier for the dealer to care for; that the electric is the simplest for the garageman to care for; that the ratio of overhead expense to profit is lower in the case of the electric car than in the case of the gasolene car; and that the electric car dealer has considerably less need of carrying an expensive stock of spare parts than has the gasolene car dealer.

"With gasolene costing the city driver of a four- or five-passenger car from two to two and one-half cents per mile, as against an electric current cost of from one to two cents a mile, largely dependent upon current rate and whether the driving is over level or hilly roads, electric cars are bound to increase in popularity," declares Brand in dealing with that phase of the subject. And by way of laying emphasis on the assertion, he cites the case of one disgruntled city driver of a five-passenger high-priced gasolene car who, because he was unable to get better than eight miles to the gallon of fuel, for which he paid more than 20 cents, seriously is considering the purchase of an electric; his consideration is based solely upon the high cost of fuel.

"Now understand me," Brand adds, in summing up, "electric cars with their privacy, their simplicity of operation, their freedom from repairs—the latter attributable to some extent to the slow speed at which they are operated—as well as their low maintenance and power cost, do not need a high price of gasolene for a sales increase, but this high fuel cost of gasolene cars is another factor that is going to further increase the demand for electrics, and live dealers must take on electric lines before their competitors get too firmly established with electric lines they now handle."

One other thing that Brand has failed to make specific mention of, though probably only because it is well known, even if it is not often thougth of, is that the electric car is the only original self-starting, electrically lighted car, and that for silence it has everything else "backed off the boards," to employ a colloquialism.

Allen Cars Coming from Fostoria.

The Allen Motor Car Co. has been organized in Fostoria, Ohio, where it just has secured a plant in which will be manufactured the Allen "36," a well standardized car listing at $1,350, fully equipped, of which a number already have been produced. The company will be incorporated some time prior to July 1st with a capital of $500,000. Meanwhile the purchase of material is being done through the Peabody Buggy Co., an old-established Fostoria concern, which is interested in the Allen enterprise. The sales department is in charge of J. E. Wright, who is a member of the Columbia Buggy Co., also of Fostoria. The Allen company is already sold up for the present season and figures that having made the necessary connections it will be enabled to increase its output for 1914 to 1,000 cars.

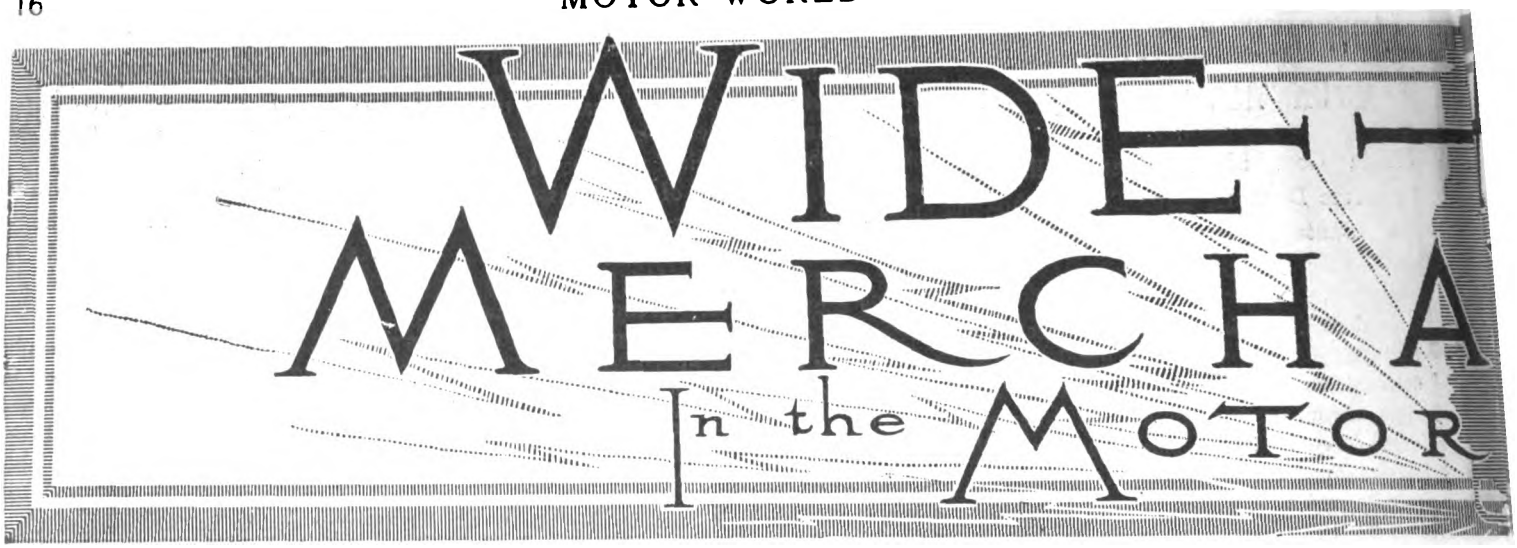
Traveler Acquires Factory in Detroit.

The Traveler Motor Car Co., which recently was organized in Detroit by J. P. Lavigne and which purposes selling its droduct direct to the public, has purchased property in that city on Grand River avenue. It comprises a two-story brick building, 80 x 100 feet, which immediately will be remodeled.

R. A. C. DECIDES TO TEST ELECTRIC LIGHTING SYSTEMS

Will Award $250 Cup to Entrant Whose Equipment Makes the Best Showing—Conditions of the Competition.

By way of determining which of the many electric lighting systems on the market is the best, or at least which is the best under the conditions imposed by itself, the Royal Automobile Club has decided to hold an open competition, for which entries will close September 15th.



For the electric lighting set that is adjudged to be the best the entrant will be presented with a cup valued at $250 and the official R. A. C. certificate of performance. The conditions are as follows: "The whole equipment must be entered for the trial and must be properly installed upon a car; the distance run upon the road shall not be less than 2,000 miles; all lamps (not less than two head lamps, two side lamps, and one tail lamp) shall be alight at the same time and for at least six hours each day; the Technical Committee of the R. A. C. shall decide which of the performances is the best; any equipment which completes its trial before October 15th shall be eligible." Which means, briefly, that equipment may be entered any time for test prior to Septemer 15th, and at the completion of the test the entrant will be awarded a certificate.

The certificates of all those whose equipment has been tested prior to October 15th will be examined and the award of the cup made after comparison of the certificates by the Technical Committee of the automobile club.

Six Months Detecting a Detective.

Having spent the time from September 30, 1912, to the current week getting service on Clovis E. Duhain, who is connected with the Pinkerton Detective Agency in New York City, the International Motor Co. filed suit against him in the Supreme Court for New York county, alleging an indebtedness of $723.60; the difficult service is said to have been caused by the fact that Duhain travels almost continuously and could not be located in New York, not even by the sheriff of Kings county. Duhain was interested in a company which operated "rubberneck" wagons and backed the purchase of two trucks from the Mack Bros. Motor Car Co. in 1909. Of the total indebtedness, $614.08 is on a three months' note drawn May 15, 1911, and $109.52 is claimed as unpaid interest on other notes drawn at various dates.

CLEAN FLOORS AS AN ASSET

Saving Effected in Workmen's Time, and Tone of Garage Raised by Weekly Use of Hose—One Man's Experience.

It is just as good business management and just as important to have a clean floor in the garage part of your establishment as it is to have a neat,clean office and salesroom.

It is a fact that workmen are affected visibly by their surroundings and scientific study has disclosed that one way to increase efficiency is to maintain an atmosphere of cleanliness and order. In large establishments it has been found possible to increase the efficiency of operatives from 15 to 20 per cent. by removing machine borings, sweeping the floors frequently and otherwise keeping everything in apple-pie order.

Standard of Work Raised.

Not the least interesting fact is the effect such cleanliness has in raising the standard of work as well as increasing the quantity. Men in small establishments are just as responsive to such methods.

This recently was illustrated in the case of a garage, the owner of which for years had been satisfied to have a repair department situated at the rear end of the building and in which there was literally a three-inch accumulation of grease and dirt on the cement floor. When the owner decided to use a shovel and hoe on it and see what could be done, all hands were put on the job for about half a day. First the floor was thoroughly scraped, then it was washed with and scrubbed with gasolene till every bit of grease was loosened; this was followed by soap and water scrub and finally a grand "hose down" which made it fairly presentable. A rule of a thorough wash once a week was adopted and has since been carried out.

Before the era of cleanliness the grease was so thick on the floor that it actually soaked through a man's shoes. Cars left for repairs showed the result in greasy running boards, floor coverings, tires, etc. The workmen's garments showed similar effects, and there was no effort made to keep anything clean because of the utter hopelessness of it. Tools laid on the floor became grease covered and left their marks wherever deposited during the course of a job. The clean floor resulted in greater freedom in working, better work, more cleanly dressed workmen, increased self-respect on the part of all hands, greater snappiness in tackling jobs and better satisfied customers. It does not cost much to try this plan, and it is not only worth trying but worth keeping up—and don't overlook the fact that customers notice and appreciate cleanliness and order.

EXAMPLE AS AN INSPIRATION.

The business of the repair department of a Western dealer grew so rapidly that the proprietor determined to look into the reason back of it. He had been selling the same line for two years and the cars were standing up splendidly. The repair department had always lost money before, and now it was making a great showing, doing more work and at a liberal profit. They had the same equipment. What was the secret? Examination of the various charge tickets showed that many outside cars had been cared for in addition to his particular line; so he felt relieved to know that at least the increased business was not due to any trouble with his particular "line."

After several attempts to fathom the mystery from the office-end, the dealer kept his eye on the department and found that the change was all due to the fact that two months before the foreman had hired a young, black-haired mechanic who looked like a boy. This boy mechanic loved his work so heartily that he never let a job go out till it was completely satisfactory. If the motor was noisy, he seemed instinctively to know just where the trouble was; like some doctors he could diagnose a case with startling speed and accuracy—and he never wasted any time. He would get right at things. His example had fired the whole force.

One Man Inspired the Whole Force.

Without realizing what was responsible for it, the entire department had taken on more activity and more ginger. Customers who had been getting half-baked work, now commented on the change and told their friends how quick and how satisfactory the work now was. This had given the impetus that resulted in an immediate gain—one boy-mechanic with a genuine love for his job had unconsciously influenced a force of six men to the extent of turning a loss into a profit.

GETTING VISITORS' NAMES.

Sometimes people come in and look at a car and then walk out after an apparently pleased examination of your car. You do not know where they came from or where they are going; in many cases that is the last you see of them. One dealer makes a point of mailing catalogs. He never has them in sight in the salesroom, but keeps them in a dust-proof file. On such occasions as the one referred to he says: "Can't I mail you one of the new catalogs when they come in?" From that point it is comparatively easy to get the name and address. The idea is to get the information without putting the question point blank.

WHAT "MAKING HAY" REALLY MEANS.

"Make hay while the sun shines" is another way of saying "Don't wait too long, or you will find that the other fellow has been there and signed up the ripe prospect you thought was yours exclusively.

AWAKE NDISING WORLD

SALESROOM "SNOBBISHNESS"

Incident Which Serves to Illustrate that Appearance Often is Deceptive and that Dress Belies Real Prospects.

The incident happened in a piano store. The concern had the agency for the Steinway; it also had other pianos at popular prices. The salesmen were all keyed up to the Steinway class, as far as style goes. They rather looked down on anyone who talked or thought anything but Steinway. Most of them were young, and not so very clever, as the story will show.

They would almost rush in a body to greet a pretty or a well-dressed woman who might pay $10 down and $5 a month on an instrument, but when one came who was poorly garbed there was much hesitation and indifference. Usually she had to stand for a few minutes before one of these pretty youths would elect himself to wait on her.

The "Boss" Sets an Example.

The "boss" knew his men were young, and one day he discovered they were snobbish. He determined to teach them a lesson. His opportunity came almost immediately. He heard the door open, and a neatly dressed Italian woman entered. The salesmen were making no move to greet her. The "boss" stepped to the door in lively fashion. He greeted her with a smile and a "Good Morning." She explained that her daughter was going to take piano lessons. Her husband was in the fruit business. They had determined to buy a piano. Would he show her one for about $250? Would he?

The "boss" spared no effort to show her that he was selling the best pianos in town for that money or anywhere near it. She decided to buy one of them. Could he deliver it that afternoon? Why, certainly! How much would she like to pay down? She would pay cash. Pay all of it? Yes. So she reached down into the folds of her dress and brought out a roll of bills which the "boss" spent some time in counting.

Lesson in Politeness and Promptness.

The receipt was given and the order entered, and then the "boss" called his selling force into the office and, with the roll of bills still in his hand, taught them a little lesson on politeness, promptness, salesmanship and playing the law of averages that put an entirely different complexion on that sales force.

Occasionally in the automobile business similar lessons must be taught. Occasionally men kowtow to style and dress and show rudeness approaching almost to insult to the "rural" looking fellows who once in a while stroll in. But it does not happen so often as it used to, and it is likely to happen still less in the future.

MENTAL ATTITUDE REFLECTED IN PROFITS AND LOSSES.

"People who own cars don't care about saving money," said an accessory dealer to a manufacturer's representative a few days ago. "I don't push these devices; we have them in stock and are ready to supply anybody who asks for them."

"How many did you sell last year?" said the salesman.

"About a hundred sets," was the reply.

Sales Consummated Without Effort.

"You sold a hundred sets and never even showed them to anyone unless they asked for them! Well, if that's the kind of a dealer you are, I certainly do not want to tie up my line with you," said the salesman.

"Just think of it!" said the salesman, recounting the incident, "that concern, without any effort, has sold over $600 worth of my goods during the year, making a profit of 40 per cent.. Supposing they had started out to sell 500 sets, placed a mark and made a real effort to sell the goods, what a nice profit they would have had off the one little line? And think of that statement that 'People who own cars don't care about saving money'! Wouldn't that jar you? It certainly beats all how many people are asleep to their opportunities."

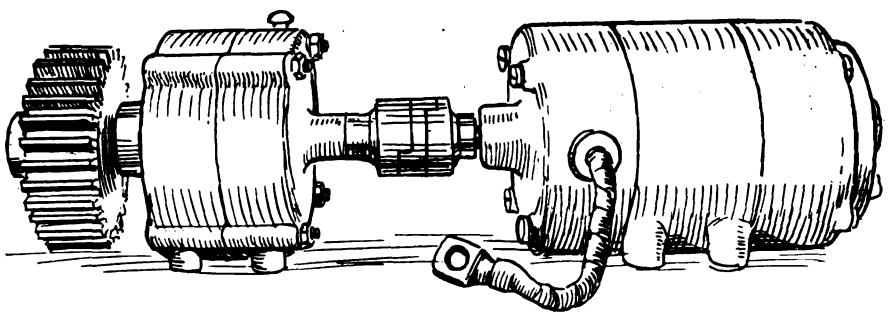
KNOWLEDGE THAT PREVENTS OVER AND UNDER-STOCKS.

Just as many individuals make a mess of their lives simply because they do not **know** themselves and never make any really earnest attempt to find themselves out, so to speak, so many business failures can be traced to a lack of definite, accurate knowledge.

Ascertaining Territory Conditions.

It is not simply a question of knowing the goods; it is a question of getting down to rock-bottom knowledge on all the conditions that surround the sale and the stocking of them. The dealer who **knows** just what his territory can yield, taking into consideration the full strength of his competition, the conditions of business generally and the other forces that must be reckoned with, is also likely to **know** pretty well what the factory will be able to do in the way of deliveres.

Gauging Needs by Past Records.



Such a dealer will not have an understock of cars contracted for, nor will he have an over-stock. He will gauge his needs by his past records, supplemented by careful study of present local conditions. The dealer who **knows** will never be in the embarrassing and financially painful situation of one who sold a thousand cars and had to refund deposits on all but two hundred and fifty. Before the dealer who **knows** commits himself that far, he will have an iron-clad guarantee of deliveries from the factory.

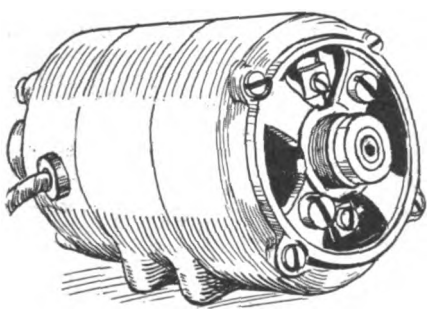
SPLITDORF STARTER EMPLOYS UNUSUAL REDUCTION GEARING

Planetary Principle in Modified Form Permits Meshing of Several Teeth at Once — Motor Supplied in Two Sizes.

Supplementing earlier and less complete details of the Splitdorf electric engine starter, which, prior to and at the time of the organization of the John Splitdorf Corporation of 136 West 52d street, New York City, which produces it, was heralded as a device quite different from the ordinary run of such devices, additional information, forthcoming with the practical readiness of the system of the market, reveals that its most distinctive feature lies in the employment of an unusual type of reduction gear. Though it already was fairly common knowledge that such would be the case, and free speculation had coupled the terms "planetary and epicyclic" gear with nearly all discussions of it, it now transpires that the gear, while of the planetary type in appearance, actually differs from such construction in several respects.

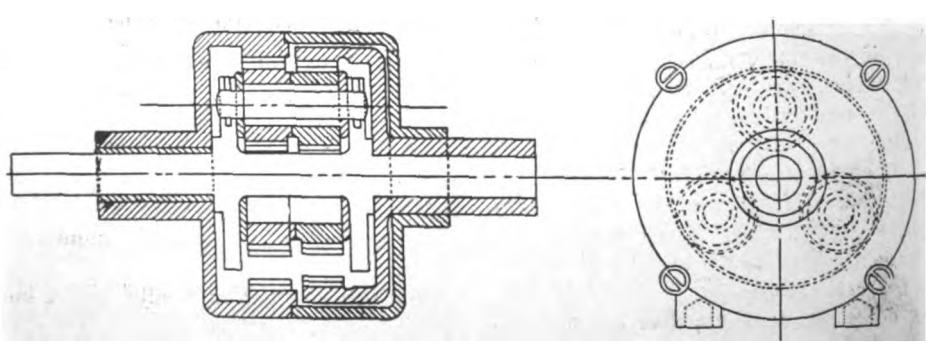


SPLITDORF STARTER COUPLED TO REDUCTION GEAR

The mechanism approaches planetary construction in its functioning in that the gears always are in mesh and that those upon which the greatest strain is imposed have several teeth in engagement at all times, the latter feature being one upon which particular stress is laid as indicating an unusually high factor of safety coupled with smallness and lightness and the reduction of internal friction to the minimum by reason of the distribution of the driving load over several teeth instead of its concentration on one tooth.

In both internal and external appearance, the reduction gear resembled the more or less familiar sun and planet train, though the resemblance is carried no further. Instead of rotating about the sun wheel, the planet pinions are anchored fast to the case and the motion of the gear shaft is transmitted through the pinion gears to the first internal, which is supplied with a hub on which a second spur gear is cut; this hub, in turn, operates through its pinion train a second internal, the hub from the last internal carrying the sprocket or gear for the final reduction. Obviously, it is a comparatively simple matter to increase or reduce the size of the final driving sprocket or gear, and in this way to obtain any total reduction that may be required in cranking the particular engine to which the system is applied.

The electric motor that forms the power element of the system is of the orthodox series pattern, except that it is very small and very light. Series winding is used, it is well to explain, by reason of the fact that this method results in an increase in motor torque with the increase in the load up to the stalling point. The reason for the really tiny size of the motor is apparent in the incorporation of a miniature flywheel within the casing. This flywheel, it is pointed out, accumulates sufficient energy of its own at 4,000 revolutions a minute, which is normal speed, to crank a heavy motor with the compression cocks closed even after the current from the battery has been cut off. Consequently it may be assumed to have a materially beneficial effect in assisting the motor to maintain its high rotative speed at the moments when the pistons of the engine are passing compression dead centers.



MOTOR IN DETAIL

Two sizes of motors are produced, one of which is slightly larger than the standard size developed for pleasure car work and has been designed for the more rigorous work of starting heavier commercial vehicle motors, and both are of the two-pole type with laminated fields to increase efficiency. Though they are constructed for a nominal voltage of six, ample provision for overload has been made, the net result being that they can be operated without likelihood of damage on as much as 12 volts. Motor cases are constructed to be water- and dirt-proof, the end cap screwing into place.

To supplement the starting apparatus, a generator to charge batteries automatically now is in course of preparation and shortly will be placed on the market. In appearance it will be almost exactly like the starting motors and it will be no larger than the smaller of the two. Fields will be of the combined permanent magnet and electromagnet type, this construction having been chosen by reason of its quick "building up" possibilities. Like the motors, the generator will be dust-proof.

Unusual Type of Lamp Reflectors.

As a means of assisting the driver to see around a corner, so to speak, one ingenious motorist has adopted the plan of fastening small horizontal strips of bright tin in front of his head lamps. They are connected at the top with a very light rod and a cord and a couple of small pulleys permits them to be turned; they stand in the same plane with the rays of light from the lamp. When it is desired to illuminate a corner, the metal strips are turned slightly sideways, thus reflecting the light to one side or the other, as the case may be. When they stand straight out they do not interfere in the slightest with the brilliancy of the lamps.

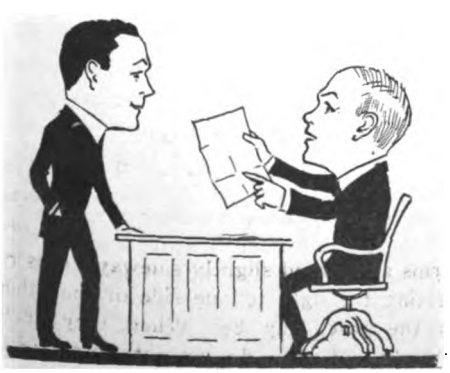
BIG "I" OF "TITLED" MEN DISPLEASES REILLY

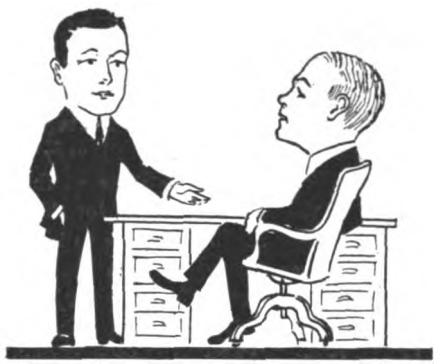
Says Twelve "I's" in Fifteen-Line Letter Is Somewhat Disproportionate—Men Who Grow in Own Estimation When Managerial Handle Is Appended—"I's" That Failed to Land an Order.

"Humph! Sounds just like Tom Lawson!" snorted Reilly, as he finished the perusal of a letter which bore the mark of an accessory house and was signed, "C. Charles Camerton, Director of Sales."



"One, two, three," and on he counted, ignoring temporarily the query of his salesman, who had asked what connection there might be between the diction of C. Charles and the Boston broker who has won fame and fortune while handing out advice to the trusting public.

"Twelve 'I's' in that letter of only fifteen lines!" went on Reilly, as he waved the epistle in question toward the salesman; if it wasn't for the letterhead you'd never know the letter was from an accessory manufacturer. Sounds as if Camerton was the whole show."



Man and Demeanor not Proportionate.

"Maybe he is some guy," volunteered the salesman, as he took the letter which Reilly offered and read the words which were interspersed between a copious line-up of "I's."

"Some guy nothing!" retorted the dealer. "I'll bet my Easter suit against your last year's breeches that he isn't making any more than you are and from what I know of him he doesn't amount to much more, either. The son-of-a-gun has been trying to sell me stuff for almost a year, and I have been getting more and more prejudiced against him. Every time I get a letter it makes me think of one of Tom Lawson's personal letters to the public, full of 'I this' and 'I that'; I never liked Lawson and I don't like Camerton—and just for his darned 'I' business I'm going to turn him down!"

"TWELVE I'S IN THAT LETTER"

"WHAT'S THE DIFFERENCE?" HE ASKED

"What's Camerton got to do with the quality of his company's goods?" asked the salesman.

"It's got this to do with it," shot back the little dealer, "that every time I buy anything I would have to deal with Camerton, and I never could stand him; and as to 'his company' of which you speak, no one could ever discover the fact that he isn't the whole company himself, at least not from listening to him tell it."

"He is a bit rasping on the nerves," commented the salesman.

"'A bit rasping' is good," supplemented the dealer. "Why, I'll bet the 'I' key on his stenographer's typewriter is worn almost flat. It must cost the company money putting in new 'I' keys for him. Of course, I don't suppose he can help being all puffed up like a pouter pigeon since he has the high-horsepowered title of 'Director of Sales' dragging around after him."

Wherein "Director of Sales" Differs.

"What the difference between a Sales Manager and a Director of Sales?" inquired Reilly's helper.

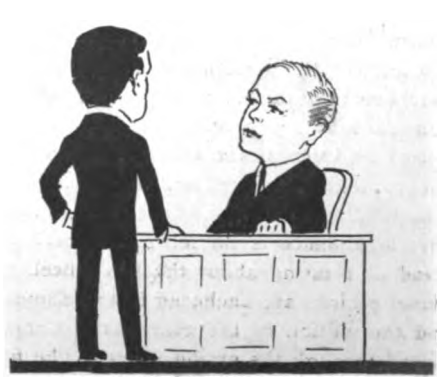
"Difference!" exclaimed the dealer. "About nine 'I's', I should say; I don't know of any other material distinction."

"Do you know Camerton?" inquired the salesman.

"No, I don't," replied Reilly, "but I know a lot just like him."

"You do!" remarked the salesman in feigned surprise. "I thought perhaps he was the only specimen in captivity."

"Far from it, my boy; far from it! They are a long way from being a rare species," declared Reilly. "You must know several if you ever notice such things. I'll bet you have several personal friends, if you only think over the list, who have swelled up considerably since they discovered they were managers of some description. I am sure that I know a few."



"Perhaps I do," slowly responded the younger man.

"There's one you know!" exclaimed the dealer, as he turned in his chair; "Jim, the Sales Manager at the factory!"

"Jim got a swelled head? No, no!" remonstrated the salesman.

Back History of the Sales Manager.

"Not now, but he used to have," answered Reilly. "I didn't know him then, and it is evidence of the fact that he doesn't feel his oats any more that he tells the story himself. You know, he started in a number of years ago with a manufacturer down in New England as a clerk in the sales department. Jim worked along at a pretty good pace and kept his eyes open, and after a while he got a chance at the sales manager's job and he grabbed it and made good. He buckled down and worked like the devil on the start, he was so anxious to get away with the job, but after he felt that he had things pretty well sewed up and received a raise he got so he rather liked to look at his title, 'Sales Manager,' which he had the right to stick at the bottom of every letter. It sort of worked itself into his system, and Jim took himself too seriously. He began to address his correspondents with 'I's' and sometimes he unconsciously injected a little hauteur into his dictation. He got to be almost as bad as Camerton. He says now that he actually felt that he was a pretty important piece of furniture about the plant. He got an awful fall,

"IT'S BEEN 'WE' EVER SINCE"

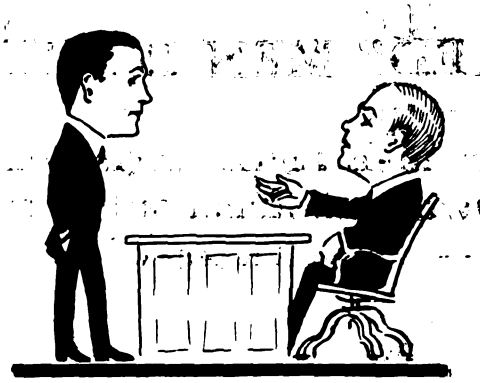
Digitized by Google

though, one day and it waked him up—and he has remained awake ever since."

"What tripped him?" asked the salesman.

The "Old Man's" Crafty Reprimand.

"The old man himself," laughed Reilly. "The old fox! He is one of the dryest old dogs you ever met. He used to keep a pretty good watch on things, used to read the correspondence and such stuff, but he seldom interfered with a man as long as the man got along all right. One day he walked into Jim's office with a handful of letters relating to an order for $10,000 worth of goods. Jim had been having a little trouble with the order. The old man had read the stuff all through and evidently had got tired of reading so many 'I's', so he picked up the bundle, walked into Jim's office, laid it on Jim's desk and said, 'I gather from these letters that you're having a little difficulty with the McGraw order,' 'Yes, a little,' admitted Jim. 'Well, my boy,' said the old man, 'remember that if you can't turn out that order, the factory and the company are always ready to help you. I'll admit it's a pretty big job for one man all alone.'



"Jimmy boy sat and thought for several minutes after the old man had gone, trying to make out what the old fellow meant; then Jim picked up the letters and began to look them through. All of a sudden it struck him that maybe 'Jimmy the Sales Manager' was sticking out pretty prominently in the letters. He looked himself over and conducted a little investigation. He asked his most confidential stenographer, who was a girl of considerable common sense, to state frankly just what people thought of him around the office, and she told him honestly that some of them thought he felt rather important since he had been made sales manager. Thereafter, instead of 'I, the Sales Manager' it became 'we, the company,' and it has been 'we' ever since."

Good and Bad in the Use of Titles.

"Titles are a bad thing in some respects," interposed the salesman.

"They are and they aren't," answered Reilly. "I know one manufacturer who cut out titles of every description. He decided that the injection of the personality of his employes into his business was not for the best health of the business, and since he is a man who makes a clean sweep when he makes a sweep, he cleaned the whole business out entirely. He directed that every letter be signed by the name of the company with the initials of the writer underneath.

"On the other hand, there are companies which feature the personality of certain of their employes; several automobile manufacturers derive great advertising value from the featuring of the name of a chief engineer, a designer, a sales manager or some other official. This is all very well, unless the horn-blowing is done at the instigation of the man advertised for the purpose of adding an artificial value to himself; there have been instances of that. I know of one manager who used to tack his name onto his company's ads, and who even tried to persuade some of the papers which frequently used news regarding the company for which he worked to use his name every time a story was used. He was trying to make himself appear invaluable to his employer, and he fell down in a horrible manner."

"WHAT TRIPPED HIM?"

Salesman Diagnoses Another Case.

"I know two or three managers that I'd like to paste in the eye just for luck, every time I see them!" retorted Reilly's lieutenant. "Some of them are in this trade and some of them aren't. There's one guy who runs the store where I have bought shoes for years; he was imported from New York a while ago to manage the store, and he certainly realizes that he's the manager of the establishment. I don't know whether it's because he's manager or believes that a man who has lived in New York is a superior being, but I know this, that if I was paying his salary and knew how he stands with the public I'd give him an injection of turtle serum to tame him down and make him go slow."

"These managers who feel their titles are beneath their titles," asserted the little dealer, "and the men who keep sticking their personality into the boss's business merit just such treatment as the manufacturer I told you about who cut the titles off everybody in the shop. Why, one of the best factory managers I ever knew didn't know what his title was. The advertising department had occasion one day to use his name, and they asked him what his official title was. Another man was known as superintendent of the factory, so he couldn't be that, and he said he didn't know what he was. The advertising manager spent a half hour trying to find the man's title, and in the end they had to make one for him; they called him 'plant manager.'"

JUST THEN THE OFFICE GIRL ENTERED

A Sales Manager and Never Knew it.

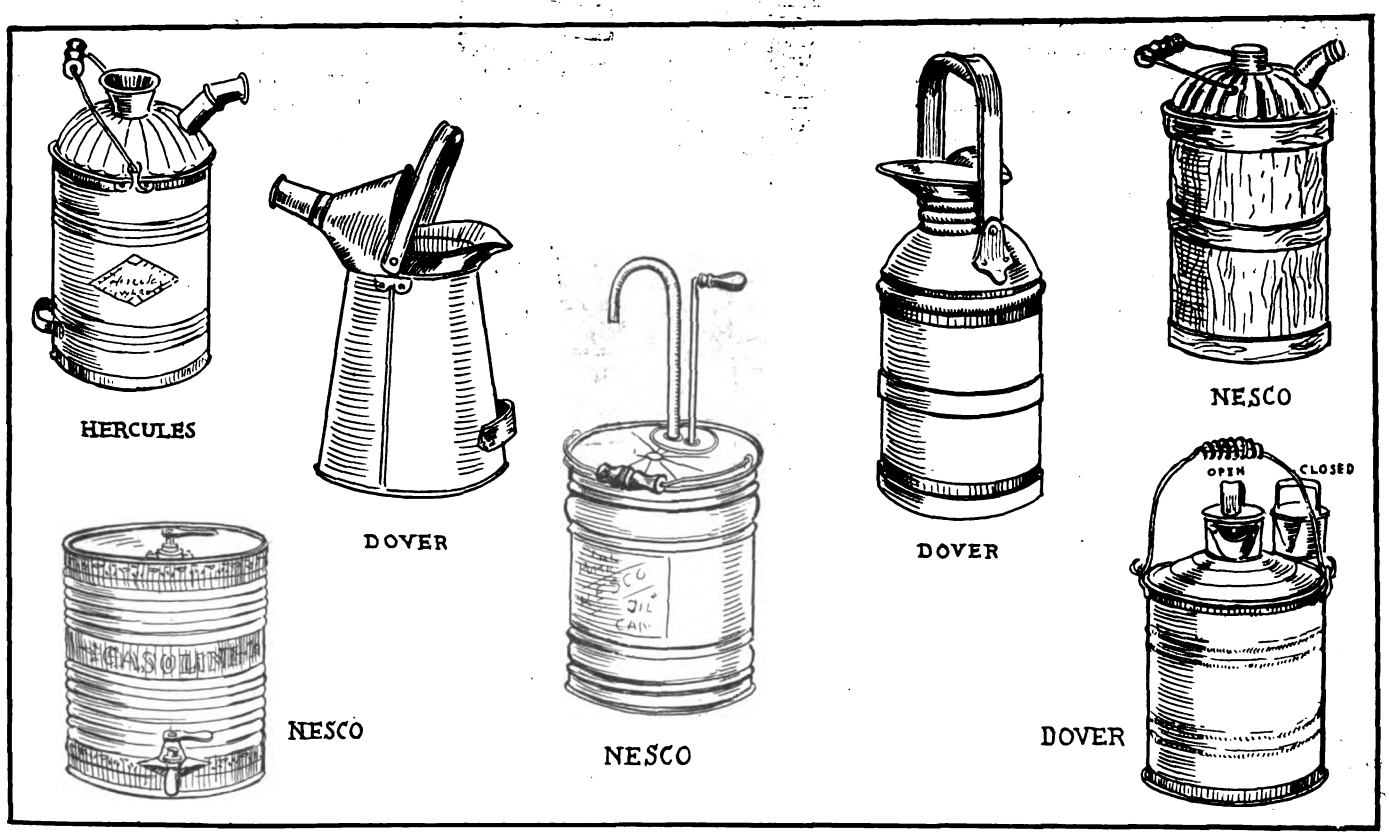
Reilly might have rambled on indefinitely had not something, as usual, occurred to stop him. This time it was the office girl, who entered with a handful of mail which she laid on Reilly's desk. The first thing he picked up was a blank sent out by a trade directory company asking for information concerning him and his business; he had filled it out down to the point where he had to enter the names of his sales force, and here he filled in the salesman's name and remarked, "I guess your my sales manager, aren't you?"

"Sir! Me sales manager! How long since?" was the exclamation.

"Oh, a long time," answered Reilly.

"What!" ejaculated the man who had just discovered his eminence; "here I've been a sales manager for months and never even knew it. There ain't nobuddy got nothin' on me, have they?" and he thrust his thumbs into the armholes and tried out the buttons on his vest.

Cash and Note Constitute a Sale.



Purchase of a car by cash and a note constitutes an actual sale and not a conditional bargain, according to a jury in the Circuit Court in Washington, D. C., which last week awarded to Harry E. Chandlee a verdict of $1,125.20 against the Springfield Fire & Marine Insurance Co., which had insured Chandlee's automobile.

Chandlee bought a Marion car June 29, 1911, paying for it with cash and a 30 days note for $650, and almost immediately taking out insurance of $1,200, on which he paid a premium of $24. Later he gave a lien or chattel mortgage on the car for the purpose of discounting the note, and when the indebtedness had been reduced to $5[illegible] the car was destroyed by fire. The insurance company refused to pay the insurance on the grounds that when Chandlee took out the policy he was not the unconditional owner of the car, but the jury held that although part of the payment was by note, the sale was a cash sale and devoid of any conditional element.

FUEL CONTAINERS THAT MAKE FOR COVNENIENCE

Utensils Developed From the "Milk Can" Type of Measure That Not Only Quicken the Work But Effect Material Economy—Their Points of Difference and Special Features Explained.

DIVERSIFIED DESIGNS OF THE USUALLY COMMONPLACE "GASOLENE CAN"

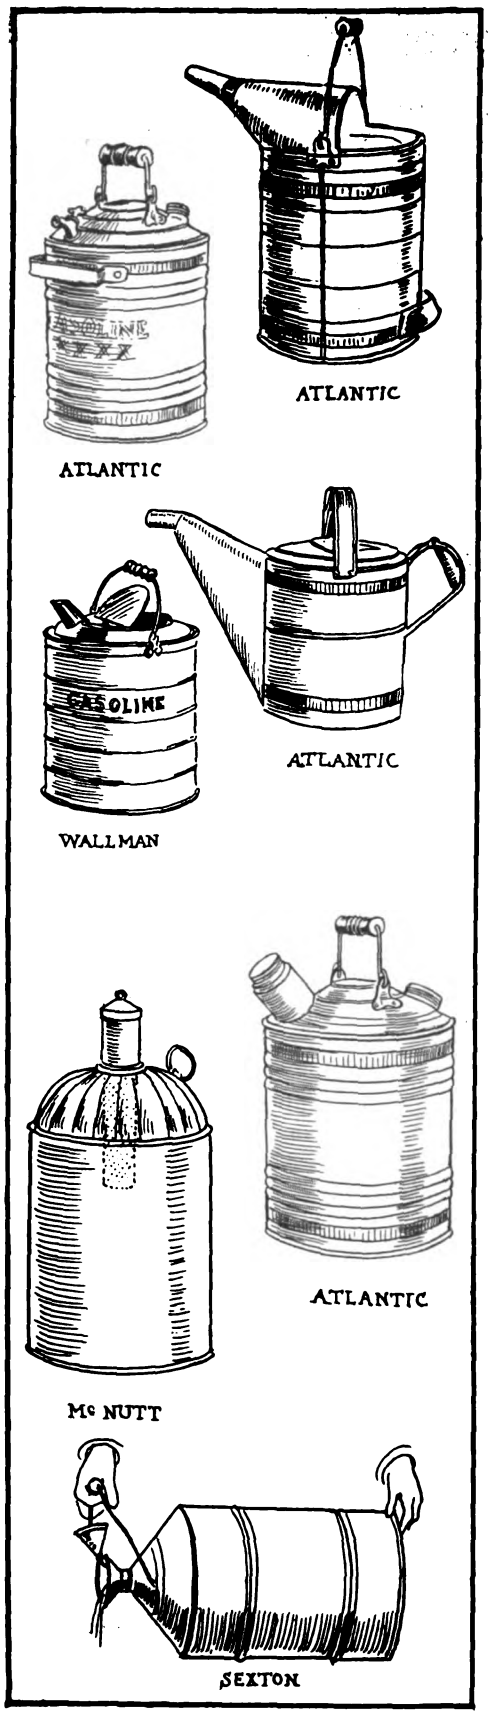
To most people, to paraphrase a time-honored adage, "a can is a can," and provided its capacity be sufficient for the material in hand, and leaks are absent, little else matters; any variety of can is used for any type of liquid without regard for the fact that, depending upon the characteristics of the liquid, a can of more suitable design may perchance be procurable. When motor vehicles first became popular, for instance, and gasolene stations sprang up in untold numbers, no more suitable container for the fuel—it served at the same time for a measure—than the wide-lipped milk can provided with a handle, was forthcoming; it was forthwith adopted and still persists, despite the fact that can and measures designed specially for the handling of the light liquid are catalogued in untold numbers by the manufacturers of stamped sheet metal goods.

The persistance of the milk can type of measure, however, is more or less in the nature of a habit. The characteristics of the fuel itself, its volitility and inflammability, as well as the characteristics of the vehicle tanks which are positioned in a variety of different places and provided with openings of any size and any shape, as called for by the fancy of the designer or the space in hand, have led to the development of very many cans and measures which are adaptable for the convenient and rapid handling of the liquid, under all sorts of conditions, and which leave little room for the use of the single milk can measure, which must of necessity always be used with a funnel, whatever the size and position of the filler, and which at best is more or less unwieldy. The development of these special cans and measures is not the least interesting of the development brought about by automobiles, and there is greater variety than the unknowing would imagine is the case.

The Atlantic Stamping Co., of Rochester, N. Y., for instance, is producing a combined measure and funnel which is suitable for use where the filler cap is positioned in a place which allows of free access. The funnel takes the place of the lip, and by way of preventing the ingress into the carburetter of large particles of foreign matter which are liable to have a negative effect, a 100-mesh brass strainer is soldered across the passage. The measure is provided with a handle for lifting and a strap hand-hold for tilting, and since the funnel portion covers only the front of the top, the wide mouth feature which made for convenience in filling the milk can type from the barrel, is not sacrificed. The device is made from heavy galvanized iron with seams lapped and soldered, and is graduated in gallons by means of impressed ridges.

For use in connection with rear positioned tanks, the Atlantic device is made in slightly different form and is provided with a spout of seamless metal and with a metal hoop handle for lifting and a conveniently shaped metal handle for tilting purposes. The device is slightly smaller—and is devoid of graduations. A wide filling space and a metal shield for preventing spilling and slopping are provided. Also in the Atlantic line are two types of portable cans. They are similar in shape and both are pro-

Digitized by Google



vided with heavy wire handles with wooden grips and are made in both three and four-gallon capacities. In one style a small brass faucet is provided in place of a spout, and by way of ensuring that the faucet will always be at the lowest point when the tank is tipped, a brace of strap iron is riveted across the front of the can and acts as a rest; naturally this type has much in its favor in that the faucet will fit into the mouth of a narrow filler and the tank can be left to empty itself without attention. On the other type a wide spout is provided which is closed during transportation by means of a screw cap. Both are provided with fillers closed by means of screw caps and are ribbed by way of reinforcing the metal.

Variety in Gasolene Can Design.

A combined measure and funnel is also embraced by the Dover line, which is made in Cambridge, Mass., by the Dover Stamping & Mfg. Co. As is shown by the accompanying illustrations, however, the Dover measure differs not a little from the Atlantic type in that it is provided with a wide lip at the rear, so that by tilting the device in the other direction, the liquid need not pass through the relatively small opening provided by the funnel spout. This makes for convenience when transferring the fuel from the barrel to a wide-mouth container or to a tank provided with a wide filler. The sides of the Dover measure slant slightly and the intermediate graduations are not provided. The bottoms are heavy and reinforced against possible leakage.

The Wallmann idea of the ideal gasolene bucket and measure is shown by one of the accompanying illustrations. It is provided with a short, tapered, and at the same time corrugated, spout which protrudes from the side of a dome-like baffle which surrounds the top of the can and prevents slopping; the length of the spout, however, is such that it cannot be injured by contact with a wall or with other objects which are liable to hit the bucket a sidewise blow. A hinged cover tops the whole and prevents both evaporation and spattering, and at the same time allows a sufficient opening for rapid filling. Its maker, the Wallman Mfg. Co., of Milwaukee, makes the bucket in five-gallon size only, with intermediate ridged graduations, and it is made of galvanized steel double seamed and soldered.

By way of preventing damage due to "knocking about," one type of can which is made by the National Enameling & Stamping Co., of New York City, is provided with a wood protective jacket firmly held in place by means of the wood hoops. Like the Wallmann article, the spout is short, so that it is not susceptible to injury and the dome

TYPES OF FUEL CONTAINERS

top is corrugated. Since the can is intended primarily for transportation, the filler cap is small and is provided with a screw cap, as is also the spout. Another Nesco product, which is made only in larger sizes and is intended primarily for the storage of the fuel, is provided with a brass faucet operated by means of a key handle and an iron-threaded filler cap. The sides and the bottom are corrugated by way of stiffening the metal.

Also made by the National company is the Hercules filler can. It is made of extra heavy stock and is provided with a jointed spout which makes for convenience in pouring, and with a very wide filling opening, funnel shaped. A strap handle is provided at the bottom for tilting, and both dome and the sides are corrugated to render it stiff; the can is put out in a five-gallon size only.

Safety Utensils That Prevent Evaporation.

Not the least important point with regard to handling gasolene is the necessity of preventing evaporation in so far as is possible and consistent with rapid dispensation, not only because of the waste which the evaporation involves, which in warm weather might prove considerable where the fuel is handled in large quantities, but also because of the fire risk which always is incurred by the presence of the highly inflammable gasolene vapor. To this end several combined measures and containers have been brought out which are fully closed at all times save when being filled and emptied, and which at the same time are provided with large filling openings and means for emptying of capacity great enough to facilitate matters.

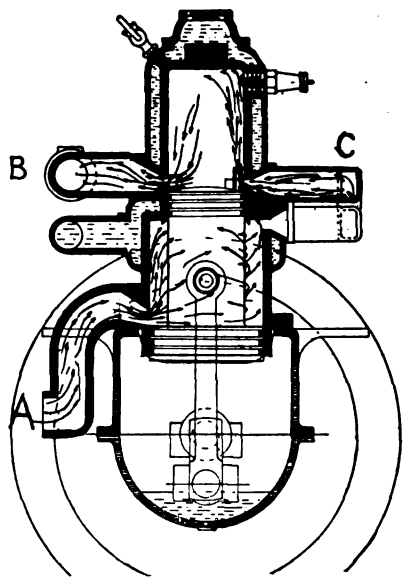
Of this type is the non-evaporating gasolene measure which is another of the Dover products. As shown in the illustration, the device is shaped more or less like the familiar milk can measure with a neck that is slightly narrower than the better known type. Fitting snugly into the cylindrical portion of the neck is a revolvable hollow metal plug or stopper with a V-shaped opening through one side, and a small hole through the opposite side; when the measure is to be emptied, the plug is turned so that the opening registers with the portion of the pouring lip attaching to the neck establishing free passage for the liquid from the container. At the same time the hole in the opposite side of the stopper registers with a similar hole in the neck and provides a vent so that the tank cannot become air bound. Filling is accomplished through the pouring lip. When not in use the stopper is turned slightly and both holes are closed so that the fuel left in the can is preserved. As with other Dover products, great care is exercised in the manufacture to ensure durability and perfection; the device is provided with a wound wire handle.

Another of the type is the Sexton Safety can, made in Boston, Mass., by the Sexton Can Co. In contradistinction to the Dover

Digitized by Google

can, which must needs be manually operated, the Sexton can is automatic. Fitted to the generously proportioned filling opening, which also serves as a spout, is a conically shaped brass stopper provided with a handle at the top and with a short chain and a helical spring at the bottom; the spring attaches to the bottom of the can and serves to draw the stopper into the closed position when the handle is released. Spilling, it is claimed, is an impossibility, no matter how full or in what position the can may be placed because of the tension of the spring and the fact that the stopper is ground to a fit; by the same token, evaporation also is impossible.

The Nesco safety can is novel in that it is provided with a pump for emptying the liquid. As shown in the accompanying illustration, the pump is mounted in a removable plate which covers the generously proportioned filler opening so that when the tank is being filled the pump is removed; a hinged cover closes the filler opening when the pump is not in place. By way of ensuring rapid transferral of the gasolene from the can to the tank of the car or other container, the pump is made double acting, so that it delivers a continuous stream.



Interest attaches to the Non-Explosive can, which is exploited at 352 Pearl street by the McNutt Non-Explosive Can Co., because of the fact—as the name would imply—that the maker claims that it is absolutely impossible for the can to explode under any conditions whatsoever. This freedom from bursting is brought about by virtue of a fine brass gauge caging which attaches to the filler and through which the liquid must pass. Naturally the principle is the same as that involved in the construction of the Davy safety lamp; the brass gauze cools the flame before it can pass to the gases within the tank.

But however great have been the strides made in the improvement of gasolene cans and measures, it is very doubtful if other than a comparatively few of the most progressive of those who dole out the fuel have or will adopt the "new fangled" devices. For those who do not, it might be said that while the milk can type of measure remains the milk can type in shape, it has been improved not a little since it first was applied to the measurement of gasolene; improvements being chiefly in the nature of greater weight of the metal and added reinforcement which make for durability, and improved soldering and galvanizing methods which point in the same direction. Also in cases where the bottoms have not been reinforced, they have been raised slightly to eliminate contact with the floor and prevent undue wear. As a matter of course, the same applies to the newer types of gasolene measures.

TWO-CYCLE MOTOR THAT RUNS ON VARIOUS FUELS

Has Differential Pistons and Burns "Gas," Kerosene or Denatured Alcohol—Revelations of a Demonstration.

One of the most recent of the many efforts constantly being made to eliminate the faults of the conventional type of two-cycle motor without losing the great advantage of simplicity is shown in the accompanying illustration, which is a cross-section of one cylinder of the Fraser-Brim-

FRASER-BRIMMER MOTOR

mer engine, manufactured by the Superior Motor Co., of Detroit, the first of which has been undergoing public demonstration in that city. There are no more moving parts than in the common or garden variety of two-cycle motor, but the piston is of the two-diameter type, as is also the cylinder, and the ports and transfer passages are arranged in an unusual way.

Apart from obvious simplicity, there are several advantages that are possessed by the new engine. The method of handling the gas makes back-firing impossible, and there is no crank-case compression and, consequently, no possibility of crank-case explosions. Side thrust per square inch of piston surface is very low because of the length and the large bearing area of the pistons.

The engine is built in units of two cylinders for the reason that the lower piston of one cylinder pumps the charge for the working or upper chamber of the other cylinder. The working cylinder has the usual intake and exhaust ports uncovered by the piston, but the intake port C is connected with the pumping chamber of the other cylinder. Each cylinder has its own intake pipe A and its own carburetter. The exhaust pipe and port are of the usual kind.

The two pistons of a pair of cylinders are set opposite, one being at the top of its stroke while the other is at the bottom. On the down stroke a partial vacuum is formed in both working and pumping chambers. Near the bottom of the stroke the port at the bottom of the pumping chamber is uncovered by the piston and a charge from the carburetter rushes in to fill the void. At the same time the ports in the working cylinder are uncovered, a new charge taken in and the exhaust discharged. On the upstroke the working piston compresses its charge in the usual way; the pumping piston compresses a charge of fresh gas, and when the working piston of the other cylinder uncovers its intake port this charge rushes in.

No check valves are required because the ports are all controlled by the pistons. The two cylinders, in the case of a double-cylinder motor, are enclosed in a common water-jacket of large capacity. As is the case in four-cycle motors, the crankcase serves merely as a support for the bearings and a housing for the cranks; the motor could be built with an open base. Both automobile and marine types will be built, according to the plans of the company, which plans to turn out a considerable number of engines during the current year.

In operation the engine, which is equipped with an E. C. B. carburetter, apparently is able to use as fuel gasolene, half gasolene and half kerosene, pure kerosene or denatured alcohol, and its flexibility and power on all of these fuels varies so slightly as to be scarcely appreciable. Running on an electric dynamometer brake, in a recent test in Detroit, all of these fuels were fed through the standard carburetter one after the other, the engine being permitted to cool—cold running water passed through the jacket continually—between each. A single squirt of gasolene injected through the petcocks sufficed to give the initial explosion, after which any of the fuels apparently gave the same power and efficiency.

Engine Tests Supply Washroom Water.

The economy that results from the utilization of the power developed while "running in" motors preparatory to installing them in the chassis is taken advantage of at not a few motor car factories. It is doubtful, however, if the economy generally is carried as far as is done in the Cadillac plant, where not only the power developed by the motors being tested is utilized, but the water which passes through the cooling jackets is piped to be utilized in the washrooms, and at other points where warm water is necessary or desirable.

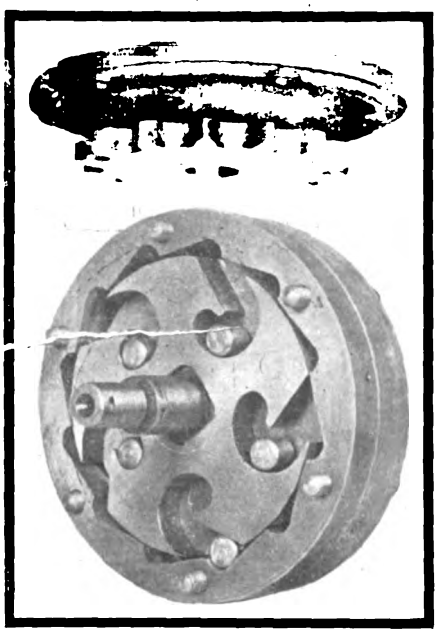
GEARLESS DIFFERENTIAL THAT RELIES ON GRAVITY



Company Formed to Exploit Unusual Device that Eliminates Gears, Springs and Friction—Now Undergoing Tests.

The shortcomings of the very common variety of differential mechanism, or as it sometimes not very properly is styled "equalizer mechanism," long have been known to the engineering fraternity and to the layman alike, and though there have been numerous attempts to replace it with something else, as is attested by the patented inventions of such noted engineers as Thomas B. Jeffery, Alanson P. Brush and others, such substitutes have not always proven all that could be desired and never have cut any figure in the trade. The principle difficulty with such devices has been that reliance has been placed on pivoted pawls and springs or frictional contact, the former permitting a certain amount of lost motion and the latter not infrequently resulting in either binding or slippage.

To obviate both of those disadvantages, to say nothing of several more, and to eliminate the necessity for the usual type of gear differential, the Gearless Differential Co. of Detroit has brought out a device in which the problem has been attacked in a slightly different manner than it has been attacked in the past. The device is styled the Gearless differential and is the invention of George D. Bailey, who is head of the Gearless Differential Co., recently incorporated and capitalized at $50,000 and having temporary headquarters in the Ford building in Detroit. Associated with Bailey are C. S. Ferguson, of the Imperial works of Flint, Mich., who is vice-president; E. O. Knight, who is treasurer, and Frank Howarth, of the Monitor Automobile Co. of Janesville, Wis., who is to be secretary. Though the device has only been perfected a short time, it already has attracted the attention of the Timken Detroit Axle Co. and is being given a try-out on a truck, and it is understood that several other companies have made overtures for the right to use it.

Strictly speaking, the Gearless differential is an adaptation of the ratchet and pawl principle, as may be judged by the accompanying illustration, which shows the device with the outer plate removed exposing the mechanism. Though the device shown is of the type developed for commercial vehicle work, where two such mechanisms are employed, one on either end of the jackshaft, it is equally applicable to pleasure cars and under such conditions takes up no more room than the orthodox type of gear differential.

The operation of the mechanism is quite simple and depends primarily upon gravitation, friction having been eliminated as an essential to its functioning. When the vehicle is driven forward, from rest, the inner member rotates a short distance until one of the loose pins drops into the position shown by the picture between the face of its curved slot and the corresponding face on the outer member to which the driving sprocket is attached. Hence, as the inner member can move no further, its movement being blocked by the pin, it carries with it the outer member and the driving sprocket. Thus, if the vehicle is making a turn, the

BAILEY GEARLESS DIFFERENTIAL

outer, or faster moving wheel, receives no drive but over-runs the inner wheel, which, temporarily, takes all the drive. Similarly, when one wheel of the vehicle is on slippery pavement, under which condition the ordinary type of gear differential would cause all the power of the engine to be transmitted to it (which makes plain the incongruity of the term "equalizer") the power is transmitted to the wheel that is capable of the greater tractive effort. When the driving power is released, as when the vehicle is coasting, the inner member automatically releases itself, gravity causing the pawl pins to roll up into their peculiarly shaped slots.

Actually, each of these members is a double member, so to speak, with two pawl cams and two sets of pins. The second set, not shown by the picture, is for use in braking and backing and obviously operates in the opposite direction. In reversing the direction of the vehicle, the housing is released from engagement with the pawl cam until the shaft makes one-eighth revolution when it locks in the opposite direction. Thus, when a braking strain is imposed on the wheels it must be equally distributed by reason of the action of the pawl cams. Further, it is pointed out, if one brake were removed, the braking strain still would be equally distributed by reason of the action of the pawl cams.

By way of positively eliminating the shock and jar of starting when the pawl cam pins drop into position, the pawl cams at either end of the shaft are set one 45 degrees ahead of the other, the immediate effect being that one-eighth revolution of the driving shafts in either direction locks the rotating part to the driving sprockets. The jar incident to locking within one-eighth revolution, it is stated, is so slight as to be practically negligible in its effect on depreciation.

Determining Stress by Optical Means.

To the "man in the street," the ways of the engineer may appear obtuse, though they should prove none the less interesting, if served in an appetizing manner, for the reason that they lay bare at least some of the methods by which the factor of safety is increased and the worry of the owner or the dealer over breakdowns decreased. In this respect probably none of the operations of the modern engineer is likely to appear more obtuse and less interesting on superficial examination than the comparatively recently perfected method of determining the stress in metals by optical means.

But that the operation is interesting nevertheless and is of vital import to dealer and user alike is revealed by the fact that with the aid of celluloid models of gears, for instance, the engineer is enabled to tell almost at a glance just how much strain similar gears made of steel will withstand and where they are most likely to rupture. From which, obviously, it is a simple matter to strengthen those parts where the greatest strain comes and in this way to insure against breakage. Formerly, glass models were used for the purpose, but owing to the brittleness of the material it was impractical to subject them to strains in proportion to the strains sustained by similar metal parts.

Latterly, some of the nitro-cellulose compounds akin to celluloid have been used, and it has been found quite possible to subject gears made of these materials to strains quite as great as the strains that must be sustained by ordinary gear wheels in practice. Strains, under the circumstances, appear in the light that is used—it is styled polarized light—as color fringes and indicate exactly where the internal stress exists and how best it may be provided for in the finished gears or other parts that have been tested "by proxy."

DEALERS WHO MAKE A SCIENCE OF SERVICE

Brooklyn Distributers Delve Deeply Into Task of Pleasing Those to Whom They Sell Cars—Little Conveniences That "Count Large"—Intelligent Definition of Real Service.

In many different sections of the United States it is generally the rule that some car or cars predominate in number, while other makes which are the favorites in other localities are in a minority; and for every such situation there is a reason. The manufacturer himself may not know the reason; he may believe it is because his dealer is a good salesman, is able to sell cars and got a good start when the trade was young, and the successful dealer's competitors may declare it is because he "got the jump on them" when the trade was in its earlier growing stage.

What Lies Back of Trade Leadership.

Perhaps all these things are true; the dealer doubtless is a good salesman, he probably did "get the jump" on his competitors, but an analysis in most instances will show that, coupled with his salesmanship and back of his "jump" is the fact that his very name connotes service—that whenever the dealer or his car is mentioned there at once flashes into the mind of the motoring public a picture of a big group of owners who swear by their dealer and are immensely satisfied with their purchases.

Should a car owner spend much time in Brooklyn, N. Y., and on Long Island he doubtless would discover from his frequent contact with other motorists that Paige, Cole and Ford cars are immensely liked, that their owners declare that when their present cars enter into their dotage they will make another purchase of the same kind of car, and should his investigative sense prompt a running down of the reason he would find it in the service department of Bishop, McCormick & Bishop at 20 Halsey street, Brooklyn.

Gets License as Part of System.

Bishop, McCormick & Bishop believe in service with a great big S. Caring for the comfort and convenience of their owners is a science with them; they even go so far as to provide a notary public at their office, where a car owner may make out his application for a license, and after he has made it out the service department attends to the rest—it gets the license and delivers it to the owner. The matter of the replacement of possibly defective parts is taken up with these dealers and not with the manufacturer with the dealer as a mere medium; if a man believes a part should be replaced, he settles the matter with Bishop, McCormick & Bishop and does not have to enter into a long distance discussion with the factory, as is too often the case.

How much in earnest these dealers are is shown by their early experience with the

Worry and Confidence

Psychologists tell us that worry arises through uncertainty. Most of our worries come from contact with other people—either because we are trying to get the best of them, or because we think they are trying to get the best of us. Worry is unnatural. It is an agitation of the mind. It affects our every action. Confidence is the antidote of worry. Those who believe and trust others seldom worry. You can eliminate your automobile worries by dealing with a responsible house.

AD. THAT PREACHES SERVICE DOCTRINE

Dragon car. The company which made it went into the hands of a receiver shortly after Bishop, McCormick & Bishop had taken a number of orders and delivered several cars; instead of throwing the blame upon the defunct Dragon company they bravely shouldered it and went to unlimited trouble to keep their moral compact with those who had bought Dragon cars; and as they did in that day, so they do to-day.

The members of the company are: Eli H. Bishop, president; Burton T. Bishop, vice-president; Clifford M. Bishop, secretary; John McCormick, Jr., treasurer, and John McCormick, and every one of them is alive to the value of service.

Knowing how an owner values service, the company recently ran a series of "service advertisements" in Brooklyn newspapers. In these, little mention was made of the cars sold, but the attention that is given after a sale is made was emphasized. Those ads developed great pulling power, and when the series was well under way its arguments were incorporated in a book entitled "Behind the Scenes." The first edition of 2,500 was soon disposed of and 5,000 more are now being distributed. The Cole manufacturers sent for a bundle to distribute among all Cole dealers, and the service story has aroused comment. The book tells the same story that Clifford M. Bishop, the secretary, told a Motor World man when showing him through the plant, which narrative, in part, follows:

Service of Early Automobile Days.

"In the early days, a service department meant real serious trouble. It meant continual argument wherever a question of responsibility was involved. Unscrupulous dealers took to advertising the sale of their cars free of repairs. They never intended to do anything free if they could help it. They only wanted to sell their product and then squirm out of their responsibility under any conceivable pretext. That made it hard travelling for the responsible dealer. The automobile business was certainly a 'game.'

"It should be easy to understand why a concern with good intentions towards its customers has been inclined to go easy where questions of service were involved—why they have hesitated to sell their cars on the basis of service. The questions of responsibility were always involved—vexing arguments were a matter of course. Factories were so busy building their current models, designing their annual new models and getting their selling agencies established, they had little time or attention to give to the cars already in service.

How Standardization Wrought Benefits.

"But standardization has solved the problem. It has reduced the number of models and the number of parts to each model, reducing also the cost of manufacture. It has simplified the handling of replacement parts and made real service possible. The result is increased prestige to the big dealer. He can now carry an adequate stock of repair parts. He can and should maintain a real local service station.

Digitized by Google

"We admit at the start that service is a mighty big word. What does service mean in any business? Perhaps the finest examples of service under unusual conditions is the Telephone company. Another is the department stores. There it is possible for us to buy everything we need. What are the railroads doing to-day? Within the last year it is possible to call up the railroad office on the 'phone, secure our tickets and have them sent to us. And in hotels the entire proposition is one of service.

Courtesy and Knowledge of Business.

"Perhaps the first thing about service is that it should be courteous. Yes, and it must be intelligent. A stupid servant is worse than no servant at all. Therefore, if one is to give real service that person must know his business thoroughly from beginning to end.

"Perhaps the most important point is efficiency. The service must be right. What does it matter if the telephone company gets a number for us in a hurry if it is the wrong number, or if the department store delivers the package for us quickly if it is the wrong package, or the railroad carries us quickly to the wrong destination, or the waiter hurries in with the wrong dish? The service must be efficient. It must be right.

"Finally, the cost. The price of service must be reasonable. Competition establishes that point. Now we have it:

"Real service is intelligent, speedy, efficient and reasonable as to cost.

Lost Money Pays Excellent Dividends.

"We lost a lot of money on the Dragon proposition, but we do not regret one penny of it. It has all been charged up to experience, and has paid very excellent dividends ever since. But we did not stop at satisfying ourselves as to the financial responsibility and dependability of the concerns we have represented in the years subsequent to the Dragon incident. We resolved to develop our force to a point where we could have our own experts to pass on the products of the various factories. We were all through taking the promises of any company that they would make good later on present defects in the cars.

"Every car we sold after that had to be right before we would handle it.

"But that did not cover slip-ups that were bound to occur in any manufacturing concern, so we developed our own inspection department so that we could go over every car we received and make sure it was right before it passed into the hands of a customer.

"But we had to go another step. That took us to the instruction department. Experience has shown us that most cars were made or ruined in their first 500 miles of running, and we figured out that if through our engineering force we could select a type of car that was as nearly perfect as possible in every detail, thoroughly inspect every one of these cars as it was received and then instruct the customer properly in the driving and handling of that car, watch him carefully for the first 500 miles, the matter of guarantee would take care of itself.

"Most cars are in service eight or nine months of the year. If a man is going to run out the amount of his investment his car must always be in shape to run. The dealer should assume this responsibility. There is only one way he can undertake to keep the cars he sells running, and that is by a substantial investment in service.

Satisfaction

Satisfaction is another big word. Some of us are satisfied to exist. Some of us must not only exist, but we must live and live well—have pleasure, comfort, enjoyment and even luxury before we are satisfied. When you come to think about it, a man who sells automobiles to a great number of people and promises them satisfaction is tackling a mighty big proposition. If he is honest, he must have every facility for giving that satisfaction—experience, knowledge, equipment and capital. When some one attempts to sell you a motor car and promises you satisfaction size him up by this standard, examine his plant and equipment and then judge his honesty of purpose.

COLE PAIGE-DETROIT Ford

ANOTHER BISHOP SERVICE AD.

"No matter how much he hates and detests the detail and hardship of a repair department he should maintain an efficient one. He should employ the most capable men he can secure, so that he will be able to turn to any emergency work that may come in and rush it through as quickly as possible. But of what use is it to have these men if he does not also have on hand every part that goes into the making of a car.

"We have one of the largest repair shops in the East. We have at our disposal in our own plant or within 45 minutes of our plant (for we co-operate with New York and Newark on the parts end) at least $30,000 worth of parts for every car we handle.

"But the old argument comes up—of what use is the speed of the service if the service is not right? Efficiency! We are working hard and intelligently for perfect efficiency. Our repair department is maintained purely and simply as a service proposition to take care of the cars we sell. Yet we run it in a perfectly systematic manner. Every man in our employ must account for every minute of his time from eight o'clock in the morning until six o'clock at night.

Making Specialists of Repairmen.

"So much for the detail end of it; but when one comes to the human element one meets variations that no system can equalize. It has therefore been necessary for us to study our employes and to put them at the kind of work they are most adapted to. We have therefore specialized in our repair department as to men. We have certain men that are especially adapted to the adjustment of carburetters and ignition systems. We keep them on that work. We have other men who are especially efficient at fitting bearings. We keep them there for that work. In this way sometimes four or five men will work on a job at different times, each one a specialist in his line. And when the job is finished it is tested by the foreman and if O. K.'d by him is sent from the shop to be tested by the road men.

"To further increase the efficiency of our service we maintain what we call our speed service squad. This squad consists of picked mechanics thoroughly familiar with all our cars who travel on motorcycles and who can reach any customer in trouble within a few minutes.

Will Maintain Low Labor Charges.

"As to the question of cost, our labor charges have always been lower than those of other concerns of similar standing and reputation. We intend to keep them there, because we are in the business of selling automobiles and with these automobiles we sell service and it is not our intention or desire to make a profit on service. Furthermore, this organization is at the owner's disposal for minor adjustments without cost. He is urged to bring his car to us every month, or oftener if he likes, for free inspection and advice. Our supply department is at the owner's service for advice and equipment. Our garage has 26,000 square feet of floor space, all on one floor, with a roadway encircling the entire building, and every car faces this roadway."

The B., M. & B. service garage is imposing, with its length of 265 feet and width of 125 and 165 feet at different ends, and also, the story of the department is apparently impressive to motorists. One day a prospective purchaser walked into the company's salesrooms to ask about a car. As he was about to go a salesman, reaching for a booklet, asked, "Have you seen our booklet 'Behind the Scenes'?"

"Yes," replied the motorist, "I wouldn't be here if I hadn't."

HOOSIER CITY SHOW HOUSED IN COLISEUM AND ANNEX

State Fair Grounds Location Chosen Instead of Mid-City Tented Exhibition — Pleasure and Commercial Vehicles Mixed.

No flimsy structure improvised of many poles and much canvas houses the second annual show of the Indianapolis Automobile Trade Association, which opened up in the Hoosier City on Monday evening last, March 24th, and will hold sway throughout the remainder of the present week until Saturday evening next, March 29th. For unlike last year's affair, the present exhibit is housed in the Coliseum and annex on the State Fair grounds and, although the building is some distance removed from the center of the city, satisfactory arrangements with the street car company by which service that leaves but little to be desired has been established.

Both buildings are draped—and by "draped" is meant that not the smallest patch either of ceiling or of wall is left uncovered—with bunting, following for the better part the red, white and blue color scheme, though at intervals purple and white, emblematic of the trade association, predominate. National flags are artistically grouped around the pillars which serve to carry the roof girders, and the very many arc lights and clusters of var-colored incandescents which have been added to render the hall bright, add much to the eye-pleasing effect.

Vehicles to the number of 55, intended for both pleasure and commercial purposes, and each the product of a different factory, are shown by the 45 dealers and manufacturers who hold space. Of the number, no less than half a dozen of the 42 pleasure cars and four of the 13 commercial vehicles which are shown are local products. Nothing new, however, with a possible exception of the Richmond car, which has not been previously shown during the present season, cropped out. The car is of conventional design, employing a four-cylinder block-cast, L-head motor mounted in a sub-frame with the three-speed transmission; drive is through a cone clutch and propeller shaft to the semi-floating rear axle. The car is displayed by L. B. Elmore of Remington, Ind.

In the matter of accessories, quite a formidable showing is made by the three dozen dealers in motor car appurtenances who hold forth on the hanging balcony which was improvised for the purpose. In their lines, however, there is little that is new and nothing that is startling.

The pleasure cars on view are: American, Auburn, Apperson, Buick, Cadillac, Case, Chalmers, Chevrolet, Cole, Detroiter, Ford, Glide, Great Western, Haynes, Henderson, Hupmobile, Hudson, Jackson, Krit, Locomobile, Lozier, Little, Maxwell, Overland, Packard, Pierce-Arrow, Paige-Detroit, Peerless, Premier, Pathfinder, Regal, Reo, Richmond, Republic, Studebaker, Stutz; Baker, Detroit, Ohio, Broc, Waverley and Woods electrics. The trucks displayed are: Avery, Buick, Case, Federal, Mais, Marmon, Overland, Packard, Premier, Reo, Studebaker, Walker electric and Waverley electric.

Circus Performer at Norfolk's Show.

Circus stunts accompanied the opening on Monday evening, March 17th, of the second annual show of the Norfolk, Va., Automobile Dealers' Association, which held sway in the Armory Hall throughout all of last week until Saturday evening, March 22nd. Not only did a lantern parade precede the formal opening, but a circus performer—Daring Daro by title—was on hand and awed the spectators by allowing a fully loaded three-ton truck to be driven and redriven over various and sundry parts of his anatomy; all of which had its effect on the box office receipts.

Twenty-two different makes of motor vehicles, both pleasure and commercial, were shown by the 13 dealers who held space; accessory dealers, half a dozen strong, had comprehensive displays of motor car appurtenances. Decorations comprised red, white and blue draperies and streamers and flags artistically arranged to conceal bare walls and the ceiling.

The cars shown were:

Ford, Chalmers, Mitchell, Mercer, Michigan, Waverley electric, Pope-Hartford, Lozier, American, Rambler, Overland, Pierce-Arrow, Cole, Kline, Buick, Locomobile, Haynes, Studebaker, I-H-C commercial, Reo, Case, Little.

Sure Number Lamp Has Trouble.

While the Sure Number Lamp Co., of New York City, which some two years ago undertook to make and market a tail lamp and license tag illuminator, apparently still has faith in the efficacy of its product, financial reverses have followed a more or less unsuccessful attempt to invade the trade, and this week judgment for $735.02 was filed against the company in the New York county clerk's office as the result of the Sure Number's failure to meet a note; the holder was Charles H. Potter, of New York.

The protested note, which was given November 26, 1912, was endorsed by Frederick Robinson and Anton H. Wolter and was of the face value of $700.

SAYS STRINGENT LIABILITY LAW IS UNCONSTITUTIONAL

Michigan Court Relieves Car Owners of Fearful Burden of Responsibility—Owner Who Was Sued Wins on Appeal.

That there are limits to the liability of the owner of a motor car and that he cannot be saddled with the blame for all misdeeds committed by any and every driver of his car was held last week by the Supreme Court of Michigan, which declared unconstitutional a statute enacted in 1909 and which made a car owner liable at all times, with the one exception that he should not be responsible for his car's conduct if the vehicle were stolen. The clause in question had hung over the heads of Michigan motorists for four years and was regarded as one of the most radical pieces of automobile legislation in existence because of its far-reaching effects.

The case which brought about the decision is illustrative of the workings of the law. Three years ago William S. Thomas, of Grand Rapids, sent his car to a repair-shop, and after the work upon the automobile was completed a repairman took the car out for a test and, while so engaged, he ran into Miss Nina L. Dougherty. Under the law she could—and did—bring suit against Thomas, and recovered damages in the Circuit Court for Kent county, although Thomas had no control over the car at the time of the accident and the driver was not agent, employe or servant of the car owner. The Supreme Court decision was rendered upon an appeal, the higher court reversing the verdict and denying a new trial.

The clause, or subdivision, declared unconstitutional read:

"The owner of a motor vehicle shall be liable for any injury occasioned by the negligent operation by any person of such motor vehicle, whether such negligence consists in violations of the provisions of the statute of this State or in the failure to observe such ordinary care in such operation as the rules of the common law require, but such owner shall not be liable in case such motor vehicle shall have been stolen."

The court, in commenting upon this section of the law, said:

"To hold this subdivision constitutional, is to hold a party absolutely liable for the negligent conduct of another, a mere stranger or a willful trespasser, no matter how careful or how free from negligence he himself has been.

"We think the result of such a holding would be to take the property of defendant, Thomas, to pay for the wrongful and neg-

Digitized by Google

ligent act of another person, not sustaining to him the relation of servant, agent, or employe.

"Such a doctrine seems unnatural and repugnant to the provisions of the constitution here invoked.

"We are forced to the conclusion that the provisions of this subdivision are not a necessary regulation in the exercise of the police power; that in and by its terms the plain provisions of the constitution are violated and the subdivision must be held unconstitutional, and the statutory liability therein asserted done away with."

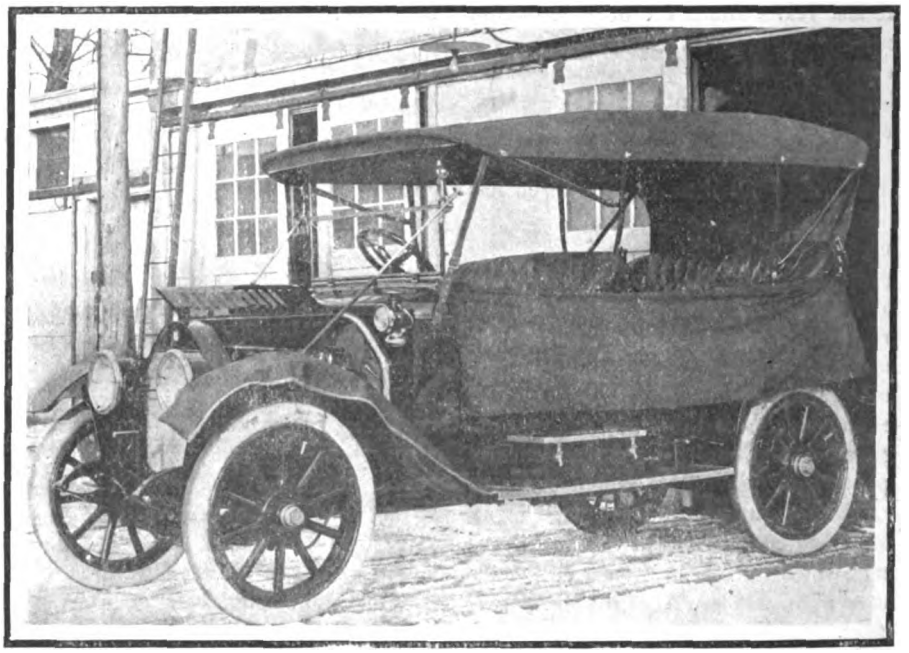
However, this section does not affect chauffeurs, as the paid driver is regarded as a servant or agent, and his employer may be held responsible for his actions.

Springfield's Show Housed in Arsenal.

Twenty-eight different makes of motor vehicles for both pleasure and commercial service, which were shown by 15 dealers, comprised the third annual show of the Springfield (Ill.) Commercial association, which closed its doors in the Arsenal on Saturday evening last, March 22nd. The show was inaugurated on Wednesday evening, March 19th. White, green and red was the color scheme, which was preserved throughout the decorative setting, which comprised, besides the orthodox streamers and draperies of bunting concealing the bare walls and ceiling and myriad lights of many colors, a large pergola which surrounded the hall. The cars on display were: Cadillac, Lozier, Hudson, I-H-C truck, Oakland, Chicago electric, Overland, Henderson, Paige-Detroit, White, Baker electric, Stutz, Marion, McFarlan, Flint truck, Michigan, Little, Case, Marathon, Metz, Pierce-Arrow, Waverley electric, Pathfinder, Haynes.

Suggests the Papier-Mache Bodies.

"Why not papier-mache bodies?" inquires a British motorist, and goes on to explain their advantages. The papier-mache, he says, might be pressed into the interstices of wire netting stretched over a light steel framework; it would have the advantage of lightness, great strength and cheapness, and in addition enamel would have less tendency to chip off it than it would off steel or aluminum.



To Break Ties in Ajax Tire Contest.

In the announcement of the Ajax-Grieb Rubber Co.'s tire-mileage contest made in last week's Motor World, it was stated that in the even of ties arising, the awards would be decided by the drawing of lots. This provision has been so amended, however, that in case of such ties, the cash prizes offered will be equally divided between the chauffeurs concerned.

KEEPING CARS FROM STAIN OF SHOP DIRT AND GREASE

Simple Arrangement that Avoids a Marred Finish and Saves Trouble —Devised by Chalmers, Is Useful to Whole Trade.

One little grease spot which has had time to work its way into the glossy finish of an automobile body has done an injury which is reparable only at considerable expense, and in too many repair-shops and garages no repair is attempted when a practically new car is turned out, bearing upon its finish the marks of uncareful workmanship. That the garageman makes no attempt to remove the soiled spots is perhaps excusable, for this in many cases would involve the refinishing of the whole car, but that he permits his workmen to dirty up a car is far from meriting excuse when prevention is a matter of no more difficulty than cutting and fitting a couple of strips of suitable material.

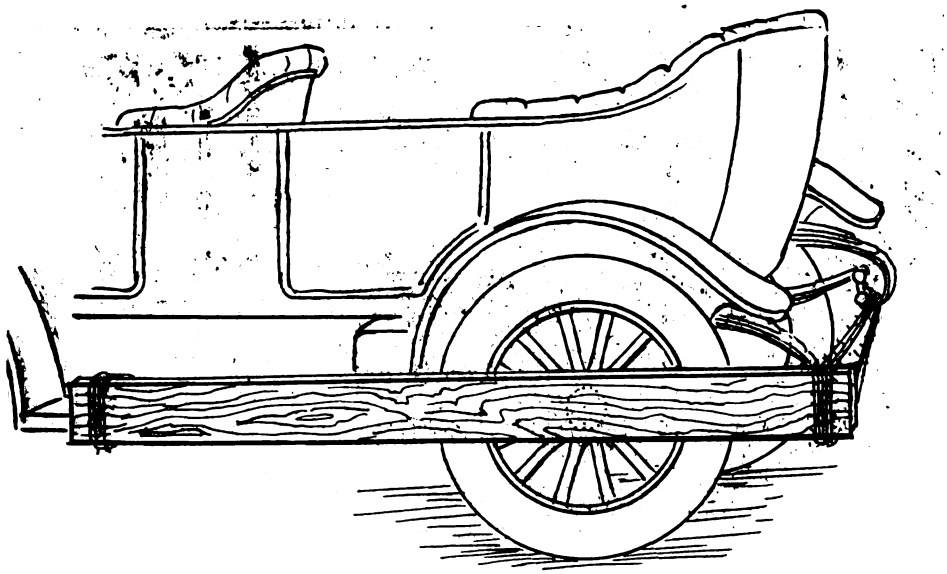
CHALMERS METHOD OF KEEPING CARS CLEAN IN THE SHOP

Bearing in mind the chagrin felt by the owner who takes his formerly spic and span car from a repair-shop only to find it spotted with dirt or grease, the Chalmers Motor Co., of Detroit, Mich., has recommended to all its dealers a method which has been used by that company to prevent finished parts from becoming marred or damaged, and the simple device is one which might well be adopted by any dealer, garageman or repairman at an expense which would be far below the value to be derived.

The protection is nothing but sheets and strips of a comparatively soft canvas or some other similar cloth, cut and fitted so that it may be attached to a car, as shown in the accompanying illustration. This ensures that the car will leave the shop looking as well as when it went in, and the result is three-fold.

Not the least important result of the use of such a device is that the workmen are impressed with the fact that care is necessary in their work and that cleanliness is required in labor upon cars which come into the shop; should a mechanic discover a spot which did not happen to be protected, he is likely to avoid marring it because the protection of the other portions has emphasized to him the necessity for careful work.

The owner will not overlook such methods; he is made to know that the repairman appreciates the fact that he has in his hands a piece of property of value and that the repairman is striving to take the very best care of it while it is in his possession. Should there be slight cause for complaint regarding carelessness, the owner who has seen such a device in operation is less likely to believe ill of the shop as a whole. Moreover, he is more assured of being a satisfied customer—which is an excellent advertisement.



The shop owner himself gets a benefit from the use of the protectors; he feels more satisfied with his establishment and takes greater pride in its modernness. Among car owners he will gain a reputation for thorough work, and when it is figured up that an hour may be spent by one man in cleaning up one car, the saving effected by the cloths and the time in which they will pay for themselves do not require an expert mathematician.

BOARD AND SHINGLE NAILS THAT SAVED A SITUATION

Crude Devices Impressed into Service by Kansas Dealer When Live Axle Broke—Necessity Again the Mother of Invention.

It goes without saying that there are accidents of lesser moment than the complete smashing of a car that will actually prevent its running, baffling the smartest of emergency repairers; but every once in awhile someone of a practical turn of mind is brought face to face with an apparently hopeless case, goes to work and solves the problem and scratches one or more casualties from the "hopeless" list.

METHOD OF FASTENING PLANK TO HOLD LOOSE WHEEL IN PLACE

Something of this sort happened recently when P. P. Belt, who is the proprietor of an automobile establishment in Fredonia, Kan., got into trouble 14 miles from home and help. One of the axle shafts in the semi-floating rear axle of his car snapped off about two inches outside the differential, and the entirely natural result was that the differential gears spun round idly, imparting no motion to the remaining sound shaft and its wheel.

Another car was at hand, so a connection was established by means of a tow-rope, and a start made for home. Immediately, however, the broken shaft commenced to work out of the axle housing, pushing the wheel out at the same time and making even towing impossible. So the other car went its way, leaving Belt to scratch his head as a preliminary to doing something more likely to enable him to get away from there.

The first thing to be done was to prevent the rear wheel from parting company with the car. The hub-cap was removed and a recess hacked half way through an oak plank, which was found lying around waiting to be used, the recess being big enough to take in the hub of the wheel. The plank, which was 7 feet long, 2 inches thick and 6 inches wide, was put up with the recess over the hub and wired in place, one end to the running-board and the other to the rear end of the rear spring on the opposite side of the car; the running-board end was further secured with a spike which acted as a pivot when the car rose and fell on its springs. So the wheel was restrained, so to speak, and all was ready for towing home.

But unfortunately the main item in the towing equipment was lacking; there was no car and not a horse to be had. So Belt had to scratch his head again, and in short order he scratched out of it a scheme that took him home under his own power. He removed the cover from the axle housing over the differential and plugged up all but one of the openings in the differential casing with waste. Through this opening a good handful of shingle-nails was dropped and the last hole stopped up so that the nails could not get out of the casing.

Of course, the nails got into the differential gears and effectually locked them, preventing their turning and compelling the power to be transmitted along the good shaft to the wheel. And with an oak plank holding one wheel on the car and a handful of shingle-nails transmitting power to the other, Belt drove home, 14 real miles, and got there without a hitch. To be sure, the roads were smooth, there were no hills and the car was started up very gingerly and driven all the way without any attempt to break speed records or perform stunts; but the fact remains that it got there without outside assistance.

CONDITIONS AFFECTING CHOICE OF ACCUMULATOR

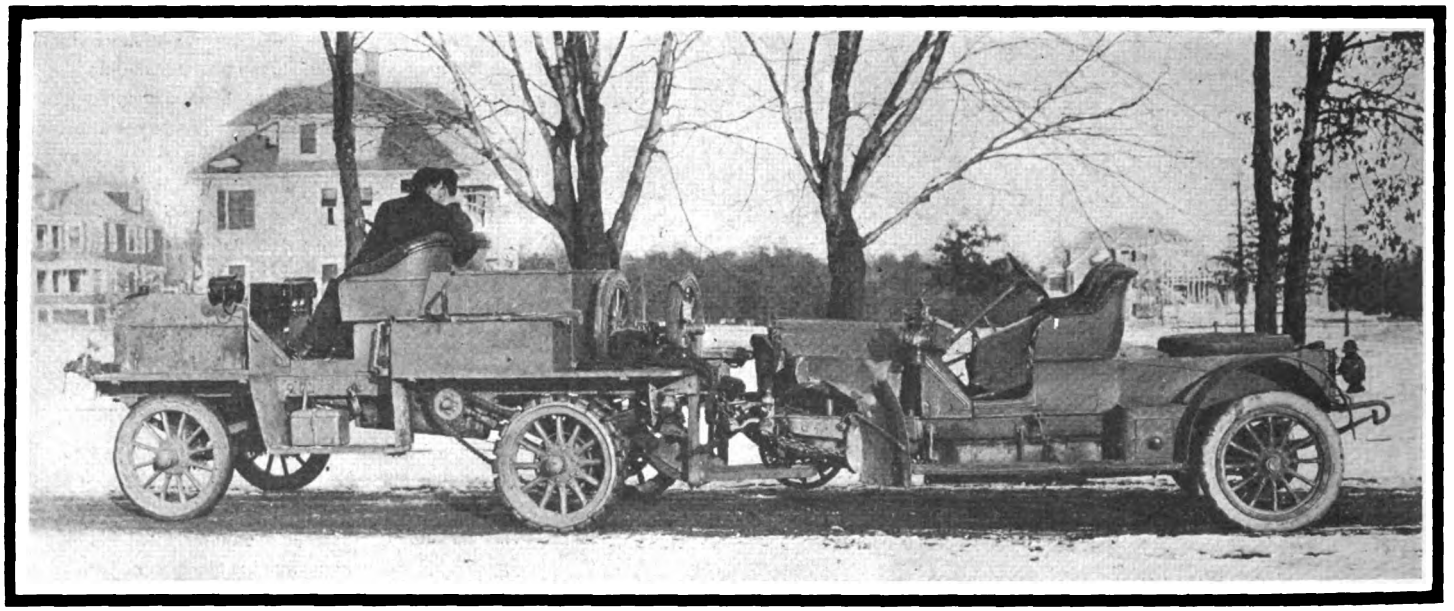
"Punishment" that the Battery Will and Will Not Stand—Wisdom of Applying a Battery of Proper Capacity.

There are few of the adjuncts to the motor car that require more careful consideration than the storage battery, whether it be used as a component of the electric starting and lighting system or as the source of current for the propulsion of an electric vehicle. The care or lack of care exercised in selecting the proper equipment for storing current will be reflected with unfailing directness in the results obtained in service, and the results will manifest themselves in terms of dollars and cents—not infrequently more dollars than cents.

A battery may have the proper number of cells to give the required voltage and yet be woefully lacking in amperage, for while the number of cells governs the voltage, or pressure, it has nothing to do with the amperage, or the volume of current. Amperage output is a function of the area of plates exposed to the electrolyte. The more plates there are the higher will be the amperage and, of course, the same result is obtainable by the use of larger plates. One cell has the same ampere-hour capacity as the whole series-connected battery, but has only the voltage of a single cell—two volts.

Current can be drawn from a battery at a rate very greatly in excess of its normal discharge capacity, and the plates will invariably respond to the demands made upon them. The penalty of an excessive discharge, however, is paid in the rapid increase in deterioration of plates, which overheat and disintegrate at a rate which rises rapidly with the overdraft. There are two ways in which a battery can be overtaxed. Current may be drawn too rapidly, as, for instance, taking current at the rate of 150 amperes per hour when the battery is normally rated at 100 amperes, and, again, drawing current at the normal rate, or even less, but continuing to work the battery after it has been discharged to the normal limit. A battery is capable of giving considerable current even after it has been worked to a normally discharged condition. In extreme cases current can be drawn from a battery until it "goes dead" and cannot produce sufficient energy to do any work, but after a rest there will be a recuperative action that will enable the plates to again give forth a current. In both cases, however, the battery suffers severely.

Obviously, if a battery is too small for its work it will be necessary to draw to a



Digitized by Google

greater or less extent upon its "reserve vitality," so to speak, and so cut down its useful life. The battery may do its work satisfactorily for the time being; it is one of the characteristics of a storage battery that it will continue to "give up" until it destroys itself in the effort to keep pace with the demands made upon it. The end will be brought much nearer the beginning, however, than it ought to be. Consequently a new set of plates will have to be purchased after an abnormally short period of service, and the expense per mile, or per hour, or however it may be figured, will be excessive.

Too large a battery, on the other hand—that is, a battery that has a plate area and an ampere-hour capacity considerably in excess of the demands made upon it—involves an abnormally high first cost, it requires more space, is heavier to carry and less easily handled than one of normal size. In its regular service the discharge will never reach the point of normal exhaustion, but the plates will be partly discharged and then re-charged over and over again—a proceeding which may be likened to winding a watch twice a day so that the full capacity of the spring never is used. In the case of the battery the proceeding is not conducive to the longest life of the plates, which give the best results and the longest life when continuously worked at approximately the normal rates set by the manufacturers. A battery long unused is sluggish when again brought into service, and a battery that is only partly used shows the same characteristics, though of course in a much lesser degree.

While the continual or frequent abuse of a battery is destructive, it is a comforting fact that an occasional excessive discharge, or an occasional abnormal draft or even a frequent discharge rate that is a trifle above the normal does no appreciable harm, and it is this quality of ability to stand a certain amount of overwork that gives the storage battery much of its value.

EMERGENCY WAGON DEVELOPED BY KNOX TO RENDER "FIRST AID" TO INJURED

SPECIAL KNOX EMERGENCY WAGON SHOWING METHOD OF TOWING BADLY DISABLED TOURING CAR

Under ordinary circumstances manufacturers of automobiles bend all their energies toward keeping cars on the road; there is little they will not do to accomplish this end. There are occasions, however, when it is necessary to go to the opposite extreme and get machines off the road on the double-quick—when, for instance, there is a smash-up and the car is left in a condition of helplessness.

Most automobile concerns of any importance have rescue cars used for such emergency work, and though they fulfil their destinies more or less satisfactorily, there are few that are as well adapted to their special class of service as the emergency car recently designed by the Knox Automobile Co., which is shown in the accompanying illustration. It is merely as a matter of course that the car is equipped with spare parts, tools, jacks, block-and-tackle and other conventional aids for incapacitated automobiles; but the special apparatus for handling cars unable to navigate on their own wheels is distinctly an advance on more familiar methods, such as skids, small trucks, and so on. An adjustable bracket, attached to the rear end of the emergency car serves as a support for the front end of the disabled machine, which can be moved out of sight and into the proper kind of a haven in short order and with little difficulty.

It's Here—the Chamber of Experts.

By way of carrying to further conclusions testing work that heretofore has been done only by the Royal Automobile Club, the "London Chamber of Motor Experts" has been formed in England, and its expressed purpose is to examine patents, make technical tests of anything and everything pertaining to automobiles and to issue forthwith certificates of merit or render judgment—for a consideration, of course. According to present plans, the Chamber, which consists of a number of men prominent in the trade who frankly admit they are experts, will sit weekly to consider such devices or matters as may be brought before it; furthermore, in the case of a device or a patent that appears meritorious, the Chamber will lend its assistance and influence in obtaining capital to exploit it. The Chamber thus will occupy a slightly different position from that occupied by the R. A. C. and the Automobile Club of America, both of which make tests and publish the results thereof but make no recommendations for or against the devices.

Easy Method of Inserting Valve Spring.

One good way to insert a refractory valve spring is to compress it in a vise and tie it with twine. After it is in place and the cotter key has been inserted, it is a simple matter to snip the string.

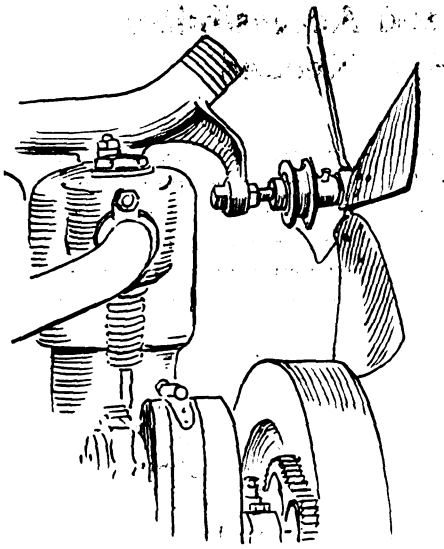
FACTORS THAT AFFECT FAN MOUNTING METHODS

Effect of Oil and Water on the Driving Belt and the Necessity for Providing Means of Adjustment—Popularity of V-section Belt and Accessibility Both Increasing—Why Substantial Supports Are Needed.

To fan or not to fan is not the question, for it has been demonstrated that if the cooling water of an automobile engine is to be prevented from boiling over and humiliating the owner whose car is likely to be somewhat scornfully apostrophied "Steamer" as a result, to say nothing of possible harmful effects on the engine, some means of providing a draft through the air tubes of the radiator must be provided. Granted, therefore, that some sort of a fan is necessary, the problem becomes one of driving it—of keeping it eternally at its work, as long as the engine is "turning over," despite the discouraging effect of oil and grease and water.

In this respect, be it added for the elucidation of those whose knowledge of fans is limited to acquaintance with the palm-leaf variety, or the whirring electric that stands on top of a desk and induces an artificial ocean breeze, the automobile fan sucks the air in through the tubes of the radiator, and does not, as is sometimes supposed, push it out the other way. It draws in fresh, cool air, which is not so cool by the time it reaches the engine, which merely proves that the fan serves its purpose in causing the heat in the water in the radiator to be absorbed by the air and dissipated.

Theoretically, the fan ought to draw in nothing but pure, clean air, but it is not the least bit discriminating and is a great deal more persuasive than the proverbial spider in inviting the nomadic house fly and horse fly and everything else that flys to come inside where it is warm. In fact, its influence on the small winged species is irresistible; no fly that ever heard the invitation has been known to send regrets. Also, the fan draws in dust and dirt and pumps it all over the engine and particularly into the carburetter intake, and though this trait of the fan is a little bit outside the province of the present article, it nevertheless indicates a fairly common hope that some day some one will devise a fan or a method of mounting a fan that will be a little more discriminate in the disposition of the flies and dust and things it draws in, even if it cannot be prevented from drawing them in altogether. One foreign manufacturer has evolved a fan and radiator of the type that is said to be all that can be desired, and even if the ordinary variety of American fan does draw in everything else along with the air and



VARIETY DISCLOSED BY A STUDY OF FAN MOUNTING AND DRIVING METHODS

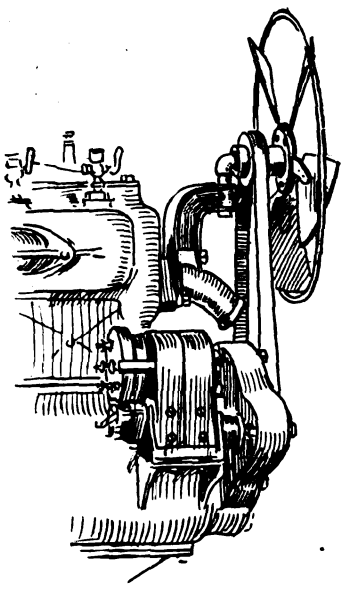
Digitized by Google

spread it all over things in general, the draft of air cools the water and the fan induces the draft. Q. E. D.

Among the other things the fan draws in along with the air is water, which on the

MAXWELL MANIFOLD MOUNTING

fan itself, or on the externals of the engine, may have no appreciable effect on efficiency in general, but rain water on the belt that drives the fan is, as one R. Kipling, Esq., puts it, "quite another story." Every one knows that water on the spark plugs and on the magneto does not help to make the engine run better, so it is unnecessary to dilate on the subject.



Necessity for Providing Adjustment.

Leaving grease and oil out of the equation for the time being, it is water on the belt that makes the average fan assembly the bete noir of the motorist, to employ a French phrase that means pretty nearly everything that is bad in polite language. If the belt is not exactly tight enough—assuming it to be a flat belt, of course—water will make it slip to a certain extent, and if it is tight enough or is a little bit tighter than it should be, water will make it stretch, which amounts to the same thing. Grease and oil also will make the belt stretch a little bit, though their most potent effect, naturally, is to cause slippage.

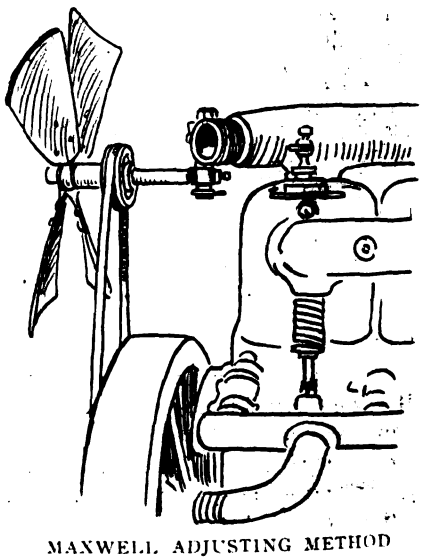
In either case, slippage implies some means of taking up the slack, whether that slack is the result of natural wear and stretch or has been super-induced by the presence of water or some oleaginous substance. That there is no visible end to the making of books is fairly well known, and though it may not be so well known that the end of methods of providing fan belt adjustment scarcely is more visible, a glance at the accompanying 14 sketches of as many different methods will help to make that fact plain, for it is very evident that not all the methods in vogue are illustrated. To illustrate and describe all the various modifications of the 14 typical installations here depicted would require a very large-sized tome.

Importance of Solidity in Mountings.

Scarcely less important than the necessity for providing some means of tensioning the fan belt is the method of mounting the whole assembly, for unless the fan is firmly and properly mounted in a substantial manner "all kinds of troubles" are likely to ensue, probably the most disastrous of which are cracked crankcases and punctured radiators. Despite the fact that fans are made as light as it is possble to make them—the weight of the cast aluminum and pressed steel variety, for instance, best can be expressed in ounces—they nevertheless have weight; the weight is augmented by

HERRESHOFF CONSTRUCTION

the speed at which they are driven, and when one of them gets loose—such things have been known to happen—it can cut some wonderful capers.



Bent Fan Blades That Ruin Balance.

Another thing—most fans are carefully balanced both statically and running before they are finally mounted for duty on an engine; which is as it should be, for rapidly rotating, unbalanced fans would cause an amount of vibration, despite their lightness, that soon would shake loose their fastenings and let them "run amuck." But no matter how carefully a fan may be balanced before it leaves the factory the accidental bending of one or more of the blades will tend to throw it out of balance and cause it to vibrate to a greater or less extent; this is one reason why most manufacturers choose very solid and substantial mountings, vide the Stutz and Columbia and the Edwards-Knight and the Warren and the Marmon and some of the others illustrated.

Not so very long ago the general practice was to drive the fan with the aid of a belt running over a pulley on the front end of the crankshaft, this construction being probably the simplest to design and manufacture. But belts are likely to break at least once in the course of their natural lives, though this is nothing against them, for any part of a piece of machinery will wear out in time, and as there are few who enjoy "fishing" amongst an accumulation of grease and oil and dirt for the end of a new belt, this practice gradually is giving away to more logical construction in which the belt runs over a pulley on the pump or magneto shaft. Incidentally, it is difficult to maintain a crankshaft front end bearing absolutely oil tight, and as the most natural abiding place of the oil that leaks out is on the fan pulley and belt, this fact has further mitigated against such construction. Where the timing gear train is lubricated with grease conditions are somewhat ameliorated, for it is not so difficult to make grease "stay put" and belts can be made to run fairly clean. On the whole, however, the pump or magneto shaft location of the pulley is preferred as permitting the greatest accessibility.

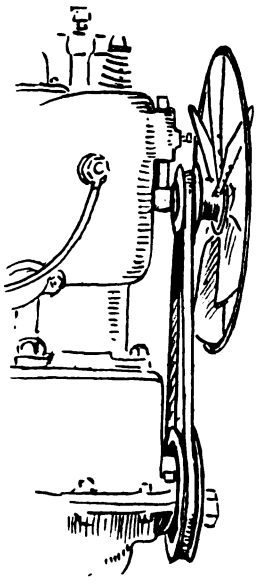
Advantage of Pump-Shaft Driving Pulleys.

Stutz construction, for instance, follows these general lines. A six-bladed fan is mounted on ball bearings on a solid triangular member securely bolted to the top of the timing gear case. A fairly wide, flat belt is used, and it passes over a flanged pulley mounted directly on the pump shaft, the belt thus coming between the end of the gear case and the rest of the engine.

MAXWELL ADJUSTING METHOD

The method of increasing the tension on the belt is simple and consists merely in providing elongated slots for the bracket-holding bolts instead of the usual round holes. Hence, when it becomes necessary

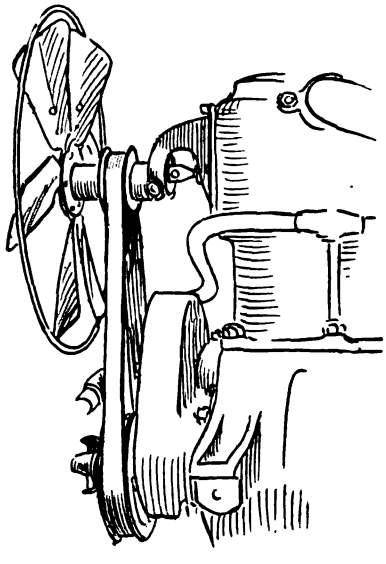
Digitized by Google



to tighten the belt the operation can be performed quickly and easily by slackening the two nuts that hold the bracket and sliding the whole mechanism bodily a fraction of an inch further from the driving pulley. Needless to add, the latitude of movement of the bracket is not sufficient to permit the fan to be moved so far to one side of the center of the radiator that only part of it is useful; the total movement is not more than one inch at the outside.

Eccentric Spindle Adjustment Preferred.

This method of shifting the whole fan assembly is used by comparatively few manufacturers, the majority preferring the eccentric spindle as leaving, perhaps, slightly less chance of damage by reason of bolts thoughtlessly left untightened after adjustments have been made. In Columbia construction, which together with the Stutz and a number of others is illustrated herewith, the eccentric spindle is mounted on a solid bracket which, in turn, is bolted to the top of the timing gear train. Loosening the end screw in the spindle permits the center of the fan to be moved with relation to the center of the driving pulley, thus providing for the removal of slack. Edwards-Knight practice is somewhat similar, except that the bracket is partly hollow, presumably to reduce weight. In both of these, it may be noticed, the driving pulley is mounted on an extension of the timing gear shaft on the outer side of the gear case, thus making the belt even more accessible than in the previous case. The Columbia-Knight engine also exhibits this feature, the essential difference in the construction being that the fan bracket is formed integral with the front of the timing gear case. Somewhat similar construction also is employed by Jackson engineers, though the driving pulley is directly on the pump shaft, as it is in the Stutz. Both employ the ecentric spindle for adjustment, as does the Warren, though the arrangement of the bracket in the latter is slightly different; instead of being bolted to the top of the timing gear case it is bolted to the inside face, thus permitting the fan to be placed slightly closer to the engine and decreasing overall length.



The Influence of Fan Blade Shape.

The shape of the fan blades and their number has very little, if any, influence on the method of mounting the assembly, though obviously both factors bear directly on the efficiency of the fan. Some manufacturers prefer the six-bladed fan, others cast in their lot with the four-bladed fan; one, at least—the Jackson—has a three-bladed fan, and it is significant that the Marmon, which is one of the latest cars to be placed on the market, is cooled with a two-bladed fan of the so-called "aeroplane" type. In this connection it is unnecessary, of course, to point out that a well-designed two-bladed fan operating at

PULLMAN BELT ADJUSTMENT

the proper speed will be more efficient than a poorly designed six-bladed fan which does nothing more than "flap the wind" and may not even do that. As a rule, however, the manufacture of fans is not attempted by the engine builder, for it is realized now more

REO BRACKET ARRANGEMENT

than ever that the designing of a really efficient and quiet fan calls for special knowledge and for facilities that the car builder rarely has at his disposal. Fan specialists are just as important in their way as are carburetter suecialists or magneto specialists, and their products can be regarded as just as efficient as the products of other parts specalists.

But to get back to belts and mountings—judging by the increasing use of the V-section belt as revealed at the recent automobile shows, the flat belt has lost some prestige during the past year. A number of manufacturers who pinned their faith to the flat belt last year have "switched over" to the V-belt for the coming season. The principal advantage of the V-belt over the flat belt is that it is less liable to slip when wet or greasy, which fact is made fairly plain by the section of the pulley. The extra strain that would tend to cause the flat belt to slip on the smaller pulley causes the V-belt to wedge itself between the pulley flanges, thus automatically increasing the grip. It is slightly narrower, too, though the decrease in overall length it permits scarcely enters into the argument for its adoption.

Popularity of V-Section Belts Increasing.

The Marmon fan, which is one of the few that has only two blades, is driven by a V-shaped belt, the fan bracket being bolted to the top of the timing gear case. Provision for taking up slack is provided in an eccentric spindle held in place by a small bolt and nut operating in a curved slot in the bracket. The Pullman is another in which a V-section belt is employed, though the method of providing for stretch is quite different, as is revealed by the picture. The bracket is in effect a double bracket, the lower portion being attached to the timing gear case with the upper portion, supporting the fan pulley telescoping into it. A clamping nut on the lower sleeve, which is split, permits the telescoping rod to be shifted up to compensate for stretch.

Probably the simplest of all fan brackets are two that are used on Maxwell models, a round belt running over a driving pulley outside the flywheel on a forward extenson of the crankshaft being used to drive the fan in both cases. In both, the bracket is attached to the water outlet piping at the top of the cylinders; in one, provision for taking up the slack in the belt is made with the aid of an eccentric spindle, and in the other the spindle terminates in a ring which clamps around a vertical rod bolted to the water pipe; a single screw serves to hold the spindle in place.

Necessity for Careful Fan Balancing.

The Herreshoff fan bracket also is mounted on the water piping, though the arrangement is quite different from that employed in Maxwell cars. The bracket is virtually an I-beam section inverted L bolted to the water pipe and carrying a similarly shaped fan spindle. A single clamping screw suffices to hold the spindle in position and permits it to be moved to separate the pulley centers to compensate for stretch in the belt. All three of these locations naturally imply carefully balanced fans, for the effect of continued vibration on the water con-

Digitized by Google

nections can be better imagined than stated.

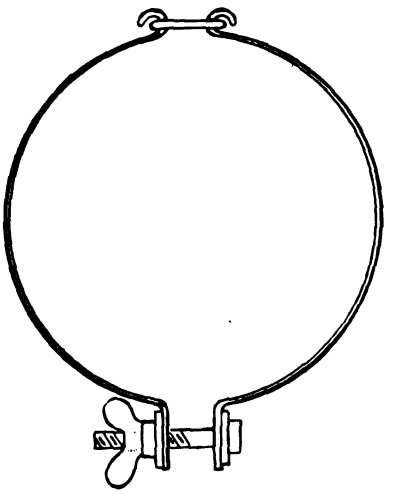
As a rule, manufacturers scout the idea of mounting the fan bracket directly on the cylinders, for a cracked or broken water jacket may be scarcely less serious than a cracked crankcase, and in general there is more metal in the crankcase to sustain the strain than in the cylinder jacket. Still, those manufacturers who have chosen such means of supporting the fan bracket have had no cause for regret by reason of cracked jackets, and some of them have evolved delightfully simple devices.

In the McFarlan arrangement, for instance, the bracket consists of nothing more complicated than an L-shaped spindle, the upper leg of which fits into a socket cast integral with the cylinder. A single set screw serves to hold the spindle and means for liberal adjustment is provided. The one possible objection to the system is that in the event of the set screw loosening itself the bracket, fan and all, would come loose and might damage either itself or the radiator. Obviously, however, such a contingency could be prevented quite easily by the simple expedient of drilling the top of the upright spindle member and inserting a cotter key in the hole. A V-section belt is used on McFarlan engines.

The Reo bracket also attaches directly to the cylinders, and it is distinctive in that it is one of the very few in which the belt is maintained continually tight with the aid of a spring. A joint where the spindle is supported in the bracket permits both ends of the spindle to move vertically; spring pressure on the inside end presses the outer end upward and in this way keeps the belt tight continually. The latitude of movement of the spindle, however, is restricted so that in the event of the belt breaking the fan could not touch the radiator.

Dry Cells for Electric Lights.

Although dry cells seldom are used as a source of energy for electric lights, it should be remembered that when they are used the voltage of each cell is a little more than one and that where six are connected in series to feed six volt tungsten lamps, the filaments are likely to be illuminated too brightly to permit of normal life Consequently, only five of the cells should be used at first until the lamps show symptoms of dimming, when the sixth should be added.



To Keep Set Screws from Loosening.

A very simple method of preventing set screws from working loose consists of filing teeth in the sides of the "cup" at the end of the screw. The teeth all should point one way, so that when the vibration tends to unscrew the threads, the teeth project into the metal and prevent movement.

CLAMP THAT FACILITATES REPLACING THE PISTON

Simply Constructed from Sheet Metal and Shop Scrap, It Serves to Compress Rings—Its Design and Operation Made Plain.

Inserting a piston in a cylinder, or lowering a cylinder over its piston, is not particularly difficult, though a certain amount of care must be taken if pinched fingers and possibly broken piston rings are to be avoided. But when it comes to monobloc motors the difficulties increase and it takes

PISTON RING CLAMP

two men to do the work without special appliances. The accompanying illustration shows a clamp that permits a monobloc motor to be assembled by one man and facilitates the work even if there are two on the job.

Two pieces of sheet metal are formed up each with one edge flanged and the opposite edge turned over to form a tube. A piece of heavy wire is bent, as shown, to form a hinge and locked in any desired way. If something neater than the twist is desired a tight-fitting copper burr may be slipped over each end, the ends being cut off close and slightly riveted over to hold the burrs in position. The burrs must be filed off so that they do not project inside the sheet metal circle; if the wire is merely twisted it must likewise be so bent that there will be no part of it inside the ring.

A small bolt passing through the flanges and provided with a wing-nut permits the tightening and loosening of the clamp. Two re-enforcing strips of metal may be soldered or riveted to the outer surfaces of the flanges to add stiffness if the metal is not heavy enough to withstand springing by itself. In order to permit the clamp to be removed from a piston without taking the nut off its bolt, one of the flanges may be slotted so that by slightly springing the other the bolt may be slipped out after the nut has been slacked back a turn or two. Another method of accomplishing the same thing would be to make one of the turnovers for the hinge joint in the form of a hook rather than a tube, so that when the nut was slacked the wire could be slipped out. Either method will answer the purpose.

When the clamp is in position on a piston it should be just long enough to catch all the rings, though it need not cover more than half of the top and bottom rings. By screwing down the wing-nut the rings are closed sufficiently to permit their entering the cylinder, which is lowered over the piston, pushing the clamp down as it goes. Each ring will have entered safely before the clamp is pushed clear. A little oil on the piston, the rings and the clamp will facilitate matters. With two such clamps one man can get the pistons into a monobloc casting with little difficulty.

Like many other simple devices, this clamp can be elaborated considerably by making the hinge joint more "shipshape" and, perhaps, providing a swing bolt in place of the plain bolt on the flange side, and other detail changes will readily suggest themselves. The form described is easily made, however, and will answer the purpose very well.

Simple Substitute for Flexible Shaft.

It sometimes is impossible with an emery wheel mounted on a lathe mandrel or on a regulation grinder, to "get in" to the place which needs the application of the abrasive. At such times a wheel mounted on a flexible shaft would, figuratively speaking, be worth its weight in gold. A very good substitute for a flexible shaft can be very quickly rigged up and comprises nothing more than a rod of Bessemer steel mounting the wheel at one end, the other end being inserted in the lathe chuck or an improvised chuck on the grinder. The flexibility of a long length of this rod is such that a latitude for the movement of the wheel embracing a circle of considerable extent is obtained.

Pencil Marks to Test Valve Grinding.

A good way to ascertain whether the valve grinding operation has been continued to the proper point—that is, so that the valve seats properly all around—is to mark lines upon the valve with a soft lead pencil; lies should be spaced about a quarter of an inch apart and continued all around. Seat the valve and turn it on its seat under some slight pressure. If the valve is properly seated the lines will have been completely removed.

WIRING OF LIGHTERS AND STARTERS MADE PLAIN

Important Part That Is Played by the "Blood Vessels" of the Electric Lighting and Engine Starting System—One-, Two- and Three-wire Methods Explained—What to do When Trouble Develops.

(This is the twenty-fourth of a series of articles designed to make clear the electric lighting and engine starting systems in use and to render easier their care and repair by the dealer and owner alike.)

If the every-day workaday person would take the trouble to liken some of the parts of his electric lighting and engine starting system to the parts of his own body, much of the fog which surrounds such apparatus would disappear.

Take the wiring, for instance—the thin, cotton-covered, innocent-appearing conductors that stretch from the generator to the battery and from the battery to the lamps and the starting motor. It is much like the system of blood vessels in the human body. A person could no more get along without veins and arteries than a lighting and starting system could get along without wiring; both are absolutely essential in their respective spheres. Just as the arteries carry the life-giving fluid to the innermost and outermost parts of the body, so do the wires carry the "juice" to the lamps and to the starting motor.

Danger That Lies in Short Circuits.

The analogy is particularly appropriate in several respects. Imagine what would happen if an artery were severed accidentally: The person would bleed to death in short order unless the flow of blood was stopped. In the wiring of a car, a short circuit can be likened to a severed artery, for it amounts to the same thing in the end, the only difference being that in one case a human life is lost and in the other the life of a battery is lost. The loss of blood weakens the person unlucky enough to suffer the rupture of an artery. The loss of electricity weakens the battery in the short-circuited line. And if the loss continues long enough in either case the result is bound to be disastrous. Veins and arteries are carefully protected to reduce to the minimum the possibility of damage to them and the same applies to the wiring of a car.

The blood-vessels are more or less hidden beneath the layers of fat and tissue and the wires are encased in waterproof layers of cotton impregnated with paraffin or some other dielectric that is equally efficacious in keeping out moisture and keeping the electricity in.

Electricity is very peculiar stuff; it always will take the shortest and easiest possible path to return to the battery or the generator or whatever the source of origin may be. But it must be provided with some sort of a medium that will permit it to return before it can be put to useful work; it must be made to circulate, so to speak, to perform work. For instance, it leaves one side of the battery and, after traversing a length of wire leading to the various devices that are to perform work and passing through them, it goes right back to the battery by way of the return circuit.

If either the outgoing or the incoming

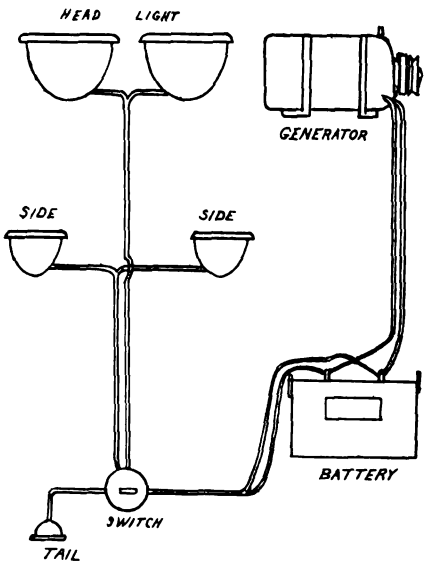

FIG. 1—TWO-WIRE SYSTEM

wire were separated, either through breakage or a switch, the flow of current would cease instantly and it would perform no work. That is what happens when a wire breaks somewhere on the car. The current cannot find it way back to the battery, and so it ceases to flow altogether. That is, it ceases to flow unless the broken end happens to come in contact with some metal part that will provide a return passage for the current, when the battery very promptly will drain itself and if the drain lasts very long it will just naturally die. After a while there will be no energy left in it, and the lamps will not light and you can press the starter button till doomsday without the slightest of sympathetic movements from the starting motor.

Consider, also, what would happen if, after a surgeon had severed both an artery and a vein in the course of an operation, he should inadvertently connect them up wrongly—the artery to the vein and the vein to the artery. It is altogether likely that the patient would be mighty uncomfortable, to say the least. But he would not be uncomfortable very long. In fact, he would cease to complain in about two shakes of the proverbial dead lamb's tail. Pretty nearly the same thing would happen if the wiring on the car were to be connected up wrongly, the positive wire to the negative terminal, for instance, or vice versa. The battery would evidence its discomfort by considerable gassing and heating, if short-circuited by the proceeding, and its "innards" would rise up, or, rather, buckle out sideways, and just naturally play havoc with themselves.

Why Wrong Connections Bring Trouble.

This is one very important thing to which all too little attention is paid by the average owner or operator. No positive wire ever should be attached to a negative wire, as otherwise a short circuit is bound to result, if not immediately, then as soon as the lamps are turned on or an attempt is made to start the motor or the generator takes up its work. There are any number of simple methods of determining the polarity of a circuit if it cannot be determined from the wiring diagram that almost invariably accompanies the installation. Probably the simplest method of all is to stick the two suspected wires (bare, of course) into a raw potato, placing them rather close together. After they have been in place for a few minutes withdraw them and the one that appears blackest will be the positive wire.

Another very simple method is to plunge the two wires into a solution of common table salt and water. Bubbles of gas will collect on the negative wire.

By way of obviating some of the troubles that arise from improperly connected wires, quite a number of manufacturers have adopted the laudable practice of using variously colored insulation to indicate the wires that lead to the various terminals shown in the wiring diagram. Then with the diagram itself printed in colors, or with the colors of the insulation indicated in

Digitized by Google

type, it becomes a simple matter to make or to check the installation should it become necessary to remove the wires for any cause. Thus, for instance, a red covered wire leads from the positive terminal of the battery to the positive terminal of the generator and never should be attached to the negative terminal. It is true that there are some generators to which the wires may be connected without reference to their polarity as determined by the battery, but these types of generators are in the minority.

Red always is the color that is used to indicate the positive terminal of either battery or generator when any color at all is used. When no color is used a small plus (+) sign serves the same purpose. The negative side generally is not indicated by any color, the negative terminal of the battery, for instance, being unpainted, in contradistinction to the positive terminal, which generally is red-coated. In lieu of coloring, a small minus (—) sign is used. These are the signs that invariably are used in wiring diagrams. Incidentally, for the elucidation of those who are unfamiliar with such signs as they are written, it may not be irrelevant to add that a series of lines alternately long and short indicates a battery, the number of pairs of lines representing the number of cells; a sequence of lines growing gradually smaller indicates a ground connection; and where one wire crosses another but is not attached or connected to it a small semi-circle at the intersection serves to make that fact plain. All of these signs are shown in the accompanying diagrams, which represent typical layouts as arranged by several manufacturers of electric lighting and engine starting apparatus.

Three Wiring Systems Made Plain.

Generally speaking, there are three wiring methods in vogue: the one-wire system, which is the simplest of all and in which the return is made through the frame of the car; the two-wire system, in which the return is made by wire; and the three-wire system, which is used where the battery is split into two sections, power being drawn from both for the starter, with the lighting load distributed half on each section.

Obviously, where it is desired to employ a 12-volt battery for starting and 6-volt bulbs, the three-wire system is the only one that can be used. Of the other two the one-wire, or grounded return, system has the advantage of simplicity as far as the actual wiring is concerned, though much controversy has waged over its other advantages as compared with the two-wire system. The question has come in for no little discussion by the Electric Lighting Division of the Society of Automobile Engineers, and though no action recommending the adoption of either system as the better has as yet been made, a statement, as follows, has been issued giving the committeemen's opinion anent the advantages and disadvantages of both systems:

Advantages of the grounded return: First—It makes possible a bigger contact point and better insulation in the lamp receptacle. (The Ediswan base has been recommended for adoption as the standard base). Second—This makes possible fewer connections at the lighting switch, so that when five lamps, a speedometer light and a horn are used there will be only 11 connections as against 14 in the two-wire system.

Wherein the Copper Return Scores.

Advantages of the two-wire system: First—As the side lights, speedometer and horn usually are carried on the body, special provisions must be made for mounting the "return" of these on the one-wire circuit, and current carrying by special grounds is doubtful when bodies are changed and the grounds removed and put back again. Second—If the magneto only, or the battery only is used for ignition, so that there is no ground due to the ignition primary circuit, the two-wire system makes a short circuit impossible if one ground occurs, and if two grounds occur they must be on opposite sides of the line to form a short circuit. Third—If the head lamps become loose on the brackets the circuit will not be affected, as in the case with the grounded return, where the contact between the lamp and the bracket makes the circuit. Fourth—With grounded return the cleanliness of the metal frame where the engine is bolted to the frame in case the ground is made to the engine, is essential and rather problematical. If copper return is used, this factor is of no importance.

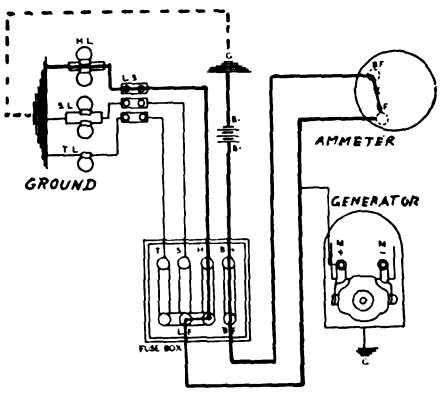

FIG. 2—GROUNDED RETURN

Obviously, there are many slight variations of all three of the types of wiring systems, as when ignition is added, for instance, and made a function of the lighting and starting system. But if all such adjuncts are left off and the diagram presented in a clear form as it applies to either lighting alone or to lighting and starting, it becomes fairly simple, and the average person should have little difficulty in tracing out the various circuits.

The plain lighting system, including only the generator, the battery and the lamps (and the necessary switches and cut-out, of course) is the simplest and it may be wired for either one or two wires, according to the designer's fancy. Figs. 1 and 2 show, respectively, the one- and two-wire systems as applied to the simple lighting system, and in neither of them is it difficult to trace the circuits.

Tracing Out the Current Path.

Commencing at the battery in Fig. 1—the battery is unmarked as to polarity for the sufficient reason that the generator is of the type that may be connected either way and will operate with equal efficiency—two wires lead directly to the generator. It is to be assumed, of course, that between the battery and the generator there is interposed an automatic circuit breaker to protect the battery when the engine is idle, for all such systems require a device of the kind. From one of the battery terminals, a wire leads to one side of each of the lamps. A wire from the other terminal of the battery leads to a central point on the switch, and from each of the individual points on the switch wires lead to the other sides of the lamps. Hence, as one battery wire leads directly to each lamp and the other to the central point on the switch, connecting the central point of the switch to any of the other individual contacts affords a passage for the current. In this case, the wires leading from the individual lamps and the one wire from the central point in the switch represent the return.

The arrangement depicted in Fig. 2 is even simpler and requires considerably less wire. In this case, both the battery and the generator negative terminals are simply grounded to the car frame, as are the wires from one side of each of the lamps. The positive terminal of the generator is connected to the other sides of all the lamps, through an ammeter, and also to the positive terminal of the battery. Each of the lamp circuits is protected with a fuse and each has its individual switch as a matter of course. Supposing, for instance, that the switch controlling the head lamps were closed, the path of the current then would be as follows, as is indicated by the heavier lines in the drawing: Starting from the positive side of the battery, it finds its way through the fuse to the ammeter, which registers the amount of current drawn, and through the meter to and through the line fuse, the head lamp switch and the head

Digitized by Google

lamps to the ground connection. As the negative side of the battery is grounded, the complete circuit thus is established. With very little effort the path of the current in any of the diagrams can be traced in a similar manner, the only requisite being patience and a knowledge of the fact that there must always be a complete circuit—that the current must always return to the battery, or to the generator, as the case may be.

The wiring diagram shown in Fig. 3 is a little more complicated than the other two, which is logical for the reason that it represents the connections necessary for a combined lighting and engine starting system in which the battery is split into two units to be charged in series and discharged in multiple. The complications added by the starting motor practically are nil, as they represent only two wires and a switch and the wires lead directly to the motor through the switch. In a system of this kind, the battery, which consists of six cells giving a nominal voltage of 12 is connected in multiple series, which is to say, it is divided into two sets of three cells each, connected in series with the two series sets afterward connected in multiple. Thus, for starting purposes, 12 volts can be drawn and for lighting it is a simple matter to proportion the load half on one set of three cells and half on the other set of three.

What To Do When Lights Go Out.

Thanks to the excellent quality of insulating material that now is available and generally is used, the care of the wiring system of a car, regardless of whether it is complex or simple, is a very small matter to worry about. Where installations are factory made, which is the case with the majority of them, it may be taken for granted that they are properly made and with reasonable care they will not develop trouble during the life of the car. Wherever possible, wires are encased in circular loom and to the uninitiated this fact may prove slightly misleading unless it is remembered that there may be several wires in the casing that appears only large enough for one. Also, the wires generally are laid out in lines that are as straight as possible in order to facilitate tracing trouble.

When the lights suddenly go out, the proper proceeding is first to examine the fuses, if any are used. If one of them is blown out that fact may be taken as an indication that there is a short-circuit somewhere in the line and a new fuse should not be inserted until the short circuit has been located and remedied. It may be due to body movement which has chafed the insulation from one of the wires and permitted it to come in contact with the body or one of the wires may have come loose from its connection in the switch and dropped down against one of the other connections. If the fuses are intact, indicating that there is no short circuit, it is time to examine the connections at the battery and at the switch. Sometimes vibration jars the holding screws loose. If all these connections appear perfectly tight, nothing remains but to go over the wiring and search out the break, for every other possible source of trouble has been eliminated.

In cases where the lights merely grow dim the proceeding will vary slightly, the first point of attack being the battery. If

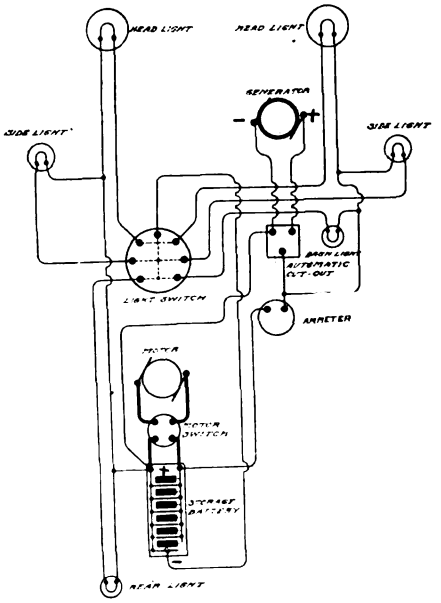

FIG. 3—THREE-WIRE CIRCUIT

the dimness is sudden it may indicate either a partial short-circuit somewhere in the line or only loose connections, either of which can be remedied quite easily. If the dimness is of the progressive type and becomes gradually worse, there may be nothing more serious the matter than a shortage of fluid in the battery or derangement of the charging function. Either condition will be indicated by a battery test with a voltmeter. It is a simple matter, of course, to fill the battery up with distilled water if the fluid appears lower than it should be and the care of the generator already has been made plain in the twenty-three preceding articles that have appeared in Motor World. Constant flickering of the lights—now high, now low and sometimes out—is a pretty certain indication of loose connections somewhere in the line and not infrequently the troubles lie in the lamps themselves which have shaken loose in their sockets.

In any case of trouble with the wiring, nothing will prove of greater avail than will system coupled with a thoughtful diagnosis. One thing at a time should be examined and before some other part is tackled the first should be put back in its original condition; otherwise the work may have to be done all over again. Where broken wires are found, no reliance should be placed on merely twisting them together and binding the joint with adhesive tape. If permanence is to be expected, the joint must be soldered. One very good way of tackling the job is to twist the wires together (after they have been carefully scraped bright) and heat them with a small blow torch, afterward applying wire solder till all the interstices are filled up. Needless to add, the joint must be taped or there is danger that the bare part will come in contact with the frame and cause a short circuit. When making such joints, care must be taken not to draw the wires too tightly or they may break again; the better way is to splice in a piece of wire, thus leaving slight slackness to allow for body movement.

Ammeter as a Tail Light Telltale.

With a straight storage battery electric lighting system, the dash-positioned ammeter serves as an efficient telltale to indicate whether or no the tail lamp is burning. The current consumption should be noted when the lamps are functioning properly, and thereafter the extinguishment of the tail light will be indicated by the lowering of the consumption by an appreciable amount. With the generator system, unless very close regulation is a characteristic of the system, the varying potential of the dynamo prevents the use of the ammeter for such purposes.

Using Hard Steel for Burnishing.

A fairly good burnisher for brass, copper or other soft metal can be made of a file or a piece of tool steel rod, hardened to the limit, with the end ground round and smooth and polished. The polishing must be as nearly perfect as possible, and there must be no scratches whatever. Held against a revolving piece in the lathe, or rubbed, with some little pressure, on a flat surface, the burnisher produces a hard, polished surface that is more durable and tarnishes less rapidly than a surface that is polished by abrasives.

Where Camel's Hair Belts Are Necessary.

In tanneries and in mills where steam and acid fumes abound, the life of a leather belt is short indeed, so that in most such establishments braided camel's hair belts are used. In instances these belts have been known to function properly for a period considerably longer than ten years under conditions which would render a leather belt useless in as many weeks. Possibly a camel's hair belt in place of the orthodox leather fan belt would prove more efficient.

1,028,843. Cleaning Device for Wind-Shields. Ewing B. Rhodes, Pittsburgh, Pa. Filed Feb. 9, 1912. Serial No. 676,662. (Squegee mounted so as to slide along the glass.) 4 claims.

1,028,847. Exhaust-Muffler. Augustus G. Snyder, Utica, N. Y. Filed Oct. 16, 1911. Serial No. 654,925. (Two chambers, the first provided with numerous transverse baffle plates and the second with a single inclined perforated plate.) 3 claims.

1,028,854. Vehicle Signal. Edward J. Best and Charles M. Fitch, Chicago, Ill. Filed Dec. 27, 1910. Serial No. 599,318. (Electric rear signal for telling operator's intended movements.) 1 claim.

1,028,866. Turning Device for Vehicles. John M. Eadie, New York, N. Y., assignor to Eadie Vehicle Gear Company, a Corporation of New Jersey. Filed Aug. 6, 1908. Serial No. 447,205. (Both front and rear axles provided with central pivots and so linked together that they turn in opposite directions.) 20 claims.

1,028,876. Transmission Gearing for Motor Vehicles. Robert Gaston Hardgrave and Charles T. Adair, Tucumcari, N. Mex. Filed Dec. 3, 1910. Serial No. 595,525. (Main driving bevel gear provided with several series of teeth which mesh with the driving pinion on the end of the propeller shaft.) 5 claims.

1,028,889. Spring Cushion Tire for Vehicle Wheels. Arthur J. Layhon, Lowell, Mass. Filed Jan. 3, 1911. Serial No. 600,564. (Springs interposed between non-yieldable rim and felloe.) 3 claims.

1,028,980. Electrical Signaling Device. Theodore Weiss and Theodore A. Walther, Chicago, Ill.; said Walther assignor to said Weiss. Filed Oct. 21, 1911. Serial No. 656,060. (Motor drives shoe which is caused to vibrate against the diaphragm by means of a stationary crown wheel.) 4 claims.

1,029,018. Transmission and Control System. Henry M. Kinney, Winona, Minn., assignor to Winona Wagon Company, Winona, Minn., a Corporation. Filed Sept. 22, 1911. Serial No. 650,750. (Modified planetary gearset.) 9 claims.

1,029,027. Pneumatic Tire Protector. Albert H. Rawitzer, Omaha, Neb. Filed Nov. 9, 1911. Serial No. 659,313. (Flexible internal armor.) 2 claims.

1,029,063. Motor Vehicle. Russell Huff, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 28, 1910. Serial No. 589,544. (Tail light and license bracket mounted on rear mudguards.) 2 claims.

1,029,109. Transmission Gearing. Aaron F. Dickey, Somerset, Pa. Filed July 3, 1911. Serial No. 636,802. (Selective type with the gears always in mesh.) 3 claims.

1,029,111. Carburetter Adjusting Device. Harry S. Echternach, Strasburg, Pa., assignor to Virgil A. Meck, Strasburg, Pa. Filed May 15, 1911. Serial No. 627,293. (Pair of gauges for indicating the maximum explosive pressure under varying carburetter conditions.) 4 claims.

1,029,147. Friction Clutch. George W. Shaffer, Buffalo, N. Y. Filed Jan. 23, 1911. Serial No. 604,110. (Expanding ring clutch.) 4 claims.

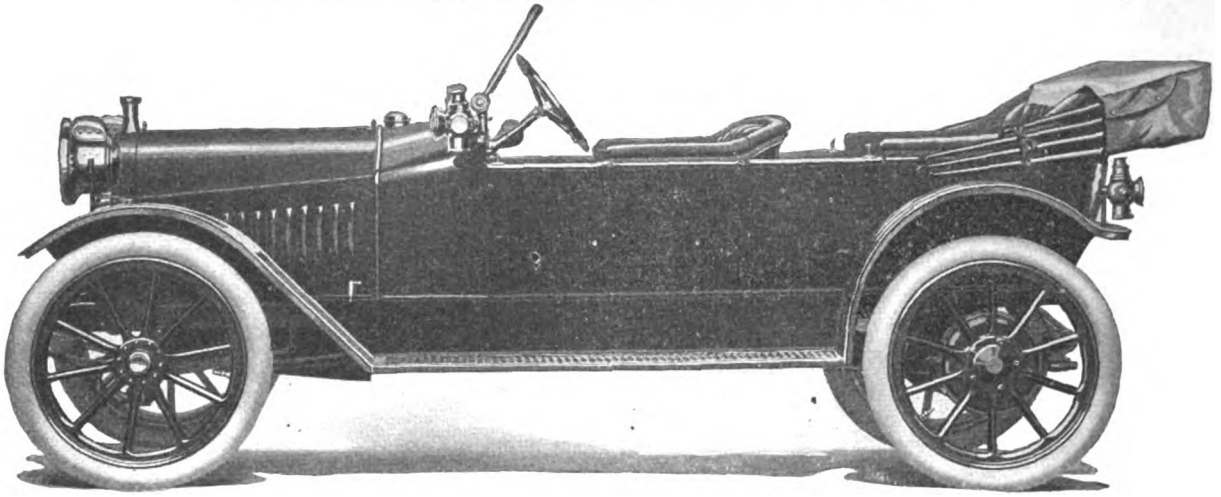
1,029,177. Spring Wheel. William T. Dulany, Jr., Arlington, N. J. Filed June 29, 1911. Serial No. 636,077. (Spokes formed of leaf springs.) 2 claims.

1,029,192. Four Phase Single Piston Valveless Motor. Charles Edouard Henriod, Neuilly-sur-Seine, France, assignor to Societe Ribeyrolles & Cie., Puteaux, Seine, France. Filed Nov. 23, 1909. Serial No. 529,585. (Four-cycle motor with rotary distributer valve and ports through piston.) 2 claims.

1,029,215. Tire Protector or Shield. Arthur H. Morton, Cleveland, Ohio. Filed Dec. 11, 1911. Serial No. 664,914. (Wire mesh protective shield.) 1 claim.

1,029,252. Shock Absorber. Owen B. Ames, Brewster, N. Y. Filed Nov. 20, 1911. Serial No. 661,302. (Small leaf springs oppose movement of weight-bearing springs.) 2 claims.

1,029,263. Vehicle Tire. Eugene H. Bingham and Theodor Tominski, San Francisco, Cal. Filed Oct. 12, 1910. Serial No. 586,737. (Tire casing made of spring metal strips and enclosing a pneumatic tube.) 3 claims.



1, 029,290. Starting Device. Henry Henken, Savannah, Ga. Filed Jan. 16, 1911. Serial No. 603,035. (Clutch that releases starter handle in case of backfire.) 4 claims.

1,029,299. Spring Wheel. William H. Howsley, Jr., Adams, Tenn. Filed Feb. 19, 1912. Serial No. 678,523. (Helical springs interposed between the hub and the ring that supports inner ends of the spokes.) 2 claims.

1,029,301. Combined Lifting Jack and Brake Mechanism for Automobiles. Alex Kertesz, Newark, N. J. Filed Jan. 10, 1912. Serial No. 670,487. (Legs attaching to the axle and lowered by means of lever.) 1 claim.

Hupmobile

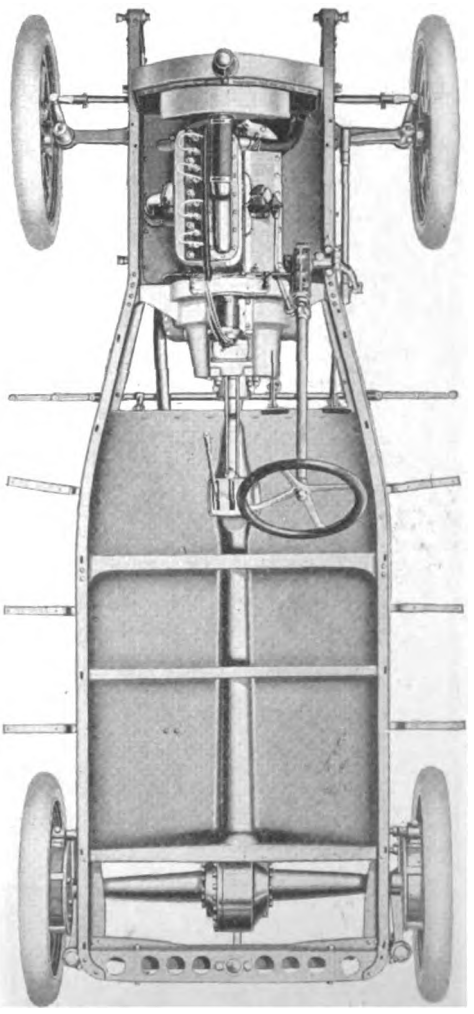
Simplicity and sturdiness meet in this car

The Hupmobile is as much at home in the lumber camps as on the boulevards. As one enthusiast puts it, "It will run anywhere that a dog can go."

Quality in looks and construction without high cost is the problem our engineers have conquered.

Look at the clean body lines, free from outside trappings, which not only make for beauty, but for easier care of the car.

The chassis, too, as you see, is stripped of every intricacy; every working part is enclosed; dust proof and oil tight.



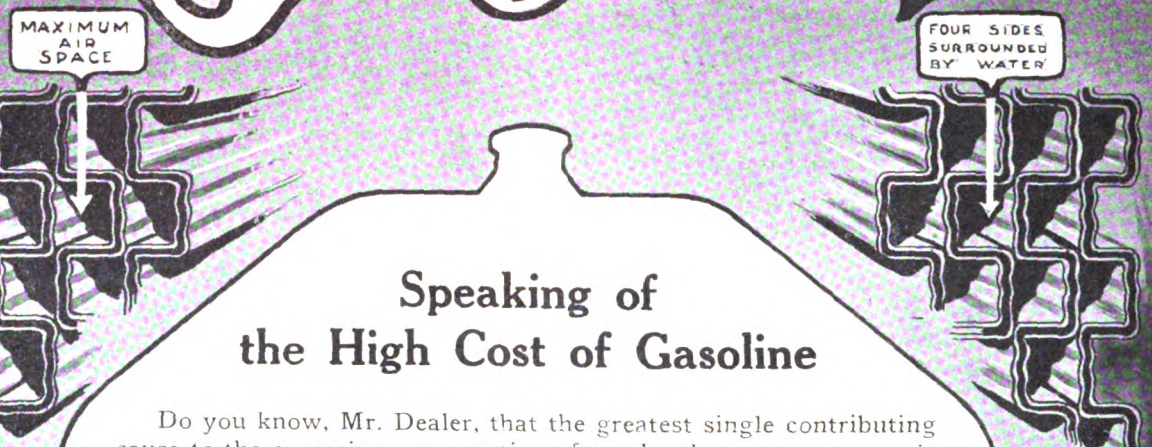
There are but four rods from front to rear; and a rear axle so sturdy that truss rods are not needed.

From time to time we have told you of the Hupmobile's structural and operative details.

Here they are assembled—the sound basis of our belief that the Hupmobile is, in its class, the best car in the world.

You should have our new catalog, which details many of the worth-while advantages of Hupmobile practice. Write for it.

HUPP MOTOR CAR CO., 1254 Milwaukee Ave., Detroit, Mich.



Hupmobile "32" Touring Car (illustrated), fully equipped, $1000

F. O. B. Detroit, including equipment of windshield, mohair top with envelope, Jiffy curtains, speedometer, quick detachable rims, rear shock absorber, gas headlights, Prest-O-Lite tank, oil lamps, tools and horn. Three speeds forward and reverse, sliding gears. Four cylinder motor, 3¼-inch bore and 5½-inch stroke; wheelbase, 106 inches; 32x3½-inch tires. Standard color black. Trimmings, black and nickel.

"32" Six Passenger Touring Car, fully equipped,	$1200 f. o. b. Detroit
"32" Roadster, fully equipped,	$1000 f. o. b. Detroit
"32" Delivery, fully equipped,	$1100 f. o. b. Detroit
"20" H. P. Runabout, fully equipped,	$750 f. o. b. Detroit

Livingston

Speaking of the High Cost of Gasoline

Do you know, Mr. Dealer, that the greatest single contributing cause to the excessive consumption of gas by the average motor is

Inefficient Radiators?

You do know, of course, that this high cost of wasted fuel is the cause of many dissatisfied customers—and that the high cost of operation due to this waste of fuel scares away many a would-be buyer.

Livingston Radiators Positively Will Insure Proper Radiation

and insofar as the cooling of your motor is concerned, will insure the very maximum of miles per gallon of both gas and oil.

There isn't a car maker in this country who cannot afford to use Livingston Radiators on his output—not one.

And if you dealers will look out for the best interests of your customers as well as of yourselves, you'll force your manufacturers to equip the cars you sell with Livingston Radiators.

It's all up to you Dealers. You can get what you demand for there are a lot more cars to be manufactured than will be sold.

It's a survival of the fittest from now on. Represent the "fittest" —the car cooled by Livingston Radiators.

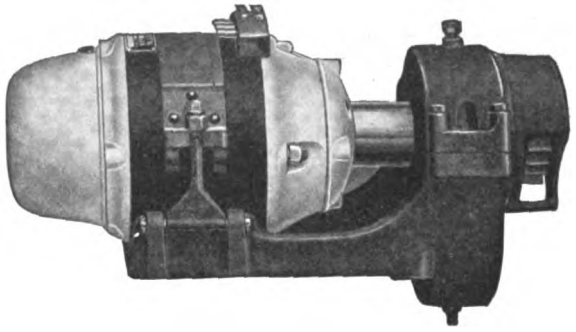
THE NORTH EAST ELECTRIC SYSTEM

A unit auxiliary electric power plant which can positively be depended upon at all times to furnish current.



FOR STARTING AND LIGHTING

Positive, Automatic, Safe, Reliable, Serviceable and Mechanically Perfect

The North East Lock Switch

Positively locks the different circuits on or off as desired

The North East Starting Switch

Free from complicated contactors and contact troubles

The North East System is not an afterthought, designed in a hurry to meet the sudden demand. As pioneers in the field of electric cranking and lighting, we have been working for years to produce the most modern and most complete equipment. Here it is—proved best by the test of four years' continuous service and more than 60,000 miles of running without perceptible wear on either brushes or bearings.

No Other System Approaches It in Simplicity

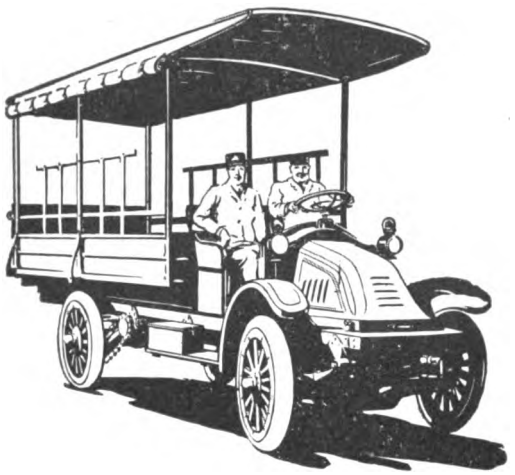
It is a unit system motor-generator with only one moving part—the armature—and is automatically changed from motor to generator by the starting of the engine, thus combining in a single machine the functions of two separate and distinct machines for starting and lighting.

Has the Highest Efficiency—Therefore Most Economical

The battery is charged and discharged in series, a feature recently adopted by other starters that formerly operated on a multiple series system, thus proving the principle of the North East System to have been correct from the start. And although it is the smallest and the lightest electric starter made, it will turn the largest engines used in automobiles with the least amount of current consumption from the battery.

Other Special Features That Distinguish the North East

Only one machine—a motor-generator complete in itself; keeps the battery charged at all times, yet never overcharges; built entirely in our factory of the best materials obtainable; positive in operation under all climatic conditions; cannot be damaged or disarranged from the driver's seat; noiseless; equal in mechanical strength, durability and finish to the finest automobile equipment.



The North East Electric System is designed to be an integral part of the engine itself, and cannot be adapted to cars now in use. You can secure the advantages of the North East, however, by specifying that you want it on your new car.

Sell the Spark Plugs Which Men Want to Buy

That is the Mezger "Soot-Proof" plug. No man can reasonably doubt it.

Hundreds of thousands of the best-built cars now use more than two millions of these "Soot-Proof" plugs.

And Our Advertising Now Is Telling Legions of Others About Them.

Here is a plug which you can warrant—at our risk—to solve the problems which every user has.

You can warrant it against short-circuit, break-downs, leakage.

You can warrant that it cleans itself.

And you can prove this fact, if you have occasion, by sooting the plug in a lamp flame. Then, in an engine, three minutes of running will make the plug as clean as new.

C. A. MEZGER, Inc.

We Are One of the Oldest Spark Plug Makers

The "Soot-Proof" plug is the final result of twelve years spent on spark plugs only—spent on solving these problems.

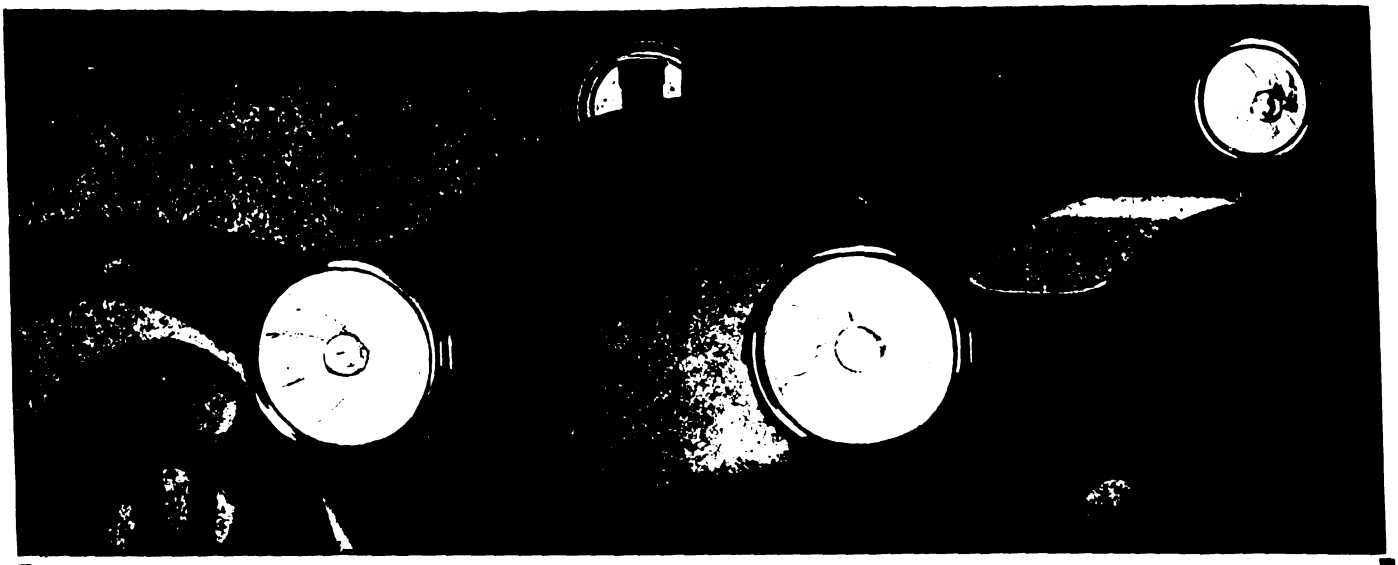
The result is, millions in use—an enormous demand—and a reputation far exceeding that of any other spark plug made.

We are advertising "Soot-Proof" spark plugs in a wide-spread way.

We are offering to dealers a very attractive discount.

These are the dominant spark plugs—the wanted spark plugs. And every month is adding vastly to their popularity.

Don't push spark plugs which are far less saleable.



Help us supply this trade.

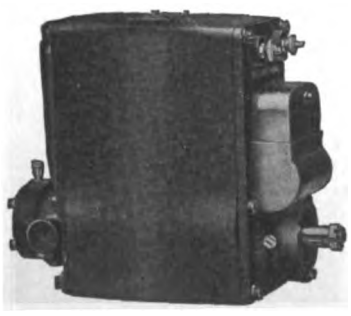
Westinghouse
Electric
Ignition, Lighting and Starting

AUTOMOBILE owners have no desire to have experiments tried on their cars.

They want a starter that starts — always. Lighting and Ignition must also be absolutely dependable.

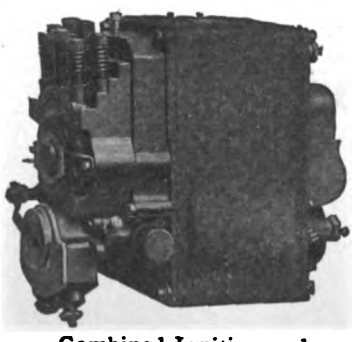
Manufacturers are expected to give buyers a car proven in every particular.

Four years were given to the perfecting of the Westinghouse System of Ignition, Lighting and Starting, before it was offered to the automobile trade.



The buyer can be sure that when a car is equipped with the Westinghouse System of Ignition, Lighting and Starting, there is nothing to worry about It's automatic, and starts and lights at the press of a button.

The following statement has great weight with automobile buyers: "The Westinghouse Company backs its System of Ignition, Lighting and Starting with all its resources It is in unequaled position to furnish service to manufacturers, agents and dealers who use its equipment, through its forty-five offices located in every large city in the country."



Equip your cars with the Westinghouse System

"A Giant in Power"

FEPS CARBURETOR

THE FEPS CARBURETOR makes it possible for every motor car owner to realize his idea of what a carburetor should be. The wonderful flexibility, the increased power, the 25% to 50% increase in mileage per gallon of fuel and the extra reserve speed are a startling revelation to every owner whose car is "Feps equipped."

The balky gasoline-guzzling carburetors to which motor car owners have tried to reconcile themselves, are a thing of the past.

The Feps Carburetor, devoid of all springs, cams, balls and reeds, positively eliminates every feature that has placed carburetors in the "pest" class. It is absolutely dependable at all times, under all conditions and with any grade of gasoline. The Feps also embodies a never failing, quick starting device, thereby eliminating another source of much dissatisfaction.

There is no excuse for you to worry along further. We ask you to try the Feps on your car at our risk.

Detroiter

12th Among 192! Only 11 Ahead—and 180 Behind! And Still Gaining Fast!

The Detroiter automobile—in its second year—already occupies 12th place among the 192 American manufacturers of pleasure cars. With all their start, only 11 other makers will produce as many cars in 1913. It is a wonderful growth, and figured in percentage of annual increase, *far surpasses the record of any other automobile firm.*

Why the 180 Were Outstripped

The 180 who fell behind, in the main, have been those who did not realize the popular demand for a *good looking car* that runs economically and wears well—at less than $1000. The makers of the Detroiter *did* realize it—brought out this strikingly handsome car that shows its breeding in every line, built into it all the nine highest grade features of construction that heretofore only the costliest cars have possessed, and then, by superior factory methods, brought the cost down to $850 and $900.

As to Dealers:

Dealers have taken on this car with eagerness. They have all made money, for buyers everywhere have been quick to respond to the tremendous value offered. Over 400 of these value-knowing dealers have been sharing Detroiter profits. They are the kind of men who stick. Probably your town is represented—though a few good territories are not. If it's *not* represented, show us you're the man we want by being first to see the opportunity and to write for our proposition.

$850 and $900

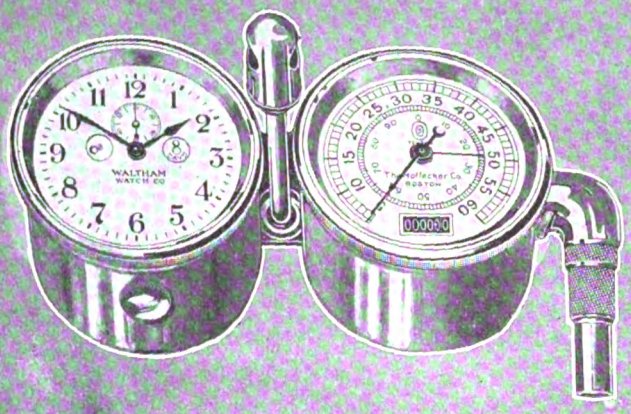
HYATT QUIET BEARINGS

THE Hyatt Flexible Bearing presents practical as well as theoretical advantages, from every viewpoint. It is the result of combining a correct theory and modern specialized manufacturing.

A bearing of quality—quiet, efficient, simple and durable—is the sole product of the Hyatt Factory. It is flexible and non-adjustable. Into it are put the best of steels, all carefully tested in the Hyatt laboratories and heat treated to give them maximum possible strength.

To this is added the service which an efficient organization renders car builders and car users through its sales and mechanical departments. Hyatt service constitutes an absolute insurance against bearing difficulties.



"Maximum Practical Value" tells the story in three words.

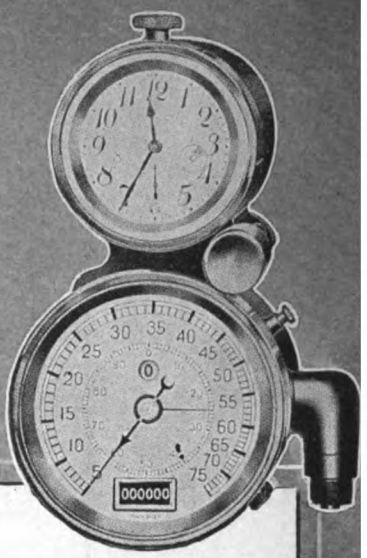
HOFF
SPEED

Again Hoffecker, standard on the famous Apperson line. A wise selection made by the men who built the first automobile and who have been building them for twenty years—men of ripe judgment and the experience of years back of them.

Standard Equipment

Recognition of Hoffecker speedometers by car manufacturers is growing. This is proof positive of sterling records of performance made by these speed recorders. You must take the judgment of car manufacturers, who could not afford to jeopardize the quality of their output through the selection of unreliable parts and accessories.



You, as a dealer who may be handling one or more lines of cars, will know how necessary it is that every part of the equipment exemplifies **quality.**

Through years of test Hoffecker Speedometers have proved their superiority. They embody scientific construction, refinement of design, and artistic appearance. They guarantee accurate speed recording, long life—they also add most materially to the appearance of the car.

THE HOFFECKER COMPANY

Digitized by Google

ECKER METER

Hoffecker Speedometers embody exclusive features, including a daily trip which can be quickly set to any desired mileage—a fractional mile register—a hand that remains steady, regardless of car vibration.

1913 Apperson CAR OUTPUT

Specify Hoffecker Speedometers on the cars you sell—insist upon them—and if you are not as yet fully satisfied concerning the claims set forth here, then write to us and we will show you in detail just why the Hoffecker Speedometer has more dollar-for-dollar value incorporated in it than has any similar device.

We spend more money in the purchase of brains, material and equipment—less money in extensive, scattered advertising campaigns.

You can tell your customer this. We are prepared to prove it.

Bear this well in mind. You cannot specify an instrument that offers more quality points than does the Hoffecker Speedometer.

Remember these facts when you are ordering your cars—remember them when you are selling a speedometer to go on a car already operating in your territory.

Main Office: Motor Mart, Boston, Mass.

Auto-Liter

We Are the Largest Makers of Starting and Lighting Devices

WE are the largest exclusive manufacturers of electrical starting and lighting devices for motor cars in the country. Our production facilities are unrivaled in the automobile accessory field. We guarantee superior quality and service.

Our factory occupies nearly 100,000 square feet of floor space. It is devoted entirely to the production of "Auto-Lite" electric starting and lighting devices. ***Our business is not a "side-line"***—hastily developed to meet a demand for such appliances. ***We are pioneers in the business.***

Our automatic, labor-saving machinery is the most modern obtainable. It is absolutely accurate in operation. Every part of the Auto-Lite system, when it comes to the assembling bench, is machined to one-half of one-thousandth of an inch. Every part is made in the Auto-Lite plant.

Our workmen are experts—trained by years of experience in building electrical appliances. Each and every one is a specialist in his line.

No order is too big for us. We are prepared to handle the largest contracts on short notice.

Our product, consisting of two mechanically independent units operating on a six-volt current, is a built-in part of the new car—not an afterthought hastily developed to meet the demand for an electrical starter and lighter.

We want every manufacturer to know the simplicity and ruggedness of the Auto-Lite system—and our capacity for prompt service on large deliveries.

We have an attractive proposition for dealers on lighting alone.

Every prospective automobile owner should know that his new car is equipped with the best starting and lighting system made. The Auto-Lite device will interest and impress him.

We have handsomely illustrated catalogues and literature, interesting and highly important to manufacturer, dealer and prospective purchaser. Your request will bring them. Write today.

1200 Starts From a Standstill

And the Battery Full at the Finish

AFFIDAVIT.

STATE OF OHIO
MONTGOMERY COUNTY) ss.

I, O. D. Apple, of the City of Dayton, County of Montgomery, and State of Ohio, on oath depose and say that on February 20, 1913, I drove an Inter-state Automobile equipped with an Aplco Electric Engine Starter, manufactured by The Apple Electric Company of said City, for a period of three hours and forty-five minutes.

During this time I brought said car to a dead stand still and started it again one thousand two hundred times by means of the Aplco Electric Engine Starter alone and without assistance from any outside source. That in not one instance did said Aplco Electric Engine Starter fail to start the engine immediately and to otherwise perform its functions properly, and that at the end of said test the storage battery used in connection with said Aplco Electric Engine Starting System showed a voltage of 6.6 volts indicating a full charge.

O. D. Apple

Subscribed and sworn to before me a Notary Public in the County of Montgomery, and State of Ohio, this 21st day of February, 1913.

Notary Public, Montgomery County, Ohio.

STATE OF OHIO
MONTGOMERY COUNTY ss

We, the undersigned upon our oaths, do depose and say that we were passengers in the automobile set forth in the foregoing affidavit upon the date and times therein mentioned, that the facts set forth by said O. D. Apple in said affidavit are true to the best of our knowledge and belief.

Subscribed and sworn to before me, a Notary Public, in the County of Montgomery, State of Ohio, this 21st, day of February, 1913.

Notary Public, Montgomery County, Ohio.

STATE OF OHIO
FRANKLIN COUNTY) ss

I, the undersigned, upon my oath, do depose and say that I was a passenger in the automobile set forth in the foregoing affidavit, upon the date and the times therein mentioned, that the facts set forth by said O. D. Apple in said affidavit are true to the best of my knowledge and belief.

H. C. Rogers

Subscribed and sworn to before me, a Notary Public, in the County of Franklin, State of Ohio, this 24th day of February, 1913.

Notary Public, Franklin County, Ohio.

In three hours and forty-five minutes this car was started one thousand two hundred times from a standstill with the Aplco Electric Engine Starter. An average of a start every ten seconds, yet in running a distance of only forty feet between stops the current used was replaced in the storage battery.

Ninety per cent of the failures of Electric Starters is directly traceable to the storage battery. It is either not charged enough or else overcharged. In the *Aplco System* this is impossible.

The current is replaced quickly after each start, yet in perfect accord with scientific principles governing the care of storage batteries.

The *Aplco System* will not overcharge its battery—it cannot undercharge it.

Prospective Car Buyers, this is the all-important feature to consider in selecting an electric engine-starter for your new car. It is not the spectacular stunts the starter will do, but the condition the battery is left in at the end, that counts. It's the assurance you have that if the system is called upon to perform unusual feats of endurance that the reserve capacity is there to be used without fear . . . The Aplco Electric Engine Starter will be put on the car of your choice if you specify it. Don't be persuaded to accept anything else.

HEAVY CAR TYPE FISK TIRES

The Great Service of Fisk Tires Is Directly Due to the Exclusive Heavy Car Type Fisk Construction

From every corner of the globe where Heavy Car Type Fisk Tires are used come reports of *Greatest Service.* These reports prove:

First, that Fisk design is right; second, that the proper materials are used; third, that these materials are blended in the proper proportions to make a "balanced" whole, a tire each part of which is attuned to the other so as to work in perfect harmony for a common end—that end being SERVICE.

The exclusive Fisk HEAVY CAR TYPE Construction is responsible for this tire perfection. As the name implies, it is a construction providing surplus strength for the severest strains of heaviest cars. With these strains properly taken care of there can be no question of Greatest Service on lighter vehicles.

Heavy Car Type Fisk Tires have exclusive points of superiority. To lessen the possibility of puncture there are two breaker strips instead of one. An extra layer of rubber on the tread greatly increases the life of this part of the tire, while the Heavy Car Type Construction allows a thick cushion of pure para rubber between the breaker strip and the fabric, minimizing shocks from stones and uneven road surfaces.

The side walls of Fisk Tires are especially reinforced to prevent rim cutting.

The added quality called for by the exclusive HEAVY CAR TYPE Construction means added expense in manufacture, but never once has The Fisk Rubber Co. consented to the slightest reduction in the quality of its product. This attitude means satisfaction on the part of the Consumer, and Business Permanence to the Dealer.

R-C-H "Twenty-Five" Completely Equipped $900 F. O. B. Detroit

THE CAR

Wheelbase—110 inches.

Motor — Long-stroke, four cylinders cast en bloc; 3¼ in. bore, 5 in. stroke. Two-bearing crankshaft. Timing gears and valves enclosed. Three-point suspension.

Steering—Left Side. Irreversible worm gear, 16 in. steering wheel. Throttle control on steering column.

Control — Central Lever operated through H-plate integral with universal joint housing just below. Hand lever emergency brake at driver's right. Foot accelerator in connection with hand throttle.

Springs—Front, semi-elliptic; rear, full elliptic and mounted on swivel seats.

Frame—Pressed steel channel.

Axles — Front, I-beam, drop-forged; rear, semi-floating type.

Transmission—Three speeds forward and reverse; sliding gear; selective type.

Construction—Drop-forgings wherever practicable; chrome nickel steel used throughout all shafts and gears in the transmission and rear axle; high carbon manganese steel in all parts requiring special stiffness.

Bodies—Touring car, full five-passenger English type; extra wide seats. Roadster, two passenger, English type.

EQUIPMENT

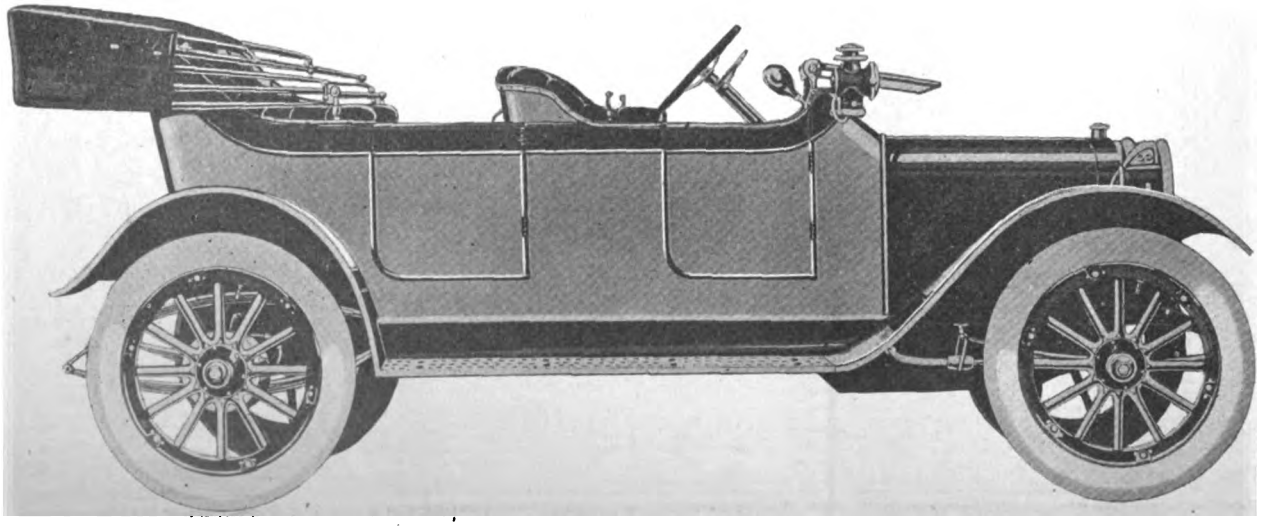
Tires—32x3½.
Large gas headlight with Prest-O-Lite tank or generators; oil side and tail lamps. Electric lighting outfit by special arrangement.
High-grade magneto.
Stewart speedometer.
Demountable rims.
Extra rim and holder.
Tally-ho horn.
Jiffy curtains—up or down instantaneously.
Top and top cover.
Windshield.
Tool kit, Jack, Tire repair kit, Pump.
Robe rail.

Proven and Tested in Every Country

THIS is the car that made good in not one country—but in 45 countries. It stood the big test that proves, demonstrates and vouches for the car, the factories that build it and the men who run the factories. It is proof absolute of R-C-H "Twenty-Five" reliability and dependability any place you take it.

If R-C-H factory production were not RIGHT, how could the car stand the wagon trails and corduroy roads of every automobile country under the sun? And if the R-C-H "Twenty-Five" is not made RIGHT of the very best materials, why do the people of 45 nations buy it?

The R-C-H "Twenty-Five" is the result of ample finances, 100 per cent efficient factory equipment, concentration on one chassis and the making of all working parts in the R-C-H factories.



This car costs more to build than any similar car made and is bigger, better made, more comfortable, more serviceable and more completely equipped than any car below $1200.

Any R-C-H dealer will prove it. But see him today. Delay means disappointment.

R-C-H Corporation

History of the Steering Ball

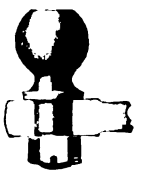
¶ It might seem at first thought that the little steering-ball of the Timken-Detroit Front Axle, like Topsy, 'just growed,' or just happened.

¶ Well, it didn't. It was developed by years of study from a crude affair to a graceful, accurate thing, with a reason in every line and curve.

¶ Timken Experience was the teacher.

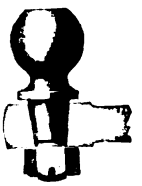
¶ In the early days, every axle maker merely bent up the end of his steering-arm and turned the tip into a ball, as shown in figure 'A.'

¶ It didn't take long to learn that this was too crude and inaccurate. The arm itself had to be elastic, the ball had to be very hard to resist wear. Different steels—different heat-treatments were required because the arm and the ball had very different duties to perform. So we came to a ball whose shank passed through the end of the drop-forged arm. It was a great improvement, though far from the present state of perfection.



¶ Then began the real evolution of the Steering-Ball of the

Timken-Detroit Front Axle



¶ First, the shank was straight and fitted snugly in its hole; rivetting the lower end pulled its collar firmly against the top of the arm, like figure 'B.'

¶ Whenever a break occurred it was always right at the bottom of the ball itself, so its neck was strengthened by a fillet and it looked like figure 'C.'

¶ After that there were fewer breaks, but these few came just above the collar, so the shank was enlarged at the collar and tapered toward the ball till it looked like figure 'D.' For added strength a castellated nut below replaced the rivetting.

¶ While this evolution was in progress, the axles were getting the severe jolts, jars and vibration of every-day service in thousands of cars, and sometimes, after long wear, the tightening of the nut underneath failed to hold the collar of the shank securely against the arm. That was easy to overcome by tapering the lower part of the shank so it would draw down to a tight fit, and could be drawn further down as vibration caused some looseness and wear. It looked like figure 'E.'

¶ It took a long time to bring out the fact that after thousands of miles of pound and vibration and taking up for wear, a time would come when the shoulder would meet the top of the arm and further take-up was impossible.

¶ So we increased the angle and left off the collar, as shown in figure 'F.' Now you get the tightest kind of a snug fit at the start, and keep it tight by turning up the nut as slight wear occurs. There is practically no limit to the amount of adjustment.

¶ In a previous advertisement we told how the ball itself is ground after hardening so it is a true sphere—and how a perfect sphere prevents pounding and the wear that would make it unsafe.

¶ The steering-ball with its shank is one of the smallest parts of a Timken-Detroit Front Axle—yet very important as are all the other parts, large and small.

¶ This history of the ball is just like the stories of development of every other part. The ingenuity and the study of able designers couldn't possibly foretell everything that experience was bound to show up.

¶ In addition broad experience covering hundreds of thousands of cars of every type—pleasure and commercial—working under every possible condition of service—has been a prime essential in the evolution of axle parts that will give the maximum of service to the user.

¶ From the dawn of the motor-car industry Timken-Detroit engineers have been getting just such experience.

The Timken-Detroit Axle Company

MAXWELL MOTOR COMPANY

INCORPORATED

DETROIT, MICHIGAN

March 22, 1913

SUBJECT: "WHY WE DID NOT USE ALL OUR PLANTS"

Gentlemen:-

You are of course aware that when the group of capitalists who financed the new Maxwell Motor Company, bid in at the Receivers sale, all the plants and other assets of the late United States Motor Company, they secured a number of factories for the making of automobiles and automobile parts, that are among the best in the industry.

To refresh your memory: There were the following plants:

Providence Engineering Works,	Providence, R.I.
Maxwell-Briscoe Company,	Auburn, R.I.
Maxwell-Briscoe Company,	Tarrytown, N.Y.
Briscoe Manufacturing Company,	Newark, N.J.
Alden-Sampson Company,	Detroit, Mich.
Brush Runabout Company,	Detroit, Mich.
Stoddard-Dayton Company, (Two factories)	Dayton, Ohio.
Briscoe Manufacturing Company,	Detroit, Mich.
Courier Motor Company,	Dayton, Ohio.
Columbia Motor Company,	Hartford, Conn.

Also the plant of the Flanders Motor Company at Detroit.

Combined acreage,	241.5
Combined floor-space,	2,684,648 sq.ft.

Now it will perhaps be news to you that we do not propose using all these plants--and the reasons will be interesting to you as showing how quality is put into a car and at the same time price is brought down to within the reach of thousands.

Take for example, the plant at Providence, R.I. This would be considered a splendid plant by some automobile concerns. It is rich in history, in tradition and in past achievements. Here George Corliss learned his trade. Others equally famous worked in this plant in its halcyon days. But it won't answer our needs today. We have sold it. Admirable for other lines, but not for this.

The Tarrytown plant we will also offer for sale, because the land value is too high for automobile manufacturing purposes, and it would be necessary to purchase many additional acres and erect

Digitized by Google

buildings to take care of the quantity of cars we intend to produce. Besides, the 5,000 men necessary to man such plants, would have difficulty in securing living quarters in Tarrytown.

The Auburn, R.I. plant, consisting of 250,000 sq.ft. of floor-space, excellent three story brick mill construction, we offer for sale because, tho an excellent labor centre, there are good manufacturing reasons why it is not an economical place to produce automobiles.

Also, for similar reasons, and because they are located at too great distances from the other plants and from our centre of operations, we will dispose of the Briscoe plant at Newark and the Courier plant at Dayton.

Do you know, that the percentage of profit on automobiles is less than almost any other line--farm implements, furniture, pianos, sewing machines, etc. Much less. And competition is keener. We have no trusts, no monopolies, in this business, yet --nor are we likely to have.

The only chance we see for success is in producing cars in quantities, contenting ourselves with a small profit per car so as to get the selling price down to within the reach of thousands who must absorb this product.

And this can be done only in plants where the highest efficiency can be obtained--almost ideal working conditions. In other words, light, ventillation, sanitation.

Then the latest types of automatic and labor-saving tools must be installed. The equipment must be faultless.

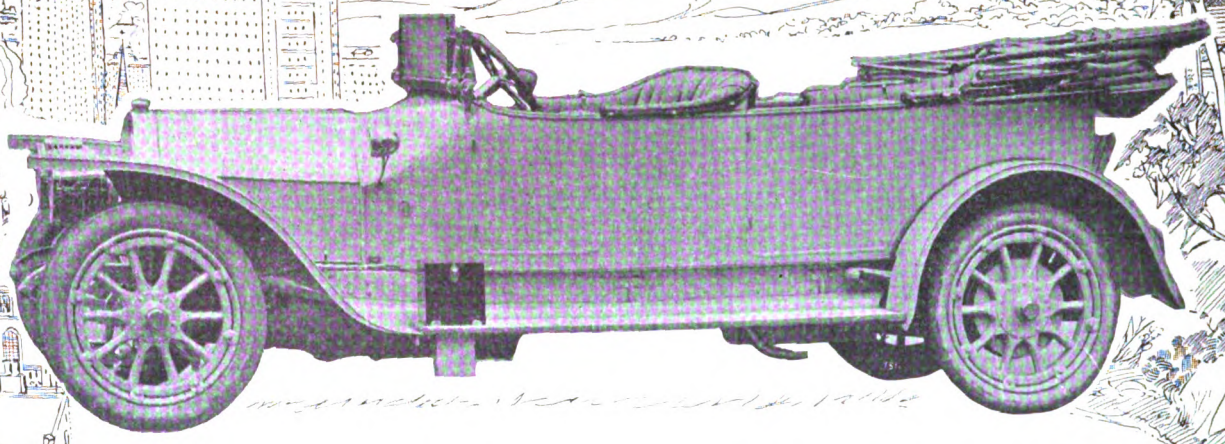
Our plants in Detroit, in Dayton and in Newcastle, are of the latest type concrete and brick construction; "saw-tooth roof" type; mostly "ground floor", and admirably adapted for economical manufacturing. These we have re-arranged, re-equipped and laid out for the building of every part of every model in quantities.

Each plant will be devoted exclusively to the making of one model--"In the Flanders plants", we make the "50-6"; in the Dayton plants, the "35-4", and in the combined Brush and Sampson plants, which are on the same tract of ground--45 acres--every last part of the "25-4" will be made.

I claim you can't make two chassis models in the same plant and keep both up to concert pitch--make it the leader in its class, and nothing short of that will satisfy us.

Yours very truly,

MAXWELL MOTOR COMPANY (Inc)



Walter E. Flanders.

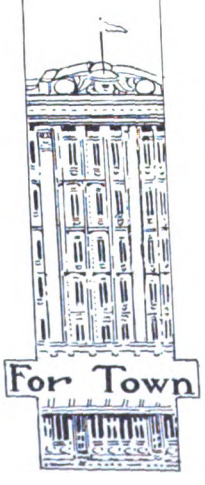
Lancia Cars

"They copied all they could follow,
But they could'nt copy my mind,
And I left 'em sweating and stealing
A year and a half behind."
—Kipling

DEALERS You Can Sell This Car

"The Best of Europe At American Prices"

The Lancia propoganda has taken root and is growing in America—and the reason is mighty obvious.



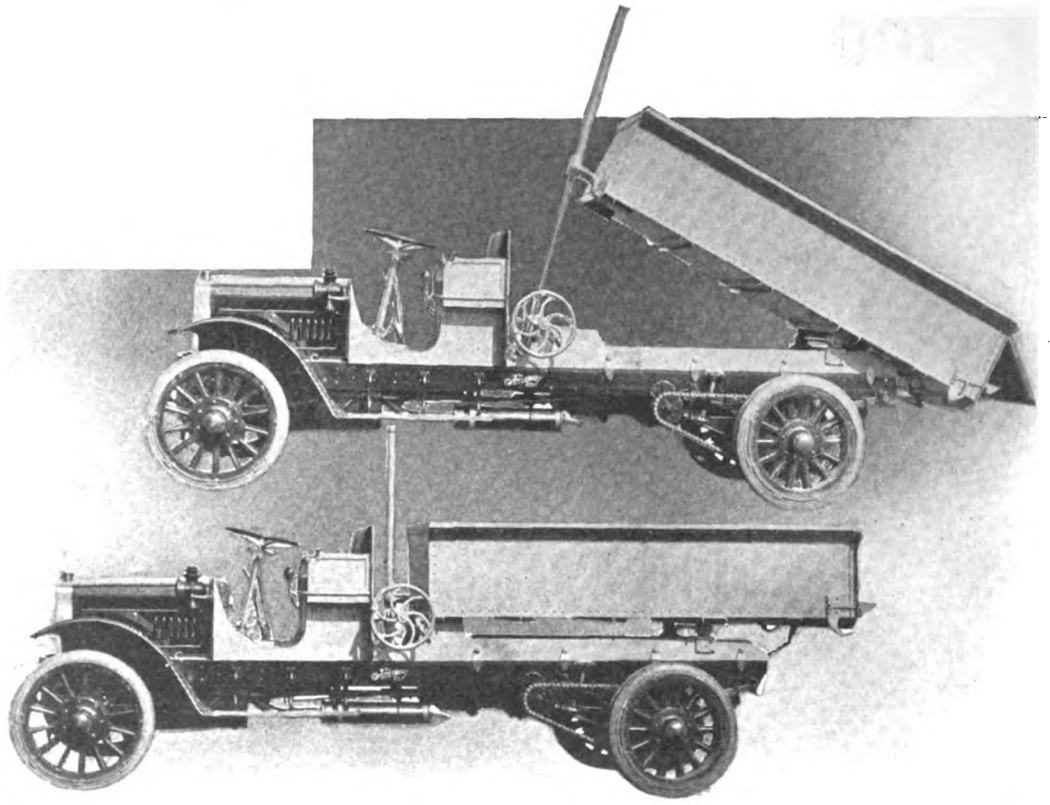
There is a class, Mr. Dealer, and a restricted one at that, who understands, appreciates and buys this peer of light European cars—(we will send you the names on request).

And there are those in ***your*** territory to whom its combination of strength, efficiency, simplicity and design will appeal.

The Lancia is the best of Europe at American prices—meaning that the purchaser of a Lancia car does not have an extravagantly priced European novelty of freak design—

But a ***real service*** car from Europe—a masterpiece of European design, steel and finish—made and tested in the Alps under the personal supervision of Vincenzo Lancia himself—with a guaranteed value, pound for pound, dollar for dollar greater than that offered by any American or European manufacturer.

Do you want to sell a car of class, service and beautiful design to the fastidious and critical? If you do, then come to New York if possible—see and know the Lancia—or write and let us give you details of the "20" and "30" mounted with coach work in keeping with the chassis.



ADAMS LANCIA COMPANY

235 West 38th Street **NEW YORK, N. Y.**

Wherever Trucks Are Sold, the Name "Atterbury" Stands for Representative Quality

These trucks practically sell themselves on the basis of proved service. They are without exception the best sellers in America.

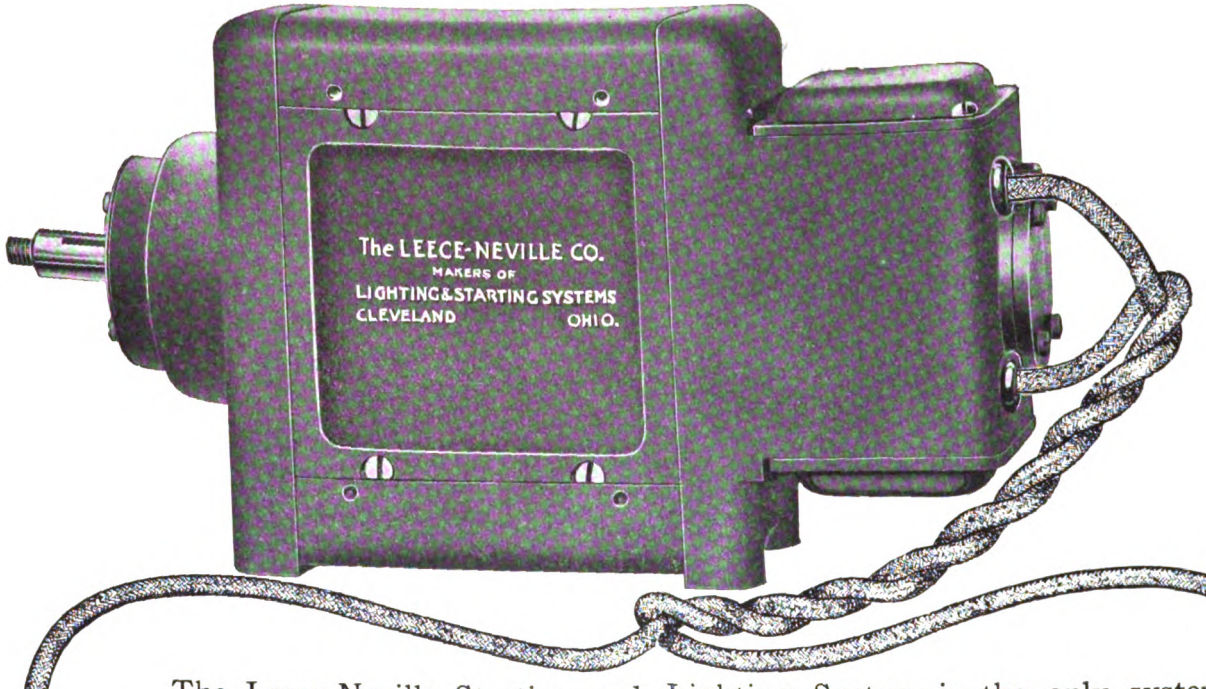
We call attention here to the fact that the United States Government has placed orders with us for a large number of 1500 pound delivery trucks, for parcel post service. Uncle Sam has plenty of money to spend, but he is by long odds the most critical, hard-to-please customer in this country. He is expert and takes no man's word. This statement in itself will sell

Atterbury Trucks

Note that Atterbury design follows accepted standard specifications, covering material, workmanship, motors, frames, etc., which good practice has been fixed for different sized trucks.

These specifications which today lay down the standard of truck construction in America are practically all creations of the Atterbury factory. The radical, advanced features in Atterbury trucks are not experiments—they are absolutely necessary to the operation and life of a motor truck and they have been tried and proved correct.

Atterbury dealers handle a complete line, from the 1500 pound shaft drive delivery wagon up to the five ton truck—including one, two, three and four ton machines.



Dealers—Our prices are right—our arrangement with you liberal—our advertising is creating general interest—our sales department is your assistant. Above all, our trucks, standard, ready sellers, because they "make good."

We want **you** as part of our selling organization.

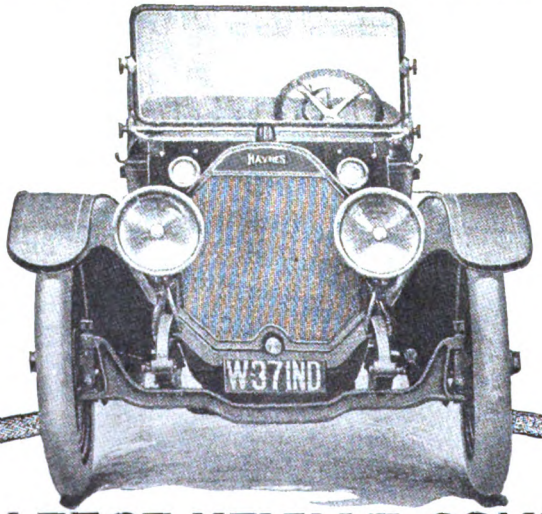
100 PER CENT EFFICIENT



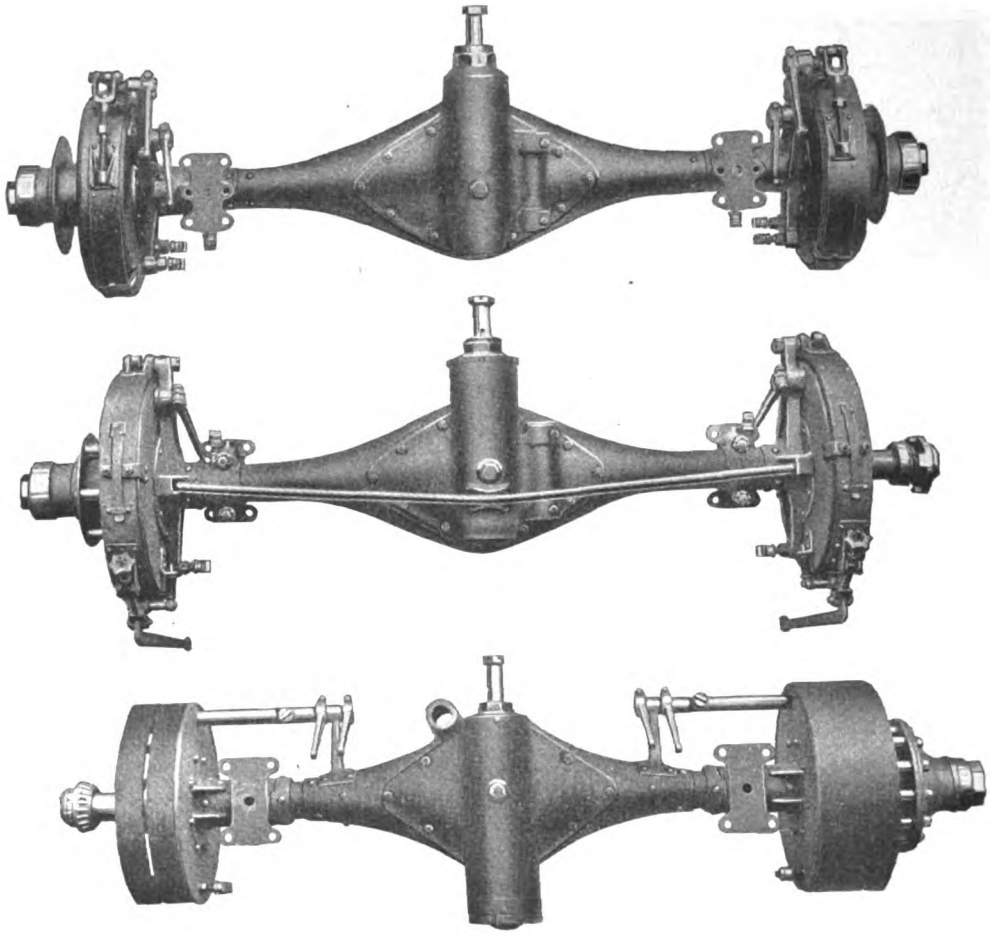
The Leece-Neville Starting and Lighting System is the only system that has proven so successful as to be copied by several other manufacturers. Yet it has never been equalled for simplicity, certainty of operation and lasting qualities.

LEECE-NEVILLE
Lighting and Starting System

For more than a year the Leece-Neville System has been standard equipment on the Haynes car. Its operation in service has been so perfect that it is known as the 100 per cent. efficient system. This efficiency counts big in the service end—it counts big to the owner to have his starter always in working order—it counts big in the sales end—no excuses needed.

We will be pleased to send you more complete information on request

The Leece-Neville System is made in two models—a double-unit system (generator and starting motor separate) and a single-unit system (motor and generator in one unit) for lighting and starting.



The Leece-Neville System is the only one powerful enough to furnish current for lights and crank large marine engines and it is standard equipment on engines of the Loew Mfg. Co., Cleveland, on their famous "Loew Victor."

American Axles

Worm Drive

WITH prompt recognition of the advantages claimed for the Worm Drive, and after exhaustive research, tests and comparisons, we secured—more than a year ago—exclusive American rights, as axle manufacturers, to use the Lanchester-Daimler type of this gear.

The superiority that has long been conceded to this particular Worm Drive in England and on the Continent, is now fully recognized in America. It challenges the consideration of every progressive motor car manufacturer.

We are offering full floating *American Axles* embodying this famous Lanchester-Daimler type of worm gearing, and suitable for either gasoline or electric vehicles. The same perfection of design and workmanship which has always characterized our bevel drive axles, is to be found in these worm driven equipments. For motor cars of the better class, *American Axles* cannot be excelled.

THE ATWATER KENT SYSTEM

has been silently advertised from coast to coast by the best advertising anybody can have—the personal endorsement of over 100,000 satisfied users.

The Atwater Kent Ignition System has no rival—no competitor. We do not use this term metaphorically, but in a literal sense.

You may think this is the use of a trite advertising term, but in this case it is nothing of the kind. That the Atwater Kent has no rival in the opinions of thousands of users has been demonstrated to us many-many times, when in ordering their new cars they have specified that they should be "Atwater Kent equipped."

There are a number of other good reasons for the superiority of the Atwater Kent System over the magneto and it is worth your while as a jobber, dealer or prospective buyer, to weigh and consider them carefully.

Space forbids our mentioning these reasons even briefly, but if you will write for our booklet "D," we will give you some of them. Then ask the motorist who drives a car "Atwater Kent equipped" and he will tell you the others, and the best reasons why the Atwater Kent Ignition System has no real rival.

BOSCH PLUGS

Are Long Lived and Efficient

THE spark plug may seem of no consequence because it is small, but engineers consider it one of the motor's most important efficiency factors, also a point where most troubles are located.

Don't leave a path for trouble! The mere insistence on Bosch Plugs gives you not only a perfect plug but one which will eliminate most of your troubles, one that will add just that ounce or two of efficiency which you are so earnestly seeking. Always insist on good plugs—Bosch Plugs—Buy Bosch Plugs Only.

A Truck Among Trucks

A large number of prosperous tradesmen and merchants, wholesalers, contractors and builders, average business men scattered over every small and large community, and alert farmers in between, are looking for a serviceable motor truck. What they need, and are ready to buy on demonstration, is a medium draft—medium weight—medium priced, practical commercial car, that will meet completely their own needs and resources. They want a thoroughly high-grade car that will respond to all tests, make their deliveries, haul their products and material. The car that meets the needs of the great commercial public is the

International Motor Truck

The Utility Car That Has Made Its Way by the Way It's Made

As an all-round commercial car, the International Motor Truck fills the bill in every way. It is built to meet every test as a business car. It is moderate in draft, size, weight and price. It is unexcelled in efficiency, service and dependability.

You should sell International Motor Trucks. Invest a letter or post card in this trade-making truck and write us for information and details of terms and territory.

Distributors: New York, Philadelphia, Chicago

Can We Send You a Copy of this Booklet?

Our Engineering Department has published the first of a series of booklets discussing the latest developments in the solving of of bearing problems.

This first brochure is entitled "Bearing Friction and Its Elimination," and aims to show why balls are superior friction reducers and how their correct application secures maximum conservation of energy.

The types of bearings particularly discussed and compared in this writing are the ball and roller bearings, as applied to all bearing points in the motor car.

It discusses and explains the growing tendency among engineers and manufacturers to favor the ball type of bearing, as evidenced by the summarization figures published by the "Horseless Age" in a review of 1913 pleasure car models. These figures show that ball bearings are used in the differential of 53 per cent of pleasure cars for 1913, as against 37½ per cent of the 1912 models; in the transmission of 75 per cent, as against 64 per cent; and in the rear wheel of 52 per cent, as against 42 per cent.

This brochure will interest you. Copy will be mailed you promptly on request.

If You Need Motor Lamps
You Need This Catalog

We want you to write for the Solar Catalog before you decide on your motor lamps, for this is the most complete line of lamps on the market. Solar Lamps have been preferred by most motorists for the past fourteen years because of their brilliancy, their style, their strength and their several exclusive advantages—their special short focus lead glass lens mirror reflectors—the patented double ray light projection (in the Solarclipse), giving two distinct fields of light, for city and country use—the new black finish, the only such finish that's proof against heat and moisture—and other features that other lamps lack.

To fail to see Solars before you buy is to fail to include in your consideration the very finest lamps in existence. Solars are made for oil, electricity, gas and in combination, for pleasure cars, motor trucks, carriages, motor boats and airships. Write for catalog now—while you think of it. (136)

YOKE BOLTS

The manufacture of this part requires—

1. Intelligent selection of open hearth or nickel steel of proper analysis.
2. Scientific heat treatments to carbonize and harden the exterior and produce a perfect bearing surface.
3. Careful testing and grinding to exact size.

Thorough knowledge of service requirements—a complete and modern heat treating equipment and long experience in manufacturing similar parts enable us to offer you the benefit of these essential features at an extremely low price.

Send blue prints for quotation.

All Acknowledge the Necessity of

Weed Chains

In one of those friendly after-luncheon, get-together parties at a well known city club, eleven men drifted on to *the subject of the dangers of skidding.* With a single exception each of the eleven owned an automobile, and each had a *skidding experience* to relate, and each felt that *his particular predicament* was the most sensational and startling.

While nearly all had experimented with the various so-called anti-skid tires, and acknowledged their possible advantages when new—yet when it came right down to "Brass Tacks," there wasn't a single one in the crowd but admitted that for *sure results,* for the **absolute elimination** of every possibility of skidding, **nothing even approximated Weed Chains,** and nothing took their place. Every one of the ten owners carried at least one pair of Weed Chains in his car.

Go where you will, put the question to any assembly of automobile owners you like and the verdict will always be the same—"*We can't get along without them.*"

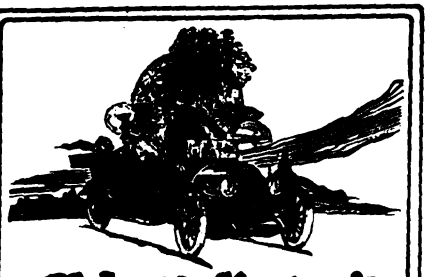
Weed Chains are universally acknowledged to be the only anti-skid device that can be absolutely relied upon at all times and under all road conditions.

Weed Anti-Skid Chains

Insure perfect control and safe, comfortable driving

Don't foolishly pride yourself on taking chances in order to prove your bravery, or to demonstrate your ability as a driver.

Weed Chains are an **absolute necessity** on both rear tires and to doubly guard yourself against accidents and to make steering comfortable and easy, put them *on the front wheels too.* They cannot injure tires because "they creep"—occupy very little space when not in use—applied in a moment without the use of a jack or other tool.



Take precaution now When you know the folly, the danger, the peril there is in driving your car over icy, slippery, snow covered roads and pavements, why not fully equip your car today with **Weed Chains** for your own protection and for the safety of other road users.

The Packard Electric Co.

Dept. D Warren, Ohio

DEALERS: A million motorists will have tire trouble in 1913. There is a demand for a **reliable,** inexpensive vulcanizer that can be used by anyone, anywhere—a vulcanizer that will mend tube punctures as perfectly as the most elaborate plant.

VUL-KIT REPAIR VULCANIZER KIT $2

The only inexpensive vulcanizer that actually **vulcanizes** a repair clear through because it is the only one in which the vulcanizing temperature is maintained long enough to cure the raw rubber. Its ever-present fuel, gasoline, is converted into a gas by the patent generator which distributes the flame over the vulcanizing surface at just the right intensity.

Other exclusive Shaler features are a handle that is cool enough to permit moving the vulcanizer the moment the repair is finished, asbestos plate inlaid in tube shelf to retain heat and prevent pinching tube, and universal clamp insuring even pressure to all parts of a repair.

A Real SHALER Vulcanizer

Not an experiment, but the product of the largest exclusive vulcanizer manufacturers in the world. Sold under the Shaler guarantee which has made the Shaler line of vulcanizers for motorists and repairmen the standard throughout the auto industry.

Get our trade proposition

Write today and get full details and trade prices on this indispensable accessory. Sooner or later every motorist will get a VUL-KIT from someone.

"My Experience

in dealing with automobile accident cases has led me to the belief that the bulb-horn is an appliance the use of which should be eliminated by statute or ordinance. I cannot understand why its use is permitted, as from every point of view it is worthless.

"As a means of warning it is valueless. There is nothing about its sound which attracts attention from the public. Accidents occur more frequently with automobiles equipped with bulb-horns than with horns of later invention. It is as antiquated as the oil lamp."

Frank E. Morris

Claim Agent, Metropolitan Claim Department,
The Ocean and Guarantee Co., Ltd.,
59 John Street, New York

—And as a result the Ocean Accident & Guarantee Company attaches this rider to each of its automobile accident policies.

The ATTENTION

of the assured is called to the value of an efficient warning device in the prevention of accident.

The horn operated by means of a rubber bulb is frequently inaudible and cannot be relied upon in an emergency. It is a matter of record and experience that the bulb horn is inadequate to the demands of safe motoring.

An adequate danger signal should produce a harsh, abrupt note sufficiently loud to be heard under all conditions of traffic.

Ocean Accident & Guarantee Co., Ltd.

Studebaker

The Man Who Carefully Looks Over a Studebaker Always Comes Back

He may say "I'll look elsewhere" but like the needle to the pole, he returns.

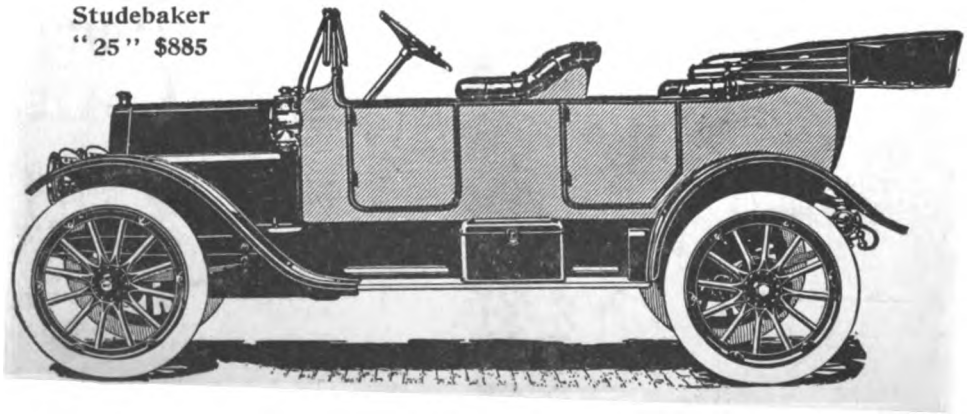
—And why shouldn't he?

There is no bigger value than the Studebaker "25" at $885.00 for the man who wants a light yet powerful and efficient car.

If he wants a bigger car there is the Studebaker "35"—which holds six passengers in comfort, started by electricity, lighted by electricity, complete in appointments and modern luxuries for $1290.00. The first big car to be sold for less than $2000.00.

And if he is looking for a six cylinder car, the last word in uninterrupted power, quiet elegance and sumptuous good taste, introduce him to the Studebaker "Six."

In fact, the Studebaker line of auto cars is designed to meet the requirement of every prospective car owner.



And every car turned out by Studebaker, whether it be a "25," a "35" or a "SIX" is an exponent of Studebaker integrity and reliability.
